ERRATA.

1,533,202, page 361, in heading, assignment, name of assignee, for "Sandusky Foundry & Machine Co." read *The Paper & Textile Machinery Company.*

1,533,618, page 444, strike out present claim 2 and insert the following as claim 2:

2. In an apparatus of the class described, a pair of chambers, a tubular passage connecting said chambers and attached thereto by screw threaded joints, a pair of nasal tubes having a screw threaded connection with one of said chambers, and a second pair of tubes having a screw threaded connection with the other of said chambers, with one of said second pair of tubes leading to a compressible reservoir, and the other of said second pair of tubes leading to an apparatus for forcing air through said chambers.

Patents Nos. 1,582,113 to 1,583,080.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 333—No. 1. TUESDAY, APRIL 7, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Notice of Cancellation.

U. S. Patent Office, *Washington, Mar. 11, 1925.*

The Arrow Brand Hemstitching & Tucking Co. Inc., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Cluett, Peabody & Co. Inc., of Troy, N. Y., to effect the cancellation of the trade-mark registration of The Arrow Brand Hemstitching & Tucking Co. Inc., of 1211 Broadway, New York, N. Y., No. 134,579, dated September 14, 1920, and the notice of such proceeding sent by registered mail to The Arrow Brand Hemstitching & Tucking Co. Inc. at the said address having been returned by the post office undeliverable, notice is hereby given that unless The Arrow Brand Hemstitching & Tucking Co. Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Interference Notice.

U. S. Patent Office, *Washington, Mar. 12, 1925.*

John M. Flottman, his assigns or legal representatives, take notice:

An interference having been declared by this Office between an application for patent filed by John M. Flottman, 160 Eddy Street, San Francisco, Calif., and applications for patents filed by Frank H. Burns, 57 Elm Street, Hoosick Falls, N. Y.; Joseph H. Cole, Penacook, Merrimack County, N. H.; Ralph A. Krause, 4936 North 12th Street, Philadelphia, Pa.; Thomas Rhodus, 835 Junior Terrace, Chicago, Ill.; Joseph A. Rostron, 18 Palmer Street, Cambridge, Mass., and William Charles Ude, 259 Thomas Street, West Haven, Conn., and a notice of such declaration sent by registered mail to said John M. Flottman at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Flottman, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

ADJUDICATED PATENT.

(C. C. A. Ill.) The Steinau patent, No. 1,436,365, for unitary window sign, *Held* invalid. *Steinau Co. v. Common Sense Novelty Co.*, 3 F. (2d) 144.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Design Pat. 60,243, H. R. Humphrey, Gas heater, decided February 13, 1925, single claim.

Design Pat. 60,245, H. R. Humphrey, Gas heater, decided February 13, 1925, single claim.

Design Pat. 60,246, H. R. Humphrey, Gas heater, decided February 13, 1925, single claim.

Pat. 1,416,632, H. Fothergill, Apparatus for removing gases from liquids, decided January 27, 1925, claim 10.

Pat. 1,458,064, A. H. Baille-Barrelle, Process of manufacture of coke for metallurgical uses, decided February 17, 1925, claim 1.

Pat. 1,462,306, A. D. St. John, Plasticiser for cellulose plastics, decided March 17, 1925, claims 1, 2, 3, and 4.

Reservation Clauses Not Permitted.

Rule 44. A reservation for a future application of subject-matter disclosed but not claimed in a pending application will not be permitted in the pending application.

Condition of Applications Under Examination at Close of Business March 27, 1925.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 48,301; Trade-Mark Division, 2,152. Oldest new case, Sept. 24, 1924; oldest amended, Oct. 1, 1924. The dates given are 1924 except where † indicates 1925.) Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

EX PARTE OSWALD.

Decided July 11, 1924.

1. CLAIMS—MULTIPLICITY OF—REJECTION.

Where the Examiner expressed his opinion that the claims were so many and so insufficiently differentiated that, taken as a whole, they obscured and concealed the invention, *Held* that if he was of the opinion that the case was such as to fall within the ruling in *Ex parte Duncan*, 276 O. G. 207, he was right in rejecting the claims on that ground.

2. SAME—SAME—DUTY OF APPLICANT TO POINT OUT PATENTABLE DIFFERENCES.

It is incumbent upon the applicant to point out in every instance, or at least in typical instances, why the claims are patentably different from each other and why the application is of such a character that the invention is not obscured by an undue number of claims.

3. SAME—SAME—DUTY OF EXAMINER.

It is not the duty of the Examiner to go through a long list of claims and specifically point out wherein each claim is not patentably distinct from some other claim. He has done his work properly when he has picked out certain typical claims and indicated wherein, in his opinion, they are not patentably different from each other.

ON PETITION.

Mr. Burnham C. Stickney for the applicant.

ROBERTSON, *Commissioner:*

Applicant petitions that the Examiner be required (1) to suspend or withdraw the final rejection; (2) to disclose which individual claims the Examiner regards to be met by the prior art and apply the references thereto; (3) to disclose which individual claims the Examiner regards as undistinguished from other claims and point out wherein he finds similarity between claims, no two of which read the same.

The application as filed contained 135 claims. The Examiner in his first action criticized the specification as "verbose to an unwarranted degree"; pointed out that Sheets 3, 4, and 5 of the drawings fail to comply with the rule requiring that the views, if possible, should stand so that they can be read with the sheet held in an upright position; held that many of the claims did not patentably distinguish from each other, but differed only by the inclusion of elements which did not render them patentable one from the other; rejected the claims under the ruling announced in *Ex parte Duncan*, 276 O. G. 207; 1920 C. D. 30, pointing out specific instances to illustrate what he meant; and stated that if applicant insisted upon retaining more than 15 or 20 claims in the case he should specifically point out how he considered each claim to patentably distinguish from all the other claims. He also required division between two groups of claims and cited one patent as a result of a cursory search.

At the end of the year from that action two amendments were presented, making certain changes in the specification, and stating that the figures on Sheets 3, 4, and 5 were arranged in the manner objected to because it was necessary to arrange Figures 1 and 2 in that way, and therefore it was thought desirable to arrange all in the same way, and pointing out at great length the differences between certain claims, but nowhere pointing out why these differences made the claims patentably different or relieved the case from the objection that the applicant, by reason of the large number of claims, had failed to comply with the statute in definitely pointing out his invention.

In his next action the Examiner repeated his requirement that the specification be revised with a view to eliminating all unnecessary matter, repeated his requirement as to the drawings, pointed out generally why the long recitation of differences appearing in the claims merely convinced the Examiner that the differences were so slight and immaterial as to be unpatentable and substantiated his position, and referred to certain claims, which he held to be identical in substance, as typical of the objections previously made and cited three patents as further showing the state of the art.

Nearly a year thereafter an amendment was filed adding to the specification, canceling five claims, contesting the Examiner's position that he must reduce the claims to a specific number, alleging that the case stood without any duplicate claims, and requesting the Examiner to specifically point out individually which claims he considered unpatentable over the prior art, and why. In response to that action the Examiner held that the amendment was not completely responsive and stated that, in order that there might be no further misunderstanding, it was specifically pointed out that no action whatsoever had been made as to the novelty. He further stated that the sole point in issue was whether the large number of claims in the case are so many and so insufficiently differentiated that, taken as a whole, they obscured and concealed the invention, and that it was his opinion they did.

The rule as to drawings sustains the Examiner's holding. The figures in this case by being slightly reduced in size could have been placed on the sheet, as required by the rule. However, since this rule has not been rigidly enforced and since it would be quite an expense for applicant to make over all the drawings, and it would also incumber the records of this Office, the requirement as to the drawings is waived.

One of the crying evils of the present method of prosecuting applications is the presenting of an inordinate large number of claims. It not only obscures the invention, as fully pointed out in *Ex parte Duncan*, supra, but it adds very greatly to the work of the Office.

The courts have repeatedly held that the unnecessary inclusion of claims, and the presenting of claims differing but slightly in their phraseology and not at all in a patentable sense obscures the invention and adds greatly to the work, both of the Patent Office and the courts.

In the case of *Carlton* v. *Bokee*, 17 Wallace, 463, the Court held that a patent would be declared void where a needless multiplication of nebulous claims is calculated to deceive and mislead the public, and in the recent decision of the *Burroughs Adding Machine Co.* v. *Rockford Milling Machine Company*, 292 Fed. Rep. 550, where the patent in suit was issued more than 14 years after it was filed with 421 claims, the court referred to the situation as "appalling." In this connection see also the following decisions: *Computing Scale Company of America* v. *The Automatic Scale Co.*, 119 O. G. 1586; 1905 C. D. 704; 26 App. D. C. 238; *In re Thomson*, 120 O. G. 2756; 1906 C. D. 566; 26 App. D. C. 419; *Bellows* v. *United Electrical Mfg. Co. et al.*, 160 Fed. Rep. 663; *In re Perlman*, 186 O. G. 560; 1913 C. D. 299; 39 App. D. C. 447; and *In re Prescott and Rummler*, 278 Fed. Rep. 590; 301 O. G. 389; 1922 C. D. 119; 51 App. D. C. 389.

In the latter case the court, while holding that the Patent Office was in error in refusing the applicant a patent, held that 1 claim out of 17 would completely cover the applicant's contribution to the art and that there was no reason "for allowing a large number of claims, and thus inviting controversy and litigation."

[1, 2] If the Examiner was of the opinion that the case was such as to fall within the ruling in *Ex parte Duncan*, which decision was affirmed by the court of appeals (276 O. G. 211; 1920 C. D. 197), he was clearly right in rejecting the claims on that ground. The amendment presented, which merely listed differences between the claims, was not a proper response. It was incumbent upon the applicant to point out in every instance, or at the very least in typical instances, why the claims were patentably different from each other and why the application was of such character as that the invention was not obscured by an undue number of claims.

Obviously, the Examiner did not intend to say that the applicant should limit his claims to exactly 20 and that if he amended it and presented 21 claims the case would be abandoned, even though his language, if literally taken, might be susceptible of that construction. What he meant was that 20 seemed to him as a reasonable number and that it was incumbent upon the applicant to show why a greater number of claims was necessary.

If the applicant had undertaken to show why the claims were not unduly multiplied by pointing out wherein the included limitations in certain claims made them patentably different over other claims, the Examiner would have been enabled to apply the art to at least certain typical claims.

[3] As fully pointed out in *Ex parte Duncan*, supra, it was not the duty of the Examiner to go through this long list of claims and specifically point out wherein each claim was not patentably distinct from some other claim. He had done his work properly when he had picked out certain typical claims and indicated wherein, in his opinion, they were not patentably different from each other. The applicant had not made a complete response by canceling one of each of all these groups but one and arguing that as to it the requirement was not properly made. The Examiner's request was not limited to these groups, which were merely referred to as typical of the whole case. The applicant should not only have canceled the admittedly superfluous claims, but have pointed out carefully and fully why, in his opinion, the rest of the claims were not superfluous.

It is true that if an appeal is taken from the Examiner's action in the present case and the Examiner should at any time be reversed it would then be necessary to apply the art.

It may be noted that the last of the claims originally presented was wholly ambiguous, indefinite, and meaningless, reading:

> The herein-described motor substantially as illustrated and described in the accompanying drawings.

Taking literally, this is the narrowest claim that could be drawn, meaning only that which is shown; but if consideration is given to the word "substantially" its range of equivalents is determinable only by a consideration of the prior art.

It is now the practice of this Office to require applicants who file a multiplicity of claims to comply with *Ex parte Duncan*, supra. One reason why the Patent Office has been so far in arrears is that so many cases are filed with a multiplicity of claims, making it impossible for this Office to keep up with its work. In this connection applicant's attention is called to the fact that Members of Congress have discussed on the floor of the House the large number of claims filed in patent applications, as may be seen from an examination of page 1259 of the Congressional Record of January 11, 1922, where Congressman Snyder, of New York, said:

> * * * if a different system were employed in the Patent Office and different rules and regulations were put in operation, so that the applicant for a patent be limited to a reasonable number of claims covering a certain application for a patent, much of the work and much of the time that is wasted down there today would be saved and the work very much expedited.

Also on page 1264 of the same Record, Floor Leader Mondell stated that if the practice of greatly multiplying claims is allowed to increase—

> you may equip the Patent Office with double the present personnel and the business will still be delayed and congested.

It is the opinion of the Commissioner that applicant can and should greatly assist this Office by withdrawing his appeal to the Examiners in Chief and complying with the Examiner's requirement.

The petition is denied, except as to the drawings.

Court of Appeals of the District of Columbia.

BOGDA v. OLSON.

No. 1581. Decided January 5, 1925.

1. INTERFERENCE—PRIORITY.
   Decision awarding priority to O. affirmed.
   Decision of First Assistant Commissioner Kinnan.
2. SAME—SAME—APPLICANT AGAINST PATENTEE—EFFECT OF DECISION BY COURT IN SUIT BROUGHT ON PATENT.
   Where after the issuance of B.'s patent suit was brought thereon and one of the defenses set up was that O. and not B. was the first inventor, *Held* that while the question between the parties herein is not res adjudicata, because the parties to the suit were not the same as the parties to the interference, the decision of the court is entitled to great weight where the witnesses were examined in open court and B. had every opportunity to put in evidence any testimony he might have had to show that he made the invention prior to the dates when it was shown O. made the invention.
3. SAME—SAME—EVIDENCE—HEARSAY.
   An attorney can not establish a fact by stating what some one told him and then asking another witness whether this is correct.
4. ABANDONMENT OF BROAD INVENTION—ABANDONED EXPERIMENT—ADOPTION BY INVENTOR OF IMPROVED FORM.
   Where O. did not follow up the first form of the device which he made, but substituted therefor what he deemed a more acceptable form, it does not follow that the first form was an abandoned experiment or that he abandoned the broad invention.
5. EQUITABLE ESTOPPEL—LACHES—COPYING CLAIMS FROM A PATENT.
   Where O. copied the claims of B.'s patent within two years from the date of its issuance and within that time suit had been brought on the B. patent in which the defense was set up that O. was the first inventor, and B. was put on notice that O. had filed an application, *Held* that O. did not lose his rights by failing to promptly copy the claims after the patent was called to his attention.

APPEAL from Patent Office. Affirmed.

Mr. A. L. Morsell for Bogda.

Mr. L. C. Wheeler, Mr. A. V. Cushman, and *Mr. J. J. Darby* for Olson.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

PER CURIAM:

Appeal from concurrent decisions of the Patent Office tribunals in an interference proceeding involving an invention covering drinking fountains for stock.

The opinion of the Examiner of Interferences contains a full and very careful discussion of every phase of the evidence. The Examiners in Chief likewise have thoroughly and satisfactorily considered this evidence, as has the Assistant Commissioner. We have examined the record, in the light of the briefs, oral arguments and decisions of the Patent Office, and, being convinced of the correctness of the conclusion reached and that further discussion is unnecessary, affirm the decision appealed from.

The decision of First Assistant Commissioner Kinnan, rendered in this case October 19, 1923, is as follows:

This is an appeal by Bogda from the decision of the Examiners in Chief affirming the decision of the Examiner of Interferences awarding priority to Olson.

The invention relates to stock-watering bowls and is set out in three counts, of which counts 1 and 2 are illustrative:

> 1. In a stock watering bowl, the combination of a supply pipe having a valve-controlled discharge portion, a bowl, the valve-controlled discharge portion of the supply pipe extending into the bowl close to the wall of said bowl, means within the bowl constructed, when operated, to open the valve mechanism, a freely engageable and disengageable holding means between the supply pipe and the bowl, said means releasably holding and supporting the bowl in a normal horizontal position, the engagement of the holding means being with that portion of the bowl which is close to the valve-controlled discharge portion of the supply pipe, said holding means permitting of the free movement of the bowl toward and to its normal horizontally supported position, but being free to be disengaged so as to permit of the complete bodily withdrawal of the bowl, and cooperating means between the bowl and the supply pipe for preventing lateral movement of the bowl while engaged by the holding means.
>
> 2. The combination, with a supply pipe, a valve in said pipe, and a presser plate for operating said valve, of a removable bowl having a part engaging the pipe, disengageable interlocking connection between the bowl and pipe to prevent lateral movement of the bowl, and a latch carried by the pipe for engaging the bowl to sustain its weight.

The party Bogda is a patentee, but derives no advantage therefrom, because the application on which his patent issued was copending with that of the application of Olson, they having been filed but a few days apart.

[2] After the issuance of the Bogda patent suit was brought thereon [*Bogda* v. *Automatic Carrier Company*, decided April 21, 1921], and one of the defenses set up was that Olson and not Bogda was the first inventor. While the question of priority between the parties herein is not res adjudicata, because the parties to the suit were not the same as the parties to the interference, the decision of the court is entitled to great weight, as the witnesses were examined in open court, and, of course, Bogda had every opportunity to put in evidence any testimony he might have had to show that he made the invention prior to the dates when it was shown Olson made the invention.

In his decision Judge Geiger, of the eastern district of Wisconsin, said:

> Upon a consideration of the testimony bearing upon the single issue of Olson's prior inventorship, the testimony in this case impresses me as compelling the conclusion that Olson conceived and perfected his invention by a complete reduction to practice, not only prior to his own filing date, but also prior to the date of Bogda's application, and prior to the latter's perfection of the invention by reduction to practice. And I feel that the evidence, referring to degrees of its cogency or probative force, not only preponderates, but is so clear and satisfactory as to exclude doubt.

Then, after discussing certain testimony relating to the work done by Olson in the latter part of the year 1916, he said:

> * * * The plaintiff, in order to meet this situation, relies upon testimony which, in a way, presents not only alternatives, but repugnancies in his position. One part of his testimony would support the claim that he conceived the invention, installed a structure or structures in the Heling farm barns, prior to the time when Olson had done any work at all. That is to say, he claims that he first conceived the idea in the spring of 1916, and reduced it to practice in the early fall. The other aspect of his proof suggests that at whatever time he conceived the invention, it was not

reduced to practice by the making of a model or a structure until at or after filing his application for a patent.

* * * * * * *

* * * The infirmities upon either of the aspects of the plaintiff's case respecting his alleged earlier or later reduction to practice, grow out of the want of certainty in his own testimony, and also of true or substantial corroboration. It may be conceded that the plaintiff installed structures in the Heling barns, but upon the important matter of fixing the date of their manufacture and installation, his proofs failed utterly. Witnesses called to establish the facts of installation, declined to even attempt to fix a date with precision; not a particle of corroborating evidence respecting the place, the time of manufacture, or the name, of a manufacturer of the whole or any part was offered; and when there was brought into the case rather clear proof of the making of a structure for the plaintiff by a founder at Beaver Dam, *after plaintiff had filed his application for patent*, it seemed entirely clear that this was the first structure ever perfected by the plaintiff.

And finally he said:

In this state of the proofs I have not the slightest hesitation in accepting the story of Olson and rejecting that of the plaintiff upon this question of actual prior inventorship through reduction to practice.

In view of this decision and of the detailed analysis of the testimony made by both the Examiner of Interferences and the Examiners in Chief it is not thought necessary to make another detailed analysis here of the testimony. It is sufficient to say that I find no error in the holdings of the lower tribunals of this Office as to the dates established by the respective parties.

It is to be noted that in his testimony in the interference Bogda claims to have made certain castings in July of 1916. This is based upon a record book of the Klipper Manufacturing Company, of Beaver Dam, Wis. In his testimony in the court case Bogda referred to this book and stated that, as the entry did not refer to stock-watering bowls, he could not say that such castings were made at that time; but in the interference he testified that they were, basing his testimony upon the testimony of one Scholz, who was employed by the Klipper Manufacturing Company in 1916.

As pointed out by the Examiners in Chief, not only does the entry itself make no reference to stock drinking bowls, but the weights of the castings stated in the entry show that they could not have been castings of the bowls. These weights correspond to castings for a horse-stall post ornament, which Bogda admitted were made about this time.

[3] Obviously the contention as to the entries in the books of the firm of Morsell, Keeney & French, predecessors of Bogda's present attorneys, is entitled to no weight. An attorney can not establish a fact by stating what some one told him and then asking another witness whether this is correct. If it was to be established that at the first of these dates appearing in the books of the attorneys indicating a visit to them by Bogda the invention was disclosed to Mr. French, the latter should have been called as a witness for Bogda. Certainly no unfavorable conclusion could be drawn from Olson's not calling him to rebut purely hearsay statements of the attorney.

Plainly it is not a sound proposition that evidence which would obviously be excluded as hearsay if the witness had testified that Mr. French told him something can become valid evidence by the attorney stating what Mr. French told him and asking the witness if that statement is correct.

Much stress is laid in the brief on the proposition that Olson abandoned the broad invention because he did not follow up the first form of the device which he made, but substituted therefor what he deemed a more acceptable form, the contention being that the first form was an abandoned experiment, that therefor Olson has lost his rights to the broad invention as stated in count 1.

The statute (sec. 4888 R. S.) requires that an applicant must furnish with his application a written description of the invention and in the case of a machine must explain the principle thereof "and the best mode" in which he has contemplated applying that principle.

[4] If the contention on behalf of Bogda is correct, then it would mean that any inventor could improve the original form of his invention only at his peril and that he must either file an application for patent disclosing the first crude form which he has devised or run the risk of being held to have lost his rights to the broad invention in view of the work of a later inventor. Obviously such a proposition is supported neither by principle nor by precedent and to state it is its own answer.

[5] It is further contended that Olson lost his rights by failing to promptly copy claims of the Bogda patent after that patent was called to his attention by the Primary Examiner. The claims were presented within less than two years from the date of the issuance of the Bogda patent. Within that time suit had been brought on the Bogda patent and that Olson was the first inventor was set up as a defense. In no way whatever was Bogda prejudiced by the fact that Olson did not *immediately* demand an interference when he knew that the Bogda patent had issued. Bogda had been put on notice that Olson was claiming to be the inventor and had filed an application for patent. Not only were the claims made within the two years' limit laid down in the decision of the Supreme Court in *Chapman and Chapman* v. *Wintroath*, 272 O. G. 913; 1920 C. D. 465; 252 U. S. 126, but Bogda had been put on notice long before that time by the defense set up in the suit brought on his patent.

As no error is found in the decisions of the lower tribunals that Olson was the first inventor of the invention set out in all three counts, the decision of the Examiners in Chief awarding priority to Olson is affirmed.

Court of Appeals of the District of Columbia.

HOOVER *v.* REPLOGLE.

No. 1,711. Decided February 2, 1925.

1. INTERFERENCE—ISSUE—RIGHT TO MAKE CLAIMS—READING LIMITATION INTO CLAIMS.

Where the claims in an interference are not limited to a "low-down" vacuum cleaner, but merely recite relative arrangement of parts which may be employed in any cleaner, H.'s contention that his device involves a low-down construction not present in R.'s device and that R. has no right to make the claims can not be sustained.

2. SAME—SAME—SAME.

The common axes of the fan and motor in R.'s structure being downwardly and rearwardly inclined when the cleaner is in its normal upright position, H.'s contention that they can not be said to be downwardly and rearwardly inclined, and that R. has no right to make the claims is erroneous.

APPEAL from Patent Office. Affirmed.

Mr. John S. Barker and *Mr. D. M. Carter* for Hoover.

Mr. D. B. Replogle, pro se.

Before MARTIN, Chief Justice, ROBB, Justice, and BARBER, Judge U. S. Court of Customs Appeals.

ROBB, *J.:*

Appeal from a decision of the Patent Office awarding priority of invention to the senior party Replogle.

It is the contention of appellant Hoover that Replogle has no right to make the claims, which read as follows:

1. A suction cleaner casing, in combination with a fan and motor, their common axes downwardly and rearwardly inclined.

2. A suction cleaner having a suction chamber, a fan chamber and a motor arranged in the order indicated from front to rear, the common axes of fan and motor downwardly and rearwardly inclined.

[1] Hoover's contention is that his device involves a low down construction, not present in Replogle's device, and that the common axes of the fan and motor in Replogle can not be said to be downwardly and rearwardly inclined. As pointed out by the Law Examiner, and by the Assistant Commissioner, these claims are not limited to a "low down" cleaner, but merely recite relative arrangement of parts which may be employed in any cleaner.

[2] As to the second contention, we agree with the Law Examiner and Assistant Commissioner that the common axes of the fan and motor in Replogle's structure are downwardly and rearwardly inclined when the cleaner is in its normal or upright position.

Since the opinion of the Assistant Commissioner contains a full and satisfactory discussion of the questions involved, we adopt it and affirm the decision.

Affirmed.

Court of Appeals of the District of Columbia.

HOOVER *v.* KIRBY ET AL.

No. 1,712. Decided February 2, 1925.

INTERFERENCE—ISSUE—RIGHT TO MAKE CLAIMS.

For reasons stated in *Hoover* v. *Replogle ante*, case No. 1,711, *Held* that K. and R. have a right to make the claims.

APPEAL from Patent Office. Affirmed.

Mr. John S. Barker and *Mr. D. M. Carter* for Hoover.

Mr. D. B. Replogle for Kirby et al.

Before MARTIN, Chief Justice, ROBB, Justice, and BARBER, Judge U. S. Court of Customs Appeals.

ROBB, *J.:*

This interference involves substantially the same question determined in the preceding interference No. 1,711, just decided, and was so considered by the Patent Office. For the reasons stated in the other decision, we affirm the decision here.

Affirmed.

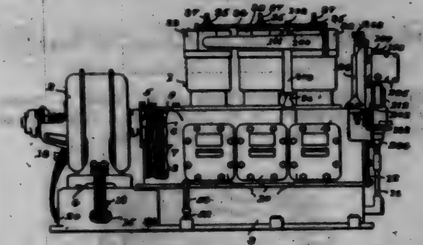
REISSUES

APRIL 7, 1925.

16,038. TURNING AND FACING LATHE. WILLIAM F. GRONE, Cincinnati, Ohio, assignor, by mesne assignments, to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a Corporation of Delaware. Filed Nov. 9, 1923. Serial No. 673,832. Original No. 1,398,115, dated Oct. 11, 1921, Serial No. 362,227, filed Mar. 1, 1920. 7 Claims. (Cl. 82—2.)

1. In a lathe the combination of a lathe bed having three sets of longitudinal ways, a carriage mounted in one of the ways, a turning tool support mounted upon the carriage, a facing tool carriage mounted in a second one of the ways and having a transverse way in it, a facing tool support mounted in the transverse way, means for imparting longitudinal movement to the first mentioned carriage and means for imparting transverse movement to the facing tool, comprising a carriage mounted in a third one of the ways, means for reciprocating said last mentioned carriage upon the lathe bed, an angularly adjustable slide mounted upon the last mentioned carriage, a shoe mounted upon the slide and means for transmitting the vertical movement of the shoe into a transverse movement of the facing tool support.



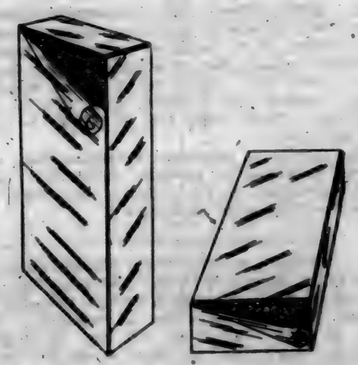
16,039. PROCESS OF PREPARING CHEESE. GOTTFRIED MEYER, St. Paul, Minn. Filed Jan. 8, 1925. Serial No. 1,325. Original No. 1,462,375, dated July 17, 1923, Serial No. 575,704, filed July 18, 1922. 6 Claims. (Cl. 99—11.)

1. The process of preparing cheese which consists in adding a milk fat containing product to already prepared cheese as a base, then mixing and heating the cheese and the product added thereto until the same assumes a stringy, doughlike or elastic appearance and subsequently working the mixture until the same assumes the required consistency.

16,040. PRODUCTION OF DIARYLGUANIDINES. JOHN YOUNG, Caldwell, N. J., and ELMER G. CROAKMAN, Buffalo, N. Y., assignors to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 3, 1925. Serial No. 6,666. Original No. 1,446,818, dated Feb. 27, 1923, Serial No. 574,297, filed July 11, 1922. 9 Claims. (Cl. 260—125.)

1. The method of producing diarylguanidines, which comprises subjecting an alcoholic, ammoniacal solution of a diarylthiourea to the action of lead oxide at a temperature below about 60 degrees C.

16,041. CONTROL SYSTEM FOR COMPRESSORS AND THE LIKE. BURTON S. AIKMAN, Whitefish Bay, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 10, 1923. Serial No. 679,810. Original No. 1,400,133, dated Dec. 13, 1921, Serial No. 169,997, filed May 21, 1917. 158 Claims. (Cl. 230—24.)

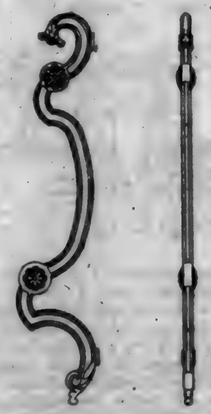


1. In combination, a driving motor, a control switch for the motor, a compressor, means for unloading said compressor and a hydraulic pressure system governing the control switch and the unloading means.

DESIGNS

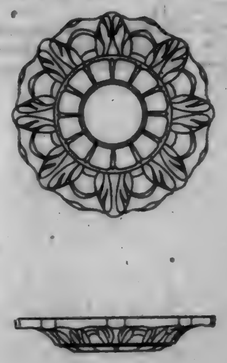
APRIL 7, 1925.

66,963. CARTON. ACHILLE BIENVENU, Montreal, Quebec, Canada. Filed Feb. 26, 1923. Serial No. 5,257. Term of patent 14 years.



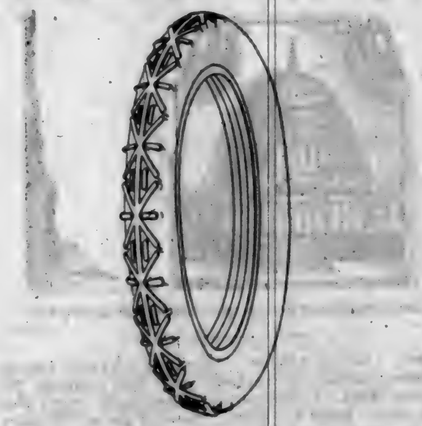
The ornamental design for a carton, as shown.

66,964. LIGHTING-FIXTURE ARM. JOHN A. BORHINGER, Springfield, N. Y. Filed Feb. 4, 1925. Serial No. 12,254. Term of patent 3½ years.



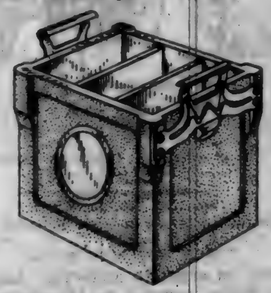
The ornamental design for a lighting-fixture arm, as shown.

66,965. LIGHTING-FIXTURE ARM. JOHN A. BORHINGER, Springfield, N. Y. Filed Feb. 4, 1925. Serial No. 12,255. Term of patent 3½ years.



The ornamental design for a lighting-fixture arm, as shown.

66,966. LAMP HUSK FOR LIGHTING FIXTURES. JOHN A. BORHINGER, Springfield, N. Y. Filed Feb. 4, 1925. Serial No. 12,257. Term of patent 3½ years.



The ornamental design for a lamp husk for lighting fixtures, as shown.

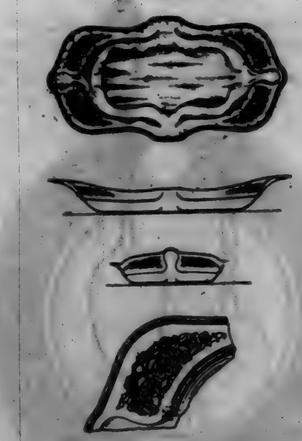
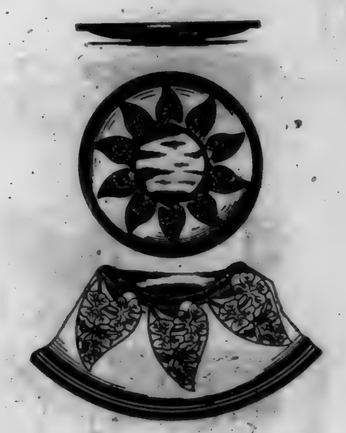
The ornamental design for a storage battery container substantially as shown.

66,969. METAL CASSEROLE HOLDER OR SIMILAR ARTICLE. SIMON W. FARBER, Brooklyn, N. Y. Filed Feb. 16, 1925. Serial No. 12,395. Term of patent 7 years.



The ornamental design for a metal casserole holder or similar article substantially as shown.

66,970. METAL CASSEROLE HOLDER OR SIMILAR ARTICLE. SIMON W. FARBER, Brooklyn, N. Y. Filed Feb. 16, 1925. Serial No. 12,396. Term of patent 7 years.

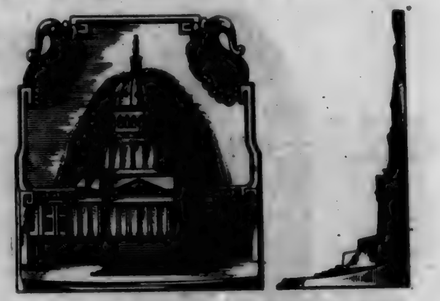


The ornamental design for a metal casserole holder or similar article substantially as shown.

66,971. METAL DISH OR SIMILAR ARTICLE. SIMON W. FARBER, Brooklyn, N. Y. Filed Feb. 16, 1925. Serial No. 12,397. Term of patent 7 years.

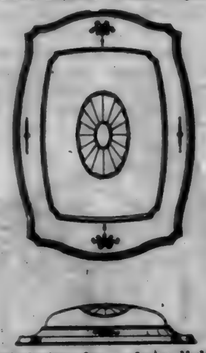
The ornamental design for a metal dish or similar article substantially as shown.

66,972. METAL DISH OR SIMILAR ARTICLE. SIMON W. FARBER, Brooklyn, N. Y. Filed Feb. 16, 1925. Serial No. 12,398. Term of patent 7 years.



The ornamental design for a metal dish or similar article substantially as shown.

66,973. SPOON OR SIMILAR ARTICLE. PETER J. GORDON, Sag Harbor, N. Y., assignor to Joseph Fahys & Co., New York, N. Y., a Corporation of New York. Filed June 17, 1924. Serial No. 9,889. Term of patent 14 years.



The ornamental design for a spoon or similar article, as shown.

66,974. BOOK END. JACK KATZ, New York, N. Y. Filed Jan. 7, 1925. Serial No. 11,953. Term of patent 3½ years.

The ornamental design for a book end, as shown.

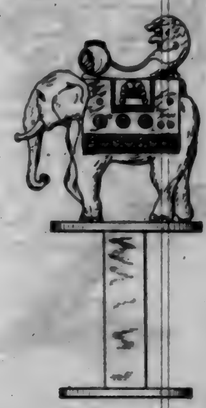
66,975. DOME LIGHT. ARCHER L. KNAPP, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 7, 1925. Serial No. 12,292. Term of patent 3½ years.

The ornamental design for a dome light, as shown.

66,976. SPOON OR SIMILAR ARTICLE. JOHN LESCH, Bridgeport, Conn., assignor to International Silver Company, Bridgeport, Conn., a Corporation of New Jersey. Filed Nov. 22, 1924. Serial No. 11,455. Term of patent 7 years.

The ornamental design for a spoon or similar article substantially as shown.

66,977. ELECTRIC-LIGHT BOWL. JOSEPH MARKEL, Buffalo, N. Y. Filed July 30, 1923. Serial No. 6,900. Term of patent 7 years.

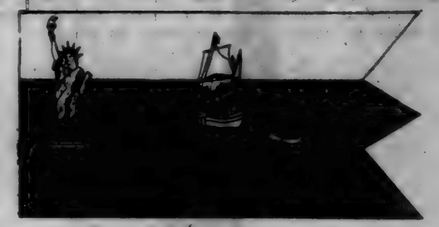


The ornamental design for an electric-light bowl, as shown.

66,978. DOORKNOB. BERENT MARTIN, San Francisco, Calif. Filed Apr. 15, 1924. Serial No. 9,284. Term of patent 3½ years.

The ornamental design for a doorknob, as shown.

66,979. RADIOCABINET. CHARLES METZ-METZETTI, New York, N. Y. Filed Dec. 5, 1924. Serial No. 11,594. Term of patent 3½ years.



The ornamental design of a radiocabinet, as shown.

66,980. CHAIR. SYDNEY PAUL, Lima, Ohio, assignor to Superior Motor Coach Body Co., Lima, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,209. Term of patent 14 years.

The ornamental design for a chair, substantially as shown.

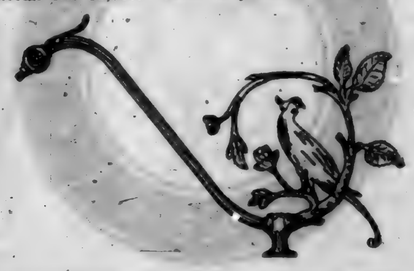
66,981. FLAG. DAVID PEREZ and HENRIETTA E. PEREZ, Buffalo, N. Y. Filed Jan. 29, 1925. Serial No. 12,192. Term of patent 3½ years.

The ornamental design for a flag, as shown.

66,982. PLATE OR SIMILAR ARTICLE. JOHN E. PHILLIPS, Chicago, Ill., assignor to Albert Pick & Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 28, 1924. Serial No. 11,506. Term of patent 14 years.

The ornamental design for a plate or similar article as shown.

66,983. PLATE OR SIMILAR ARTICLE. JOHN L. PHILLIPS, Chicago, Ill., assignor to Albert Pick & Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 28, 1924. Serial No. 11,507. Term of patent 14 years.



The ornamental design for a plate or similar article, as shown.

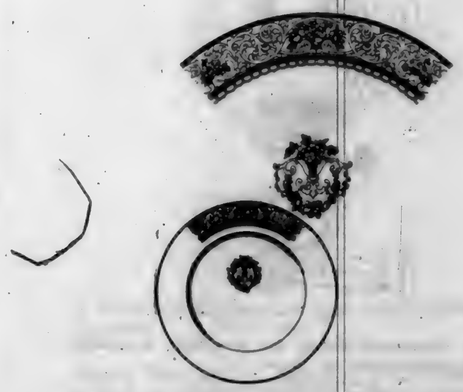
66,984. SPOON OR SIMILAR ARTICLE. ADOLPH H. REIMHERR, Providence, R. I. Filed Feb. 9, 1925. Serial No. 12,317. Term of patent 14 years.

The ornamental design for a spoon or similar article as shown.

66,985. BRACKET FOR LIGHTING FIXTURES. JACOB RIBAYSEN, Chicago, Ill. Filed Dec. 22, 1924. Serial No. 11,760. Term of patent 7 years.

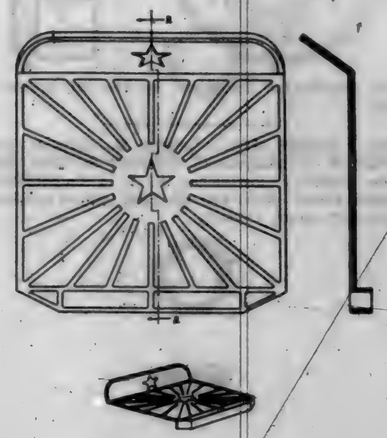
The ornamental design for a bracket for lighting fixtures, as shown.

66,986. VANITY CASE. JACOB RITTER, New York, N. Y. Filed Mar. 15, 1923. Serial No. 5,480. Term of patent 3½ years.



The ornamental design for a vanity case, as shown.

66,987. LIGHTING-FIXTURE ARM. HERMAN A. SAPION, New York, N. Y. Filed Feb. 4, 1925. Serial No. 12,258. Term of patent 3½ years.



The ornamental design for a lighting-fixture arm, as shown.

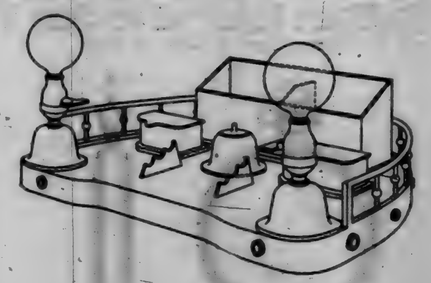
66,988. CHINA PLATE OR SIMILAR ARTICLE. HANS SCHIEFFNER, Selb, Germany, assignor to The Rosenthal China Corporation, New York, N. Y. Filed Apr. 20, 1923. Serial No. 5,868. Term of patent 7 years.

The ornamental design for a china plate or similar article as shown.

66,989. STEP PLATE. JOHN SEYS, Grand Rapids, Mich. Filed May 7, 1923. Serial No. 6,088. Term of patent 3½ years.

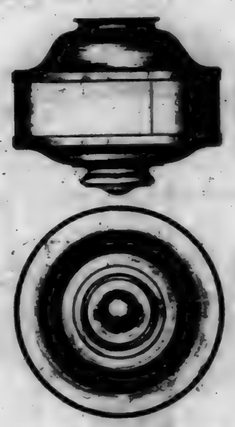
The ornamental design for a step plate, substantially as shown.

66,990. LINGERIE CLIP. MARK TAPPEL, London, England. Filed Jan. 2, 1925. Serial No. 11,855. Term of patent 14 years.



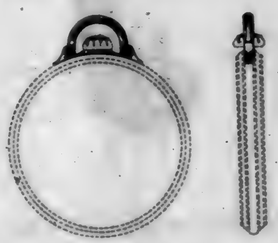
The ornamental design for a lingerie clip as shown and described.

66,991. HAND TELEPHONE. GEORGE K. THOMPSON, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 31, 1923. Serial No. 8,197. Term of patent 14 years.



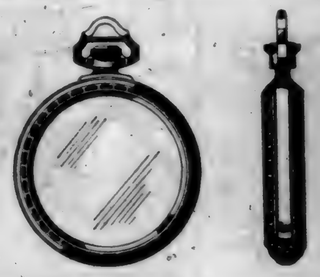
The ornamental design for a hand telephone, as shown

66,992. WRITING SET. PETRO TRABARA, Benton Harbor, Mich. Filed Dec. 13, 1924. Serial No. 11,696. Term of patent 14 years.



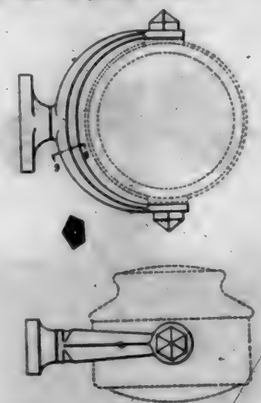
The ornamental design for a writing set, as shown.

66,993. LIGHTING GLOBE. CHARLES E. VERHUNCE, Winnetka, Ill. Filed May 4, 1923. Serial No. 6,059. Term of patent 3½ years.



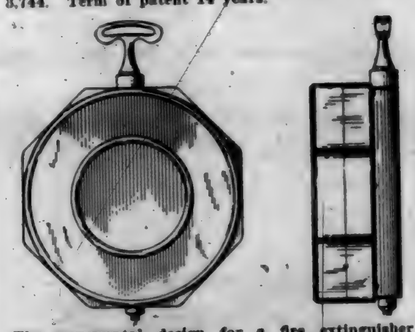
The ornamental design for a lighting globe as shown.

66,994. WATCHCASE APPENDAGE. ARTHUR W. WADSWORTH and ARTHUR P. CONANT, Fort Thomas, Ky., assignors to The Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed Nov. 21, 1924. Serial No. 11,434. Term of patent 14 years.



The ornamental design for a watchcase appendage, substantially as shown.

66,995. WATCHCASE. ARTHUR W. WADSWORTH and ARTHUR P. CONANT, Fort Thomas, Ky., assignors to The Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed Nov. 21, 1924. Serial No. 11,438. Term of patent 14 years.



The ornamental design for a watchcase, substantially as shown.

66,996. VEHICLE SEARCHLIGHT BRACKET. FREDERIK G. WHITTINGTON, Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Feb. 13, 1922. Serial No. 684. Term of patent 14 years.

The ornamental design for a vehicle searchlight bracket, substantially as shown.

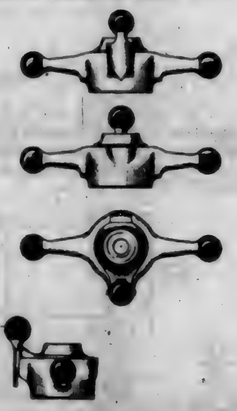
66,997. FIRE EXTINGUISHER. PETER L. WILBUR, Tuckahoe, N. Y. Filed Sept. 16, 1922. Serial No. 3,744. Term of patent 14 years.

The ornamental design for a fire extinguisher as shown.

66,998. WATCHCASE. GEORGE D. MOYLAN, Providence, R. I., assignor to American Standard Watch Case Company, Providence, R. I., a Corporation of Rhode Island. Filed Feb. 12, 1925. Serial No. 12,358. Term of patent 7 years.

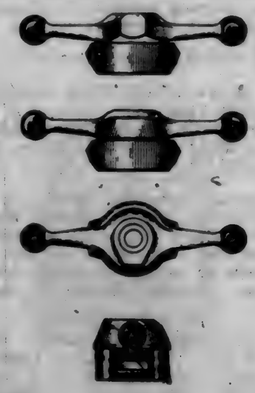
The ornamental design for a watchcase, substantially as shown.

66,999. WATCHCASE. GEORGE D. MOYLAN, Providence, R. I., assignor to American Standard Watch Case Company, Providence, R. I., a Corporation of Rhode Island. Filed Feb. 12, 1925. Serial No. 12,359. Term of patent 7 years.



The ornamental design for a watchcase, substantially as shown.

67,000. WATCHCASE. GEORGE D. MOYLAN, Providence, R. I., assignor to American Standard Watch Case Company, Providence, R. I., a Corporation of Rhode Island. Filed Feb. 12, 1925. Serial No. 12,360. Term of patent 7 years.

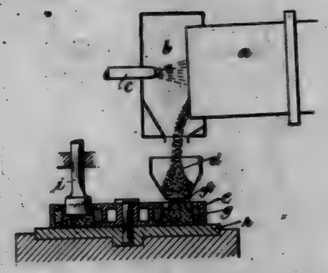


The ornamental design for a watchcase, substantially as shown.

67,001. RADIATOR CAP. LAURENCE A. SWEET, Los Angeles, Calif. Filed Aug. 27, 1923. Serial No. 7,008. Term of patent 14 years.

The ornamental design for a radiator cap, substantially as shown.

67,002. RADIATOR CAP. LAURENCE A. SWEET, Los Angeles, Calif. Filed Jan. 23, 1924. Serial No. 8,380. Term of patent 14 years.



The ornamental design for a radiator cap, substantially as shown.

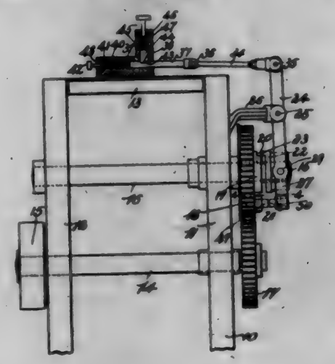
PATENTS

GRANTED APRIL 7, 1925.

1,532,113. PROCESS OF AGGLOMERATING ORE AND THE LIKE. NIKOLAI AHLMANN, Copenhagen, Denmark. Filed Oct. 20, 1922. Serial No. 595,858. 1 Claim. (Cl. 75—73.)

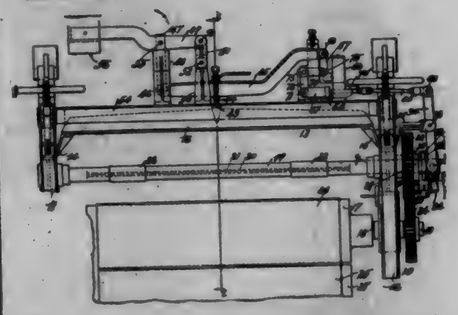
The process of agglomerating pulverous ore which consists in heating the pulverous material to a temperature less than the sintering temperature and then subjecting the heated material to pressure to form a coherent, porous mass.

1,532,114. PROCESS FOR THE TREATMENT OF FABRICS AND THE LIKE. RAYMOND F. BACON, New York, and CLEO H. KIDWELL, New Brighton, N. Y., assignors to John M. Van Heusen, Boston, Mass. Filed Mar. 16, 1922. Serial No. 544,320. 6 Claims. (Cl. 8—20.)



1. The method of selvedging multiple ply interwoven cotton fabric which consists in treating those portions thereof to be selvedged with an acid solution comprising 73 to 75 per cent by weight of sulphuric acid for a period of about one minute at ordinary room temperature, and then completely removing the acid.

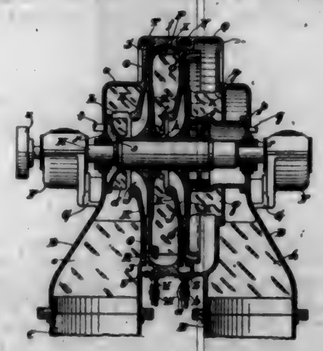
1,532,115. TYPEWRITING MACHINE. BENJAMIN F. BARKER, El Paso, Tex., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 14, 1922. Serial No. 543,636. 19 Claims. (Cl. 197—194.)



1. A slide-device for ascertaining the scale position on a typewriting machine of the initial character of any writing to be centered between any given readings on the scale of the typewriting machine, having in fixed position thereon a scale, the graduations of which are numbered as on the letter-space scale of the typewriting machine, and the slide of which is a continuous tape having a front and a rear reach, the front reach of which bears a scale, the graduations of which are similarly numbered, but in the reverse direction, and are at letter-space distances apart and at twice the distance apart of the graduations on the fixed scale.

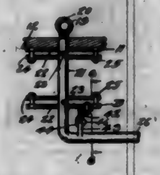
1,532,116. CLUTCH. EDWARD C. BATCHELDER, Portsmouth, N. H., assignor to Morley Button Manufacturing Company, Portsmouth, N. H., a Corporation of Maine. Filed Oct. 19, 1923. Serial No. 669,459. 9 Claims. (Cl. 192—33.)

1. A clutch comprising two interlocking members, means to rotate one of said members, a rotatable shaft, the other of said members being non-rotatably mounted on said shaft, shifting means adapted to move one of said members into interlocking engagement with the other and a contact member pivoted on one of said clutch members and with an eccentrically disposed contact face thereon adapted to engage said shifting means and move one of said clutch members out of engagement with the other.



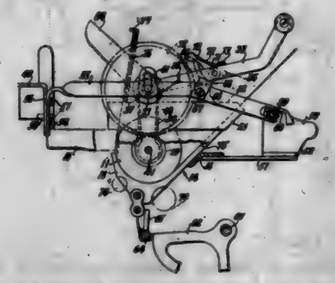
1,532,117. SEVERING MECHANISM FOR WET-PAPER MACHINES. EDWARD C. BATCHELDER, Portsmouth, N. H., assignor to Morley Button Manufacturing Company, Portsmouth, N. H., a Corporation of Maine. Filed Oct. 19, 1923. Serial No. 669,460. 16 Claims. (Cl. 92—67.)

1. A wet paper machine having, in combination, a make-up roll, a paper feed belt, a guide roll for said belt coacting with said make-up roll, a rotatable cutter adapted to coact with said make-up roll, a slide frame upon which said make-up roll and rotary cutter are



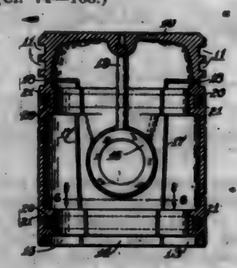
rotatably mounted and mechanism actuated by the movement of said slide frame away from said guide roll for automatically operating said cutter to sever the paper on said make-up roll.

1,532,118. TAR EXTRACTOR. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 26, 1924. Serial No. 709,113. 1 Claim. (Cl. 183—77.)



A combined exhauster and tar extractor for gas comprising a casing, an impeller rotatably mounted in said casing, a diffuser extending radially from said impeller and curved at its outer end, an annular chamber in said casing adjacent said diffuser and a slot in alignment with the radially extending portion of said diffuser adjacent said curved end and leading into said annular chamber whereby tar is projected from said diffuser into said slot.

1,532,119. SAFETY APPLIANCE FOR RAILWAY TRAINS. EDWARD W. BOULDEN and CHARLES J. COWLES, Sioux City, Iowa. Filed Apr. 7, 1924. Serial No. 704,765. 2 Claims. (Cl. 246—190.)

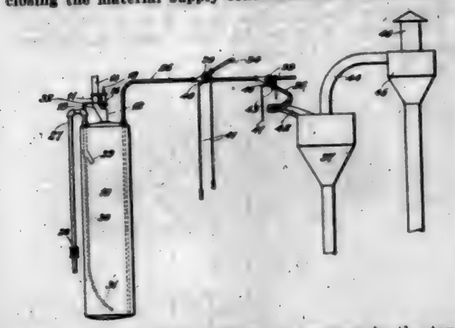


1. In combination with a locomotive having a cab, an air brake system, an auxiliary release valve connected with said brake system and disposed within the cab, an actuating shaft operatively connected with said valve and extending through the cab, means to support said shaft, including spaced brackets provided with openings to receive said shaft, friction plates secured to the brackets by means capable of adjusting the plates toward the brackets, said plates being provided with openings to register with the openings in the brackets, friction pins secured in the shaft and engaged between the respective plates and brackets, the shaft being provided with a crank lever extending beyond the cab and adapted to be actuated by contact with a member external of the locomotive, elements fixed to the bracket and crank lever, respectively, adapted to register and receive a sealing strip when the valve is closed, and a sealing strip connecting said elements and adapted to be broken when the crank lever is moved.

1,532,120. TYPEWRITING MACHINE. WILLIAM O. BRYANT, Los Angeles, Calif., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 27, 1921. Serial No. 510,772. 8 Claims. (Cl. 197—117.)

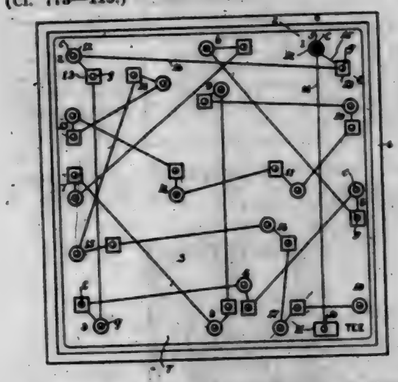
1. In a typewriting machine, in combination, a platen, a platen-axle, a platen-frame in which said axle is journaled, a carriage in which said platen-frame is mounted, case-shift mechanism for shifting said platen-frame, a pinion on one end of said platen-axle to rotate the same, a gear-supporting member extending outwardly from the platen-frame parallel to said axle, a gear on said member to mesh with said pinion, means for actuating said gear, and a guide fastened on said carriage and having a slot to receive the outer end of said gear-supporting member so as to guide it during case-shift movements.

1,532,121. PISTON. CHARLES R. BUTLER, Indianapolis, Ind. Filed Apr. 17, 1922. Serial No. 553,424. 21 Claims. (Cl. 74—108.)



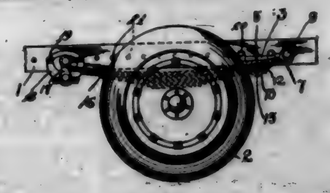
1. A metal piston, having a skirt which is divided into a plurality of separated segments, and one or more continuous rings of a metal having a smaller coefficient of expansion than that of the metal of which the piston is made, said rings being located in the wall of said skirt with piston metal against them both radially inward and radially outward thereof, there being one such ring near the head end of the skirt.

1,532,122. PNEUMATIC CONVEYING APPARATUS AND THE LIKE. VIRGINIUS Z. CARACRISTI, Bronxville, N. Y., assignor to Locomotive Pulverized Fuel Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 3, 1919. Serial No. 287,157. 4 Claims. (Cl. 302—55.)



1. A system for transporting comminuted materials comprising, in combination, a material receiving tank, a material supply connection therefor, a valve controlling said supply connection, a material outlet pipe, means for supplying pressure fluid to the tank to discharge the material through the outlet pipe, and means actuated by a portion of the pressure fluid taken from the supply

line before delivery into the tank for automatically closing the material supply connection valve prior to the

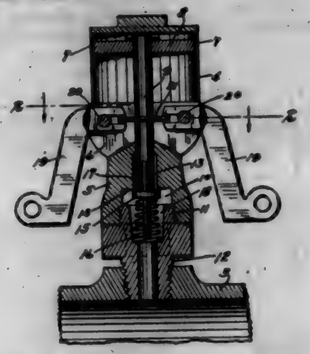


accumulation of effective discharge pressure in the tank whereby escape of the pressure fluid through the material supply connection is prevented.

1,532,123. GAME. DAVID B. CONKLIN, Brooklyn, N. Y. Filed Nov. 24, 1923. Serial No. 676,764. 6 Claims. (Cl. 273—115.)

1. A game board comprising a ball, and a flat base provided with a plurality of depressions arranged in pairs, the depressions of each pair being closely adjacent to each other; said base being also provided with lines connecting the depressions in series; said lines passing from each depression of a pair to the other depression of the same pair, and from one depression of each pair to a depression not of the same pair therewith.

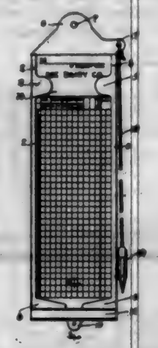
1,532,124. COMPENSATING LOAD-CARRYING DEVICE. ALBERT EUGENE COOK, Evanston, and THOMAS VAN TUYL, Kankakee, Ill.; said Van Tuyl assignor to said Cook. Filed Nov. 15, 1922. Serial No. 601,048. 4 Claims. (Cl. 267—54.)



1. The combination with a motor truck chassis frame, of shackles supported thereon, springs having the front ends thereof supported on said shackles, housings secured to the sides of the rear portion of said frame, studs supported in said housings, said springs having the rear ends thereof engaged on said studs, and plates formed on said housings above the rear portions of the springs adapted to be contacted by said springs to permit said springs to compensate for heavy loads when carried by the truck.

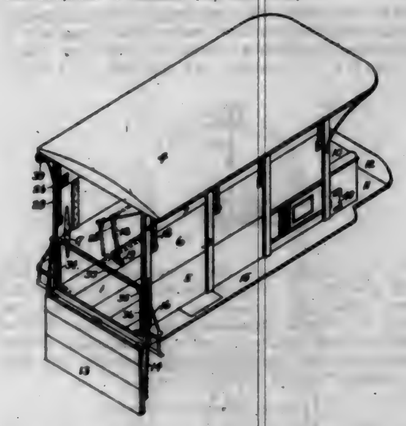
1,532,125. DEVICE FOR FIRING EXPLOSIVES BY ELECTRICITY. ALEXANDER DJIDICS, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 21, 1924. Serial No. 751,281. 5 Claims. (Cl. 102—10.)

2. An electrically fired match comprising a flat plate of insulating material constituting a base, a pair of metallic plates, the outer edges of which are engaged about the outer edges of the base and the inner edges of which are engaged with the edges of an opening formed through said base.



1,532,126. RELEASE RELIEF VALVE FOR AIR-BRAKE SYSTEMS. HARTWELL L. EDRIDGE, Minneapolis, Minn. Filed Mar. 14, 1924. Serial No. 699,214. 5 Claims. (Cl. 303—80.)

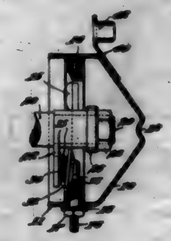
1. A relief valve comprising a valve casing having a valve seat and a primary relief port connected therewith, a cylinder having a lateral secondary relief port, a piston working in said cylinder, normally closing said secondary relief port, an air passage opening into said primary relief port and leading to the outer end of the cylinder, the initial opening movement of said check valve serving to admit air to the outer end of said cylinder and the air thus admitted serving to move said piston into a position to open said secondary relief port and hold said check valve in a position to keep said primary relief port open until the pressure of air in said valve casing has been reduced toward atmospheric pressure.



1,532,127. CARD HOLDER. ROSALIE N. ELLIOTT, Evanston, Ill. Filed Mar. 7, 1923. Serial No. 623,852. 1 Claim. (Cl. 40—16.)

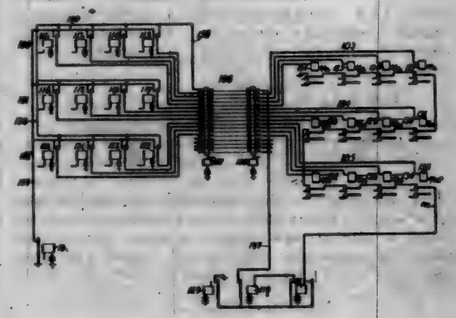
A milk card holder comprising, in combination, a body, inturned lips along opposite edges of said body, integral lugs extending out from said lips to bear against the surface of an inserted card and hold the same in place, a positive abutment across the bottom edge of the in-

serted card rendering said edge inaccessible for purposes of removal, and shields extending across the major portion of the face of the card just above its lower edge to prevent buckling.



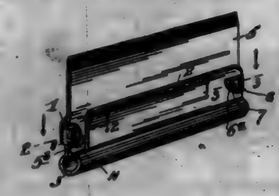
1,532,128. CONVERTIBLE VEHICLE. JOHN P. FLETCHER, U. S. Army. Filed Nov. 24, 1923. Serial No. 676,768. 7 Claims. (Cl. 296—19.)

1. In a vehicle of the class described the combination with a body; of a side closure collapsible intermediate its longitudinal edges to form upper and lower units normally disposed with their adjacent edges in abutting relation, means pivotally interconnecting the upper portions of the respective units to permit adjustment of one unit to a horizontal and the other to a plane inclined with respect to the horizontal and means to effect securement of the respective units in their adjusted position.



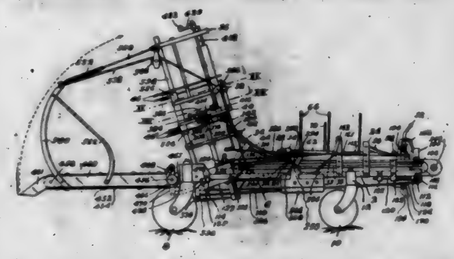
6. In a vehicle of the character described the combination with a body including a floor, top and side closures collapsible intermediate their longitudinal edges; of means pivotally interconnecting the upper edges of the units of the respective side closures to enable the lower units to be horizontally positioned with their longitudinal edges in adjacent relation and the upper units in the position initially occupied by the lower units, to a stretcher deck with side units disposed at its longitudinal edges and means for securing the units in adjusted position.

1,532,129. COMMUTATOR. EDWARD A. FRISS, Dorchester, Mass., assignor, by mesne assignments, to Francis J. V. Dakin, Boston, Mass. Filed Feb. 5, 1921. Serial No. 442,685. 7 Claims. (Cl. 200—24.)



4. In a commutator, the combination of a plurality of fixed contacts set in a ring of insulating material, a rotatable member and a disc contact carried by said rotatable member for slidably engaging said fixed contacts; said disc contact being loosely mounted to permit tilting in all directions.

1,532,130. CONTROLLING MECHANISM. OWEN C. FROM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 5, 1924. Serial No. 690,707. 6 Claims. (Cl. 179—18.)

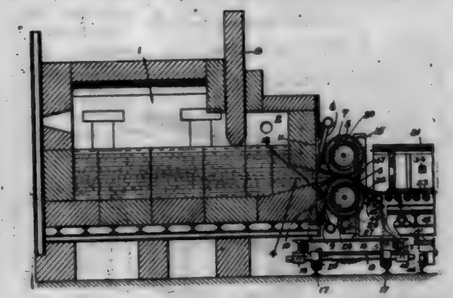


1. In combination, a plurality of register devices for receiving records, electrical contacts on said devices, a second plurality of registers, means for transferring a record from the first registers to the second registers, and means including said contacts for determining if the record has been transferred correctly.

1,532,131. RAZOR-BLADE HOLDER. HENRY J. GAISMAN, New York, N. Y. Filed Sept. 22, 1921. Serial No. 502,392. 1 Claim. (Cl. 30—12.)

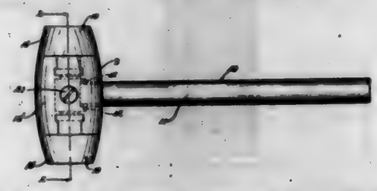
A blade holder comprising a pair of spaced jaws, one of said jaws having a recess and the other jaw having a stop formed from the material of said jaw and extended along said jaw partly within said recess of the other jaw and partly in line with the space between the jaws, said stop having a cam-like inner edge opposing said space to engage a blade in said space.

1,532,132. GRAIN SHOCKER. RAY B. GAUNT, Breckenridge, Mo. Filed Sept. 26, 1921. Serial No. 503,304. 57 Claims. (Cl. 56—405.)



1. In a machine of the character described, the combination with a portable supporting frame, of cooperating shock forming arms mounted thereon, reciprocatory means for conducting bundles of grain to said shock forming arms and raising said bundles, a lower set of packers for alternately forcing the bundles into opposite sides of the shock forming arms, an upper set of packers cooperating with the lower set in forcing the bundles into the shock forming arms, and mechanism for opening the shock forming arms to discharge the completed shock therefrom.

1,532,133. STRAINER FOR COOKING VESSELS. FRANK GAWRONSKI, Chicago, Ill. Filed Feb. 18, 1924. Serial No. 693,439. 3 Claims. (Cl. 53—8.)



1. A device of the class described comprising a disk, and adjustable means thereon for gripping a vessel, including a pair of bars slidably mounted on said disk and having overlapping adjacent ends formed with longitudinal slots, and means for clamping said ends to the said disk.

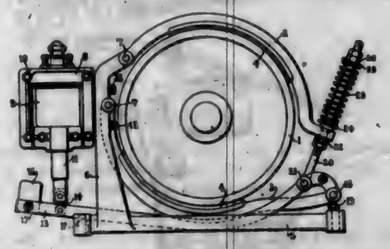
1,532,134. METHOD AND APPARATUS FOR MAKING SHEET GLASS. FREDERICK GELSTHARP, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed June 12, 1922. Serial No. 567,581. 8 Claims. (Cl. 49—33.)

8. Apparatus for forming sheet glass, comprising a receptacle containing a bath of molten glass and having an outlet passage through its wall below the surface of the glass, a pair of fluid cooled rolling members spaced apart with the space therebetween adjacent the passage and in opposition thereto, a pair of lip members at the outer end of the passage projecting between the rolling members and serving as shields for the rolling members to reduce the area of contact between such rolling members and the glass, and means for rotating at least one of the rolling members to govern the speed of movement of the glass therebetween.

1,532,135. SECTIONAL HAMMER. WILLIAM H. GIBBS, Milwaukee, Wis. Filed Feb. 11, 1924. Serial No. 692,000. 4 Claims. (Cl. 145—36.)

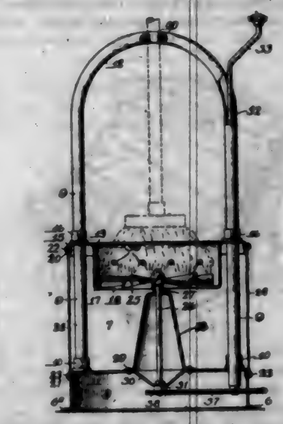
4. A sectional hammer, comprising a handle formed with lips at one end thereof, a pair of complementary head sections formed with complementary grooves, a pair of contact ends, and means for clamping the lipped end of the handle and the contact ends in position within said grooves and between said head sections, the lips on said handle cooperating with the sides of said grooves to prevent longitudinal movement of the handle.

1,532,136. METHOD AND STRUCTURE FOR ANALYTICAL MEASURING OF WEIGHTS. ERNEST L. GRAY, New York, N. Y. Filed Nov. 3, 1921. Serial No. 512,512. 15 Claims. (Cl. 265—49.)



1. In a counter-poise, the combination of, a body portion providing an interior chamber; a cover for said chamber removably secured to the body portion and adapted to provide tightness for preventing chemical changes in said chamber; and a partitioning member manually removably insertible in said chamber and manually slidably movable therein.

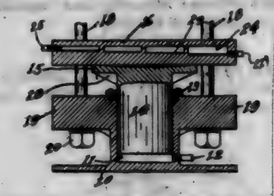
1,532,137. TIRE CARRIER. WALTER R. GREEN, Chicago, Ill. Filed Feb. 1, 1922. Serial No. 533,208. 8 Claims. (Cl. 224—29.)



1. In a tire carrier, a main tire carrier having a pivoted section, a supplemental carrier having a swingable section attached thereto, and hinged means for locking said supplemental carrier to the main carrier against swinging movement.

1,532,138. ELECTROMAGNETIC BRAKE. HOWARD E. HODGSON, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 12, 1924. Serial No. 705,088. 10 Claims. (Cl. 188—171.)

1. The combination with a brake drum and cooperating brake shoes of a weighted operating arm tending to move under the action of gravity towards a given position, means operatively connecting said arm to said shoes to provide for release of the latter upon movement of the former out of said given position and spring means tending to move said arm out of said given position and to effect setting of said brake shoes, said spring means being ineffective after a slight initial movement of said arm out of said given position.

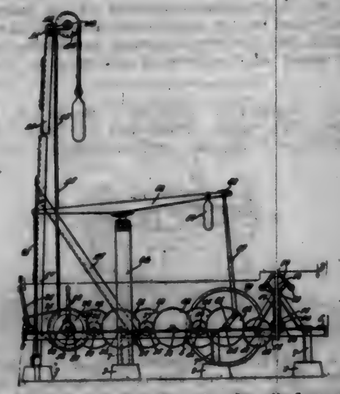


1,532,139. MOP CLEANER. HARRY H. HOOD, Chicago, Ill., assignor to Buford G. Lincoln, Chicago, Ill. Filed Dec. 29, 1920. Serial No. 433,808. 15 Claims. (Cl. 15—15.)

2. In a mop cleaner, the combination of a fan casing adapted to receive a mop therein and provided with bars to hold the mop, a dust collector chamber, a fan rotatably mounted in the fan casing for forcing a current of air through said casing to remove the dust from the mop and deposit it in said chamber, and means for operating said fan.

1,532,140. HYDRAULIC PRESS. EDWARD HUTCHENS, Milwaukee, Wis., assignor to Utility Manufacturing Company, Cudahy, Wis., a Corporation of Wisconsin. Filed Apr. 2, 1924. Serial No. 703,618. 4 Claims. (Cl. 18—17.)

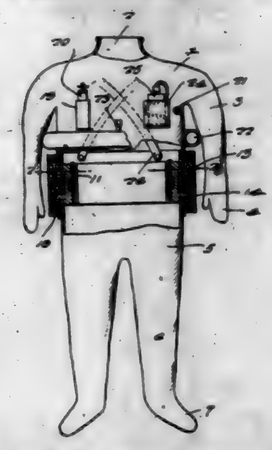
1. In a hydraulic press comprising a hydraulic cylinder and suitable press plates therefor, a ram having a working surface machined concave to normally contact the press plate around the periphery of the working



surface of the ram whereby deflection of the ram surface under maximum load will produce a surface of uniform contact between the ram and the press plate.

1,532,141. BRAKE BAND. PERCY GEORGE KENYON, Rochdale, England, assignor to Turner Brothers Asbestos Company Limited, Spotland, Rochdale, Lancaster, England. Filed May 10, 1924. Serial No. 712,202. 3 Claims. (Cl. 188—234.)

2. A brake band, comprising an envelope of fibrous material, and a metallic operating core passing through said envelope and provided with means within the envelope for gripping the same, the ends of said core extending outside of the envelope for attachment to brake-actuating mechanism.

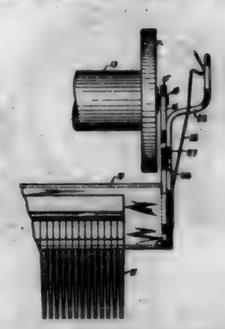


1,532,142. WEIGHT-MOTOR GOVERNOR. WILLIAM H. KIRER, Beggs, Okla. Filed July 17, 1923. Serial No. 652,138. 2 Claims. (Cl. 188—187.)

1. In a device of the character described, a governor including a shaft having a threaded portion, a driven wheel mounted on the shaft adjacent to the threaded portion and having a tapered bearing, a threaded cone operating on the threaded portion of the shaft, and adapted to move within the tapered bearing of the gear, an arm having connection with the cone, a vertically movable governor shaft, said arm having pivotal con-

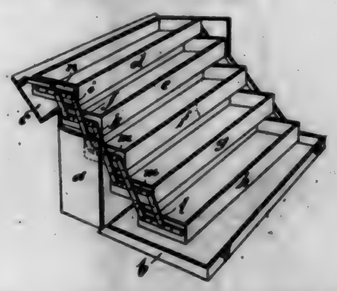
nection with the lower end of the governor shaft, and said arm adapted to be moved to operate the cone and increase friction between the cone and tapered bearing to retard the movement of the gear.

1,532,143. LIFE-PRESERVING SUIT. ANGELOS KURTIS, Brooklyn, N. Y. Filed Oct. 4, 1924. Serial No. 741,739. 2 Claims. (Cl. 9—20.)



2. In a life preserving suit comprising an inflatable jacket, hand coverings on the ends of the sleeves of the jacket, an inflatable trousers portion, foot coverings on the lower ends of the legs thereof, the adjacent ends of the jacket and trousers portion being arranged in overlapping relation, means encircling the waist line of the wearer for holding the jacket and trousers portion in air tight and water tight relation, said means comprising complementary sections detachably secured together at their respective ends and arranged on the inside of the suit, ribs on the outer face of said sections for engagement with the overlapping portions of the jacket and trousers, and a band extending around the waist line on the outside of the garment, means associated with the band for cooperation with the bulged portions of the overlapping portions of the jacket and trousers formed by the ribs on the complementary sections, said last mentioned means comprising rubber strips arranged on the inside of said band.

1,532,144. SHIPPING BASKET. HARRY C. LINK, Traverse City, Mich. Filed May 12, 1924. Serial No. 712,733. 5 Claims. (Cl. 217—124.)



1. In a receptacle, the combination of a body unit comprising staves and top and bottom hoops, a bottom unit comprising a rim and crossed slats secured thereto, said bottom unit being adapted to be disposed within the bottom hoop of said body unit, said body unit being provided with bendable fasteners engageable with said rim of said bottom unit for securing the same in position, and a cover unit comprising a rim and crossed outwardly bowed slats secured thereto, coacting as specified.

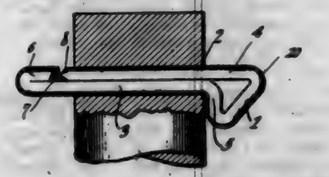
1,532,145. TUBE FRAME FOR AXMINSTER LOOMS. GEORGE DEWEY LOCKWOOD and WALTER H. WAKEFIELD, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 19, 1923. Serial No. 675,470. 7 Claims. (Cl. 139—10.)

4. In a tube frame for Axminster looms, a yarn tube supporting bar, a spool bearing member secured to the bar, means on said bar projecting beyond the spool bearing member and presenting a lifting edge, a detachable chain engaging member attached to said first named member, and a rib formed on said chain engaging member and lying under the lifting edge, and a chain hook member carried by said chain engaging member.

1,532,146. PORTABLE RECEPTACLE SUITABLE FOR CONTAINING AND DISPLAYING ARTICLES SUCH AS TRAVELERS' SAMPLES. CHARLES HENRY LYDE, Dorridge, England. Filed Sept. 14, 1921. Serial No. 500,593. 1 Claim. (Cl. 190—17.)

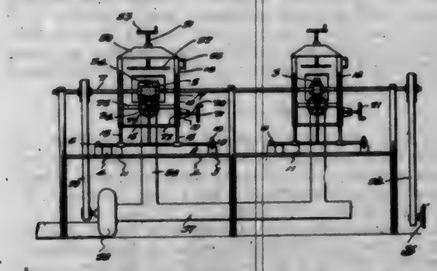
A case having a hinged lid, and also having a closure at one side, a plurality of superposed trays, lazy tongs links connecting said trays together, and links pivotally connected to the lid and also pivotally connected to the uppermost tray, whereby when the hinged lid is raised and turned in one direction the trays are moved in substantially opposite directions and arranged automatically in lateral offset relation to one another, and when said lid is closed the said trays are arranged entirely within the case and in vertical relation one immediately below another.

1,532,147. COMBINATION TOOL. KENNETH MACPHERSON, Nanton, Alberta, Canada. Filed Dec. 21, 1922. Serial No. 608,338. 2 Claims. (Cl. 7—8.)



1. A fence tool comprising two similar members recessed intermediate their ends for pivotal union with each other, the one member including a removable staple-pulling element inset on the outer face thereof,

a plier jaw, a hammer head, and a wire cutting edge; the other member including a removable staple-pulling



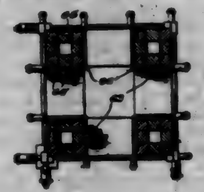
element similarly inset, a plier jaw, a claw element, and a wire cutting edge, said elements functioning in pairs upon co-action of the two members.

1,532,148. COTTER KEY. MACKEY K. MALONE, Wills Point, Tex., assignor of one-half to D. Leon Sanders, Wills Point, Tex. Filed Jan. 15, 1925. Serial No. 2,651. 3 Claims. (Cl. 74—8.)

1. A cotter pin having a pair of legs of different lengths with a bendable head connecting one end, the terminal of the longer leg being folded inwardly and arranged in alinement with the short leg, the meeting ends of said legs having abutting biting engagement whereby the body portion of the longer leg is bent laterally on the longitudinal movement of the shorter leg in one direction.

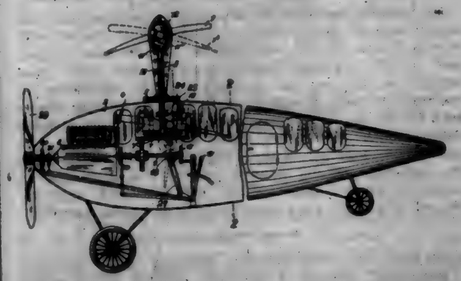
1,532,149. PAPER-EDGING MACHINE. BEN S. OLSON, St. Joseph, Mo. Filed Apr. 16, 1924. Serial No. 706,953. 4 Claims. (Cl. 92—68.)

1. A machine for decollating paper comprising a frame, standards slidably mounted upon the frame, manually operable means for moving the standards along the frame, a platform mounted for vertical movement upon the standards, means carried by the platform and adapted to be manually operated for raising and lowering the platform along the standards, a cutting element journaled for rotation above the platform and having a series of radially disposed cutting blades and means for securing a stack of sheets upon the platform.



1,532,150. PIPE LIFTER. HARALD T. OLSON, Elsie, Nebr. Filed May 20, 1924. Serial No. 714,674. 1 Claim. (Cl. 294—86.)

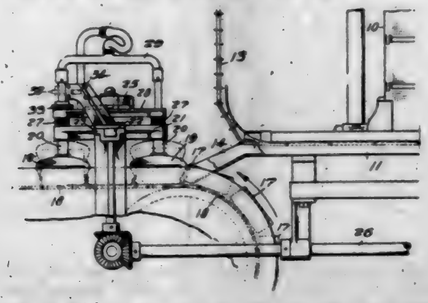
A pipe lifter comprising a shank, a reducing nipple threaded on the lower end thereof, a pipe engaging member carried by the reducing nipple, a sleeve threaded on the upper end, a packing nut threaded into the upper end of said sleeve and spaced from the upper edge of the shank, a swivel member, the lower end thereof being



reduced and extending through said packing nut, and a head on the reduced end of the swivel member, disposed between the packing nut and the upper end of the shank.

1,532,151. HOIST CONSTRUCTION. JOHN W. OSTRANDER, Madison, Wis. Filed Jan. 31, 1924. Serial No. 689,725. 4 Claims. (Cl. 212—144.)

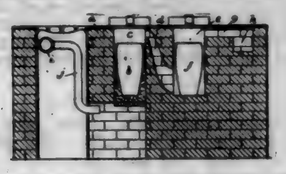
1. A structural beam composed of a plurality of longitudinal members, spacers between said members, clamping devices bearing against the outlet faces of said members and said spacers and encircling the same, said clamping devices being slidably engaged one with another, and means fitted to said devices to effect longitudinal movement of the several devices and bind them around the beam.



1,532,152. FLYING MACHINE. ERICH OTTO, Stettin-Podejuch, Germany. Filed Apr. 29, 1924. Serial No. 709,936. 3 Claims. (Cl. 244—15.)

1. A flying machine of the character described comprising a fuselage, a rotatable mast surmounting said fuselage, a pair of horizontal, coaxial shafts held rotatably by said mast, carrying planes connected to said

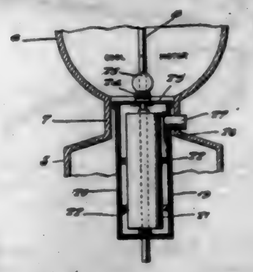
shafts, means for rotating the mast, means for pitching the planes about the shafts so that they will act as a lifting propeller when the mast is rotated, a pair of horizontal, coaxial shafts held rotatably in the fuselage, carrying planes connected to said latter shafts, and means for adjusting said latter shafts rotatively for varying the angular position of their planes.



1,532,153. MATCH-BOX-FILLING MACHINE. TOM A. PALMER, Akron, Ohio. Filed June 30, 1924. Serial No. 723,320. 11 Claims. (Cl. 226—11.)

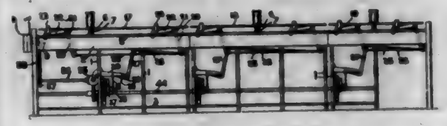
7. The combination of the filler trough of a match machine, means for guiding boxes to be filled and means receiving matches from the trough and movable between the trough and boxes for transferring matches from the trough to the boxes in successive layers, the matches of successive layers being delivered by said transfer means in reverse position as to the heads thereof.

11. The combination of means for moving slender articles in parallel order in a direction crosswise of their length, a support for boxes or receptacles, and pneumatic means for transporting such articles to said boxes or receptacles comprising a pneumatic head movable to and from a position above said support, said head having on its exterior opposite article engaging surfaces to maintain such articles in parallel order.



1,532,154. CRUCIBLE FURNACE. FREDERICK GEORGE PENNY, London, England. Filed July 29, 1922. Serial No. 578,505. 1 Claim. (Cl. 263—11.)

In crucible furnaces of the type herein specified, the employment of communicating channels with respectively narrow inlets leading from the top of the main furnace and which gradually diverge and curve into wide mouths at the bottom of the auxiliary chambers, in combination with subsidiary flues from the latter chambers to the main flue which also splay open to a wider outlet mouth whilst they curve towards the main flue outlet end, together with a small by-pass branch from the last pipe to the interior end of the main flue to cause a gentle induction in the aforesaid specially shaped subsidiary flues, substantially as herein described.



1,532,155. ILLUMINATING MEANS FOR MOTOR METERS. JOSEPH A. PRIVETT, Monroe, N. C. Filed Oct. 18, 1923. Serial No. 668,322. 1 Claim. (Cl. 240—2.)

A motor meter comprising a casing having a rim portion and a neck portion, the rim portion being open at its opposite sides and the openings thereof covered with transparencies, a thermometer extending through the neck portion and entering the rim portion, a battery-support located in the neck portion, a bulb mounted

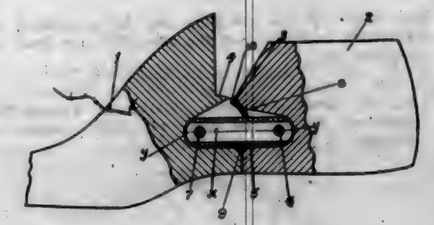
upon said support and disposed in the rim portion between the transparencies and a push button switch mechanism passing transversely through the battery support and the neck portion of the casing.

1,532,156. SPOOLER FOR WINDING SPOOLS OF DIFFERENT LENGTHS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 1, 1924. Serial No. 747,144. 10 Claims. (Cl. 242—43.3.)

1. A spooler adaptable to wind spools of different lengths simultaneously comprising a series of rotatable spool carriers and means for rotating the same, a plurality of separately movable traverse rods having guides, each of which co-operates with a spool of said series, means for actuating each of said traverse rods independently of the others in correlation to the speed of rotation of the spools and the length of the spools with which such traverse rod co-operates.

1,532,157. PROCESS FOR THE DESTRUCTION OF NOXIOUS INSECTS. HERMANUS GERARDUS RINGELING and NEELTJE LOUWRINA WIBAUT-ISEBREE MOENS, Amsterdam, Netherlands. Filed Sept. 7, 1923. Serial No. 661,514. 4 Claims. (Cl. 167—6.)

1. An insecticidal process, comprising the steps of depositing insect-infested articles in an air-tight container; extracting the air from the container; introducing ammonia gas into said container to act on the articles therein for a given period; and thereafter removing said gas from the container and from said articles.

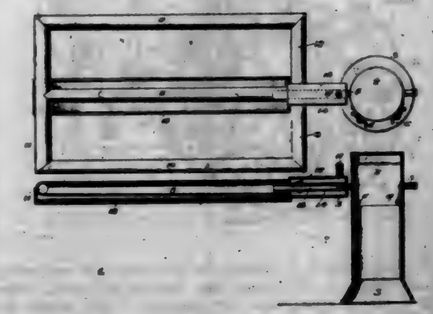


1,532,158. AIRSHIP PROPELLER. GEORGE H. SANFORD, Meadville, Pa. Filed Oct. 8, 1923. Serial No. 667,849. 3 Claims. (Cl. 170—159.)

1. An all metal propeller comprising a hollow cylindrical hub, blades radiating therefrom and integral therewith, each blade being transversely concaved and

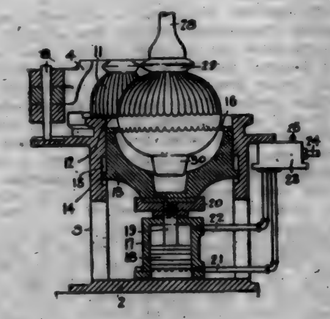
pitched at an angle to its plane of rotation, reinforcing ribs extending longitudinally upon the working surfaces of each blade, an attachable flat plate connecting the bottom edges of the ribs and extending from the leading to the trailing edge of each blade and from the hub to the outer end of each blade, reinforcing plates closing the ends of the hub, and inwardly extending shaft engaging sleeves upon the plates on the hub.

1,532,159. LAST. JOHN C. SCHELTER, Rochester, N. Y. Filed Oct. 28, 1924. Serial No. 746,423. 8 Claims. (Cl. 12—130.)



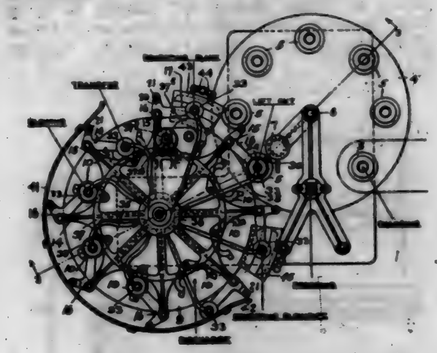
1. A last comprising a fore part having its rear end cut to form a convex cylindrical bearing, a heel part having its forward portion formed with a concave cylindrical bearing cooperating with the cylindrical bearing on the fore part, a bonding member pivoted to the heel part and the fore part, the center of the cylindrical bearings on the heel part and the fore part lying above a line intersecting the centers of the pivots of the bonding members when the last is expanded and below said line when the last is collapsed, one of said cylindrical bearing surfaces having a seat therein, and a resilient member arranged in said seat to cooperate with the other cylindrical surface.

1,532,160. GAME AND TOY. JOHN K. SEYMOUR, Elyria, Ohio. Filed Jan. 9, 1922. Serial No. 527,835. 4 Claims. (Cl. 273—119.)



4. In a game apparatus, a combination with a frame, a dished top therefor, a central opening within the said dished top, a rotatable wheel disposed within the said opening and rotatable out of contact with the said top, said top being divided into a plurality of spaces bordering around the said opening, a plurality of projections extending above the surface of the wheel and closely spaced together, a ball adapted to be placed in the said dished top and against the said projections, the diameter of the ball being greater than the distance separating the projections, and means to prevent the ball from coming to rest on the dividing line between the dished top spaces.

1,532,161. HEATING SYSTEM FOR INCUBATORS. HENRY M. SHEER, Quincy, Ill., assignor to H. M. Sheer Company, Quincy, Ill., a Corporation of Illinois. Filed Feb. 11, 1920. Serial No. 357,876. 4 Claims. (Cl. 237—14.)



4. A hot air system including a distributing pipe, a return pipe, a pipe for connecting the distributing pipe with the return pipe, a supply pipe extending into the distributing pipe, a suction chamber surrounding the supply pipe and communicating with the return pipe and with the distributing pipe, and a source of heat discharging into the supply pipe.

1,532,162. MOLD FOR MAKING GLASSWARE. FREDERICK W. STEWART, Oak Park, Ill., assignor to Inland Glass Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 23, 1923. Serial No. 620,673. 2 Claims. (Cl. 49—42.)

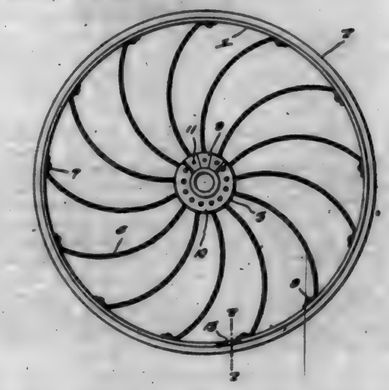
1. A mold for forming articles of glassware comprising an upper mold part made up of horizontal swinging sections, the inner walls of said mold part having flutes formed therein terminating in scallops, a vertically movable lower mold part having scallops at its upper edge engaging with said first named scallops, a cylinder, a piston, connections between said lower mold part and said piston, and means for admitting fluid to points above and below said piston.

1,532,163. METHOD OF FORMING HOLLOW GLASSWARE. FREDERICK W. STEWART, Oak Park, Ill., assignor to Inland Glass Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 23, 1923. Serial No. 620,674. 2 Claims. (Cl. 49—79.)

1. The method of forming hollow glassware consisting in providing a sticking-up tool, heating said tool, pressing a blank, sticking-up the open-end of the blank, introducing the blank into a blow-mold, and blowing the blank with air admitted through the sticking-up tool.

1,532,164. DRAFT EQUALIZER. KORBINIAN THALHAMMER, Coon Rapids, Iowa. Filed Sept. 22, 1923. Serial No. 664,170. 1 Claim. (Cl. 278—12.)

A draft equalizer comprising a relatively long cross bar disposed transversely of the line of draft, levers pivotally mounted at the ends of the cross bar and normally disposed parallel with the line of draft, inner and outer levers pivoted at their forward ends to the intermediate portion of the cross bar and disposed rearwardly thereof and extending in the line of draft, the last mentioned levers being pivoted at a point nearer one end of the cross bar than the other, a link rod pivotally connected with the rear end portion of the inner lever and pivotally connected at its other end with the lever at the shorter end of the cross bar, a link rod pivotally connected with the inner lever at a point between the cross bar and the point of pivotal connection of the first mentioned link rod with the inner lever, and pivotally connected with the lever at the longer end of the cross bar, the rear end portion of the outer lever extending beyond the rear end of the inner lever, and adapted to be connected with a draft appliance.

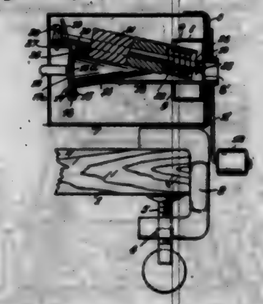


1,532,165. SOAP-STICK HOLDER. GEORGE WESLEY TINDALL, Toronto, Ontario, Canada, assignor to C. E. Fulford Limited, Toronto, Ontario, Canada, a Company of Great Britain. Filed Dec. 29, 1923. Serial No. 683,383. 2 Claims. (Cl. 206—56.)

1. A soap stick holder comprising a cylindrical casing, a closing cap for the casing, a soap stick cap in which a soap stick is adapted to be permanently inserted, a threaded connection between the soap stick cap and container cap, and interengaging means formed in the

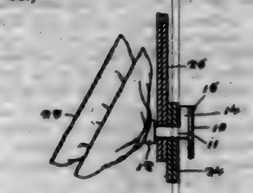
soap stick cap and container cap for preventing the inadvertent unscrewing of the soap stick cap from the container cap.

1,532,166. SPRING WHEEL. WALTER E. WEAVER, Nacogdoches, Tex. Filed Mar. 14, 1924. Serial No. 699,286. 1 Claim. (Cl. 152—50.)



A spring wheel of the class described comprising a continuous rim having a flat peripheral portion provided on one edge with a tire engaging flange, a hub embodying an annular groove forming a pocket on one side thereof, a plurality of longitudinally bowed spring spokes interposed between the rim and hub, said spokes interposed between the rim and hub, said spokes being provided on their inner ends with wedge-shaped enlargements forming heads for reception in said pocket, said heads being disposed in abutting relation, a face plate closing said pocket on one side, said plate, heads, and hub being formed with aligned bolt holes, bolts passing through said holes for retaining the plate, heads and hub in assembled relation, the outer ends of said spokes being bent at an angle and bearing against the flat peripheral portion of said rim, and fastenings for securing said angularly bent ends to the rim, the points of anchorage of the outer ends of the spokes being shifted circumferentially, so that each spoke has its outer end anchored at a point out of radial alignment with respect to the hub connection.

1,532,167. PENCIL SHARPENER. ERNST WEILER, Berlin, Germany, assignor of one-half to Weiler & Co., G. m. b. H., Berlin, Germany. Filed Apr. 17, 1924. Serial No. 707,237. 2 Claims. (Cl. 120—96.)

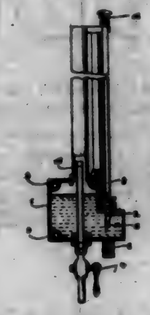


1. In a pencil sharpener of the character described, the combination with cutters adapted to revolve about their axes as well as about the pencil point, of springs tending to impart axial motion to the cutters, and a

plate arranged so as to oppose such motion, the plate being arranged obliquely relative to the axis of rota-

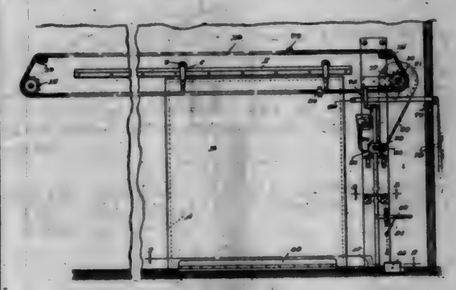
tion of the cutters so as to impart an axial reciprocating motion to the cutters in cooperation with the springs.

1,532,168. COMBINED COLLAR BUTTON AND TIE FASTENER. CHARLES A. BELL, Medina, N. Dak. Filed July 21, 1924. Serial No. 727,327. 2 Claims. (Cl. 24—64.)



1. A combined collar button and tie fastener comprising separable members, one member including a base and a hollow shank projecting centrally therefrom, and a head from one end of the shank having an inclined surface, the other member including a plate, and a shank projecting centrally therefrom and adapted to be received by the shank of the first mentioned member, said plate being arranged obliquely on its shank to assume a position in parallel relation with the incline surface of said head when the parts are associated, and means for holding said members together for the purpose specified.

1,532,169. METHOD OF AND MEANS FOR MEASURING TRANSMISSION. FRED H. BEST, Westfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 6, 1919. Serial No. 322,085. 19 Claims. (Cl. 179—175.)



1. The method of determining the transmission equivalent of an electrical device, which consists in associating said device with an arrangement of apparatus having a known transmission equivalent, then reducing the value of the transmission equivalent of said device to restore the combination to the equivalent value of the device alone before said association, and determining the extent of the change in the value of said transmission equivalent.

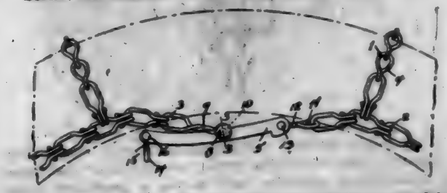
1,532,170. PRESSURE-INDICATING APPARATUS. MAURICE BOUFFART, Herstal, Belgium. Filed Mar. 6, 1922. Serial No. 541,614. 2 Claims. (Cl. 73—81.)

1. A liquid pressure indicating apparatus, comprising, a reservoir for containing liquid, an indicator tube, open to atmospheric pressure, and having a graduated scale with its zero between the middle and the upper end of the scale, a pressure tube having an enlarged portion on which acts the pressure to be measured, both said tubes being entered into said reservoir, a conduit for conducting the pressure to be measured, said conduit entering the said pressure tube at its base, said enlarged portion being positioned at a level between the middle and the upper part of the apparatus, to coincide with the level of the zero of the graduation of the indicating tube.

1,532,171. DOOR-OPERATING MECHANISM. PAUL BURMEISTER, near Fulda, Minn., assignor of one-half to Charles West and one-half to Delmer M. Mead, Fulda, Minn. Filed June 23, 1923. Serial No. 647,389. 9 Claims. (Cl. 268—8.)

1. Operating mechanism for a slidably mounted door, comprising a chain trained about sprockets and connected with the door, a motor having a drive connection with one sprocket, a reversing switch for the motor, a longitudinally movable rod located at one side of the door-way and connected with the switch, and treadle operated means at both sides of the door-way for moving said rod.

1,532,172. MEANS FOR RECEIVING WEAK SIGNAL CURRENTS. JOHN R. CARSON, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 18, 1918. Serial No. 240,631. 5 Claims. (Cl. 178—63.)

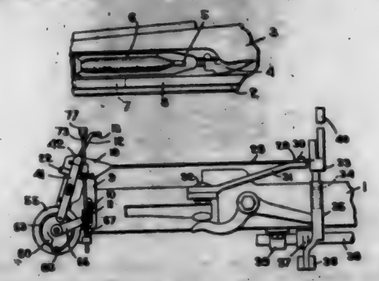


1. The combination with a main line having distortion and attenuation, a correcting network com-

prising an inductance, a resistance and a capacity in series, and input and output circuits for said network

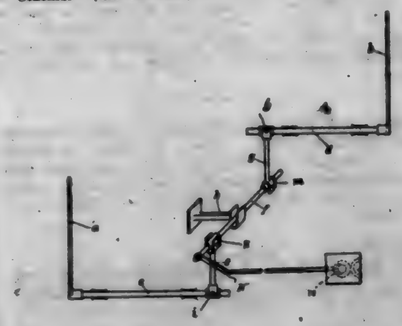
arranged to give said inductance an auto-transformer operation for increasing the voltage in the output circuit.

1,532,173. COUPLING-TIGHTENER BAR. PETER H. CLOOS, Jr., Watertown, S. Dak. Filed Apr. 28, 1923. Serial No. 635,386. 2 Claims. (Cl. 24—69.)



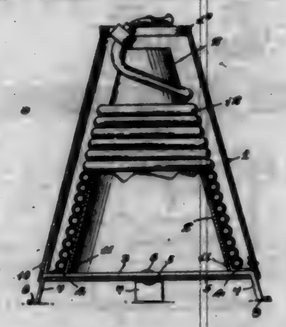
1. A coupler and tightener for tire chains comprising a lever bar, a fulcrum intermediate the ends of the bar for the connection of one end of the chain, a hook pivotally connected to the bar adjacent one end thereof and constituting means for the connection of the bar with the other end of the chain, and a hook freely pivotally connected to the bar adjacent the other end thereof and having a laterally presented bill for locking engagement with one of the links of the chain adjacent the last-mentioned end thereof when the lever bar has been swung about its fulcrum to draw the ends of the chain together.

1,532,174. WRENCH. JAMES M. CROCKER, Terre Haute, Ind. Filed Mar. 15, 1924. Serial No. 699,485. 1 Claim. (Cl. 81—137.)



A wrench comprising a handle portion having a jaw at one end thereof, said handle portion having teeth, a movable jaw adapted to operate over the handle portion, a securing member having teeth formed along one of its edges and mounted eccentrically in the movable jaw, said securing member having flattened side surfaces and a flattened end surface, a flat spring member secured to the movable jaw and adapted to engage the flattened end surface to hold the securing member in its active position, said spring adapted to engage one of the flattened side surfaces to hold the securing member in its inactive position, and an extension formed integral with the securing member to operate the securing member.

1,532,175. FEELER MECHANISM FOR LOOMS. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 12, 1923. Serial No. 624,362. 23 Claims. (Cl. 139—270.)



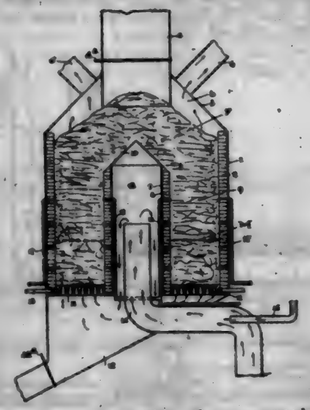
1. A feeler mechanism for looms comprising a feeler support, a feeler movably mounted on the support, means for yieldingly projecting the feeler rearwardly, a detent device acting to engage the feeler and hold it against rearward movement, means acting at regular intervals to release the feeler from the detent device and thus allow the feeler to be projected rearwardly to co-operate in normal manner with the filling in the active shuttle, means acting to project the detent device bodily rearwardly after the feeler is released whereby, if the said filling is not depleted to a predetermined amount, the feeler will be moved by the filling into reengagement with the detent device and means to restore the detent device to retracted position after it has been re-engaged by the feeler whereby the feeler, when in unreleased or inoperative position, is held well out of contact with the filling.

1,532,176. MOTOR VEHICLE OF ANY KIND. FRIEDRICH GAUSS, Oberturkheim, Germany, assignor to Daimler-Motoren-Gesellschaft, Unterturkheim, Germany. Filed July 21, 1922. Serial No. 576,636. 8 Claims. (Cl. 74—89.)

1. In a motor vehicle, the combination with change speed gear and a shaft operatively connected therewith; of devices at each end of said shaft adapted to operate the same in a direction longitudinal of the said shaft and also to rotate the same, said shaft in being submitted to rotation and to longitudinal displacement, being simultaneously exposed to a swinging motion; the above mentioned operating devices at each end of said shaft being so connected to said shaft that when such devices at one end of said shaft are operated, thereby operating said shaft, the devices at the other end of said shaft are also operable in a corresponding manner; means also being provided to enable all movements of said shaft being carried out in the same plane.

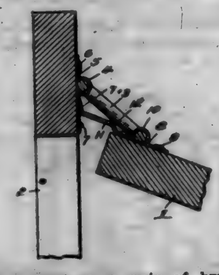
1,532,177. HOSE HOUSING. WILLIAM V. GIST, St. Joseph, Mo., assignor of one-half to De Witt C. McCall, Jr., St. Joseph, Mo. Filed Mar. 28, 1924. Serial No. 702,648. 3 Claims. (Cl. 248—28.)

1. A device of the character described comprising a base, a tapering supporting member secured upon said base, a protective casing secured upon said base in encircling spaced relation to said supporting member, said casing being open at its upper end, said base comprising a pair of bars crossed intermediate their ends and being provided with depending supporting portions.



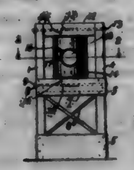
1,532,178. LUBRICATOR. LOUIS A. GODBOLD, Houston, Tex. Filed July 25, 1921. Serial No. 487,441. 7 Claims. (Cl. 255—71.)

1. In a roller boring drill, the combination with a head having rotary cutters mounted on bearings thereon, of a lubricator barrel on said head, ducts therefrom constantly open to said bearings and means in said lubricator barrel to exert a gas pressure on the lubricant in said barrel to force it continuously through said ducts to said bearings.



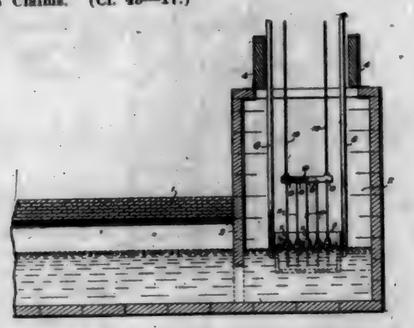
1,532,179. GAS PRODUCER. JOHN BARNES GOODWIN, Elko, Nev. Filed Apr. 14, 1923. Serial No. 632,084. 3 Claims. (Cl. 48—63.)

2. A gas producer comprising an outer casing and an inner casing defining a fuel space between the two casings, a grate supported by the casing, a lining of fire resistant material provided on the inner wall of the outer casing and on the outer wall of the inner casing, means for supplying a heated combustion supporting gaseous fluid to the inner casing which is distributed to the fuel between the inner and outer casings, pyrometric means embedded in the walls of the inner casing and the walls of the outer casing for maintaining a



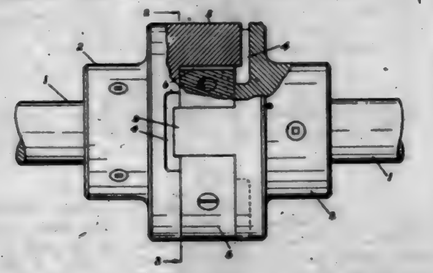
constant temperature within the gas producer, and means for discharging the gases produced from the fuel.

1,532,180. HINGE CONSTRUCTION. WILLIAM J. GROSS, Westphalia, Mich. Filed Oct. 21, 1924. Serial No. 744,918. 2 Claims. (Cl. 16—163.)



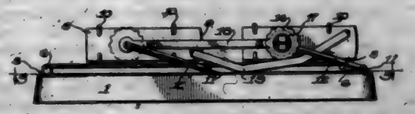
2. In a hinge structure, a pair of brackets having loops, a link pivotally engaged with the loops, one bracket provided with outwardly extending lips, and the other bracket provided with an extension offset in relation thereto so as to extend over the lips when in a closed position and to engage the lips when in an open position.

1,532,181. BEARING. CLAUDE C. HAIGLER, San Jose, Calif. Filed June 21, 1923. Serial No. 646,865. 1 Claim. (Cl. 64—54.)



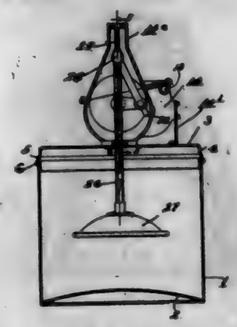
A bearing, comprising a plurality of upright corner pieces, a base member rigidly supported by said corner pieces, the upper end of said base member being provided with a cylindrical socket, a top member adjustably secured to the upper end of the corner pieces and provided with a cylindrical socket on the lower surface thereof, the said sockets of the base and top members being in axial alignment and a bearing member having a transverse opening and provided with upper and lower reduced trunnion portions adapted to fit within said cylindrical sockets in the base and top members.

1,532,182. METHOD OF DRAWING GLASS AND APPARATUS THEREFOR. WILLIAM E. HEAL, Washington, D. C. Filed Mar. 27, 1923. Serial No. 628,134. 3 Claims. (Cl. 49—17.)



1. The method of drawing glass which comprises lowering a box-like receptacle having spaced slots in its side walls, into a body of molten glass, raising said receptacle and maintaining it above said body of molten glass whereby the glass in said receptacle will tend to flow through said slots by gravity and return to said body of molten glass, and drawing sheets of glass from the glass in said receptacle.

1,532,183. SHAFT COUPLING. EUGENE HIGGINS, Jackson, Mich. Filed Aug. 6, 1923. Serial No. 655,983. 2 Claims. (Cl. 64—96.)



1. A shaft coupling comprising a pair of shaft members, each having driving lugs and recesses adapted to receive the driving lugs of the other member, and a cruciform coupling member coacting with the lugs of both shaft members, said coupling member being formed of fibrous material, said driving lugs projecting through said coupling member and into the said recesses of the other member whereby there is a bearing engagement of the driving lugs with the coupling member extending entirely across the same.

1,532,184. TOASTER. BERTRAND B. KAHN, Hamilton, Ohio, assignor to The Estate Stove Company, Hamilton, Ohio, a Corporation of Ohio. Filed July 30, 1923. Serial No. 654,639. 13 Claims. (Cl. 53—5.)

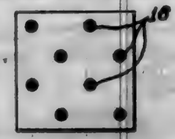
2. In a toaster, the combination of a heating element, a support oscillatory toward and from the heating element, a slice holder having its opposite ends pivotally secured to said support, and means including translating means to move said slice holder about its pivot.

1,532,185. WASHING MACHINE FOR LIGHT HOUSEHOLD SERVICE. ROBERT H. KIRBY, St. Louis, Mo. Filed Jan. 16, 1922. Serial No. 529,486. 1 Claim. (Cl. 74—14.)

In a device of the class described, a support, a casing mounted thereon, an intermediate vertical partition therein dividing the same into two compartments, gearing in one compartment embodying a rotatable shaft extending through a bearing in said partition into the other compartment, a motor on said support connected to said gearing, a vertical extension forming part of said second compartment, a depending guide rod in said extension, a hollow plunger rod in said second compartment mounted to reciprocate on said guide rod, and a crank and pitman connection between said rotatable shaft and plunger rod for reciprocating the latter on its guide rod.

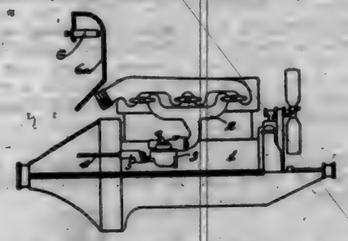
1,532,186. GAME OF SKILL. BENJAMIN F. KLEIN, Chicago, Ill. Filed Mar. 29, 1923. Serial No. 628,413. 5 Claims. (Cl. 273—95.)

1. Apparatus for playing a game of skill comprising an objective standard and a propelling standard, a basket on said objective standard, and a sling on said propelling standard for supporting a ball.



1,532,187. COIL-WINDING MACHINE. ALEXANDER H. KOPPRASCH, Chicago, Ill., assignor to Electric Service Supply Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 23, 1924. Serial No. 721,686. 7 Claims. (Cl. 140—92.2.)

1. A coil winding machine comprising a bar, two coil supporting heads slidable thereon, means to adjust the heads toward and from each other to vary the length of the coil, a pair of normally parallel stems one on each head and about which the coils are to be wound, and

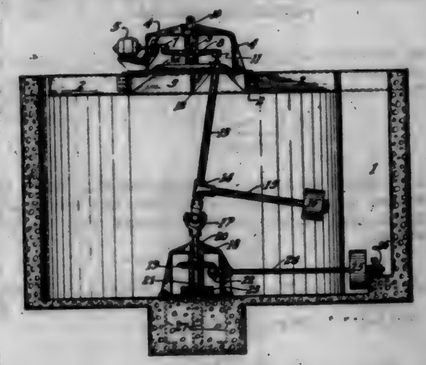


means to incline one stem to permit it to be moved out of parallelism with the other stem to facilitate removal of the coils.

1,532,188. LITHOGRAPHIC PRINTING PLATE AND PROCESS OF PREPARING THE SAME. JAMES KRAKER, Chicago, Ill. Filed Dec. 1, 1922. Serial No. 604,214. 4 Claims. (Cl. 95—5.6.)

1. A photolithographic plate comprising a foundation of lithographic stone, a layer of hardened gum-like material disposed upon the stone, and a layer of sensitive greasy material separated from the stone by said layer of hardened gum-like material.

1,532,189. THERMOSTATICALLY-CONTROLLED HEATING ELEMENT. LEWIS H. LAMONT, Chicago, Ill. Filed Sept. 18, 1922. Serial No. 588,759. 8 Claims. (Cl. 219—38.)



1. A heating device for fuel supply lines comprising an electrical heating element, a switch adapted to automatically maintain a closed electrical system until the heater element reaches a definite temperature and a thermostat adapted to permanently release said switch upon attaining said definite temperature.

1,532,190. PROCESS FOR THE MANUFACTURE OF ACETALDEHYDE. MARCEL JEAN LOUIS LEDEU and EDOUARD JOSEPH BACHMANN, Roussillon, France, assignors to Societe Chimique des Usines du Rhone, Paris, France. Filed Sept. 25, 1924. Serial No. 739,798. 5 Claims. (Cl. 260—158.)

1. A process of manufacture of acetaldehyde consisting in passing a stream of acetylene and oxygen through an acid solution of ferrous sulphate in the presence of copper salts and of metallic mercury.

1,532,191. DEVICE FOR THE APPLICATION OF POWER. ELMER E. LEMING, Salt Lake City, Utah. Filed Mar. 10, 1924. Serial No. 698,078. 1 Claim. (Cl. 74—14.)

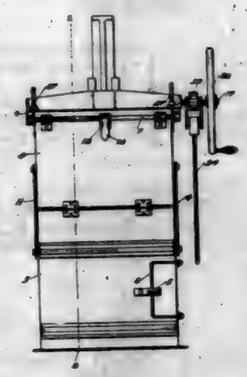
A horizontal gear wheel, means for rotating same, a propeller shaft attached to the underside of such gear wheel by a ball and socket joint, and at the other end attached by universal joint to a continuation of such shaft, the continuation of such shaft carrying a gear revolving therewith, means for imparting the rotation of said last mentioned gear to other machinery, a shaft carrying a weight at its outer end rigidly attached to

the lower part of first mentioned shaft just above the universal joint, means for preventing the first mentioned shaft from being thrust by centrifugal motion so far outwardly as to cause a strain or stress on the first mentioned gear and a tank in which said machinery rotates substantially as shown and described.

1,532,192. TYPEWRITING MACHINE. JOHN C. MCLAUGHLIN, East Orange, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 13, 1921. Serial No. 469,095. 1 Claim. (Cl. 197—183.)

The combination of a platen, a type-bar pivoted to swing against the platen, means for operating the type-bar, and means adjustable to arrest the type-bar near the completion of its printing stroke and at the exact required distance from the platen, said arresting means comprising a stationary stop and a co-operative stop formed for adjustment on the type-bar, the latter stop in the form of a distortible eye integral with the body of the type-bar and projecting from said body and capable of being moderately opened or closed by bending the same.

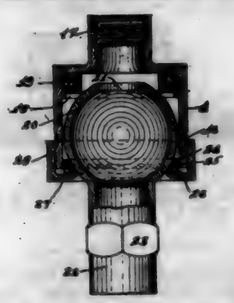
1,532,193. LADY'S COMBINATION HAT. ISRAEL MALLOY, Fort Wayne, Ind. Filed Nov. 12, 1921. Serial No. 514,442. 2 Claims. (Cl. 2—172.)



1. A hat comprising a crown, a horizontally extending brim secured thereto, buttons on said brim, a shield secured in said crown, strap extensions forming a part of said shield, loop members attached to said strap extensions, and buttons secured to said shield adapted to be

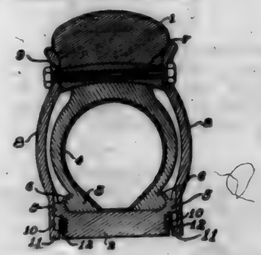
engaged by said loop members to hold the shield and said extensions secured around the neck of a person wearing the hat, said shield adapted when unbuttoned

to be turned up around said brim and then folded and engaged around the hat crown with said straps overlapping and the loop members engaged with the brim buttons.



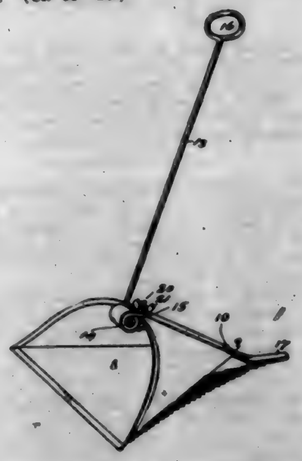
1,532,194. BALING MACHINE. WILLIAM H. MARTIN, Davenport, Iowa. Filed Mar. 10, 1920. Serial No. 364,744. 2 Claims. (Cl. 100—5.)

1. In a device of the class described, the combination of a receptacle provided with a hinged closure on one of its sides; a frame formed of two pairs of parallel cross-plates united at their outer ends by plates provided with wings extending rearwardly between the receptacle walls, and hingedly connected therewith, a rectangular frame at the inner ends of said cross-plates, forming a central vertical guide-way, said end-plates and guide-way being fitted with transverse shaft bearings; lips at the forward edge of said first-named frame projecting between the side-walls of said receptacle; slotted extensions at the forward edge of said first named frame; latches pivoted on said receptacle adapted for engagement with said extensions, to hold said first-named frame in closed position; and compression devices provided with a central controlling member vertically movable in said guideway.



1,532,195. SWIVEL-JOINT COUPLING. ABRAHAM L. MORRISON, Dubuque, Iowa. Filed Feb. 4, 1922. Serial No. 534,047. 1 Claim. (Cl. 285—95.)

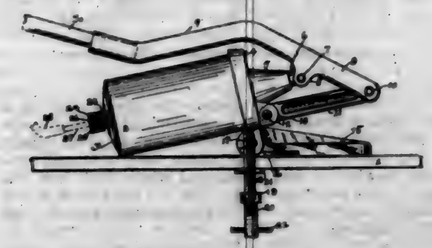
A swivel joint coupling, comprising a socket member, a ball member therein, a packing ring contacting with the outer side of said ball member, an annular interior flange in said socket member for retaining said packing ring in position, a second packing ring contacting with the other side of said ball member at the outer end of said socket member, a flat ring member in said socket member around said ball member and contacting with said second packing ring, resilient means engaging said flat member to hold the second packing ring in frictional engagement with the ball member, and means adjustably



engaged on said socket member for drawing both of the packing rings into frictional contact with the ball member.

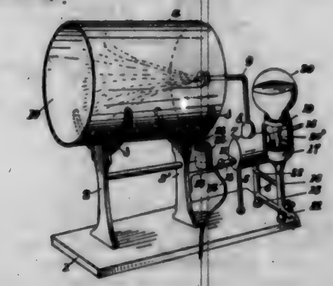
1,532,196. VEHICLE WHEEL. RALPH ROGERS MUNDELL, Chicago, Ill. Filed Apr. 9, 1923. Serial No. 630,717. 5 Claims. (Cl. 152—35.)

2. In a wheel, a rim structure, comprising an inner cylindrical member, an outer cylindrical member, a pneumatic tube between said members, lateral ring plates secured to one of said members and having a plurality of grooves, and lugs on said other member engaging in said grooves.



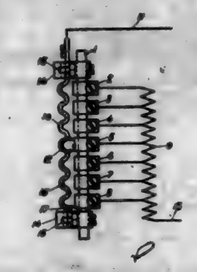
1,532,197. DUSTPAN. WILBUR H. NICHOLAS, Indianapolis, Ind. Filed Mar. 24, 1924. Serial No. 701,862. 5 Claims. (Cl. 65—20.)

1. A dust pan formed out of a rectangular metal sheet having two opposite corners on a long side of the sheet



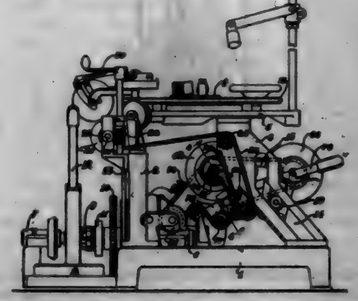
bent in the same direction at angles on lines extending from opposite corners of the sheet approximately to the middle of the edge between the two corners, said corners being curved toward each other until their edges lap, a tongue at the convergence of the angular bends of the corners bent upon the adjacent laps of the corners to aid in locking them in their lapped relation, a handle having an extension, and means for securing the handle to the pan comprising a strap attached to the pan having means cooperating with the handle extension, a bolt which passes through the lapped portions near the upper edges of the bent corners and securing the handle extension to the strap means.

1,532,198. TIRE PUMP. JOHN L. NILSON and JOHN F. PRINCE, Chicago, Ill. Filed May 2, 1922. Serial No. 557,849. 6 Claims. (Cl. 230—27.)



1. In a running-board air pump, the combination with the pump cylinder and running-board, of a removable closure for the rear end of the cylinder, said closure being provided with a foot portion adapted to be secured to the running board and alone arranged to support said pump on said running-board, and fulcrum bearing portions on said support with which the piston-operated lever of said pump is pivotally connected.

1,532,199. APPARATUS FOR GENERATING AND APPLYING VAPORS FOR HYGIENIC OR COSMETIC PURPOSES. WERNER OTTO, Berlin, Germany. Filed Mar. 24, 1922. Serial No. 546,496. 3 Claims. (Cl. 126—344.)

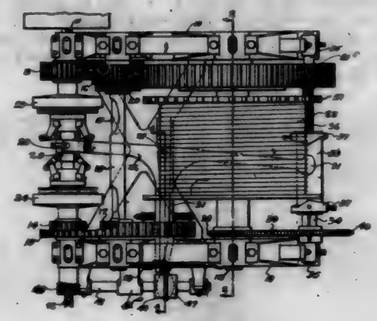


2. An apparatus for generating low tension vapors for hygienic or cosmetic purposes, comprising an evaporator having uncontrolled liquid supply and vapor escape passages, a constant level liquid supply vessel under atmospheric pressure so arranged that the plane of the liquid level in the evaporator passes through it, an uncontrolled downwardly extending substantially U-shaped tubing connecting said liquid supply vessel with the supply passage of the evaporator, a heater in said evaporator and above said U-shaped tubing, and a reserve liquid containing bottle inverted with its mouth disposed adjacent to the surface level of the liquid in the supply vessel thereby to form a water seal in the closed bottom end of the bottle to permit the liquid from the bottle to be conveyed to the supply vessel by gravity, the U-shaped tubing serving as a trap to prevent the heat from the evaporator from being transmitted to the supply vessel and to prevent the volatilized and vaporized gases in the evaporator from being conveyed into the bottle.

1,532,200. PLUG CONTACT. WILHELM HENNING PETERSSON, Gamla Posten, Ludvika, Sweden. Filed Jan. 11, 1923. Serial No. 611,991. 6 Claims. (Cl. 173—328.)

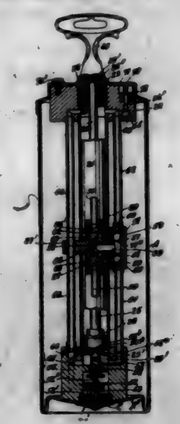
1. In plug contacts for regulating purposes, a row of fixed conductors, a metal plate having a number of grooves resiliently held at a certain distance from said fixed conductor, and a plug adapted to engage one of said grooves and to make contact with one of said fixed conductors.

1,532,201. ADJUSTABLE SUPPORTING MECHANISM. PAUL PIERCE, Chicago, Ill., assignor to Pierce Wrapping Machine Co., a Corporation of Illinois. Filed Nov. 11, 1922. Serial No. 600,217. 10 Claims. (Cl. 242—6.)



1. In a mechanism of the class described, rotatable supporting means, and means on said supporting means, simultaneously and positively movable to contact and centrally position supported articles of different sizes.

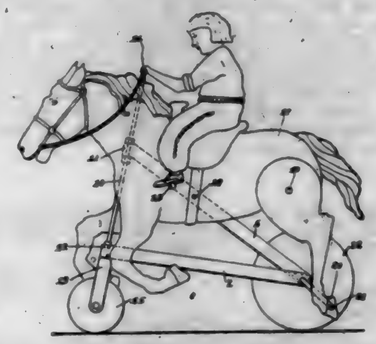
1,532,202. HOISTING MECHANISM. MAX WEBB POWELL, Chicago, Ill. Filed July 30, 1924. Serial No. 729,048. 9 Claims. (Cl. 192—15.)



1. A hoist including in combination a drum, a shaft carrying said drum, double clutch operated reversible gear for driving said drum, an arm operating said clutches, a toothed wheel detachably secured to said drum, a rocker shaft, safety locking mechanism on said rocker shaft adapted to cooperate with said toothed wheel, a crank arm on said rocker shaft and a link pivoted to the crank arm having slot connection with

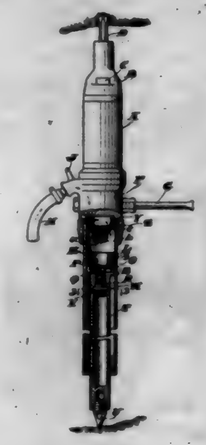
said clutch operating arm, the length of such slot being sufficient to allow the clutch arm to move into neutral

without moving the link while insufficient to allow the clutch arm to move from one clutch engaging position to the other without moving said link.



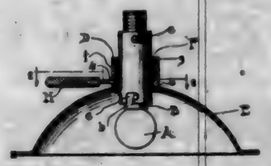
1,532,203. LIQUID PROJECTOR. ALBERT V. SAMMIS, Huntington, N. Y., assignor to Fire Gun Manufacturing Company, Inc., Huntington, N. Y., a Corporation of New York. Filed July 3, 1917. Serial No. 178,407. 11 Claims. (Cl. 299—98.)

1. In a liquid-projector, a pump comprising a cylinder and a piston, in conjunction with a casing having intake connections, gravity valves located in said casing and controlling said connections, another casing integral with the first-named casing and communicating therewith, and suction valves contained in said second casing and controlling its connection with opposite ends of the pump cylinder.



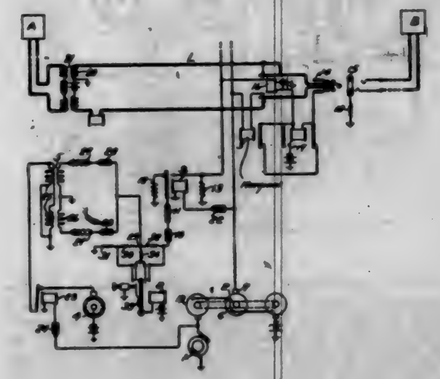
11. In a syringe the combination of a reservoir; a piston chamber in the reservoir having suction inlets to opposite ends thereof and a discharge outlet to the exterior of the reservoir connected with opposite ends of the piston chamber; a piston; a rod to reciprocate the piston extending from the end of the piston chamber opposite to the discharge outlet; a valve operable during the reciprocation of the piston to shut off the discharge outlet from opposite ends of the piston chamber, and valve mechanism operable when the piston is in its innermost position to shut off the discharge outlet from said chamber substantially as and for the purpose specified.

1,532,204. HOBBYHORSE VELOCIPEDE. JOHN R. SINGER, Minneapolis, Minn. Filed June 28, 1923. Serial No. 648,318. 4 Claims. (Cl. 208—42.)



1. In a hobby-horse velocipede the combination of a three-wheeled truck, means for steering one of the wheels of said truck, a crank axle for driving the other wheels of said truck, a hobby-horse whose body is hinged to a frame member of said truck, and whose hind legs are hinged to its body, and whose rear feet are hinged to the cranks of said axle, and a driver's seat mounted on said hobby-horse.

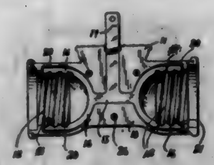
1,532,205. FEEDING MECHANISM FOR ROCK DRILLS. FRED M. SLATER, Easton, PA., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 7, 1923. Serial No. 643,838. 1 Claim. (Cl. 74—109.)



A fluid pressure piston, comprising a cup-shaped main hollow piston head, a hollow cylindrical cap having limited longitudinal movement in said hollow head, the body portion of said cap being guided in the head cavity by the walls of the head, said cap having a flange at its outer end, packing material in the recess formed between the said cap flange and the main head, and a guiding projection formed integral with the cap and extending inwardly from the body portion of the cap into the main piston head, and means for limiting the longitudinal movement of the guiding projection and cap relatively to the main piston head.

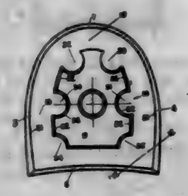
1,532,206. SOCKET FOR ELECTRIC LAMPS. EUGENE A. SNOW, River Forest, Ill. Filed Dec. 27, 1921. Serial No. 524,851. 2 Claims. (Cl. 240—44.)

1. The combination of an electric lamp socket, a holder therefor, said holder comprising a hollow cylinder having a peripheral circumferential elongated slot, a helical spring disposed within said holder and surrounding said socket, one end of said spring being anchored to said holder, the other end of said spring being free, and a lug integral with said free end projecting through said slot, the tension of the spring being such that the lug tends to move towards one end of the slot, whereby the spring grips the said socket, and manual movement of the lug towards the other end of said slot tends to unwind the spring and thereby permit free movement of the socket.



1,532,207. SIGNALING SYSTEM. LELAND J. STACY, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 16, 1921. Serial No. 500,767. 7 Claims. (Cl. 179—80.)

7. The method of informing a calling subscriber that ringing current is being supplied to a called station which comprises generating a plurality of currents one of which is an audio-frequency and the other is a lower frequency, modulating one of said currents, and supplying the modulated and unmodulated currents to the calling subscriber.



1,532,208. ELECTRIC-LAMP SOCKET. HERMAN L. STRONGSON, Brooklyn, N. Y. Filed Dec. 4, 1922. Serial No. 604,676. 7 Claims. (Cl. 173—337.)

3. Improvements in lamp sockets comprising a body member having globe receptacles, sheet metal contact blades disposed edgewise along the wall of the receptacles and being flexible to make spring contact, corrugations made in the edges of the said flexible blades to simulate screw threads, a jack-blade punched integrally with the aforesaid contact blades and projecting from the body, a center contact part secured at the bottom

of receptacles, and another jack-blade integral with the center contact part and projecting from the body parallel to the first named jack-blade.

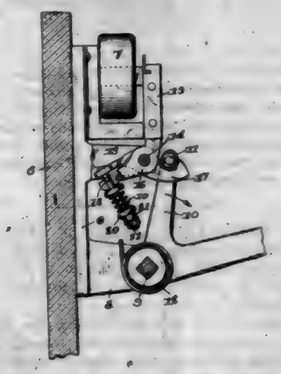
1,532,209. RUBBER HEEL. JOHN GEORGE TUFFORD, Elyria, Ohio. Filed Dec. 23, 1921. Serial No. 524,516. 1 Claim. (Cl. 36—35.)

A "whole" type rubber heel adapted for attachment to the convexly rounded bottom of a shoe sole, having a lower convex tread face, and an upper concave attaching face, said attaching face comprising an approximately U-shaped grooved border portion extending parallel with and directly adjacent the sides and rear of the heel, the groove thereof being arched transversely of its length, the arching thereof being sharper than the arching of the convexly rounded shoe sole bottom portion with which it is adapted to contact, and the groove being transversely inclined from the side and rear top edges of the heel downwardly and inwardly towards the central portion of the attaching face thereof, the central portion of the concave attaching face within the grooved border portion being substantially non-re-entrant above the plane of the lowermost edge of the grooved portion, a plurality of nail receiving openings through the tread face adapted to direct heel securing nails through the said grooved portion of the attaching face with the nail heads held in the body of the heel, the conformation of the said tread and attaching faces and the placing of the nail directing openings being such that nails passed through such openings and into the convexly rounded bottom of a shoe sole will so distort the heel from its normal form as to bring the surfaces of the heel groove portion and of the opposed shoe sole bottom into intimate contact, the tread face being thereby made approximately flat, and the re-action of the distorted resilient rubber heel portions against the distorting power of the nails causing a tight sealing of the seam between the contacting rubber heel side and rear edges and the shoe sole bottom.

1,532,210. CONTAINER. HARRY C. WEIS, Monroe, Mich., assignor to The Weis Fibre Container Corporation, Monroe, Mich., a Corporation of South Dakota. Filed June 19, 1922. Serial No. 569,344. 1 Claim. (Cl. 229—5.5.)

In a container, a cylinder having its edge folded upon itself to form a bead and an inwardly projecting annular flange, a flat disk of slightly greater diameter than the inside of said cylinder mounted in said cylinder immediately adjacent the inside of said flange, and a second flat disk of slightly greater diameter than the inside of said head mounted within said bead

immediately adjacent the outside of said flange, said disks being compressed together and against said flange,

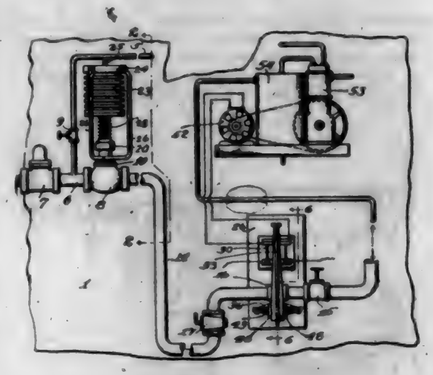


whereby each of said disks is slightly dished to accommodate the flange and cause the edges of the disks to form a tight joint with the cylinder.

1,532,211. SUSPENDERS. RICHARD A. WESLECK, Toledo, Ohio. Filed Apr. 18, 1924. Serial No. 707,819. 2 Claims. (Cl. 241—12.)

1. In a suspender, the suspender having two parts, the parts of the suspender having button holes at their ends and extending from the said button hole ends to beneath the arms of the wearer and diagonally across the shoulders at the back of the shoulders and terminating in loops through which the other of the parts extend, the said loops being located substantially between the hips and the arms of the wearer.

1,532,212. MAGNETIC LATCH MECHANISM. GUSTAV O. WILMS, Milwaukee, Wis., assignor to The Reliance Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 27, 1921. Serial No. 465,034. 6 Claims. (Cl. 200—108.)

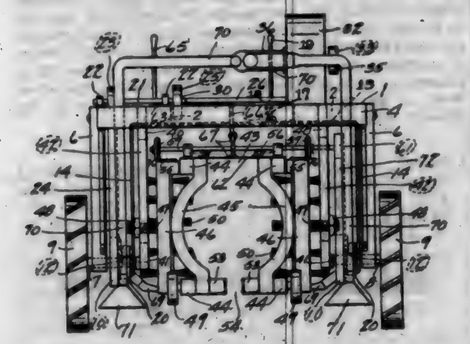


3. In a device of the class described, a holding member, a latch element engageable with said holding member to releasably secure the same in one position, a movable member, means releasably securing the movable member in a locking position, and a connection between said latch element and movable member for retaining the latch element in engagement with the holding member when the movable member is in locking position and for imparting a hammer blow to the latch element when the movable member is released by its securing means, whereby the disengagement of the latch element from the holding member is insured.

1,532,213. RENEWED RUBBER AND PROCESS FOR PRODUCING THE SAME. HERBERT A. WINKELMANN, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 11, 1923. Serial No. 650,969. 14 Claims. (Cl. 18—52.)

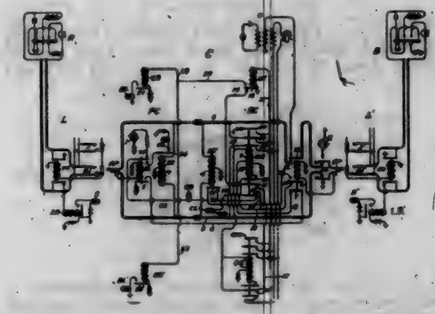
1. A process for renewing the plastic properties of vulcanized rubber which comprises incorporating with vulcanized rubber a condensation product of an aldehyde and an aromatic amine.

1,532,214. FREEZING THERMOSTAT AND CONTROL MECHANISM. WILLIAM WISHART and ALBERT H. MORRELL, Clinton, Iowa, assignors, by mesne assignments, to Climax Engineering Company, Clinton, Iowa, a Corporation of Delaware. Filed Aug. 8, 1921. Serial No. 490,779. 7 Claims. (Cl. 62—4.)



6. The combination with a refrigerating plant and the refrigerator thereof, of a condenser water supply pipe, a valve in said pipe, a diaphragm mechanism connected with said pipe, a motor control switch mechanism for said plant controlled by said diaphragm mechanism, and a freezing drip thermostat in said refrigerator connected with said water supply pipe and with said valve and controlling said valve and diaphragm, said freezing thermostat comprising a pipe coil connected with the water supply pipe and valve mechanism, a restricted nozzle formed on one end of said coil, and means secured on said nozzle for absorbing or radiating heat at said nozzle.

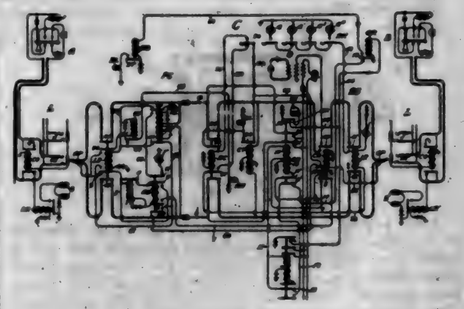
1,532,215. BOLL-WEEVIL TRAP. OWEN C. WOODS, Waycross, Ga., assignor of one-fourth to Henry W. Williams, Argyle, Ga. Filed Dec. 24, 1923. Serial No. 682,463. 1 Claim. (Cl. 43—140.)



A machine of the kind described, comprising in combination a wheel-borne frame; an exhaust fan in a housing on the frame; slotted hangers under the back end of the frame; a weevil trap adjustably mounted between said slotted hangers, the same including open side frames having threaded fingers with adjustment nuts thereon engaging the slotted hangers, rotary brushes mounted through the side frames, and weevil pans on

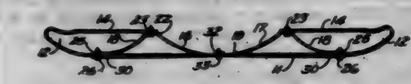
the side frames under the brushes, there being a plant-way left between the weevil pans; means for directing the plants through the said plant-way between the

weevil pans; pipes connecting the weevil trap with the exhaust fan; and means for driving the exhaust fan and the rotary brushes by the power furnished by the wheels.



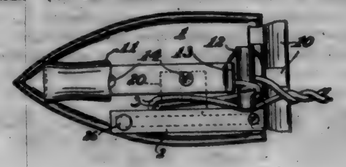
1,532,216. TELEPHONE SYSTEM. GEORGE A. YANOCHOWSKI, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 10, 1921. Serial No. 499,778. 33 Claims. (Cl. 179—49.)

8. A telephone system including a switchboard having answering jacks and a circuit provided with an answering terminal, a second switchboard having multiple jacks and a calling terminal for said circuit, an operator's set at said second switchboard, automatic means responsive to the connection of said answering terminal to one of said answering jacks for connecting the said operator's set at said second switchboard to said circuit.



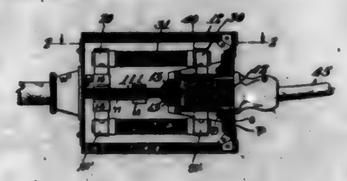
1,532,217. TELEPHONE SYSTEM. GEORGE A. YANOCHOWSKI, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 12, 1921. Serial No. 499,990. 19 Claims. (Cl. 179—49.)

1. A telephone system including a switchboard divided into positions, a calling line appearing in multiple answering terminals at a plurality of said positions, a second switchboard divided into positions, circuits extending from one of said positions upon said first board to positions upon said second board, the answering ends of said circuits being located at said first switchboard, and the calling ends of said circuits being located at said second switchboard, an operator's head set at one position upon said second board, means responsive to the direct connection of one of said circuits with any one of the multiple answering terminals of said calling line



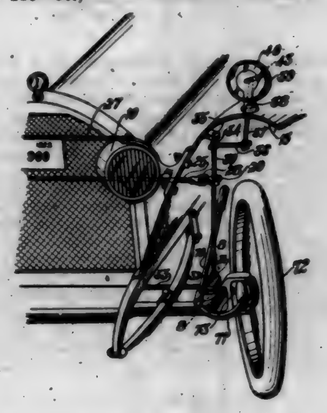
to connect said operator's set to said circuit, and subscriber controlled means for disconnecting his line from said circuit.

1,532,218. VEHICLE BUMPER. FINDLEY E. ANDREANI, Los Angeles, Calif., assignor to United States Bumper Co., a Corporation of California. Filed Nov. 9, 1922. Serial No. 599,773. 1 Claim. (Cl. 293—55.)



In a vehicle bumper, the combination of: a laterally extending frontal structure having a single bow at each end thereof, said structure being formed of a bar offset upwardly near one end thereof and having the other end bent rearwardly to form one of said bows and a second bar offset downwardly near one end thereof and having its other end bent rearwardly to form the other of said bows, said offset portions of said bars being spaced apart and of parallel horizontal extension; an arch member consisting of a central arch, the crown of which extends between said offset portions of said bars and the ends of which central arch are joined to the inwardly turned ends of said bows, said arch member further consisting of cantilever portions extending from the ends of said central arch and secured to said frontal structure; and a vertically disposed bar extending across the crown of said central arch and said offset portions of said bars and being rigidly secured thereto.

1,532,219. CONTROLLER FOR ELECTRICALLY-HEATED FLATIRONS. EUGENE ANTHONY, near Seattle, Wash. Filed Nov. 29, 1920. Serial No. 427,261. 1 Claim. (Cl. 219—25.)



An electrically heated flat iron having a hollow casing member secured to and extending across the rear end of the iron above its bottom face and adapted to serve as a supporting member when the iron is turned up and also as a container for a current regulating device, and a thermostatically operated current regulator in said casing.

1,532,220. PLUG BOX AND PLUG. FRANK P. ARROUSES and WILLIS C. HOLLINS, Los Angeles, Calif. Filed May 11, 1920. Serial No. 380,666. 8 Claims. (Cl. 175—369.)

1. In a plug box; a series of twelve jaws arranged in six pairs, each pair comprising an upper jaw and a lower jaw; means for connecting the first two upper jaws together; means for connecting the last three upper jaws together; means for connecting the first four lower jaws together; means for connecting the last two lower jaws together; a fixed jumper comprising means permitting a connection of the first two upper jaws to the last two lower jaws, the third upper jaw and the last three upper jaws being adapted to be connected at will by a jumper; and means for connecting the three wires of a three phase circuit to the first two upper and last two lower, the last four upper, and the first four lower jaws respectively.

1,532,221. SIGNAL MEANS FOR AUTOMOBILES AND THE LIKE. ARTHUR P. BAMFORD, Irvington, N. J. Filed May 15, 1922. Serial No. 561,151. 4 Claims. (Cl. 116—36.)

1. The combination of the steering gear for a vehicle or the like, of a lamp carried by said vehicle and means connecting said lamp with said steering gear whereby said lamp is turned laterally from straight-ahead position in direction and extent corresponding to the direction and extent of turning of said steering gear and for positively returning the lamp to straight-ahead position.

1,532,222. RIFLE-CLEANING-ROD TIP. WARREN S. BELDING, Philipsburg, Pa. Filed Aug. 12, 1924. Serial No. 731,560. 4 Claims. (Cl. 42—91.)

4. A tip for cleaning rods comprising a circular piece of metal having a cap of the diameter of a rifle less twice the thickness of the usual patch, a pin having a sharp point formed integral with and projecting from one face of said cap, a plurality of spaced-apart collars formed integral with and projecting from a reduced portion of said tip, and means for connecting said tip to the remainder of a cleaning rod, said pin being adapted to hold the patch in place during its movement through the receiver and bore of the rifle and said collars being adapted to hold said patch in position during the movement of the tip through the bore and receiver in the opposite direction.

1,532,223. STOP COLLAR FOR RIFLE-CLEANING RODS. WARREN S. BELDING, Philipsburg, Pa. Filed Sept. 27, 1924. Serial No. 740,179. 2 Claims. (Cl. 42—91.)

1. A stop collar for cleaning rods for firing pieces comprising a two-part structure, one portion having an opening therethrough to permit it to be slid on the rod and comprising a head portion, an integral circular portion of reduced diameter adjacent said head, and an integral screw-threaded portion of still further reduced diameter extending from said circular portion, and the other portion comprising a cylindrical sleeve-like member bored and screw-threaded portion of the first-mentioned part and bored to cooperate with the circular reduced portion of said part.

1,532,224. CURRENT-COLLECTING APPARATUS. ROBERT S. BLAIR, Sound Beach, Conn. Filed Apr. 19, 1921. Serial No. 462,582. 17 Claims. (Cl. 191—56.)

2. In current collecting apparatus, in combination, a conducting member, a rotary collecting member adapted to rotate about an axis transverse to said conducting member and pneumatic means adapted to maintain flexible electrical contact between said members.

1,532,225. PROCESS FOR VULCANIZING RUBBER AND PRODUCT OBTAINED THEREBY. SIDNEY M. CADWELL, Leonia, N. J., assignor to The Naugatuck Chemical Company, a Corporation of Connecticut. Filed Jan. 10, 1922. Serial No. 528,278. 56 Claims. (Cl. 18—53.)

1. A process for treating rubber, which comprises subjecting the rubber to an organic sulphur compound as a vulcanizing agent characterized by the group

and vulcanizing the rubber.

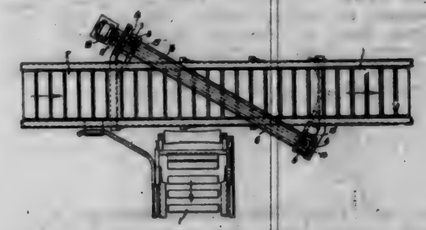
29. A vulcanized rubber derived from rubber combined with an organic sulphur compound as a vulcanizing agent characterized by the group

and an amine.

1,532,226. PROCESS FOR VULCANIZING RUBBER AND PRODUCT OBTAINED THEREBY. SIDNEY M. CADWELL, Leonia, N. J., assignor to The Naugatuck Chemical Company, a Corporation of Connecticut. Original application filed Apr. 1, 1922, Serial No. 548,826. Divided and this application filed Apr. 1, 1922. Serial No. 548,828. 44 Claims. (Cl. 18—53.)

1. A process of vulcanizing rubber or similar material which comprises combining with the rubber a vulcanizing agent, and an accelerator comprising the radical

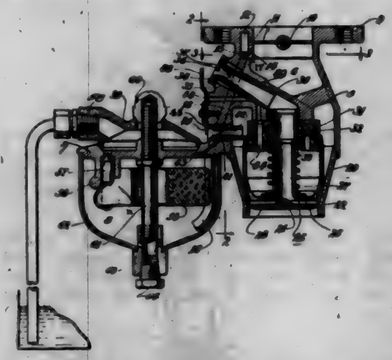
and vulcanizing the rubber.



1,532,227. PROCESS FOR VULCANIZING RUBBER AND PRODUCT OBTAINED THEREBY. SIDNEY M. CADWELL, Leonia, N. J., assignor to The Naugatuck Chemical Company, a Corporation of Connecticut. Original application filed Apr. 1, 1922, Serial No. 548,826. Divided and this application filed Apr. 1, 1922. Serial No. 548,829. 32 Claims. (Cl. 18—53.)

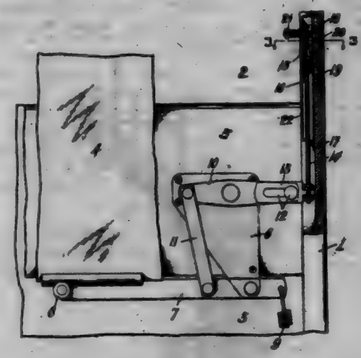
1. A process of vulcanizing rubber or similar material which comprises combining with the rubber a vulcanizing agent and an accelerator comprising the radical

where M is a metal, and vulcanizing the rubber.



1,532,228. DEFLECTING DEVICE FOR CONVEYER SYSTEMS. FREDERICK S. CARPENTER, Hartford, Conn., assignor to The Hartford Rubber Works Company, Hartford, Conn., a Corporation of Connecticut. Filed May 29, 1923. Serial No. 642,172. 4 Claims. (Cl. 198—188.)

1. The combination with a conveyer system having a main run and a branch run arranged transversely and in proximity to the main run, of means adjacent the junction of the main and branch runs for governing the movement of articles on the main run to or past the branch run, comprising, a beam arranged at an inclination to the main run, means for maintaining the beam at said inclination but permitting bodily movement thereof from an article-obstructing position adjacent the main run to a non-obstructing position removed from the main run, and means for shifting the beam to and from an article-obstructing position including a lost motion connection allowing the beam to temporarily rest upon an article on the main run until it has been carried past and clear of the beam.

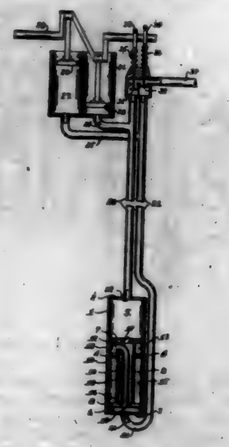


1,532,229. CARBURETOR. MILFORD G. CHANDLER, Chicago, Ill., assignor, by mesne assignments, to Curtis B. Camp, trustee, Oak Park, Ill. Filed Oct. 14, 1922. Serial No. 594,522. 4 Claims. (Cl. 261—72.)

1. In a vacuum feed carburetor, a fuel reservoir, an induction passage, a Venturi tube extending from atmosphere into said induction passage, a connection between the upper part of the fuel reservoir and a constricted part of said Venturi tube for creating a suction in said reservoir for lifting fuel thereto, a manually operable cam member for variably restricting the entrance to said Venturi tube, a secondary air valve having a chamber therein wherein suction is effective

for opening said valve, a piston within said valve, a duct extending through said piston and terminating beneath said cam, there being an opening through said cam member adapted to be moved into alignment with said duct to expose the duct to atmospheric pressure to prevent effective suction within the hollow valve.

1,532,230. WINDOW-CONTROL MECHANISM. ANGELO ROBERT CLAS, Toledo, Ohio. Filed Sept. 24, 1923. Serial No. 664,352. 3 Claims. (Cl. 268—4.)



1. The combination with a slidable window member, of a frame guiding the movements of the member, an arm pivotally carried by the frame for vertical rocking movements and supporting the window, counterbalancing means for the arm, a lever fulcrumed to the frame, means connecting the lever and arm for imparting rocking movements from one to the other, and manually operable control means guided for vertical reciprocatory movements in a side of the window frame parallel to the movement of the window, and connected to the lever to cause a rocking thereof when the control means is moved.

1,532,231. RODLESS DEEP-WELL PUMP. WILLIAM G. CORRY, Berkeley, and REMI C. KNIGHT and LOUIS F. CHAMPION, Oakland, Calif. Filed Nov. 26, 1923. Serial No. 676,973. 4 Claims. (Cl. 103—45.)

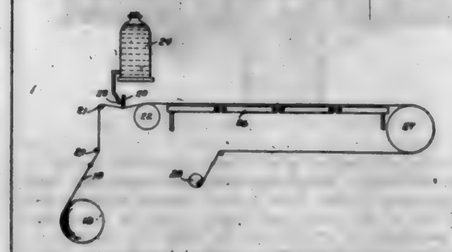
1. A pumping apparatus comprising a barrel having a working cylinder and a pumping cylinder axially alined

therewith, said pumping cylinder having a fluid inlet; a piston operable in each cylinder; a connecting stem between said pistons, having a fluid passage from said pumping cylinder to said working cylinder; means for supplying fluid under fluctuating pressure to said work-

ing cylinder to reciprocate said pistons, the fluid pumped from said pumping cylinder flowing through said passage and being added to the working fluid; and means for separating from said working fluid an amount of fluid equal to the pumped fluid added thereto.

1,532,232. TENNIS RACKET. JOHN J. CULLINAN, Chicago, Ill. Filed Apr. 17, 1922. Serial No. 554,326. 9 Claims. (Cl. 46—24.)

1. A tennis racket or the like comprising an open frame head adapted to be strung with resilient strings, and a handle spliced with said frame and a strand of stout gut drawn tightly around said frame and its ends extending transversely through the racket at the junction of the frame and handle and anchored against displacement.



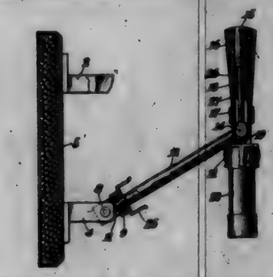
1,532,233. MILK-HEATING APPARATUS. ARNOLD O. DAHLBERG, San Francisco, Calif. Filed Mar. 5, 1923. Serial No. 623,003. 2 Claims. (Cl. 261—121.)

1. An apparatus for heating milk comprising in combination with a milk containing hot well, a perforated distributor head therein, a cap threaded thereto and forming a closure for one end thereof, said cap provided with a tubular nipple threaded interiorly and exteriorly, concentrically disposed tubular members threadably connected to said nipple with their walls in spaced relation and extending exteriorly of the hot well, the inner tube providing a steam conduit discharging into

the distributor head, an insulating packing interposed between the tubes immediately above the cap, and a perforated nut slidably mounted on the inner tube and threadedly connected to the upper end of the outer tube to afford a vent for the chamber between the tubes.

1,532,234. SUPERFICIALLY-FINISHED RUBBER ARTICLE OR MATERIAL AND METHOD OF PRODUCING SAME. CHARLES H. DENNISON, Quincy, Mass., assignor to American Rubber Company, East Cambridge, Mass., a Corporation of Massachusetts. Continuation of application Serial No. 496,008, filed Aug. 27, 1921. This application filed Dec. 6, 1922. Serial No. 605,176. 20 Claims. (Cl. 91—70.)

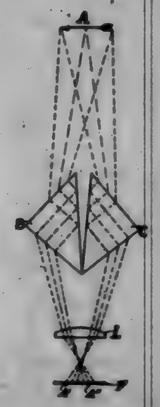
1. The method of changing the surface characteristics of a rubber containing material which consists in superficially hardening it by treatment with bromine.



6. The method of producing a superficial hardening and leatherlike slip or gloss on rubber or compounds thereof which consists in both superficially treating it with bromine and vulcanizing it.

19. As a new article of manufacture, a body having a bromine-hardened rubber contining surface portion.

1,532,235. COMBINED SWITCH AND FUSE. WALLACE G. DEXTER, Brooklyn, N. Y. Filed Mar. 8, 1922. Serial No. 541,899. 5 Claims. (Cl. 200—114.)

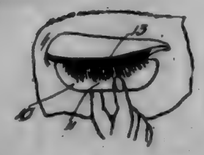


1. An electric switch comprising fixed contact members, a movable contact member associated therewith having portions respectively contacting with said fixed contact members, conducting clips interposed between said contacting portions of said movable contact member,

means permitting relative movement between said conducting clips without disconnecting said movable contact

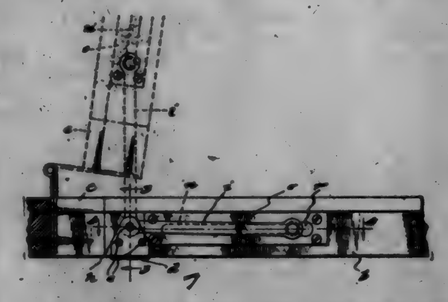
member, and fuses held in position by said clips and disengageable therefrom by relative movement therebetween.

1,532,236. METHOD AND APPARATUS FOR PRODUCING MULTIPLE-IMAGE EFFECTS IN PHOTOGRAPHY. LEON F. DOUGLASS, Menlo Park, Calif. Filed Dec. 26, 1922. Serial No. 609,140. 5 Claims. (Cl. 88—1.)



1. The method of producing two images of a single object on a photographic film which comprises firstly, refracting and reflecting two pencils of light rays from said object through two large right-angle prisms positioned in front of a camera lens with their large faces adjacent, and secondly, refracting said light rays through said camera lens onto said film.

1,532,237. HERMETIC SEAL. OSCAR H. ELIEL, La Salle, Ill. Filed May 9, 1921. Serial No. 467,960. 1 Claim. (Cl. 27—6.)



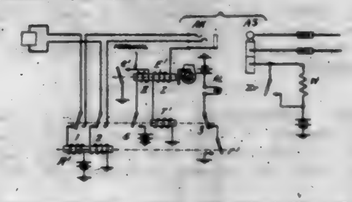
A hermetic seal for burial caskets comprising an outwardly extending horisontal flange on the body portion, a cover portion having an upturned edge adapted to overlap said flange, an upturned edge on said horisontal flange, the upturned edge of the cover portion lying within the upturned edge on said horisontal flange and spaced away therefrom, and fusible material sealingly secured between said flange and its upturned edge and the margin and upturned edge of the cover portion.

1,532,238. HAIR CURLER. EDNA M. FARRELL, Los Angeles, Calif. Filed June 23, 1924. Serial No. 721,740. 2 Claims. (Cl. 132—31.)

2. An eyelash curler embodying a sheet of flexible material shaped to conform with a portion of a human eyelid, and means for removably affixing the sheet to the eyelid.

1,532,239. DOORCHECK. GEORGE FAUSER, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Feb. 15, 1923. Serial No. 619,104. 5 Claims. (Cl. 16—82.)

1. In a structure provided with a door and door frame, the combination of a header, an outwardly swinging door supported in relation to said header, an angle plate secured to the inside of the header and the underside of the header thereby stressing against the entire cross section of the header when the door opens, a slotted plate secured to the top of the door and a link pivoted to the anchor and slidably connected with the slot in the said plate.

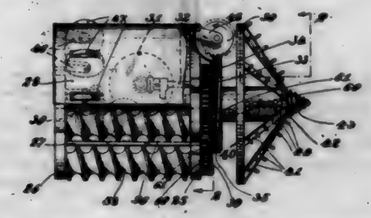


1,532,240. BLOTTER ATTACHMENT FOR FOUNTAIN PENS. ANTONE FIERO, Stockton, Calif. Filed Feb. 11, 1924. Serial No. 691,902. 1 Claim. (Cl. 120—84.)

A blotter attachment for fountain pens including a primary plate having its edges inturned to form guides and means on the inturned edges for attachment to the pen, a secondary plate having inturned edges to frie-

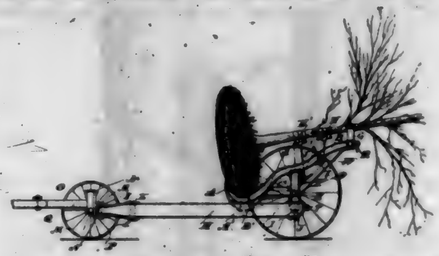
tionally engage the guides on the primary plate to hold the two together, the inturned edges on the secondary plate being turned back to form slots to receive the edges of a blotter placed over the secondary plate.

1,532,241. METERING CIRCUIT FOR TELEPHONE SYSTEMS. ARTHUR FLAD, Berlin, and FRITZ LUBBERGER, Schmargendorf, Germany, assignors to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Filed July 10, 1922. Serial No. 573,957. 6 Claims. (Cl. 179—8.)



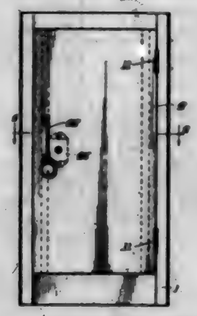
1. The combination, with a subscriber's line, of a meter and cut off relay for said line, a circuit including said meter and cut off relay in series, said meter being non-responsive to normal current flow in said circuit, means for temporarily increasing the current flow in said circuit to operate said meter, and means controlled by the operating magnet of said meter for opposing the effect of the increased current after the magnet has operated in order to facilitate the deenergization of the magnet when the current is reduced to its normal value.

1,532,242. SUPERHEATER. EDWARD A. GROGHEGAN, New York, N. Y. Filed Apr. 14, 1922. Serial No. 552,748. 1 Claim. (Cl. 122—460.)



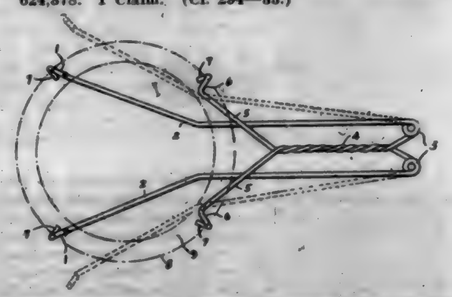
A steam superheater including a fire-tube of a boiler, a superheating unit comprising a flat spiral strip of metal adapted to guide the fire gas in a spiral course through said tube, and a return-bend tube having the arms thereof wrapped around the spiral of said metal strip to give the steam passing therethrough a whirling motion, and whereby the fire gas is caused to follow parallel with said tubes.

1,532,243. EXCAVATING MACHINE. WILHELM HEBSACKER, Heilbronn, Germany. Filed June 17, 1920. Serial No. 389,780. 4 Claims. (Cl. 262—7.)



1. An excavating machine comprising a cylindrical body, a horizontal platform therein, a substantially conical head revoluble at the front end of said body, means on said platform for rotating said head, helical conveyors arranged at the periphery of said body extending parallel to its axis, means for driving said conveyors, a plurality of propelling means for said body, and adjustable means for guiding said body.

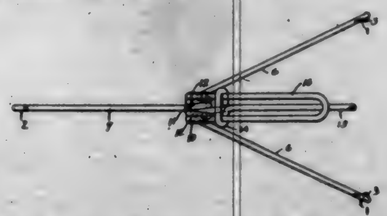
1,532,244. TREE-TRANSPLANTING DEVICE. CHARLES F. IRISH, Bratenahl, Ohio. Filed May 2, 1921. Serial No. 466,368. 11 Claims. (Cl. 214—3.)



1. The combination, with a truck, of a concave tree excavator and carrier mounted on said truck, said excavator having a projecting front edge to engage under the root mass of the tree, a lever connected to and extending from said excavator and carrier, and means for locking the lever.

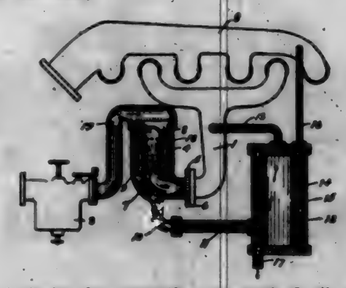
1,532,245. LOCKER LOCK. EVERETT DEE KASER, Aurora, Ill., assignor to Durabilt Steel Locker Co., Aurora, Ill., a Corporation of Illinois. Filed Apr. 11, 1921. Serial No. 460,315. 5 Claims. (Cl. 70—14.)

1. A locker comprising a body having a hinged door, a tubular reinforcement extending along one edge of said door and arranged to form a housing, a keeper mounted on said body and arranged to extend into said housing when the door occupies its closed position, and locking mechanism located in said tubular reinforcement and arranged for interlocking engagement with said keeper.



1,532,246. BAKE-PAN LIFTER. RUDOLPH A. KOTTKE, Detroit, Mich. Filed Mar. 12, 1923. Serial No. 624,378. 1 Claim. (Cl. 294—33.)

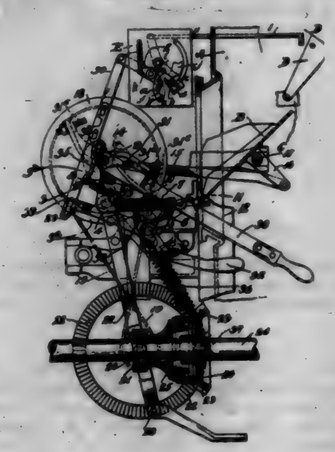
In a device of the character described, two pairs of wire arms, each pair carrying coacting jaws for gripping



utensils, one of said pairs of arms being connected in a substantially rigid relation and the arms of the other pair being flexibly connected to said rigid arms for movement to and from each other, each rigid arm being integral with one flexible arm, and the lengths of wire forming said arms being twisted one around the other between the joined ends of said arms.

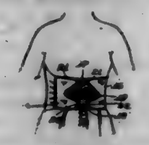
1,532,247. PAN LIFTER. RUDOLPH A. KOTTKE, Detroit, Mich. Filed May 18, 1923. Serial No. 639,807. 7 Claims. (Cl. 294—31.)

1. In a device of the character described, a pivot member, and a pair of gripping members each formed of wire looped to embrace said pivot member, and each forming a handle at one side of its fulcrum and an arm at the other side thereof, said arms terminating in coacting jaws, one of said handles functioning as a spring bearing upon the other handle to urge said gripping members apart.



1,532,248. VAPORIZER FOR INTERNAL-COMBUSTION ENGINES. WILLIAM L. LAUDAN, Sterling, Colo. Filed Jan. 12, 1924. Serial No. 685,802. 6 Claims. (Cl. 48—180.)

1. A device for separating unvaporized oil and dust particles from a fuel mixture, comprising a cylindrical member open at both ends, a tubular member located within the cylindrical member and spaced from the sides thereof, said tubular member having one end closed and the other end open and connected to the wall of the cylindrical member, which is adapted to register with an opening in an intake manifold, said tubular member having a plurality of rows of holes, means comprising conical flanges for causing gases to make a sharp turn when passing from the space in the cylindrical member to the inside of the tubular member, and a cap, having a cylindrical conduit, connected to the open end of the cylindrical member and adapted to be connected with a carbureter.

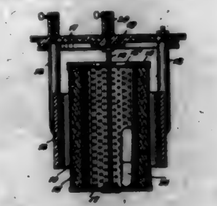


1,532,249. AUTOMATIC POWER DISCHARGE CHUTE. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Nov. 15, 1923. Serial No. 675,014. 19 Claims. (Cl. 83—73.)

1. In combination, a discharge chute for concrete mixers, driving mechanism, clutch mechanism intermediate said driving mechanism and the discharge chute for transmitting movement to the chute, catch mechanism for normally maintaining said clutch mechanism inactive, and an automatic means for releasing the catch

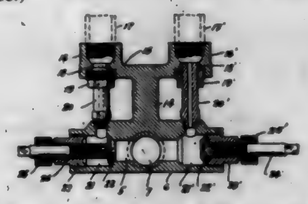
mechanism and effecting operation of the clutch means to transmit movement to the discharge chute at a predetermined time.

1,532,250. BRASSIÈRE. EMILY A. LINDEMANN, New York, N. Y. Filed Oct. 28, 1921. Serial No. 511,024. 2 Claims. (Cl. 2—42.)



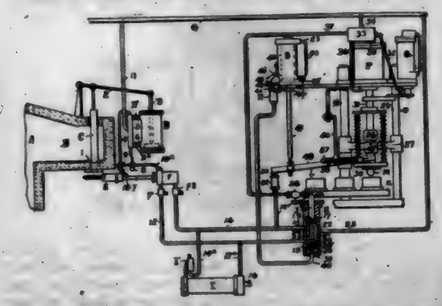
1. A brassière comprising an inelastic front portion and a back portion, said back portion being formed of inelastic end sections and a middle section being secured to the end sections along lines converging upwardly and downwardly respectively, from the intermediate portion of said back portion.

1,532,251. VALVE. DAVID G. LORRAINE, Los Angeles, Calif. Filed Dec. 23, 1919. Serial No. 346,967. 14 Claims. (Cl. 251—95.)



1. A valve comprising a casing, a stationary cylinder having a peripheral port therein, a sleeve rotatably mounted on said cylinder and having a peripheral port therein adapted to register with the port in said cylinder, means for limiting the rotation of said sleeve on said cylinder, and means effective after the rotation of said sleeve has been stopped for causing adjacent portions of said sleeve and said cylinder to be moved into close contact for closing said ports.

1,532,252. MEANS FOR PROVIDING AND RELEASING OIL IN BATTERY SOLUTIONS. MARTIN L. MARTUS, Woodbury, and EDMUND H. BECKER and HAROLD B. SCHOENMEHL, Waterbury, Conn. Filed May 24, 1924. Serial No. 715,564. 9 Claims. (Cl. 136—38.)

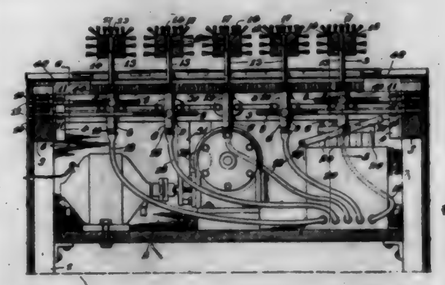


1. The combination with a battery element, of independent oil containing means carried thereby adapted upon immersion in an electrolyte solution to release the oil.

1,532,253. FLOW-NOZZLE STRUCTURE. WILLIAM MEREDITH and STEPHEN A. D. COX, Huntington Beach, and WALTER L. FOSTER, Whittier, Calif. Filed Aug. 18, 1924. Serial No. 732,795. 6 Claims. (Cl. 166—15.)

6. A flow nozzle structure comprising a block having a main passage extending therethrough and adapted to be connected to a well, a plug closing the other end of the passage, there being branch passages extending from said main passage, said branch passages having outlet ports, caps having openings, one aligned with and facing each outlet port, a flow nipple bridging the space between each port and cap, said flow nipple being laterally removable, a valve for each branch passage, a gate valve in said main passage between said plug and the juncture of said passages, and a gate valve on the other side of said juncture.

1,532,254. PROCESS AND APPARATUS FOR CONTROLLING THE FEEDING OF GLASS. WILLIAM J. MILLER, Swissvale Borough, Pa. Filed Nov. 21, 1921. Serial No. 516,645. 20 Claims. (Cl. 49—5.)

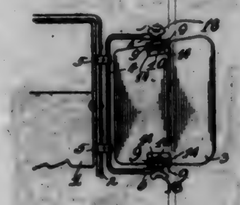


1. The process of maintaining uniformity in gathers of glass produced by an automatic feeder which consists in regulating the amount of glass in a gather being formed by the feeder by the amount of glass in a preceding gather.

1,532,255. MEANS FOR TRANSPORTING GLASS ARTICLES. WILLIAM J. MILLER, Swissvale Borough, Pa. Filed Nov. 21, 1921, Serial No. 516,646. Renewed Oct. 20, 1924. 12 Claims. (Cl. 49—14.)

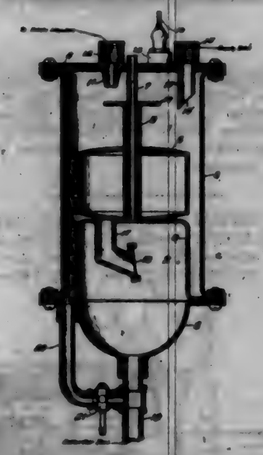
1. In combination with mechanism for transporting hollow articles of glass, a vacuum gripper for said mechanism comprising a member contoured to circumferentially fit the wall of the article from without, a second member mounted in unison therewith and contoured to fit the wall of the article from within, said members being spaced apart to form a chamber which is closed by the article when the gripper engages an article, and means for applying a vacuum to said chamber.

1,532,256. PAN-GREASING MACHINE. WILHELM MOLLER, Lewistown, Pa., assignor to Easy Pan Greasing Machine Co., Philadelphia, Pa. Filed June 14, 1924. Serial No. 720,077. 6 Claims. (Cl. 91—39.)



1. A pan greasing machine including a frame; a rack slidable on the frame; brushes; rotatable members carrying the brushes and operatively connected with the rack, and means for imparting harmonic reciprocating motion to the rack.

1,532,257. WINDSHIELD. ALBERT B. MUELLER, Chicago, Ill., assignor to Augustus Ehle, Chicago, Ill. Filed Sept. 9, 1921. Serial No. 499,524. 1 Claim. (Cl. 296—84.)

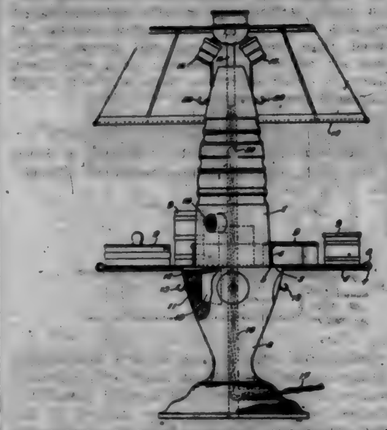


The combination with a transparent main wind shield provided with a frame; of a supplemental transparent wind shield provided with a carrier that is coupled with one side of the main wind shield frame; clamps upon said carrier that grip opposite sides of the supplemental shield, each clamp comprising a back portion upon one side of the supplemental shield, ears connected with said back portion and upon the other side of the supplemental shield, a member in hinge connection with said ears, and a screw in threaded connection with the outer portion of said hinged member and, when turned, engaging said back portion to force the inner portion of the hinged member toward the supplemental shield; a

threaded stem upon the back portion of each clamp and passing through the carrier for the supplemental shield;

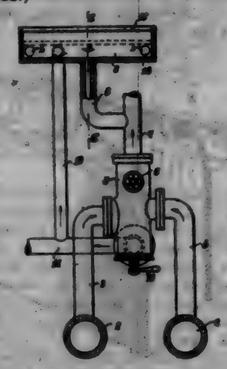
and a nut upon each clamp stem, the carrier for the supplemental shield having portions interposed between said nuts and the clamp body portions.

1,532,258. VACUUM-FEED SYSTEM. GUSTAVE C. NELSON, Moline, Ill., assignor to Borg & Beck Company, Moline, Ill., a Corporation of Illinois. Filed June 14, 1920. Serial No. 388,755. 5 Claims. (Cl. 103—236.)



1. In a vacuum feed system, a tank comprising a receiving chamber and a feed chamber, a valved communication between said chambers, a vacuum producing connection to the receiving chamber comprising a nipple projecting inward from the top of said chamber, a float operated disk cut-off to engage said nipple and close said connection, and a liquid fuel supply inlet in the top of the receiving chamber comprising a nipple projecting into the receiving chamber from the top thereof and having its lower end located below the end of the nipple in the vacuum connection and cut angularly in relation to its length and with the longer side located opposite said vacuum connection nipple.

1,532,259. DRESSER LAMP. ANDREW C. NIELSEN, Chicago, Ill. Filed June 8, 1921. Serial No. 475,927. 2 Claims. (Cl. 240—3.)



1. A dresser lamp comprising a body, a base supporting the body and having a peripheral shoulder projecting beyond the body, and a tray for toilet articles revolubly mounted on the body and supported on said shoulder,

said tray provided with an upstanding flange surrounding the body and having its outer margin bent to form a

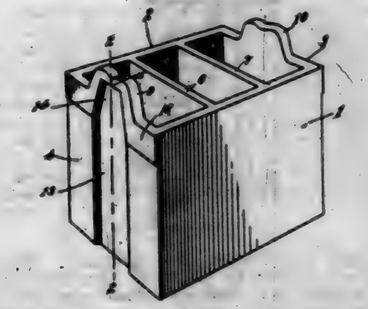
rounded bead for preventing dislodgment of articles from the tray and having its edge turned down and under the tray.

1,532,260. CLOTH-SINGEING DEVICE. WALTER OSTHOFF, Barmen, Germany. Filed Aug. 26, 1921. Serial No. 495,557. 8 Claims. (Cl. 158—99.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

4. In a device of the type set forth, in combination, a burner presenting a relatively extended narrow flame slot and having a port intermediate its ends for the admission of a combustible pressure gas and means spaced laterally from said fuel port for admitting a non-combustible pressure gas.

1,532,261. CAR SHIFTER. AUGUSTUS T. PERKINS, Oak Park, Ill., assignor to Webster Mfg. Company, Chicago, Ill., a Corporation of Ohio. Filed Jan. 31, 1924. Serial No. 689,630. 18 Claims. (Cl. 104—176.)

1. In apparatus for shifting railway cars along a track, the combination of a traveling carriage movable parallel with the track, having a member adjustably mounted thereon for engaging and disengaging either end of the

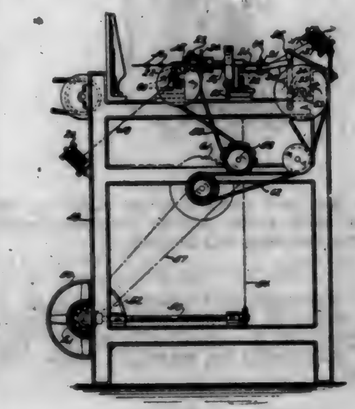


car, for pushing the car in either direction, and instrumentalities including a power device in stationary position and a cable system and sheaves cooperating to cause back and forth movement of said carriage at greater speed than the speed of said power device, whereby cars are movable successively along said track, some distance, in either direction, with relatively slight movement of said power device.

1,532,262. CIGARETTE HOLDER. WILLIAM A. PIKE, Ottawa, Ill. Filed July 26, 1924. Serial No. 728,302. 4 Claims. (Cl. 131—51.)

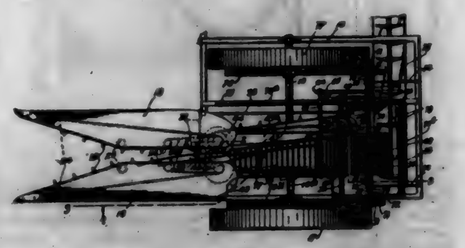
1. The combination with an ash tray, a horisontally disposed flange carried by said ash tray, of a cigarette holding member carried thereby, said member comprising spring actuated gripping jaws, a lever pivoted to the ash tray and cooperating with said jaws for opening the same upon a downward movement of the lever, and a supporting leg adjacent said lever and outside of the pivotal point thereof and forming means whereby when pressure is applied on the lever the tray will be prevented from tilting.

1,532,263. CONTAINER. OLIVER O. REIBER, Forest Park, Ill., assignor to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed June 16, 1924. Serial No. 720,201. 3 Claims. (Cl. 130—29.)



1. A container with side, end and bottom walls with handles secured to the top of the end walls projecting upwardly in the plane of the end walls, said handles being solid and provided with an external under-cut ledge to compel inward pressure as the box is lifted.

1,532,264. BUMPER. PHILIP RIEDELS, Los Angeles, Calif., assignor to United States Bumper Company, Inc., Los Angeles, Calif., a Corporation of California. Filed Nov. 13, 1923. Serial No. 674,458. 8 Claims. (Cl. 293—55.)

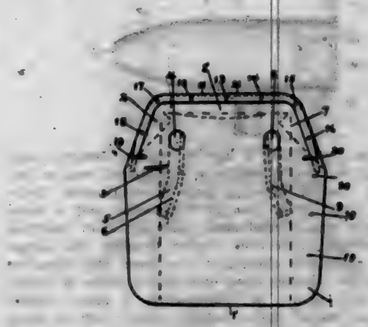


7. An automobile bumper comprising a plurality of vertically aligned bars, said a secondary bar having a forked end joined to the ends of the front bars above and below the bars.

1,532,265. MACHINE FOR MAKING ORNAMENTS. WALTER ROBICHAUD, New York, N. Y., assignor to Paper Novelty Mfg. Co., New York, N. Y., a Corporation of New York. Filed Jan. 16, 1917. Serial No. 142,621. 6 Claims. (Cl. 117—24.)

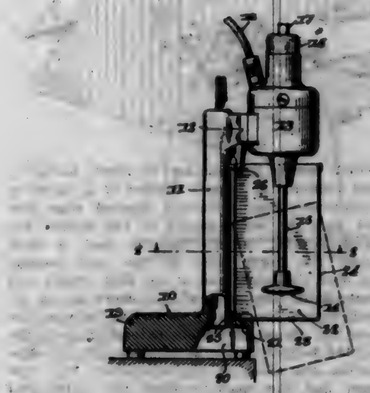
4. In a machine of the character set forth, the combination of a tapered mandrel, means for winding loop-forming material onto said mandrel, said mandrel and said loop-forming means relatively movable longitudinally of each other during the formation of loops on said tapered mandrel.

1,532,266. CUTTER FOR ENSILAGE HARVESTERS AND THE LIKE. ANDREAS G. RONNING and ADOLPH RONNING, Minneapolis, Minn. Filed Nov. 14, 1919. Serial No. 337,979. 9 Claims. (Cl. 146—110.)



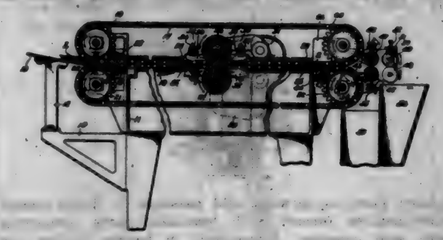
1. An ensilage cutter comprising co-operating rotary drums having intermeshing circumferentially spaced blades arranged for a combined cutting and feeding action on the stalks delivered thereto, said drums having hollow interiors into which the cut ensilage is forced, means for forcibly delivering the stalks to said drums, and means for discharging the cut ensilage from the interiors of said drums.

1,532,267. VESTED GARMENT. ALBERT ROSENBERG, Baltimore, Md. Filed July 25, 1924. Serial No. 728,171. 7 Claims. (Cl. 2—102.)



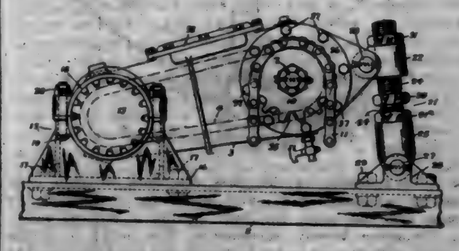
1. A garment provided with a lapel and a collar and with a series of means for securing a vestee, said means

secured to the inside of the garment under the lapel and under the collar in alignment with the collar and



the lapel, and slit places in the garment under the lapel for inserting the ends of a vestee patterned to align with the collar and the lapel.

1,532,268. DRINK MIXER. JOHN W. RUGGABER, Racine, Wis., assignor to The Gilchrist Company, Newark, N. J., a Corporation of New Jersey. Filed Oct. 7, 1921. Serial No. 505,986. 3 Claims. (Cl. 259—184.)



1. In a drink mixer, the combination with a container, of a base having a ledge adapted to receive a portion of the container and to support it at its bottom, a standard rigid with said base, a hook on the upper portion of the standard adapted to extend into and engage the inner periphery of the upper margin of the container to hold it in upright position, a motor supported by said standard and a stationarily supported rotary agitator driven by said motor and suspended from above with sufficient clearance to permit the container to be manually manipulated into its operative position on the ledge.

1,532,269. ART OF STEMMING TOBACCO. FREDERICK C. SCHOFIELD, Lynchburg, Va., assignor to Tobacco Stemming Machine Company, Lynchburg, Va., a Corporation of Delaware. Filed Dec. 10, 1921. Serial No. 521,819. 22 Claims. (Cl. 131—51.)

1. The method of leaf stemming which consists in gripping the leaf stem at a point intermediate its ends, in folding the leaf and in removing the lamina portions of the leaf from the folds.

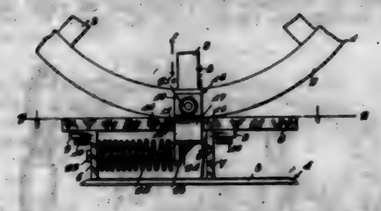
1,532,270. MOVABLE TRANSMISSION UNIT. PAUL S. SHIELD, Cincinnati, Ohio, assignor to Augustine Davis, jr., Covington, Ky. Filed May 26, 1923. Serial No. 641,585. 16 Claims. (Cl. 64—52.)

1. In a transmission unit, a trunnion-bearing, a chain-case pivotally supported at said trunnion-bearing, a chain in the chain-case, a power-delivering shaft and sprocket for said chain in the trunnion end of the chain-case and coaxial with the trunnion-bearing, a power-receiving shaft and sprocket for the chain in the remote end of the chain-case, a sprocket on the outer part of the latter shaft, a driving chain on said sprocket, a screw device cooperative with the chain-case to support the same in adjustable angular relation to the trunnion-bearing in order to adjust the said driving chain.

1,532,271. METHOD OF MANUFACTURING SIRUP. RONALD JAMES SLAY, Hattiesburg, Miss. Filed June 15, 1921. Serial No. 477,858. 1 Claim. (Cl. 127—41.)

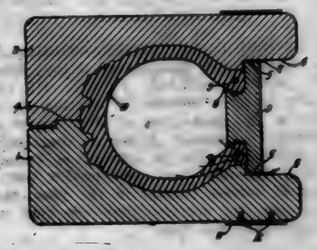
The herein described method of treating the juice of sugar cane in the production of sirup which consists in determining the amount of sucrose contained within the juice, adding thereto an amount of tartaric acid equal to not less than two and one-half per cent of the amount of sucrose present in the juice, thereafter boiling the juice for not less than one hour and subsequently sterilizing the juice.

1,532,272. COMBINED HOT AND COLD WATER FAUCET. THOMAS H. SPENCE, Seattle, Wash., assignor to Samuel M. Gross, Cleveland, Ohio. Filed Aug. 11, 1924. Serial No. 731,316. 2 Claims. (Cl. 251—106.)



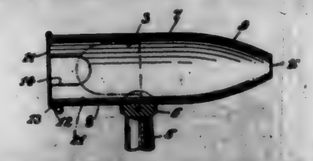
1. A faucet of the character described comprising a valve body having an upwardly tapering conical cham-

ber open at top and bottom formed with a circular valve seat at its upper and lower portions, respectively, and lateral passages on opposite sides intermediate said seats communicating with sources of water supply, respectively, together with a delivery passage intermediate said lateral passages, said chamber having divisional



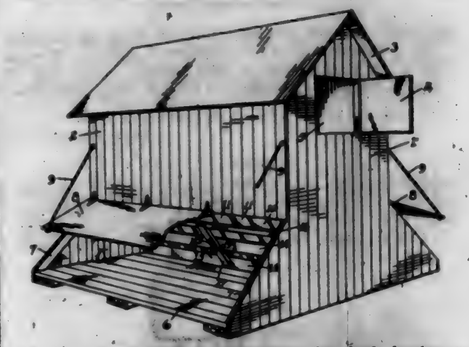
contact portions between said passages, a frusto-conical valve-member formed with branched parts connecting with said passages, respectively, a handle closing one end of said valve chamber, a screw-threaded closure for the opposite end of said chamber, a spring interposed between said closure and the lower end of said valve member.

1,532,273. FLEXIBLE-TREAD WHEEL. WYATT C. STARR, Lake Wales, Fla. Filed May 19, 1924. Serial No. 714,444. 3 Claims. (Cl. 301—44.)



2. In a device of the class described, a tread comprising a base, a body, and means for connecting the base and the body, the body having a reduced neck; a connector loosely surrounding the neck; a spring united with the connector and with the tread; and means for assembling the connector with a wheel.

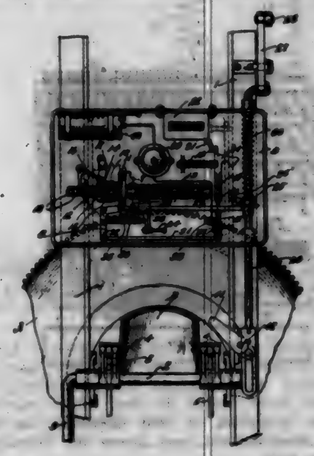
1,532,274. APPARATUS FOR VULCANIZING TIRES. WILLIAM J. STEINLE, deceased, late of Flushing, N. Y., by William Steinle, administrator, Flushing, N. Y., assignor to The Hartford Rubber Works Company, Hartford, Conn., a Corporation of Connecticut. Filed Oct. 25, 1923. Serial No. 670,649. 3 Claims. (Cl. 18—38.)



2. Tire vulcanising mold equipment comprising substantially duplicate mold sections for shaping the outside of a casing, and a sealing ring for closing the gap between the mold sections at the bead-engaging portions thereof, the total thickness of the mold sections and sealing ring at the bead-engaging portions of the sections being greater than the total thickness of the mold sections at the tread-engaging portions thereof.

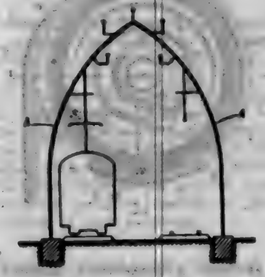
1,532,275. CONFECTION SCOOP. DAVID L. STAUMPF, New York, N. Y. Filed July 21, 1922. Serial No. 576,522. 7 Claims. (Cl. 107—48.)

6. A scoop comprising a handle and an integral shell member rigid therewith having a cylindrical portion and a generally conical tapering portion continuous therewith, said shell being open at both ends and a cover for the larger end of said shell, whereby upon insertion of a cylindrical confection holder through the larger end of the scoop and closing of the cover, the operation of scooping the smaller open end into a mass of frozen confection will result in compressing a mass thereof into the open end of the cylindrical holder and in filling the generally conical end of the scoop, and whereby upon opening the cover, the handle member may be withdrawn as an integral part with the molded lump of frozen confection connected thereto.



1,532,276. STOCK FEEDER. ELMER F. SWARTZ, Perrysburg, Ohio. Filed Mar. 12, 1924. Serial No. 698,639. 2 Claims. (Cl. 119—60.)

2. In a stock feeder, a container for feed, having a hopper-shaped bottom, the hopper formed of a plurality of closely positioned boards having opposed edge portions located near the lower corner of the hopper ent therefrom and forming outlets for the feed, a strip for supporting the lower ends of the said boards, doors hinged near the upper end of the said hopper and strips for supporting the ends of the doors at an incline to the horizontal, a flooring extending between the lower ends of the strips, the doors extending from the upper end of the hopper to the flooring, boards for closing and sealing the sides of the container, the ends of the hopper and the space between the strips and the flooring, adjustable slide boards extending along the sloping sides of the hopper for covering the said outlets, guide strips located on the outside of the guide boards and secured to the hopper for supporting the said boards and having slots, bolts extending through the slots and into the boards for locking the boards in adjusted positions.



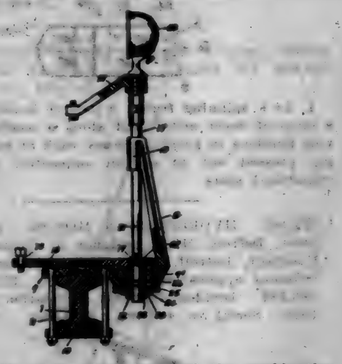
1,532,277. CONTROL MECHANISM FOR MIXING MACHINES. HERAULT A. THESTER, Milwaukee, Wis., assignor, by mesne assignments, to Koehring Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 6, 1916. Serial No. 89,312. 13 Claims. (Cl. 88—73.)

1. In combination, a mixing machine comprising a rotary mixer, control means including governor mechanism operable by said mixer, indicating means to advise the operator of the time of completion of the mixing operation by said mixer, means to automatically actuate

the indicating means from the governor mechanism, means for discharging the mixer, and means to prevent operation of the discharging means until after the indicating means has been operated.

1,532,278. ARCH FOR THE ELECTRIFICATION OF RAILWAYS. NELSON UHRY, Paris, France, assignor to Societe des Grands Reseaux Electriques, Paris, France, a Corporation of France. Filed Aug. 25, 1923. Serial No. 659,816. 1 Claim. (Cl. 191—40.)

A structure for supporting overhead conductors comprising a relatively light metal frame having vertical legs, and inwardly curved upper sections united at their ends forming an ogive or gothic arch.



1,532,279. ENDLESS SICKLE BLADE. HOMER ULLOM, Lamar, Colo. Filed Aug. 5, 1920. Serial No. 401,865. 1 Claim. (Cl. 56—291.)

A guard bar comprising a housing providing a continuous chamber rectangular in cross section and having a slot extending along the front edge of said housing, in combination with an endless cutter having blades, the guard bar being provided with guard fingers formed integrally with the chamber and extending outwardly, the fingers being provided with upper faces inclined

downwardly towards the outer free ends of the fingers, with the blades of the endless belt inclined and slidable in face to face engagement with said fingers.

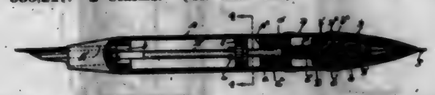
1,532,280. DIRIGIBLE HEADLIGHT. WILLIAM V. VAN ETTEN, Everett, Wash. Filed Apr. 8, 1924. Serial No. 704,918. 2 Claims. (Cl. 240—62.)

1. In a vehicle of the class described, the combination with the front axle and steering knuckle thereof, of a lamp supporting bracket rigidly fixed to the axle comprising a horisontal base plate and an upwardly directed standard; said base plate having an opening therethrough and said standard having a bearing vertically alined with the base opening, a lamp rotating lever overlying the base plate and having a sleeve bearing at one end extended rotatably through said base plate opening, a lamp supporting shaft rotatably mounted in the bearing of the standard and slidably keyed in said sleeve of the rotating lever, a locking ring fixed on the lower end of the sleeve and a spring bearing against said ring and base plate to yieldably retain the sleeve within the base plate opening, and a link pivotally connecting the rotating lever with the steering knuckle.

1,532,281. SUBMARINE LIFE-SAVER. JOHN B. VAN TINE, Lambertville, N. J. Filed Oct. 21, 1924. Serial No. 744,958. 3 Claims. (Cl. 114—16.7.)

3. The combination with a submarine having a compartment therein, a water tight closure for the compartment, means for moving the closure away from the compartment, of an escape car disposed in said compartment including a removable cover means for permitting access to the car through the compartment, means for initially raising the escape car in the compartment, a pipe extending into the compartment communicating with the exterior of the submarine, a control valve in said pipe and means for automatically releasing the closure of the compartment and for operating the control valve upon the initial raising movement of the car within said compartment.

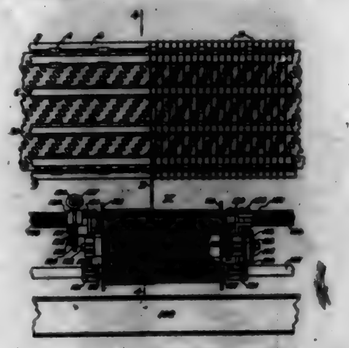
1,532,282. THREAD-GUIDING DEVICE FOR SPINNING FRAMES. ARTHUR C. VARNUM, Southbridge, Mass. Filed Dec. 31, 1923. Serial No. 683,709. 4 Claims. (Cl. 118—11.)



1. In a spinning frame, a pot-eye holder formed from a strip of sheet metal bent along a median line to provide portions in parallel planes, each of said portions being pressed out to provide oppositely disposed semi-cylindrical seats.

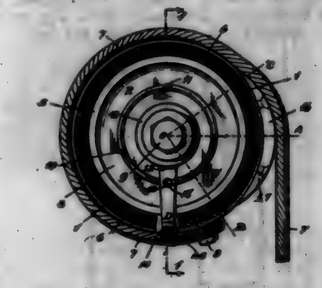
1,532,283. HYDROCARBON MOTOR. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed July 30, 1917, Serial No. 183,587. Divided and this application filed Aug. 23, 1920, Serial No. 405,493. 5 Claims. (Cl. 113—112.)

1. A method of welding two tubular parts together consisting in forming an annular shoulder interiorly of one such part and spaced from the end thereof, forming a similar shoulder on the other such part also spaced from the end thereof, telescoping the parts so that the end of the inner part abuts against the internal shoulder of the outer part and the shoulder of the inner part is adjacent the end of the outer part, and heating the shoulder of the inner part and the adjacent end of the outer part to cause them to flow together.



1,532,284. WRITING INSTRUMENT. FREDERICK WALDORF, Erie, Pa. Filed Feb. 13, 1922. Serial No. 536,217. 2 Claims. (Cl. 120—18.)

1. In a writing instrument a hollow handle adapted to contain writing fluid, and having an internally threaded socket in the end thereof, a tube centrally secured into said hollow handle, a lead pencil feeding mechanism comprising a lead-holder and feeding screw adapted to be screwed into said socket, and a stem on said feeding screw adapted to non-rotatably telescope in said tube.

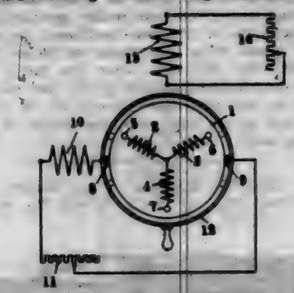


1,532,285. MACHINE FOR SPACING, TENSIONING, AND COILING MATERIAL SUCH AS WIRE. CHARLES WILLIAM WATSON, St. Kilda, Victoria, Australia. Filed June 20, 1923. Serial No. 646,726. 9 Claims. (Cl. 153—67.)

1. In agglomerate structure production apparatus, a core, a plurality of retainers located around said core, a revoluble distributor by which to position reinforcement wire bearing on said retainers and being movable lengthwise of the core at a regulated speed, means re-

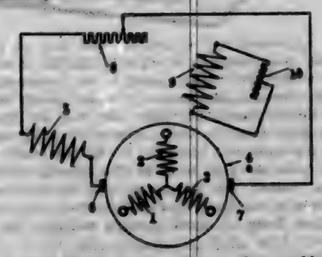
sisting the revolution of said distributor to tension said wire reinforcement, and means for fastening the ends of the wire.

1,532,286. SNUBBER. HARRY D. WEED, Syracuse, N. Y., assignor to American Chain Company, Inc., a Corporation of New York. Filed Sept. 24, 1924. Serial No. 739,507. 9 Claims. (Cl. 267—10.)



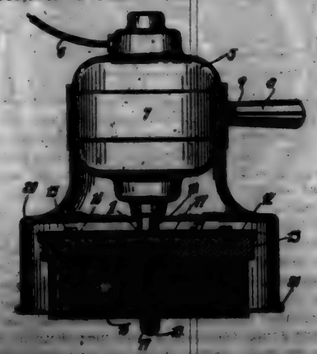
1. In a snubber, a brake-drum, adapted to be connected non-rotatively with one of two spring-connected members of a vehicle; a rotatable friction element surrounding the periphery of said drum; a draft-element coacting peripherally with said friction element to cause rotation thereof and adapted to be connected with the other of said two spring-connected members of the vehicle for actuation thereby; and means to vary the moment of rotation of said friction element about said drum, said means comprising a peripheral extension upon said friction element at a portion thereof co-operating with said draft element.

1,532,287. ALTERNATING-CURRENT MOTOR. HANS WEICHSEL, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Mar. 17, 1924. Serial No. 699,866. 3 Claims. (Cl. 172—276.)



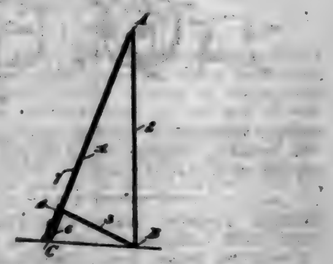
1. In a synchronous induction motor, the combination of an inducing member provided with a commutator and brushes thereon, means for supplying alternating current to the inducing member, an induced

member having an exciting winding in circuit with the brushes, said exciting circuit being adjusted to cause



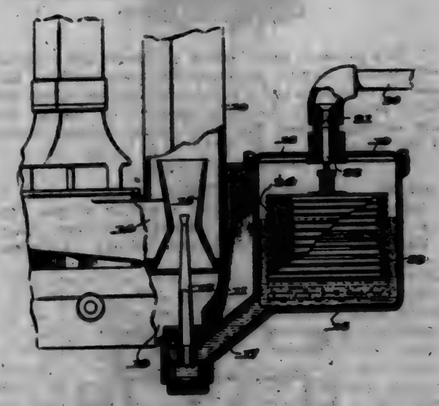
the motor to operate with approximately unity power factor at full load when the axis of the brushes coincides with the axis of the exciting winding.

1,532,288. ALTERNATING-CURRENT MOTOR. HANS WEICHSEL, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed June 28, 1924. Serial No. 722,904. 1 Claim. (Cl. 172—280.)



In an alternating current motor, the combination of an inducing member provided with a commutator and brushes thereon, and an induced member provided with an exciting winding in circuit with the brushes and with a second winding displaced from the excited winding, said windings of the induced member being of the concentric distributed type overlapping each other and having a smaller number of conductors in the terminal slots of each winding belt than in intermediate slots of said belt, the conductors of the excited winding being located nearest the inducing member in such slots as contain conductors of both windings.

1,532,289. ELECTRIC SCRAPER. JOHN H. WEINBRENNER, New York, N. Y. Filed Apr. 29, 1924. Serial No. 709,930. 1 Claim. (Cl. 15—28.)

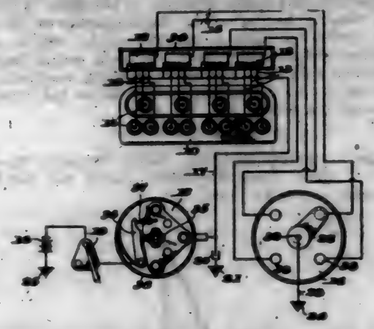


An electric scraping machine comprising a casing, a motor, a vertical shaft driven by the motor, an annular plate connected to the shaft and having a hollow extension formed with an internal annular flange, a brush head and brush attached to the plate, a cylindrical element having a top flange supported by the hollow extension, and a tension spring within said cylindrical element, one end of the said spring bearing against the shaft and adapted to normally maintain the lower end of the cylindrical element below the working surface of the brush.

1,532,290. PHOTO MOUNT. GRANT WILSON, Walton, N. Y. Filed June 30, 1923. Serial No. 648,699. 6 Claims. (Cl. 40—149.)

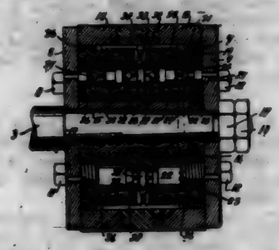
1. An easel mount for photographs and the like embodying in combination a back support, a connected forwardly extending strut portion having an upwardly opening pocket and a panel portion connected at its top to the back support and having its lower edge resting in the pocket.

1,532,291. FLOAT-VALVE MEANS. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 9, 1920. Serial No. 429,586. 8 Claims. (Cl. 137—104.)



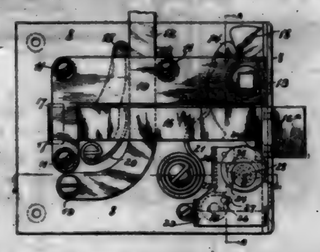
1. In an internal combustion engine, the combination with a carburetor having a float chamber, of an expansible float of corrugated sheet metal in said chamber.

1,532,292. HYDROCARBON MOTOR. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 8, 1921. Serial No. 449,841. 8 Claims. (Cl. 123—148.)



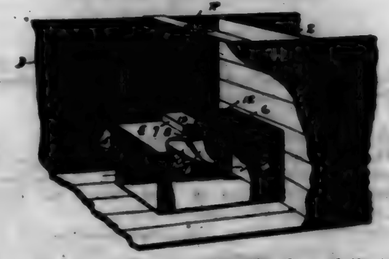
2. In a hydrocarbon motor, the combination with a motor cylinder having a plurality of sparkplugs, of means for synchronously operating said sparkplugs com-

prising a coil having a primary winding connected to a current source and having a plurality of secondary



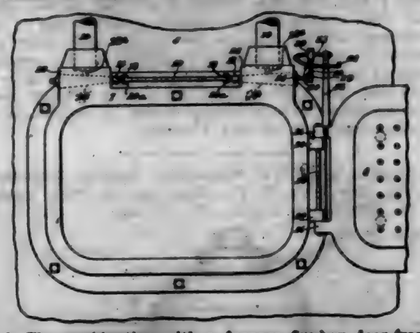
windings connected to the respective sparkplugs one of said secondary windings being formed to produce a stronger spark than the other.

1,532,293. PISTON. ARTHUR LEON ARMENTROUT, Whittier, Calif., assignor of one-half to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed May 7, 1923. Serial No. 637,312. 10 Claims. (Cl. 74—109.)



1. In a pressure pump having a cylinder and a piston reciprocating therein, an expansible wall engaging element on the piston and a pumping mechanism within the piston actuated by the pump pressure for forcing the said element against the wall on the working stroke of the piston.

1,532,294. AUTOMOBILE DOOR LOCK. PETER F. AUGENBRAUN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed June 30, 1920. Serial No. 393,044. 4 Claims. (Cl. 70—29.)



1. In a lock for automobile doors, the combination of a latch bolt, outside and inside means for retracting the bolt, a slide adapted to be moved into the path of the bolt and engage and deadlock the same, means at the inner side of the door for actuating the slide to deadlock or release the bolt, a key lock operable from the outer side of the door and having a rotary member the said key lock being independent of the bolt actuating means, a bar connected with the rotary member of the key lock and means actuated by the bar for moving the deadlocking slide to its two positions, the said slide actuating means being constructed to be moved out of engagement with the slide after the latter has been moved to dead-locking position by the key so that said slide will be left free to be moved out of engagement with the bolt by the slide operating means at the inner side of the door.

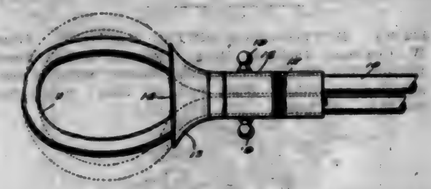
1,532,295. LIQUID METER. PAUL BAILEY, Berkeley, Calif. Filed Mar. 24, 1921. Serial No. 455,091. 3 Claims. (Cl. 73—68.)

1. An apparatus for measuring the flow of liquid in a conduit, comprising a short tube in the conduit and through which all of the liquid to be measured passes, means for forming adjacent to the tube a relatively still body of liquid, means providing for flow of liquid from the still body into the tube, means for measuring flow through the tube and operated by the dynamic force of the flow from the still body to the moving body in the tube, and means for increasing the force of said operating flow by suction effect derived from the movement of the large body of liquid passing through the tube.

1,532,296. AIR SUPPLY AND AUTOMATIC CONTROL FOR FURNACE DOORS. JOHN BALTHASAR and ANGELO VIOLA, Jersey City, N. J. Filed June 19, 1924. Serial No. 720,971. 2 Claims. (Cl. 110—55.)

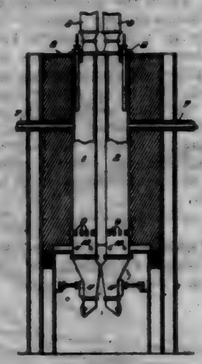
1. The combination with a furnace fire-box door-frame having a passageway formed therein provided with a plurality of air discharge orifices, of means for supplying air to said passageway, a rotary valve for controlling the amount of air supplied, a door swingingly carried by said frame, a post carried by said door, a track having an inclined portion and a horizontally extending portion carried by said post, and means connected to said valve and adapted to travel on said track for causing the swinging movement of said door to rotate said valve, the inclined portion of the track causing the rotation of the valve and the horizontally extending portion permitting the door to be moved from its half opened to its fully opened position without further rotating the valve.

1,532,297. CALIPERS. CARL L. BAUSCH and EDWIN HART, Rochester, N. Y., assignors to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 14, 1921. Serial No. 437,835. 1 Claim. (Cl. 33—148.)



Calipers comprising a pair of members each formed of a strip of sheet metal folded upon itself to provide a substantially U-shaped cross section, means pivotally connecting said members intermediate their ends in substantially parallel relation, said members having the opposing ends thereof on one side of the pivot adapted for contact with opposite sides of an object to be measured, a spring tending to move said contact ends together, a part carried by one of said members on the opposite side of the pivot provided with a main scale arranged in an arc concentric with said pivot and graduated in suitable units, and an opposing end portion on the other member bifurcated to slidably embrace the opposite sides of said scale part and provided with a scale arranged obliquely to said main scale for movement thereover to indicate in fractions of a unit of said main scale.

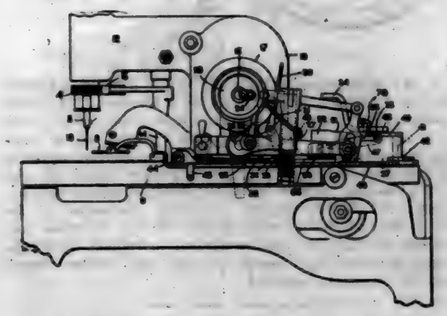
1,532,298. BASKET. DAVID BLOOM, Berkeley, Calif. Filed Oct. 30, 1923. Serial No. 671,787. 6 Claims. (Cl. 217—122.)



1. In a basket of the character described, an element cut to present coacting tongues merging into the body of the element in unbroken lines and formed to yield to a stem forced between the same and to individually adapt themselves to the shape of the stem for yieldingly resisting the removal thereof.

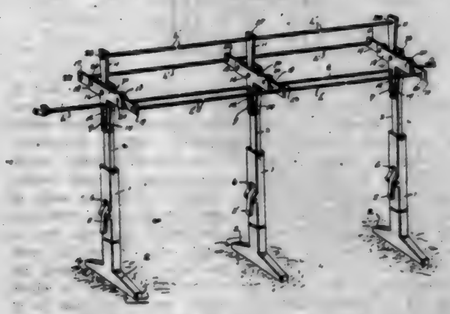
1,532,299. SURGICAL DEVICE. ALFRED H. BRAECKLEIN, Baltimore, Md., assignor of one-half to Marguerite A. Braecklein, Baltimore, Md. Filed May 1, 1923. Serial No. 636,012. 2 Claims. (Cl. 128—327.)

1. A tourniquet comprising a flexible member arranged in loop formation, a clamp mounted thereon, said clamp comprising a tubular member adapted to receive both ends of the loop, a flared mouth at one end of said tubular member for the passage of the flexible member, spaced flanges extending upon opposite sides of the mouth, means carried by the tubular member and engaging the flexible member to permit movement of the latter through the tubular member in one direction, but holding the flexible member against movement in an opposite direction and means whereby the holding means may be instantly released.



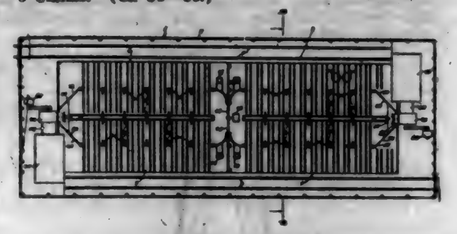
1,532,300. CONTINUOUS PROCESS OF MAKING COKE AND ILLUMINATING GAS. HERMAN BUNTE, Springfield, Mass., assignor of one-half to Charles Henry Tenney, Springfield, Mass. Filed Feb. 14, 1922. Serial No. 536,463. 1 Claim. (Cl. 202—8.)

The herein described process of making coke and illuminating gas which consists in continuously passing coal in a solid body downwardly through a retort which is externally unheated and provided with an unrestricted chamber from the top to the bottom thereof, maintaining a limited zone of combustion in said retort above the bottom thereof by burning a portion only of the coke formed therein to generate heat to carbonize the descending coal, injecting preheated air into the retort above its lower end to supply oxygen for the combustion of said portion of the coke being burned, injecting steam into the retort below the point at which the air is injected and at a point where the coke is at sufficiently high temperature to react with the steam, passing the products of combustion and gas formed in the lower part of the retort upwardly through the descending body of the coal to heat and carbonize the same and drive off its volatile constituents, passing the remainder of the coke downwardly in a unitary column beyond said combustion zone and beyond the points at which the air and steam are injected, while maintaining the same out of further contact with air or gas, with-



drawing from the upper part of the retort the gases and volatile products produced and continuously withdrawing the remaining coke from the lower end of the retort below the point at which the steam is injected therein.

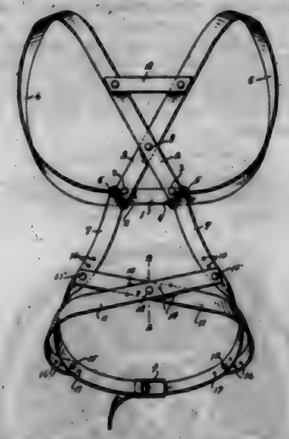
1,532,301. BUTTONHOLE-SEWING MACHINE. JOHN W. CONNORS, Dedham, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Feb. 23, 1924. Serial No. 694,550. 3 Claims. (Cl. 112—67.)



1. In a buttonhole sewing machine, the combination with a bed plate and work-holding means thereon, of a frame movably mounted on the bed plate and carrying stitch-forming mechanism which is mounted for turning movement about a vertical axis at the end of the buttonhole, a clutch by which the stitch-forming mechanism is operated, a clutch-disengaging member carried by said frame and having an arm, a latch to hold said clutch-disengaging member inoperative, a slide movably mounted on said bed plate, a latch-releasing member carried by said slide and adapted to release the latch as the frame moves, a restoring member also carried by said slide, and arranged to cooperate with said arm to restore the clutch-disengaging member to inoperative position, and means for shifting said slide to place the latch-releasing member and restoring member into or out of operative position.

1,532,302. EXTENSION CLOTHESLINE SUPPORT. CHARLES W. COOPER, Pittsburgh, Pa. Filed Mar. 22, 1924. Serial No. 701,193. 2 Claims. (Cl. 68—3.)

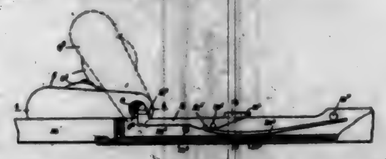
1. In combination with a clothes-line support provided with an open slot in its upper portion to receive a clothes-line, a detachable member provided with an open slot to straddle the line engaged with the support, a headed member carried by the support and which is received within the slot of the applied member to provide means for holding the member to the support, and additional means for holding the member to the support.



1,532,303. EVAPORATOR. WILLIAM W. COBBINS, San Jose, Calif. Filed Dec. 4, 1922. Serial No. 604,879. 6 Claims. (Cl. 34—46.)

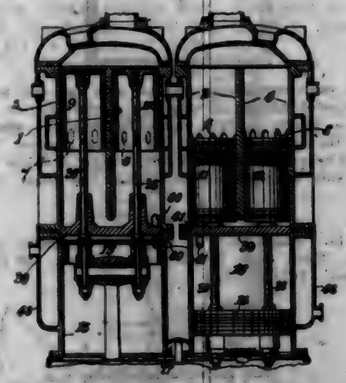
4. An evaporator of the character described comprising two sets of tunnels, the tunnels of each set being substantially parallel one to the other and the sets being longitudinally aligned in abutting relation, and the tunnels in each set being open to each other at both ends, a plurality of transversely arranged tracks in each tunnel spaced substantially along the length of the tunnels, doors along the sides of the tunnels for admitting fruit carrying cars to any of said tracks, doors at the abutting ends of the tunnels, a source of heated air at the remote ends of each, set cooperating means for selectively blowing the heated air from opposite remote ends of the tunnels toward their abutting ends or of guiding the air straight through two of the abutting tunnels in one direction and through the other two in the opposite direction.

5. In a structure as defined in claim 4, means at the abutting ends of the tunnels for reheating the air passing therethrough.



1,532,304. BODY BRACE. DONALD V. CUNNING, Youngstown, Ohio. Filed Nov. 17, 1923. Serial No. 675,403. 2 Claims. (Cl. 2—45.)

1. A brace of the class described comprising an elongated elastic strip having its central portion providing a short member, the extremities of said member being continued by upwardly and inwardly disposed members one crossing the other at a point closely adjacent to the short member, means for connecting said second named members adjacent their junctions to the short member to provide loops, buckles engaged within said loops, said second named members being continued and disposed through the buckles to provide loops adapted to be engaged over the shoulders of the wearer, means for connecting the overlying portions of the second members, means for adjustably connecting the free extremities of said second members, the portions of the second members outwardly of the buckles being adapted to be disposed

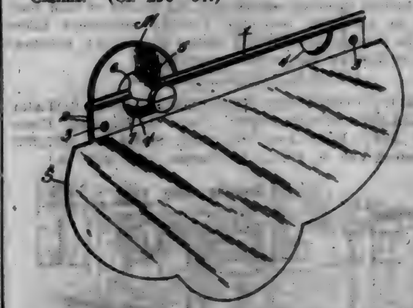


forwardly around the body of the wearer for connection in front just below the crest of the ilium, and a strip secured to each of said members outwardly of the buckle through which said member is disposed and to the other of said second named members at a point outwardly of the buckle through which the other of said second named members is directed.

1,532,305. DEVICE FOR REGULATING THE RATE OF FIRE IN AUTOMATIC FIREARMS. REGIS DARNE, St. Etienne, France, assignor to Etablissements Darne, St. Etienne, France, a Corporation of France. Filed June 11, 1924. Serial No. 719,443. 4 Claims. (Cl. 89—2.)

1. A device for regulating the rate of fire in automatic fire arms, comprising a fixed casing, a member having a reciprocating movement in the said casing during the actuation of the fire arm, a spindle rotatably mounted in the said casing, an arm fixed to said spindle so as to rock therewith, a weighted member mounted upon said arm in an adjustable position relatively to the axis of the rocking spindle so as to regulate the inertia of the said arm, a stop member carried by the reciprocating member and adapted to come in engagement with the said spindle and to rock the same and the weighted arm during the movement of the carrier member in one direction, said means allowing of said stop member to slip past the spindle during the movement of the carrier member in the opposite direction, for the purpose described.

1,532,306. INTERNAL-COMBUSTION ENGINE. JOHN DAVIDSON, Burton-on-Trent, England. Original application filed June 29, 1920, Serial No. 392,754. Divided and this application filed Aug. 15, 1923. Serial No. 657,522. 3 Claims. (Cl. 123—52.)

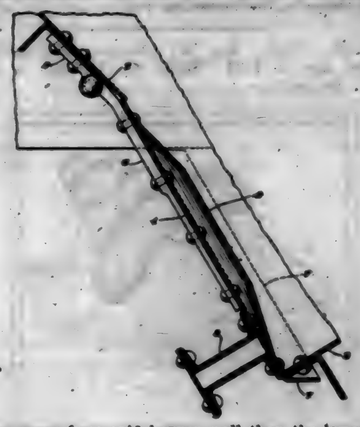


3. In an internal combustion engine, a pump cylinder; more than two working cylinders of smaller diameter arranged at one end of the pump cylinder parallel with one another and in open communication with one another at one end; a combustion head at the other end of the working cylinders common to all of the working cylinders; a pump piston in the pump cylinder; more than two working pistons in the working cylinders each working cylinder having one working piston only; means enclosed in the pump and working cylinders positively connecting the pump and working pistons together; a connecting rod; and pivotal means on the outer face of the pump piston for direct connection of the pump piston to the connecting rod.

1,532,307. TOY. RAY W. DOVER, Cambridge, Ohio. Filed Apr. 9, 1924. Serial No. 705,814. 1 Claim. (Cl. 46—40.)

A toy of the character described comprising a base member having a figure thereon representing a head in profile, and a flexible element having one end secured to the lower portion of the forehead and the other end secured to the neck of the figure, said flexible element being normally V-shaped, whereby the intermediate portion of the element is permitted to form irregular lines on said base to change the lines of the profile.

1,532,308. GLARESHIELD. ROSWELL DOWNING, Oneida, N. Y. Filed Feb. 28, 1924. Serial No. 695,772. 5 Claims. (Cl. 296—97.)



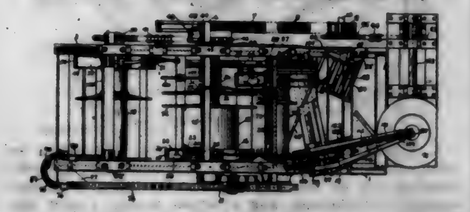
1. A device of the character described comprising, in combination, a securing member provided with an outstanding lug of yieldable material having a diametral opening therethrough, and a screen having a part disposed through the opening of the lug and in close frictional engagement with said lug.

5. A device of the class described comprising, in combination, a plurality of suction cups provided with outstanding lugs, a clip having parts disposed through the lugs whereby the clip and lugs are connected for relative swinging movement, and a screen carried by said clip.

1,532,309. RAILWAY CAR. IRA EVERETT, Sayre, Pa., and GEORGE T. COOKE, New York, N. Y. Filed Sept. 19, 1921. Serial No. 501,591. 4 Claims. (Cl. 105—280.)

1. In a railway car having hopper walls, a metallic door provided with a continuous flange about the side and bottom edges thereof extending upwardly from the door body so as to embrace the lower edges of said

hopper walls, said flanges deflected from the door body to such an extent that the upper part of said flange is



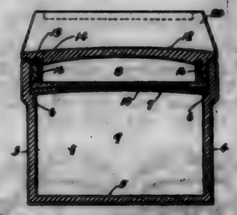
further away from said hopper wall than the lower part of said flange.

1,532,310. HAT CONVERTIBLE INTO UMBRELLA. ELISABETHA FUNKE, Zurich, Switzerland. Filed Nov. 12, 1920. Serial No. 423,527. 3 Claims. (Cl. 2—191.)

1. A hat comprising a crown and a brim, said brim comprising a plurality of sections, foldable material covering said sections, hingedly fastened rods adapted to be turned in or outwards, and the hinges of said rods being so arranged that the turning movement takes place in planes substantially radial to the hat, substantially as and for the purpose specified.

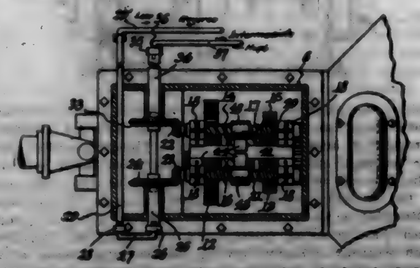
1,532,311. COMBINED PERCUSSION AND ROTARY DRILLING APPARATUS. JOHN H. HERMAN, Houston, Tex. Filed June 13, 1921, Serial No. 477,202. Renewed Feb. 9, 1925. 13 Claims. (Cl. 255—3.)

1. A rig for well drilling comprising a frame, a drill reel and a casing reel mounted thereon in horizontal alignment, a crank shaft on said frame, a sand reel mounted idly on said shaft, means to clutch said sand reel to said crank shaft, a Samson post at each side of said frame, a bridge connecting the upper ends of said posts, a walking beam on said posts, means to rock said beam comprising a connection between the rear end thereof and the said crank shaft, and means to rotate said shaft and said reels.



1,532,312. FOLDING IRONING BOARD. ERNUS LLEWELLEN HUBB, Nashville, Tenn. Filed Feb. 21, 1924. Serial No. 696,840. 3 Claims. (Cl. 68—17.)

1. In a structure of the character described, a vertically arranged enclosing and supporting cabinet, strips arranged vertically at opposite sides of the cabinet interiorly thereof, one strip being formed with ratchet teeth, a bracket slidably engaged with said strips, a pawl pivoted on said bracket and cooperating with said ratchet teeth for holding the bracket at an adjusted



vertical position, an ironing board pivoted upon the top of the bracket and adapted to be swung outwardly of the cabinet into a horizontal position, a slotted guide on the underside of the board, and a brace pivotally connected with the lower end of the bracket and slidably engaged with said slotted guide.

1,532,313. BURIAL VAULT. THOMAS F. JETTE, Everett, Wash. Filed Apr. 28, 1924. Serial No. 709,491. 2 Claims. (Cl. 72—7.)

1. A vault comprising opposite side and end walls, a form located within the vault in spaced relation to the walls, a plastic sealing material filling the space between the form and vault walls and a cover section adapted to overlie the vault and having a flange on its under side adapted to seat within the edges of said walls.

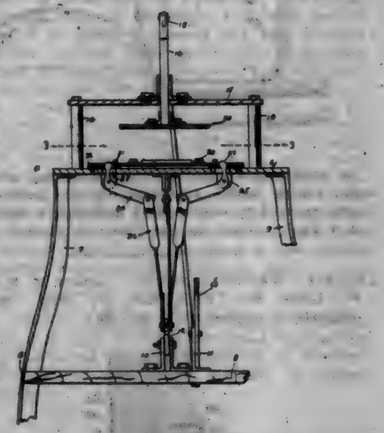
1,532,314. GEAR SHIFT. HENRY CARL JOHLS, Temple, Tex. Filed Sept. 9, 1924. Serial No. 736,761. 5 Claims. (Cl. 74—89.)

1. A transmission gearing operating device including a pair of worms, supported above the gearing of a transmission, gear shift forks having heads formed with threaded openings adapted to accommodate the worms, said forks having connection with gears of the transmission, and means for rotating the worms to move the forks for moving the gears.

1,532,315. PIPE CUTTER. VICTOR KARBOWSKI, Chicago, Ill. Filed Dec. 17, 1923. Serial No. 681,255. 2 Claims. (Cl. 81—192.)

2. A pipe cutter of the type described comprising a handle member, a chain consisting of a plurality of links secured to one another by means of shafts, and having one end secured to the handle member, a pipe cutting wheel rotatably mounted on each of said shafts, said wheels having substantially flat side walls perpendicular to the shaft upon which they are mounted and having a V-shaped recess in the outer peripheral wall thereof, its walls merging with the side walls of said cutting wheels to form a pair of sharp cutting edges, and means for securing the free end of said chain to said handle, whereby said chain may be wrapped about the outer wall of said pipe and be moved longitudinally thereabout to cause the cutting wheels to bite into and sever said pipe.

1,532,316. COLLAPSIBLE BOX. FERDINAND M. KAUFMAN, Atlanta, Ga. Filed July 14, 1924. Serial No. 725,854. 2 Claims. (Cl. 229—41.)

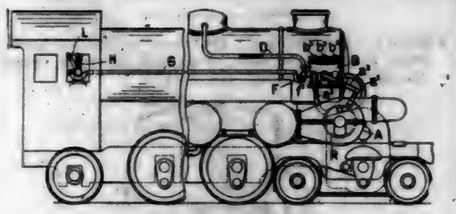


1. A collapsible box comprising a rectangular shell, an end closure joined to ends of opposite sides of said shell, end tabs forming extensions from the free sides of said shell and hinged thereto, said end closure, the free sides of said shell and said tabs each having a hinge in a common plane through the center of the box upon which the box may collapse with outward movement of the hinges, a fold in the double thickness of said collapsed tabs about which the projecting corner may swing to permit the tabs to pass to the interior of the expanded box under the hinge of the end closure.

1,532,317. EYESHIELD. EDMUND WINCHESTER KINGSBURY, Framingham, Mass. Filed Feb. 10, 1923. Serial No. 618,306. 1 Claim. (Cl. 2—12.)

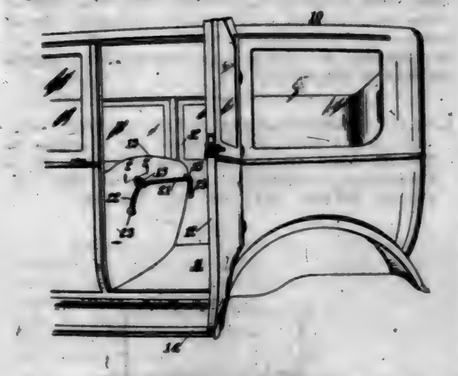
A device of the class set forth embodying a thin piece of material through which a person may observe a binding light without objectionable interference with his vision, a frame in which said material is mounted, a curved band adapted to fit flat against the forehead of said person, this band being attached to the upper edge of said frame, said frame projecting forwardly and downwardly from said point of attachment at an angle which will maintain said frame above the line of vision when the head of the wearer is in normal vertical position, and an adjustable head-band attached to said forehead-band for clamping the forehead-band against the head of the wearer.

1,532,318. PANEL-MANUFACTURING DEVICE. WILLIAM STIMS KISINGER, Covington, Ky., assignor to The Donaldson Art Sign Company, Covington, Ky., a Corporation of Kentucky. Filed Aug. 31, 1922. Serial No. 585,567. 4 Claims. (Cl. 153—13.)



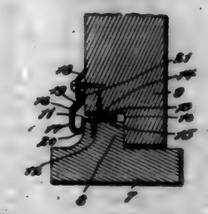
1. In a device of the class described the combination of a table having a depression formed in its top, a reciprocating shaft carried by the table, a foot carried by the shaft adapted to enter the depression in the table, dies carried by the table adapted to be reciprocated above the depression, perpendicular to the reciprocating shaft, and lever actuated means to reciprocate the shaft and the last mentioned dies.

1,532,319. TURBINE LOCOMOTIVE. REINHARD KLINGELHÖFFER, Werden-Ruhr, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Jan. 22, 1924. Serial No. 687,853. 5 Claims. (Cl. 188—90.)



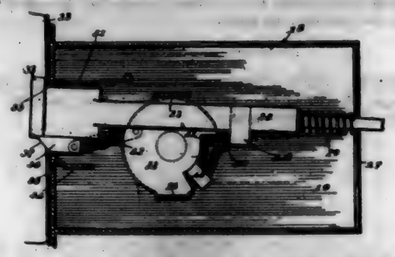
1. In a turbine locomotive a train brake and a mechanism for throwing the train brake in and out, means

for directly braking the rotary energy of the rotating parts of the turbine upon the train brake being thrown



in, said means being arranged so as to be in positive engagement with the said mechanism during its action of throwing-in the train brake.

1,532,320. ROBE SUPPORT AND HANDLE. ARCHER L. KNAPP, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 21, 1923. Serial No. 633,601. 1 Claim. (Cl. 296—77.)

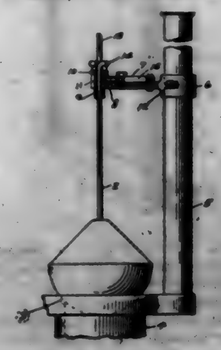


In combination with a robe supporting member for motor vehicle bodies, a bracket for said member, and a handle secured to said bracket including a flexible cable and a knob secured to the free end thereof.

1,532,321. WEATHER STRIP. ARTHUR H. KUHLMANN, St. Louis, Mo. Filed Mar. 10, 1922. Serial No. 542,684. 3 Claims. (Cl. 20—69.)

1. A weather proofing for casement windows, comprising an element composed of a shield, a trough and a tongue and arranged for securement to a sill, an element having a hook and arranged for securement to a sash and an element comprising a table, a deflector and a reentrant portion and arranged for securement to a sash, said tongue and hook adapted to form a weather seal in the joint between the sill and sash and said table, deflector, reentrant, shield and trough adapted to form a water seal for said joint.

1,532,322. DOOR CATCH. JAMES HENRY LANE, Richfield, Idaho. Filed June 2, 1923. Serial No. 648,060. 4 Claims. (Cl. 292—63.)

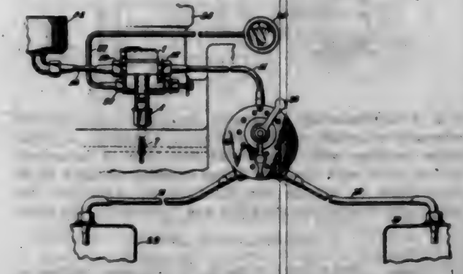


1. A device of the character described comprising a spring pressed vertically shiftable lock bolt, a rotatable disc, a handle pivotally supported upon said disc and said handle being adapted to be utilized for rotating said disc, a lug extending from said bolt adapted to be engaged by said handle when the latter has been swung in one direction about the axis of its pivot, whereby the lock bolt will be retracted, and means adapted to be actuated when the disk is rotated in one direction to elevate the lock bolt at the forward end of the latter.

1,532,323. EYEGLASS MOUNTING. JAMES T. LAUGHLIN, Santa Barbara, Calif. Filed Sept. 17, 1923. Serial No. 663,089. 4 Claims. (Cl. 88—41.)

1. A lens mounting formed from a single strip of sheet metal and comprising a nose bridge, nose grips integrally formed at the lower ends of the sides of said bridge, lens clamps arranged at the juncture of the bridge and grips and formed from the same strip of metal, a pair of opposed fingers stamped from the strip and adapted to bear against the periphery of the lens at points immediately above and below the point of attachment of said lens clamps, and a pair of superorbital arch engaging fingers formed with said grips.

1,532,324. FLUSH VALVE. HARRY G. LAWRENCE, Salt Lake City, Utah. Filed Oct. 15, 1923. Serial No. 668,782. 2 Claims. (Cl. 4—57.)

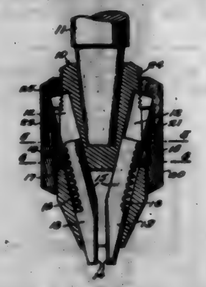


1. In a device of the character described including a valve with a stem, means for guiding the stem for longitudinal sliding, a bracket supporting the guiding means and slotted for lateral passage of the stem upon removal of the guiding means from the bracket.

1,532,325. METHOD OF PRODUCING FORMS. GOCK YOU LEE, San Francisco, Calif. Filed Jan. 12, 1924. Serial No. 685,876. 7 Claims. (Cl. 41—10.)

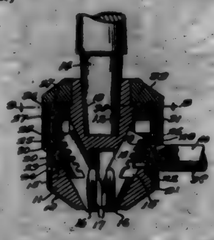
1. The method of producing three dimensional shell forms which consists in shaping a foraminous material to the finished form co-extensive therewith and of then securing it in such a condition by the application thereto of a plastic cementitious material for subsequent hardening.

1,532,326. FLUID-TRANSFER DEVICE. LEON B. LENT, New York, and CHARLES B. KIRKHAM, Garden City, N. Y. Filed Sept. 29, 1921. Serial No. 504,128. 3 Claims. (Cl. 103—4.)



3. In a device for transferring fluid, the combination of a casing, a power driven gear pump within the casing for effecting a transfer of fluid through the casing at constant delivery pressure, said casing being provided with a passage for returning excess fluid discharged from the pump to the inlet side thereof, a spring loaded valve controlling said passage, means for regulating said valve to vary the pressure at which fluid is delivered by said gear pump, an auxiliary pump for transferring fluid independently of said gear pump through a second passage in said casing, a valve controlling said second passage, said gear pump and auxiliary pump being independently operable and connected in series whereby fluid transferred by the auxiliary pump passes through the gear pump.

1,532,327. INVISIBLY-STITCHED SEAM AND METHOD OF MAKING SAME. FRANK LUPPINO, Watkins, N. Y. Filed Jan. 14, 1924. Serial No. 685,945. 7 Claims. (Cl. 112—262.)



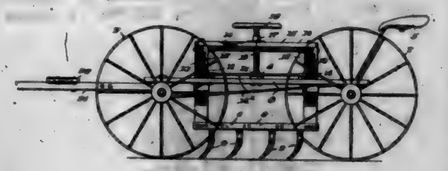
7. The herein described method of forming an invisibly stitched seam for connecting two parts of leather or the like and of substantially the same thickness, and having edges which are adapted to abut, which consists in forming an inclined channel adjacent each of said abutting edges so that the bottoms of the channels extend substantially parallel with said abutting edges and lie in planes substantially midway between the opposite faces of said parts, passing stitches from the bottom of each of said channels to the bottom of the other channel so that said stitches extend substantially parallel with and between the opposite faces of said parts in a direction away from the open ends of said channels, and closing said channels to conceal said stitches in the material of said contacting parts.

1,532,328. CHUCK. HARRY R. MCCONNELL, Richmond, Va., assignor to The McConnell-Browning Engineering Company, Richmond, Va., a Corporation of Virginia. Filed Sept. 30, 1922. Serial No. 591,536. Renewed Aug. 16, 1924. 1 Claim. (Cl. 279—62.)

A chuck comprising a body portion having its upper end threaded, a plurality of downwardly converging slidable gripping elements carried by said body portion and adapted to be clamped about a tool, said gripping elements being provided upon their outer faces with relatively high pitch threads, a rotatable ring surrounding said body portion and having internal threads engaging the threads on said gripping elements, an externally threaded slidable sleeve surrounding said body portion between said rotatable ring and the threaded end of the body portion, said rotatable ring being capable of relatively slight longitudinal movement limited in one direction by said slidable sleeve, the threads on said body portion and said sleeve being of different pitch, and a rotatable sleeve surrounding said body portion and having internal threads engaging the threads on said slidable sleeve and said body portion.

1,532,329. CHUCK. HARRY R. MCCONNELL, Richmond, Va., assignor to The McConnell-Browning Engineering Company, Richmond, Va., a Corporation of Virginia. Filed May 1, 1923. Serial No. 635,964. 4 Claims. (Cl. 279—62.)

1. A chuck comprising a body portion, jaw members slidably mounted in said body portion and adapted to be gripped about a tool, a pair of sleeves surrounding said body portion and oppositely rotatable, each of said sleeves being arranged to move all of the jaw

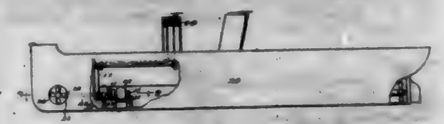


members simultaneously into engagement with the tool, and an operating member connected between said sleeves and adapted to effect successive rotation of said sleeves in opposite directions.

1,532,330. AUTOMATIC EXPANDING OIL DRILL. DONALD HENRY MITCHELL, Chattanooga, Tenn., assignor of one-half to Harley A. W. Howcott, New Orleans, La. Filed Oct. 22, 1923. Serial No. 670,170. 15 Claims. (Cl. 255—75.)

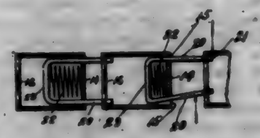
1. A drill comprising a body portion having an upwardly opening longitudinally disposed way therein, the lower portion of which is enlarged and formed with oppositely arranged windows, a rod slidably received in said way carrying a flattened plate on its lower end, cutters pivotally connected to said plate and adapted, at times, to be extended through said windows, means for automatically locking said rod against sliding movement and operable to release the same upon upward movement of the drill, and a bit connected to the lower end of the drill.

1,532,331. WHEELED CULTIVATOR. TIB MONTOYA, El Valle, N. Mex., assignor of one-half to J. C. Gallegos, Espanola, N. Mex. Filed Oct. 26, 1923. Serial No. 670,978. 3 Claims. (Cl. 97—159.)



3. In a cultivator, the combination of a frame, a frame guided by and bodily movable up and down relative to the first-named frame and equipped with means for engaging the ground, cooperating means on said frames at several points for the bodily raising and lowering of the second-named frame, and manually operable means connected with the said means on the first-named frame for the vertical adjustment and adjustable fixing of the second-named frame.

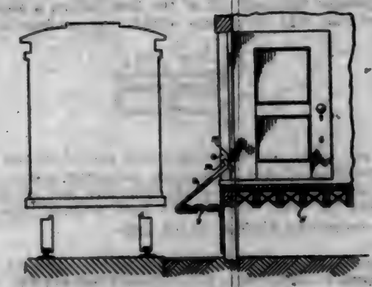
1,532,332. LIGHT. CHARLES H. MUCKENHIRN, Detroit, Mich. Filed Aug. 4, 1921. Serial No. 489,706. 1 Claim. (Cl. 240—48.4.)



As a new article of manufacture, a light-housing closure composed of film-like flexible material having a succession of concentrically arranged projecting portions of progressively varying diameters to reinforce the closure, said projecting portions merging by easy curvatures into one another to permit flexing of the closure under lateral pressure without breakage.

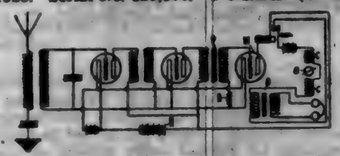
1,532,333. PROPELLER. DANIEL FRANCIS MURPHY, Galveston, Tex. Filed Apr. 19, 1923. Serial No. 633,264. 5 Claims. (Cl. 115—34.)

1. A manœuvering apparatus for water craft having a rotary propeller axially disposed to produce a transverse impulse with relation to the path of movement of the craft, said propeller being radially movable in its own plane to reverse the direction of transverse impulse, and means for operating and controlling the same.



1,532,334. BRACELET. NELS T. NELSON, Attleboro, Mass., assignor to J. F. Sturdy's Sons Co., Attleboro Falls, Mass., a Corporation of Massachusetts. Filed Jan. 29, 1924. Serial No. 689,231. 12 Claims. (Cl. 59—79.)

1. A bracelet structure comprising a series of box links, means for elastically connecting said links including a resilient connector member slidaby housed in the box link and responsive to manual manipulation to detachably connect said links whereby links may be inserted or removed at will to change the effective length of said bracelet.

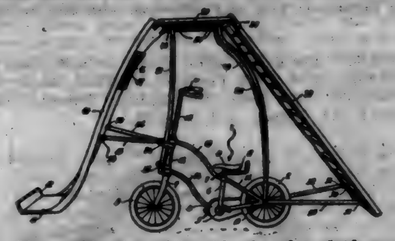


1,532,335. SAFETY ATTACHMENT FOR SHIPPING PLATFORMS AND THE LIKE. PETER NORD, Lestock, Saskatchewan, Canada. Filed Sept. 10, 1924. Serial No. 737,014. 4 Claims. (Cl. 104—31.)

1. A device of the character described adapted to retain a shipping platform in elevated position comprising a body to rest on the top of said platform with the depending end to embrace said platform pivoted to the warehouse, the remote end being provided with a T-head

at said connection, said T-head being adapted to interfere with the door when said hook is moved from horizontal position, as and for the purpose specified.

1,532,336. WIRELESS-TELEGRAPH CALLING DEVICE. WILLIAM HOCKLEY NOTTAGE, Ruislip, and THOMAS DIXON PARKIN, Chelmsford, England, assignors to Radio Corporation of America, a Corporation of Delaware. Original application filed Dec. 18, 1920, Serial No. 431,599. Patent No. 1,452,925, dated Apr. 24, 1923. Divided and this application filed Feb. 23, 1923. Serial No. 620,696. 4 Claims. (Cl. 250—2.)

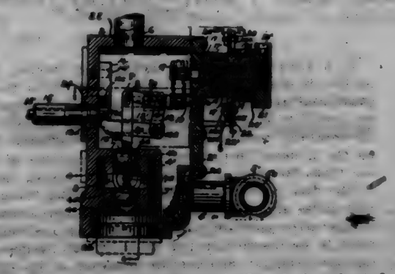


1. In radio receiving apparatus the combination of an antenna, a spring controlled balance wheel, and electromagnetic means controlled by said antenna for causing said balance wheel to oscillate.

1,532,337. BABY-CARRIAGE BODY. GEORGE E. O'HEARN, Gardner, Mass., assignor to O'Hearn Manufacturing Company, Gardner, Mass., a Corporation of Massachusetts. Filed May 11, 1923. Serial No. 638,262. 1 Claim. (Cl. 280—47.)

In a baby carriage, a rigid body having a rigid rim, a removable rigid inner shell having an outturned rigid rim for suspending said inner shell in said body without contact between the bottom of said inner shell and the said body, supporting members on the bottom of said inner shell so that it may rest on a surface when removed from the said body without contact between the bottom of said shell and said surface, and a well opening in said inner shell for the projection of an occupant's feet therein.

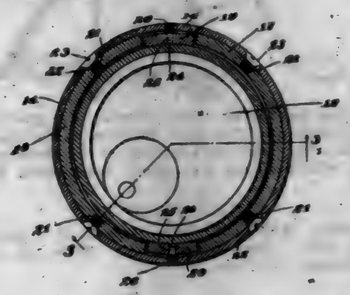
1,532,338. APPARATUS FOR ANIMAL ACROBATS. EMIL PALLENBERG, Clinton, Conn. Filed Aug. 29, 1923. Serial No. 659,293. 6 Claims. (Cl. 208—130.)



1. The combination with a bicycle, of a platform supported above the latter from the frame thereof and means at the forward and rearward ends of the platform whereby a trained animal may mount and descend from the same.

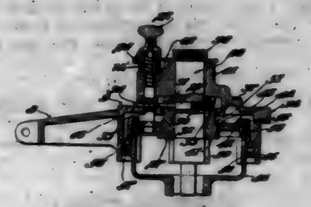
1,532,339. WHEELED TOY. EDWARD H. PARKE, Findlay, Ohio. Filed Feb. 26, 1923. Serial No. 621,243. 6 Claims. (Cl. 46—47.)

1. A toy of the class described comprising a wheel supported structure including an axle having wheels fixed thereto, pins carried by said axle and extending in planes at right angles to each other and projecting at their opposite ends beyond the axle, a bracket mounted on the axle, a bell mounted to swing on said bracket, and fingers carried by the bell and located in the path of said pins whereby the turning of the axle will ring the bell.



1,532,340. HEAT CONTROL FOR INDUSTRIAL OVENS. HOWARD W. PARSLOW, Utica, N. Y. Filed June 14, 1924. Serial No. 720,116. 9 Claims. (Cl. 236—15.)

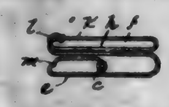
1. A heat governor, comprising a hollow body adapted to be charged with fuel gas to be delivered to burners for producing the heat, a primary gas receiving chamber within said body, a thermostat supported by one end of the body adapted to be inserted in the zone of the heat evolved by the burners, a mechanism for predetermining maximum and minimum degrees of heat to be controlled by the thermostat, located at the opposite end of the body, a pair of valves in said receiving chamber, said valves being flexibly and adjustably connected and being arranged for simultaneous operation for controlling the



outflow of the fuel gas towards the burners, and a series of connected links interposed between and operatively connecting said thermostat and said predetermining mechanism with each other and with said valves.

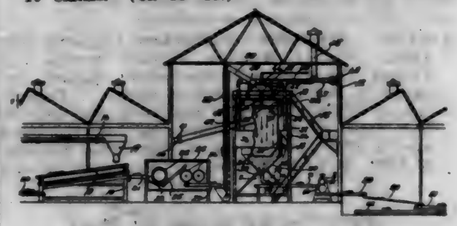
1,532,341. LOCKING DEVICE FOR FUSES AND THE LIKE. CHARLES H. PEARSON, Brookline, Mass. Filed Nov. 26, 1920, Serial No. 426,406. Renewed July 1, 1924. 11 Claims. (Cl. 102—36.)

1. An improved coupling for connecting a rotatable setting cap to a fuse base, comprising circumferential grooves in the setting cap and fuse base normally in alinement with each other, a plurality of segments normally located in the groove in the fuse base, and means for drawing such segments radially into the groove in the setting cap and partially out of the groove in the fuse base.



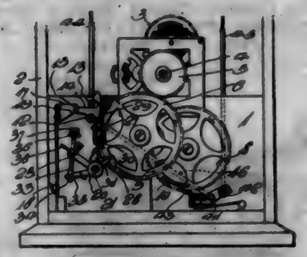
1,532,342. STEERING WHEEL FOR AUTOMOBILES. SILAS A. PIERCE, Jr., Pawtucket, R. I., assignor to P. S. L. Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Nov. 18, 1921. Serial No. 516,056. 5 Claims. (Cl. 70—129.)

1. A steering wheel for automobiles having, in combination, a steering shaft, a disk mounted on the steering shaft and rotatable therewith, a housing provided with an inwardly extending flange, a spring pressed pin bodily rotatable with the disk adapted to engage the flange on the housing to prevent the disassembling of the housing from the disk, a locking bolt for locking the housing to the disk, said locking bolt and housing being provided with holes adapted to be aligned when the locking bolt is in operative position, thereby enabling a slender instrument to be inserted in the holes for the purpose of pushing back the pin against the pressure of its spring, and thereby permit the disengagement of the housing from the steering shaft disk, and a steering wheel mounted on the housing.



1,532,343. SHOULDER-STRAP HOLDER. ISABELLE JOHNSTON POTTER, Birmingham, England. Filed Apr. 19, 1924. Serial No. 707,644. 5 Claims. (Cl. 24—85.)

1. A garment holding device comprising means for detachably connecting it to an outer garment at the shoulder of the wearer and a clip comprising a loop into and out of which a shoulder strap may be moved, the passage into and out of the loop having a yieldable obstruction that terminates within the confines of the



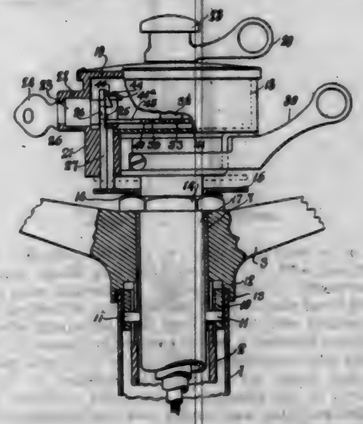
loop and above the strap-supporting portion of the loop, the terminal of said obstruction extending toward such strap-supporting portion of the loop and free therefrom, whereby the strap lies between such terminal and said strap-supporting portion of the loop.

1,532,344. PROCESS OF DISINTEGRATING AND DRYING PEAT. FREDERICK A. PLUMMER, Minneapolis, Minn. Filed Mar. 29, 1923. Serial No. 628,559. 10 Claims. (Cl. 44—38.)

1. The process of producing peat in finely divided dry condition, which consists first in disintegrating wet or damp peat, second in projecting the disintegrated peat in a shower through a drying air current and drying the same by said air current while floating or suspended therein, and third in precipitating and collecting the pulverized or finely divided dry peat.

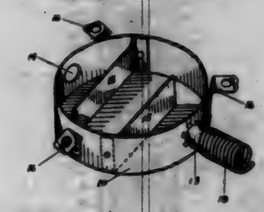
1,532,345. ELECTRIC SWITCH. GEORGE F. RAUCH, Pukwana, S. Dak. Filed Oct. 26, 1922. Serial No. 597,128. 13 Claims. (Cl. 250—39.)

1. In combination, a movable switch member, a movable actuator having means for moving said switch member to closed position when said actuator is moved in one direction to a predetermined extent, means operated by said actuator for moving said switch member to open position, when said actuator moves further in the same direction, and chronometric means for moving said actuator in the specified manner.



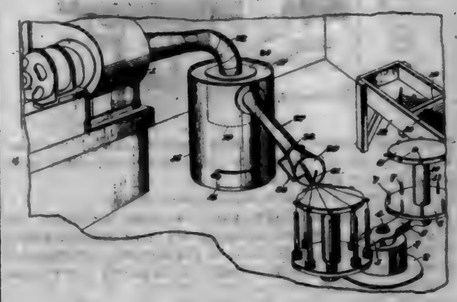
1,532,346. PROPELLER. ISAIAH L. ROBERTS, Nueva Gerona, Isle of Pines, West Indies, assignor of one-half to William C. Lichtenstein, Jersey City, N. J. Filed Oct. 15, 1918. Serial No. 258,160. 3 Claims. (Cl. 170—167.)

1. A propeller comprising a plurality of circumferentially and axially extending helicoidal blades and arms lying in substantially the same radial plane connecting the blades to the shaft, said arms having con-



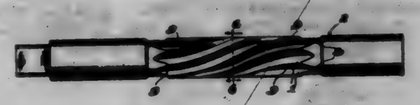
caved propelling surfaces whose cords are set on pitch lines co-ordinating with the pitch lines of the helicoidal blades.

1,532,347. LOCK FOR IGNITION SYSTEMS AND STEERING WHEELS. LOUIS R. RUTHENBURG, Dayton, Ohio. Filed Feb. 28, 1923. Serial No. 620,795. 8 Claims. (Cl. 70—127.)



1. In combination, a steering wheel mechanism, an ignition control system, and means of rendering inoperative the steering mechanism and the ignition control system, said means having its manually actuated portions located above the steering wheel composing a part of the steering mechanism.

1,532,348. OIL HEATER. GEORGE A. SAVILLE, Jr., and PETER SCHMALL, Lincoln, Nebr., said Schmall, assignor to said Saville, Jr. Filed Oct. 20, 1924. Serial No. 744,770. 2 Claims. (Cl. 184—104.)

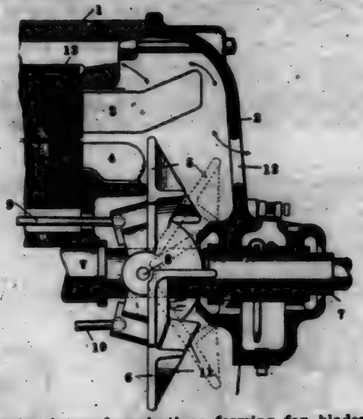


2. An oil heater having the form of the strainer plate of an internal combustion engine and being adapted to be secured in intimate contact with the exterior surface of the strainer plate, said oil heater having an open side adjacent the strainer plate, an inlet port in the side of said oil heater, a nipple secured to the said oil heater at the inlet port, a conductor connected to said nipple and adapted to be connected to receive exhaust gases from the engine and to conduct the exhaust gases into the said oil heater, baffle plates within said oil heater for providing a tortuous passageway for the exhaust gases within the oil heater, and resilient ears secured to the said oil heater, said ears being adjustable in position and being provided with apertures for receiving the bolts which secure the strainer plate to the wall of the crank case of the engine.

1,532,349. BOBBIN CLEANER. ROBERT SCHOFIELD, South Dartmouth, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 12, 1925. Serial No. 2,036. 11 Claims. (Cl. 28—19.)

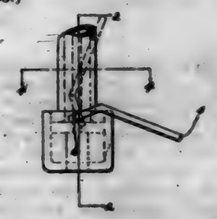
6. In a machine for removing waste yarn from bobbins, the combination of a yarn gathering tank, an air conduit communicating with said tank, a baffle extending into said tank and having imperforate side walls opposite the air conduit and a bottom screen wall, and means for inducing air currents through said conduit to cause the waste yarn and air currents to strike against the exterior of the imperforate side walls of the baffle and be deflected downwardly and the air currents to pass about the lower edges of the side walls upwardly through the bottom screen wall of the baffle freed from all the waste yarn.

1,532,350. METHOD OF MAKING HELICAL EXPANSIBLE REAMERS. WALTER A. SHATTO, Millersburg, Pa. Filed Dec. 29, 1923. Serial No. 683,524. 6 Claims. (Cl. 76—108.)



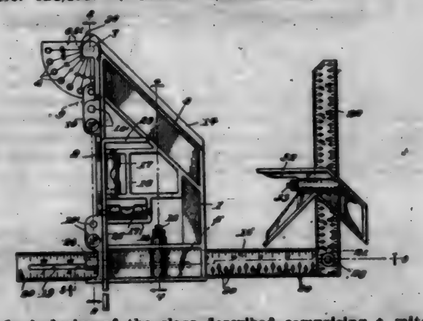
1. The steps in the method of making an helical expansible reamer which consists in providing flutes and radial slots between and parallel with the flutes, and heating the reamer and twisting the same to obtain the desired helical angle of the flutes.

1,532,351. DYNAMO-ELECTRIC MACHINE. DANIEL L. SHEA, St. Louis, Mo., assignor, by mesne assignments, to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Oct. 20, 1921. Serial No. 508,907. 8 Claims. (Cl. 171—252.)



2. A dynamo electric machine having switching means comprising weights pivoted on an axis in the plane of

the rotor shaft axis and rotatable on said pivots, said weights being provided with a plurality of substantially

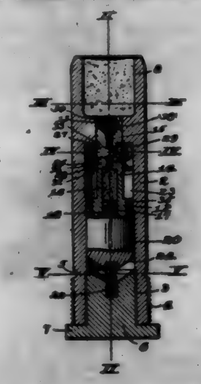


triangular integral projections forming fan blades positioned in planes radial to the rotor shaft with their bases nearest the shaft.

1,532,852. HOSE COUPLING. SAMUEL A. SNELL, St. Louis, Mo., assignor to Moon Brothers Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 25, 1921. Serial No. 517,684. 2 Claims. (Cl. 285—165.)

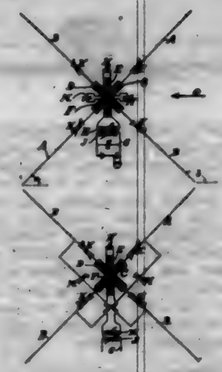
1. In a hose coupling, a cup, a compressible collar seated therein, a U-shaped lever for compressing said collar, the legs of which are pivoted on said cup and are provided with cam-like terminals which lie in a plane inclined to the plane containing the remainder of the lever whereby when the collar is compressed, the manually manipulated end of the lever is forced against the hose attached to the coupling to lock the coupling in collar-compressing position.

1,532,853. COMBINATION TOOL. LEONIDAS NINDE WALDRON, Amity, Oreg. Filed Mar. 12, 1923. Serial No. 624,490. 7 Claims. (Cl. 33—39.)



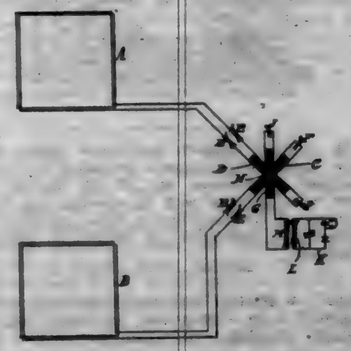
1. A device of the class described comprising a miter frame of T-shape in cross section and having a slot in its miter end, a miter blade and saw guide pivoted to the wide part of the frame with the blade engaging the slot and adjustable supporting members in the enlarged part of the frame.

1,532,854. REVOLVING STOOL. JOSEPH S. WALTON, Los Angeles, Calif. Filed Nov. 9, 1923. Serial No. 673,851. 2 Claims. (Cl. 155—95.)



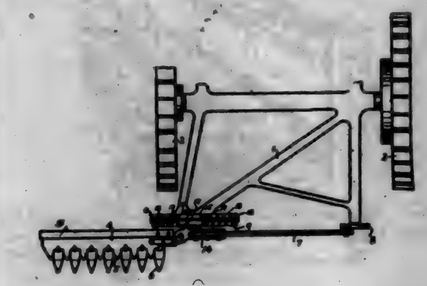
1. In a revolving stool, a pedestal provided at its upper end with an inwardly extending flange and with an outwardly extending flange, an upright stop in the pedestal and connected to the inwardly extending flange, a segmental ring hooked over said outwardly extending flange and forming a swivel connection therewith, a stop on said ring cooperating with the stop on the inwardly extending flange for limiting the rotation of the ring relatively to the pedestal, a coil spring arranged in the pedestal and ring and having one end anchored in the inwardly extending flange and the other end anchored to said ring, bolts detachably connecting the segments of the ring together, and a seat spider detachably connected to said ring.

1,532,855. PERCUSSION FUSE. CHARLES P. WATSON, Big Pine, Calif. Filed Mar. 9, 1921. Serial No. 451,002. 21 Claims. (Cl. 102—39.)



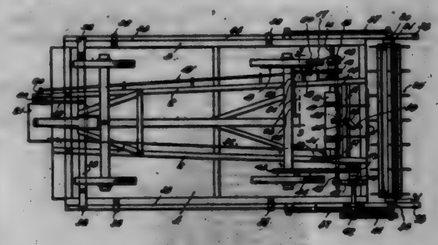
7. In a fuse for ordnance projectiles, a casing chambered to receive and carry a booster charge and means for firing such charge, a tubular connection interposed between the charge and the firing means, an oscillating turret bolt transversely supported in the said tubular connection and arranged to serve as a safety cut-off to interrupt the tubular connection, the turret bolt being supported so as to be movable to a limited extent longitudinally, and a combined expansion and torsion spring acting on the said bolt for holding it in safety position, the bolt having an eccentrically disposed part adapted to be acted upon by centrifugal force when the fuse is in rotation during the flight of the projectile, such centrifugal force tending to move the turret bolt longitudinally in its seat against the action of the said spring, and also tending to cause it to oscillate, also against the action of the said spring, the movements of the turret bolt operating to arm the fuse, putting the firing means into communication with the booster charge.

1,532,856. RADIO SIGNALING SYSTEM. ROY ALEXANDER WEAGANT, Douglas Manor, N. Y., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed Feb. 7, 1919, Serial No. 275,552. Renewed Aug. 27, 1924. 36 Claims. (Cl. 250—20.)



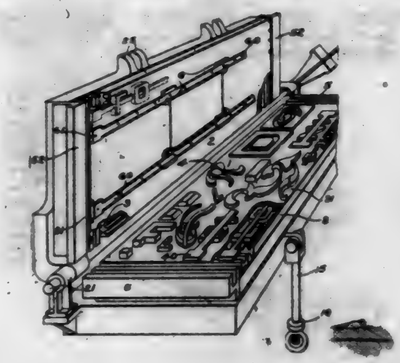
1. In radio reception, the method of minimizing static interference, which consists in simultaneously receiving signal waves and static waves from different directions with respect to the horizontal plane, balancing out the currents due to static waves and retaining the currents due to signal waves.

1,532,857. METHOD AND APPARATUS FOR RADIO-SIGNALING. ROY ALEXANDER WEAGANT, Douglas Manor, N. Y., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed Feb. 7, 1919. Serial No. 275,554. 34 Claims. (Cl. 250—20.)



1. The method of minimizing static interference in radio transmission, which consists in receiving signal waves simultaneously and static waves successively in different portions of an antenna system, and utilizing the relative phases between the resulting currents to select the desired current.

1,532,858. MOWING MACHINE. REINHOLD WENDMANN, Houston, Tex. Filed Nov. 9, 1922. Serial No. 599,762. 2 Claims. (Cl. 56—306.)

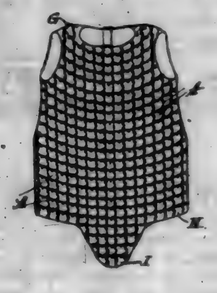


1. In a mowing machine the combination with a cutter bar and pitman, of a cushion member for said cutter bar including a bracket provided with an elongated slot, securing bolts fitted through said slot; the ends of said bracket being upturned, forming bearings, a bearing rod having its ends mounted in said bearings; a slidable bracket having end bearings which work on said rod, and being provided with an oblong slot; spiralled springs interposed between the bearings of the first named bracket, and the corresponding ends of the slidable bracket, and a finger carried by the pitman of said machine and working in the slot of said slidable bracket.

1,532,859. STRAW SPREADER. WILBER F. YATES and OLIVER D. SHIRK, Lewiston, Idaho. Filed Oct. 12, 1922. Serial No. 594,044. 3 Claims. (Cl. 275—5.)

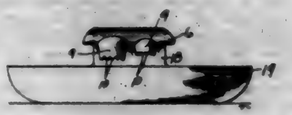
3. A straw spreader comprising a rack having line-guiding means at its rear end, a follower mounted for longitudinal movement along said rack, a drum mounted under the rear end of said rack, driving connections for said drum including a clutch, a pair of lines connected with said follower and extending therefrom around said line guiding means to said drum for drawing said follower rearwardly along the rack, a transverse bar secured to and movable bodily with said lines, a rock shaft mounted under the rear end of the rack on an axis substantially at right angles to the plane in which the lines extend from said line-guiding means to said drum, clutch throw-out connections between said rock shaft and the aforesaid clutch, and a crank arm on said rock shaft disposed in the path of the aforesaid transverse bar to be operated by the latter.

1,532,360. PRINTING DEVICE AND TYPE. JUSTUS C. ZUBLI, Bremerton, Wash. Filed Nov. 26, 1923. Serial No. 676,945. 5 Claims. (Cl. 101—247.)



1. A printing device comprising two platens, supporting means permitting approach and separation of said platens, electromagnetic means for holding type against the faces of either of said platens, and type including magnetic material.

1,532,361. PROCESS FOR THE PREPARATION OF ALKYLAMINE SALTS OF THE 4-HYDROXY-3-ACYLAMINO-PHENYLARSONIC ACIDS. JEAN ALTWEGG, Lyon, France, assignor to Societe Chimique des Usines du Rhone, Paris, France. Filed Feb. 29, 1924. Serial No. 696,085. 4 Claims. (Cl. 260—14.)

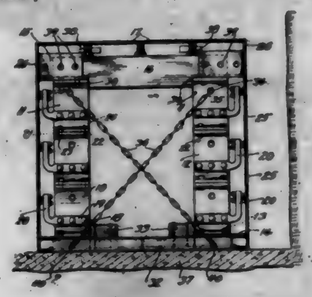


1. A process for the preparation of alkylamine salts of 4-hydroxy-3-acylamino-phenylarsonic acids, consisting in the combination of these acids with alkylamines.

1,532,362. ARMOR COAT. WILLIAM BAILEY, Cleveland, Ohio. Filed May 25, 1921. Serial No. 472,435. 3 Claims. (Cl. 89—36.)

3. In a protective armor, horizontal and vertical rows of metal plates closely grouped together at their edges, the adjacent vertical and horizontal edges of said plates provided with spaced integrally formed projecting eyes, and vertical and horizontal wires arranged at right angles to each other common to and connecting all the eyes, on adjacent edges of said rows of plates.

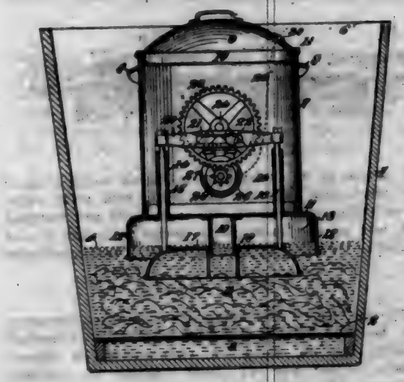
1,532,363. CIGAR-LIGHT EXTINGUISHER. OTTO A. R. BUMGES, Chicago, Ill. Filed Sept. 14, 1922. Serial No. 588,150. 5 Claims. (Cl. 131—61.)



5. A cigar light extinguisher comprising a body having light smothering devices therein having upper and lower openings thereto, means on said lower opening to break up compact ash, and a receptacle positioned below said lower opening to receive ash therefrom.

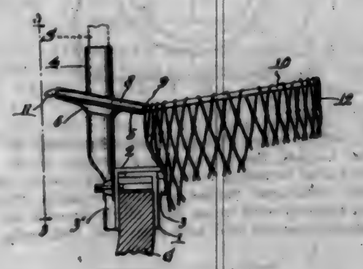
1,532,364. MANUFACTURE OF CONDENSERS. OSCAR ADOLPHUS BERMAN, Cincinnati, Ohio. Filed Oct. 2, 1922. Serial No. 591,889. 1 Claim. (Cl. 250—41.)

In an electrical condenser an insulating support, a metal disc secured thereto so as to be engaged over its whole area with the support, an insulating disc, a nut fixed in said support, a screw in engagement with said nut, extending through the support, the metal disc and the insulating disc without contacting therewith and having a handle rigidly connected thereto at its upper end, a second metal disc rigidly fastened to said screw adjacent its lower end, a binding post on said support and a spring secured to the binding post and yieldingly pressing against the lower end of the screw acting at the same time as electrical connection and securing the screw against accidental rotation.



1,532,365. FORM. HARRY E. BILGER, Chicago, Ill. Filed Feb. 9, 1922. Serial No. 535,202. 10 Claims. (Cl. 25—131.5.)

1. In a form, support, and cover plates mounted thereon, each of said supports consisting of a plurality of sections of I-beams, one of the flanges of the I-beams being provided with an opening, and the adjacent flange of the next section being provided with a correspondingly positioned lug adapted to project into said opening.

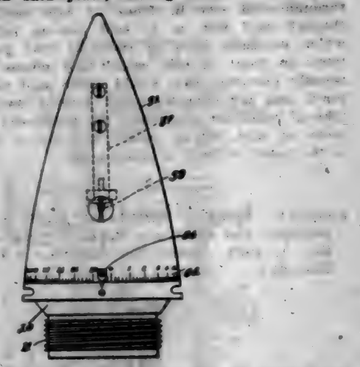


1,532,366. WASHING MACHINE. HOSMER BLUM, San Francisco, Calif. Filed Nov. 21, 1922. Serial No. 602,355. 4 Claims. (Cl. 68—37.)

1. A washing machine including a chambered member having an open bottomed cupped member at its lower end, a second cupped member disposed concentrically within the first cupped member, means extending into the chamber and connected with the second cupped member, an electric motor fixed within the chamber, and

a geared driving connection between the motor and the means extending into the chamber for simultaneously operating said cupped members toward and from each other.

1,532,367. ROWLOCK. WILLIAM H. BOCKMAN, North Webster, Ind. Filed Jan. 23, 1925. Serial No. 4,304. 2 Claims. (Cl. 9—26.)



1. In a device of the class described, the combination with opposed clamping plates and a standard extending from one of the plates, of an apertured plate tiltably mounted on and adapted to frictionally engage and grip the standard, an elongated loop extending from and connected to the plate, and a flexible container supported by the loop, said container and loop constituting means for holding the plate in frictional engagement with the standard.

1,532,368. FUSE. FREDERICK W. BOLD, Chelsea, Mass., assignor to Charles H. Pearson, Brookline, Mass. Filed Oct. 31, 1919, Serial No. 334,849. Renewed July 1, 1924. 13 Claims. (Cl. 102—36.)

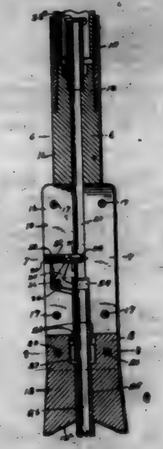
1. In a time fuse, the combination of a base, a timing train mounted thereon, a firing pin, controlled by said timing train, a safety device operable only by centrifugal force, said device being located in the base and in the path of movement of the firing pin, and a lock for said plate normally in the path of movement of the plate, and movable out of said path by the shock of firing.

3. Safety setting means for time fuses comprising a timing train, a rotatable plate connected therewith, a firing notch in said plate, setting means including a

depending spring completely spanning said notch, and means for operating the spring to rotate the setting plate to vary the setting of the timing train.

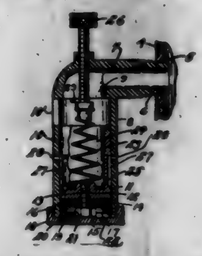
1,532,369. FUSE. FREDERICK W. BOLD, Chelsea, Mass., assignor to Charles H. Pearson, Brookline, Mass. Original application filed Oct. 31, 1919, Serial No. 334,849. Divided and this application filed Oct. 26, 1921, Serial No. 510,529. Renewed July 1, 1924. 1 Claim. (Cl. 102—36.)

A starting means for the timing train of a mechanical time fuse comprising, in combination, a radially extending arm fixed to the timing train, a shaft, a sleeve slidable longitudinally of said shaft and normally engaging the end of the radially extending arm, said sleeve movable on said shaft out of engagement with said arm on the shock of firing, and cooperating means on said shaft and said sleeve for locking the sleeve to the shaft on the shock of firing.



1,532,370. TOWEL CABINET. JOSEPH N. BORROUGHS, Oakland, Calif. Filed Mar. 16, 1922. Serial No. 544,128. 5 Claims. (Cl. 45—32.)

1. In a towel cabinet, a towel casing provided with a slot in its front wall, a towel supply roller mounted

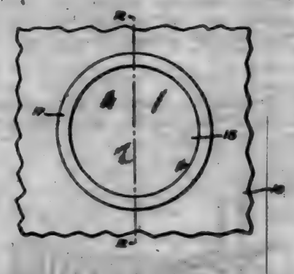


in said casing, a take-up roller mounted in said casing, means for feeding said towel from said supply roller through said slot in front of said casing and back through said slot on to said take-up roller, a shield which normally rests in front of that portion of the towel in front of said casing and means for simultaneously elevating said shield above said portion of the towel and for operating said feeding means and said take-up roller for advancing the towel and winding the same on said take-up roller to bring a clean portion of the towel in front of said casing.

1,532,371. ROTARY DRILLING TOOL. WILLIAM H. BRUNSON and CLARENCE JAMISON, Brea, Calif. Filed Dec. 1, 1923. Serial No. 677,970. 9 Claims. (Cl. 255—61.)

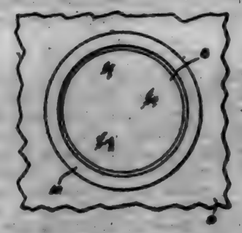
1. In rotary well drilling apparatus, a shoe including coring apparatus, the shoe having a bore for the reception of a core formed by the coring apparatus, and means within the shoe operative upon a predetermined actuation of the shoe for severing a core housed within the shoe and for completely closing the lower end of the bore of the shoe to prevent escape of any portion of the core therefrom.

1,532,372. GAS SAVER. HARVEY A. BUCK, Toledo, Ohio. Filed Sept. 10, 1923. Serial No. 662,015. 7 Claims. (Cl. 251—130.)



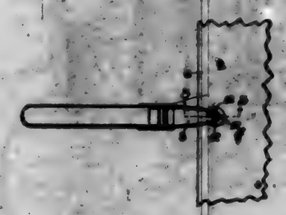
1. A cylindrical housing having an intake port through a side wall thereof, a piston reciprocable in said housing past said port for closing said port, and a spring normally acting on the piston to resist closing of the port by the piston.

1,532,373. TRACK ELEMENT FOR TRAIN-CONTROL SYSTEMS. CHARLES S. BUSHNELL, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Nov. 6, 1922. Serial No. 599,399. 7 Claims. (Cl. 246—63.)



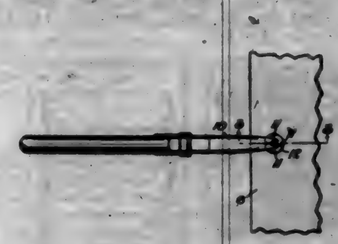
1. A device of the character described comprising, a pair of track rails, ties for supporting said track rails, means extending underneath said track rails and fastened thereto, and an electro-magnetic device including a core of magnetic material supported by said last mentioned means.

1,532,374. WINDOW FRAME. ALPHONSO S. CAMPBELL, West Medford, Mass., assignor to A. S. Campbell Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 21, 1920. Serial No. 405,088. 3 Claims. (Cl. 296—145.)



1. A curtain window installation comprising, in combination, a glass, the fabric, and a metallic frame, said metallic frame including a single metallic portion having generally continuous flanges exerting retaining pressure on both faces of said glass, said fabric pressed between said metallic portion and said glass and cushioning said glass.

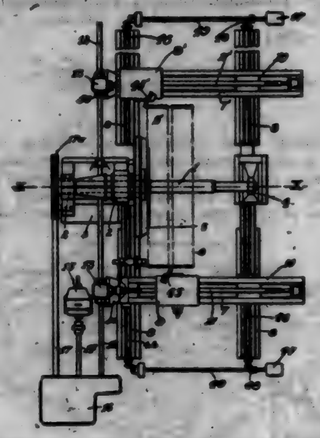
1,532,375. WINDOW AND WINDOW FRAME. ALPHONSO S. CAMPBELL, West Medford, Mass., assignor to A. S. Campbell Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 21, 1920. Serial No. 405,089. 3 Claims. (Cl. 296—145.)



2. A curtain window frame installation comprising, in combination, two frame parts adapted to engage opposite sides of the glass and curtain fabric, one of said frame parts presenting integral, distortable projections passing through openings in the other part, said projections having openings to receive a distorting tool and presenting portions adapted to exert assembling pressure upon the frame incident to their distortion.

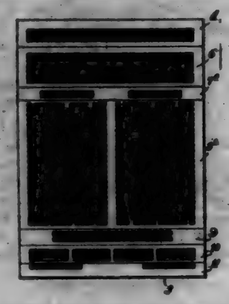
1,532,376. APPARATUS FOR LOCATING SECURING PARTS OF SEPARABLE FASTENERS TO CARRYING FABRICS. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,761. 5 Claims. (Cl. 223—54.)

5. An appliance for locating relative to one another the stud and socket members of a separable fastener, said appliance providing gripping jaws, one supplied on its gripping face with a socket member locating element and on its outer face with a stud-locating depression.



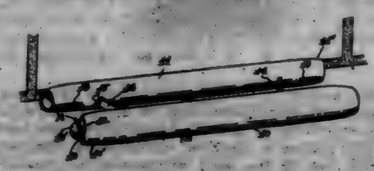
1,532,377. APPARATUS FOR LOCATING SECURING PARTS OF SEPARABLE FASTENERS TO CARRYING FABRICS. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,762. 4 Claims. (Cl. 223—54.)

1. An appliance for locating one relative to the other the stud and socket members of a separable fastener, said appliance having two relatively movable jaws at least one of which is sufficiently thin to fit between the stud and socket while the head of the stud is entered in the socket.



1,532,378. MACHINE FOR PLANING HELICAL GEARS. ELBERT H. CARROLL, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 31, 1921. Serial No. 457,398. 10 Claims. (Cl. 90—8.)

1. In a machine of the class described, the combination with a rotary blank carrier, a blank mounted thereon and a reciprocating tool slide, of a tool base carrying a tool for engagement with the blank, the said tool

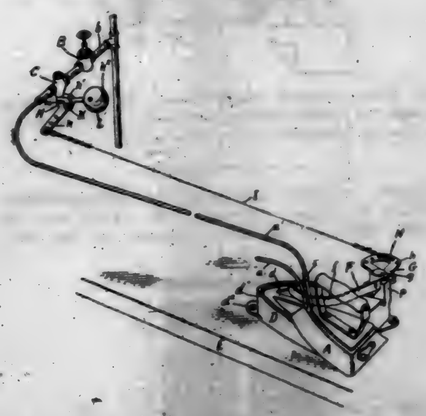


base being turnable bodily about an axis passing through the cutting point of said tool at right angles to the line of movement of the slide.

1,532,379. DUMMY LAY-OUT FOR ADVERTISERS. DOLPH C. CARTER, Cleveland, Ohio. Filed Aug. 14, 1920. Serial No. 403,530. 14 Claims. (Cl. 283—56.)

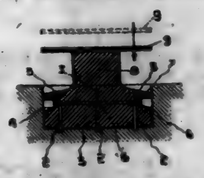
1. A dummy lay-out set comprising a plurality of sheets provided with blocked-out portions, the portions of different sheets being adapted to represent different type set-ups and said portions from a plurality of sheets being adapted for application to a common support to form a dummy lay-out.

1,532,380. BRICK JOINTER AND RAKER. CHRISTIAN N. CHRISTENSEN, Minneapolis, Minn. Filed June 12, 1923. Serial No. 644,858. 3 Claims. (Cl. 72—138.)



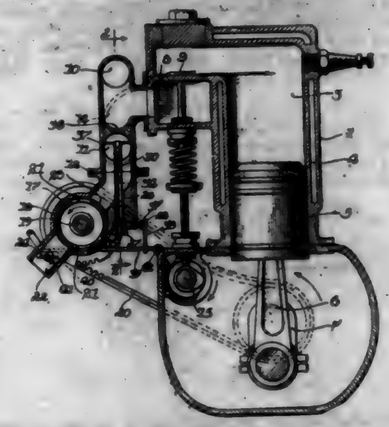
3. In a tool of the class described, a pair of finishing members, arms joining said members in laterally opposed relation, said members serving alternately as handles and jointers, a raker blade and means at one end of one of said members for clamping said blade thereon.

1,532,381. LINGERIE CLASP. EMMA EVANS CLARK, Hammond, Ind., assignor to The Wilson Fastener Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 2, 1923. Serial No. 642,899. 7 Claims. (Cl. 24—259.)



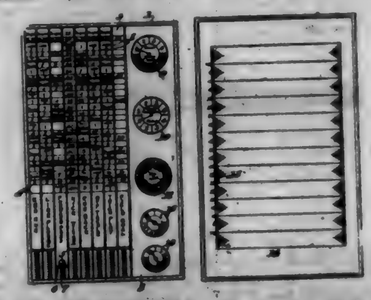
1. A lingerie clasp comprising a U-shaped resilient body and a snap fastener comprising a stud rising from a base, and a socket member having an internal spring, said socket member and base being secured to the inner faces of the limbs adjacent their free edges.

1,532,382. PRESSING APPARATUS. FREDERICK J. CLARK, Buffalo, N. Y., assignor to Steam Pressing Iron Company, Chicago, Ill. Filed June 24, 1924. Serial No. 722,069. 6 Claims. (Cl. 68—27.)



6. A pressing iron stand having an iron supporting part, and a valve controlling arm pivotally secured to said stand and movable to a valve opening position overlying the iron supporting part and to a valve closing position substantially clear of the iron supporting part.

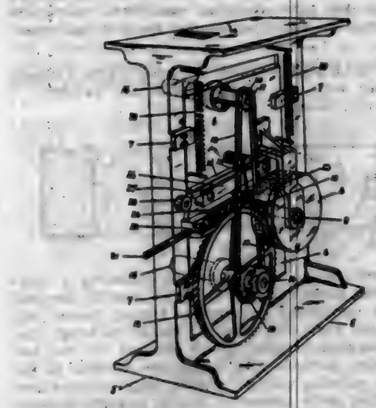
1,532,383. METHOD OF MANUFACTURING GOODS OF INDIA RUBBER AND OTHER PLASTICS. JAMES E. CLELAND, Montreal, Quebec, Canada, assignor of one-half to Harry W. Lucas, Montreal, Canada. Filed Jan. 17, 1923. Serial No. 613,296. 4 Claims. (Cl. 18—59.)



3. The method of manufacturing heels consisting in supporting an attachment ring of annular form upon studs in the mold in position placed above the floor of the mold, placing a block of unvulcanized composition upon the floor of the mold within the ring, the cross section of the block being substantially uniform and less in measurement than the interior of the diameter of the ring and exerting downward pressure upon the top of the block through a plate of greater area than the matrix for the purpose of causing the composition to flow both under and over the ring and completely fill the mold without disturbing the position of the plate, and finally vulcanizing the heel thus molded.

1,532,384. INTERNAL-COMBUSTION ENGINE. DON COLE, Chicago, Ill., assignor of one-half to John A. Dienner, Chicago, Ill. Filed May 15, 1919. Serial No. 297,185. 14 Claims. (Cl. 123—122.)

1. The method of feeding an internal combustion engine having a piston, cylinder, valves for exhaust and intake, intake pipe and a suction controlled fuel feeding and atomizing device opening into the intake pipe, which consists in subjecting the atomizing device to high suction to cause fluid fuel to be injected into contact with a heated area in the intake pipe, admitting sufficient air for combustion into said intake pipe and insulating by deflection the air thus admitted from said heated area.

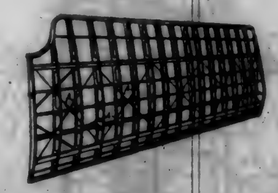


1,532,385. GAME APPARATUS FOR PLAYING INDOOR FOOTBALL. WALTER M. COX, Jersey City, N. J. Filed Oct. 15, 1924. Serial No. 743,711. 7 Claims. (Cl. 273—94.)

1. A game apparatus for playing indoor football, consisting of a number of alleys representing certain fundamental football plays, and transverse ridges dividing the alleys into spaces representing the results of particular plays.

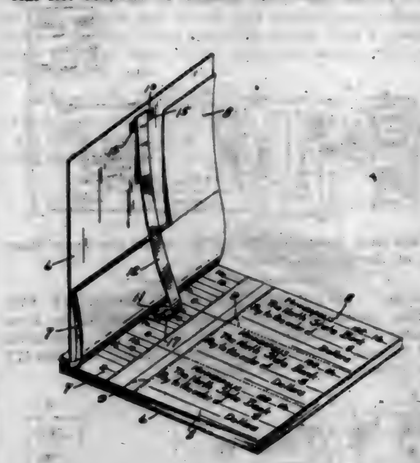
1,532,386. CINEMATOGRAPH MACHINE. JAMES CUMMINGS and HAROLD ANDREW MCGREGOR WILSON, Sydney, New South Wales, Australia. Filed July 27, 1923. Serial No. 654,133. 3 Claims. (Cl. 88—17.)

1. A cinematograph operating mechanism in which the fan shaft is mounted in bearings adapted to be displaced horizontally on a vertical plate by the relative movement between said vertical plate and a frame, and



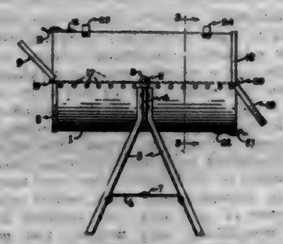
means for effecting the horizontal displacement of said bearings and shaft.

1,532,387. SMOKING PIPE. OSCAR H. DAVIS, Kansas City, Mo. Filed Mar. 10, 1924. Serial No. 698,044. 4 Claims. (Cl. 131—12.)



2. In a smoking pipe, a stem having its bore of enlarged diameter between its points of communication with the bowl and the mouthpiece, and a smoke stream expander fitting within the said enlargement and at its ends over the constricted portions of the bore of the stem; the ends of the expander having notches to permit smoke and juices to pass from the bowl into the said enlargement and from the latter into the bore of the mouthpiece.

1,532,388. WIRELESS-TELEGRAPH APPARATUS FOR AEROPLANES. HARRY MELVILLE DOWSETT, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Aug. 16, 1921. Serial No. 492,813. 2 Claims. (Cl. 250—1.)

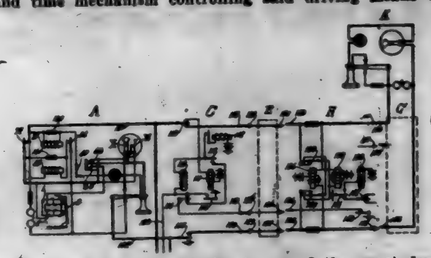


1. In radio signalling apparatus for aeroplanes having bracing wires located within the aeroplane wings, the combination with such wires of additional wires disposed within said wings, all of said wires being connected together and to the signaling apparatus.

1,532,389. CHECK STUB HOLDER. MARTINIUS DYSTHE, Minneapolis, Minn. Filed Jan. 18, 1924. Serial No. 686,099. 6 Claims. (Cl. 281—40.)

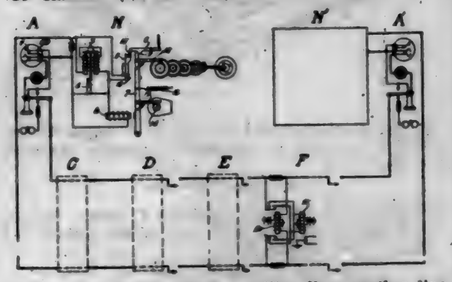
6. The structure defined in claim 1, in which the permanent anchor may be detachably secured to the cover of a check book.

1,532,390. ASH SIFTER. HORATIO S. EARLE, Detroit, Mich. Filed Oct. 6, 1921. Serial No. 505,761. 2 Claims. (Cl. 83—60.)



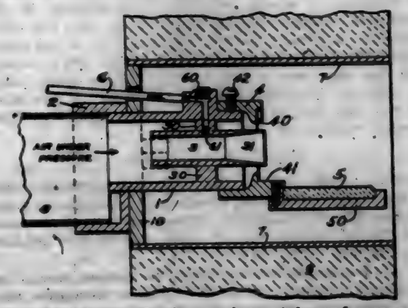
1. An ash sifter consisting of a framework including two spaced standards, a bearing at the upper end of each standard, a cylindrical body member positioned between the said standards, studs positioned centrally on opposite sides of the cylindrical member and engaging the bearings, a screen extending longitudinally of the cylindrical member separating the same into two compartments, a closure member for each end of the cylindrical body member consisting of a fixed and a hinged part, the fixed part of one closure member being above the screen at one end and below the screen at the opposite end, the said cover members having hinged portions likewise respectively disposed.

1,532,391. MEASURED-SERVICE TELEPHONE SYSTEM. JOHN ERICKSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 16, 1921. Serial No. 461,760. 19 Claims. (Cl. 179—7.)



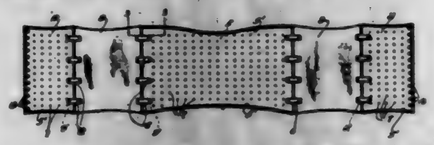
1. In a measured service telephone system, means for connecting a calling and a called line, a cumulative time indicating device, driving means for operating said device to assess an invariable and fixed line charge against the

calling subscriber when the called subscriber answers, and time mechanism controlling said driving means to



operate said indicating device to record the exact duration of the conversation.

1,532,392. MEASURED-SERVICE TELEPHONE SYSTEM. JOHN ERICKSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 25, 1922. Serial No. 563,477. 10 Claims. (Cl. 179—11.)

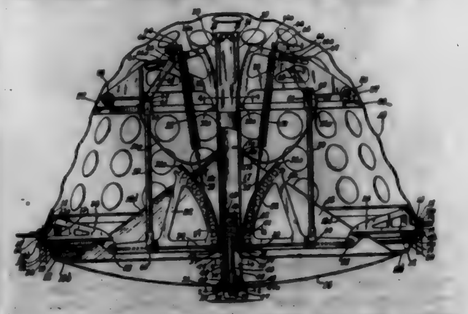


1. In a telephone system, a calling line, another line, a substation on said calling line, a charge assessing device at said substation comprising a relay, a magnet, a timing device, and a register, means for extending a connection from said calling line to said other line, means responsive to the answering of the subscriber on said other line for operating said relay by causing a current change in said calling line, means controlled by said relay for energizing said magnet, means responsive to the energization of said magnet for operating said register and for restoring said relay, means controlled by the restoration of said relay for starting said timing device by deenergizing said magnet, and means controlled by said timing device for again repeating the initial operation of said relay.

1,532,393. OIL BURNER. IRVING J. FOLTZ, deceased, late of Seattle, Wash., by FLORENCE O. FOLTZ, executrix, Seattle, Wash. Filed Dec. 18, 1923. Serial No. 680,316. 2 Claims. (Cl. 158—78.)

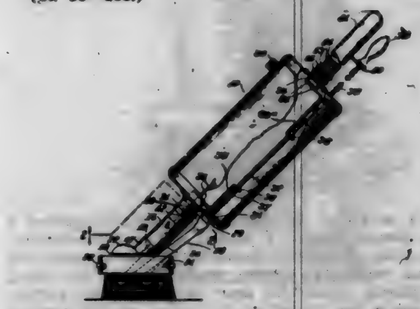
1. An oil burner having an inner tube and means for discharging oil thereinto from one side, a concentric surrounding tube spaced therefrom to form an annular passage, the outer wall of said annular passage being at its outer end reduced in diameter and terminating just back of the outer discharge end of the inner tube, and a common air supply connection for both said tubes.

1,532,394. GARMENT. EMIL F. LEWIS FRITZ, Chicago, Ill. Filed Sept. 20, 1922. Serial No. 591,627. 1 Claim. (Cl. 2—48.)



A garment of the class described including a front body covering portion formed of pliable metallic material and having ventilating perforations formed therein side body covering portions formed of elastic material, connections comprising tapes fixedly secured to the side body covering portions and detachably secured to the front body covering portion, a back body covering portion including parts formed of pliable metallic material having ventilating perforations formed therein and having grommets formed therein affording means of lacing the parts together, and connections comprising tapes fixedly secured to the side body covering portions and detachably secured to the back body covering portions.

1,532,395. SWIVEL COUPLING. WILLIAM H. FULTON, Irvington, N. J., assignor, by mesne assignments, to Titeflex Metal Hose Co., a Corporation of New Jersey. Filed Apr. 13, 1921. Serial No. 461,059. 4 Claims. (Cl. 285—9.)

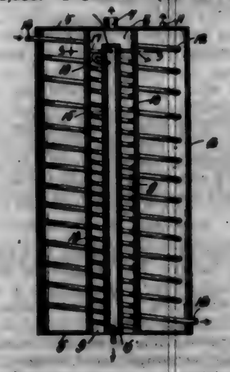


2. In a swivel coupling, the combination of two tubular members, one of said members journaled in the other, an abutment on one of said members adapted to bear against the end of the other member, a second abutment on one of said members adapted to bear against the interior of the other member, a petticoat secured to one of said members, and a packing in said petticoat surrounding said journal.

1,532,396. VALVE MECHANISM. JOHN R. GAMMETER and WALDEMAR D. KMENTT, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Sept. 19, 1923. Serial No. 668,602. 36 Claims. (Cl. 244—31.)

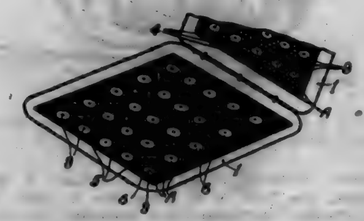
1. A valve mechanism comprising a valve seating member, a valve adapted to seat thereon, a valve impelling lever operatively connecting the two, a spring having connection to said lever for impelling the valve toward its seat, and means on said lever for anchoring the spring at different points thereon such as to vary the spring's moment arm on said lever so as to compensate adjustments of spring tension as to their effect upon the relation between the valve's resistance at closed and open position.

1,532,397. BRUSH. JAMES D. GARVEY, Chicago, Ill. Filed Jan. 15, 1921. Serial No. 437,523. 3 Claims. (Cl. 15—131.)



1. In a device of the character described, a fluid container, a brush having a wood back provided with an opening therethrough, an angle member secured to the brush-back so as to provide an upwardly inclining projection, a reenforcing member secured to the brush and across said angle member, a supporting stem or rod intermediate of the lower end of the container and the brush-back, the end of said supporting stem or rod being slotted to receive the upwardly extended projection of said angle member, and pins disposed transversely through the supporting stem or rod and the upwardly extended projection whereby the brush is secured to said supporting stem or rod.

1,532,398. RUBBER COMPOSITION AND METHOD OF PRESERVING RUBBER. WILLIAM C. GEER and WEBSTER N. JONES, Akron, Ohio, assignors to B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Oct. 12, 1922. Serial No. 594,171. 7 Claims. (Cl. 18—50.)



1. The method of preserving rubber which comprises treating the rubber with 1,8-naphthylene diamine.

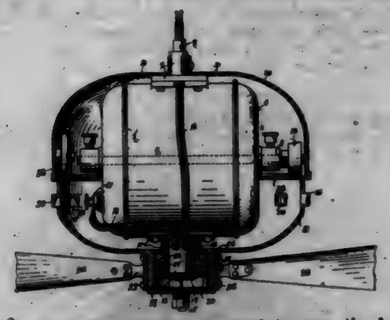
1,532,399. REFRIGERATING APPARATUS. ALONZO L. GIBBS, New York, N. Y. Filed Apr. 19, 1923. Serial No. 633,235. 3 Claims. (Cl. 62—119.)

1. A refrigerating apparatus comprising a generator tank, a heating chamber arranged therein, a heating coil within the heating chamber, one end of said heating coil communicating with the generator tank, a weak liquor receiving means situated within the heating chamber, the opposite end of the said heating coil communicating with the liquor receiving means, and a conduit connecting the said liquor receiving means with the said generator tank.

1,532,400. VENTILATED SEAT PAD. LOUIS M. GRAPE, St. Louis, Mo. Filed Feb. 11, 1924. Serial No. 691,882. 5 Claims. (Cl. 155—182.)

1. A seat pad comprising a mesh work member and a multiplicity of spacers secured to the meshwork body thereof, whereby said pad is spaced away from the seat on which it is placed.

1,532,401. GELATINIZING MACHINE FOR BATTERY ELECTROLYTES. JOHN GRAVES, WILLIAM BALDERSTON, and EDGAR J. MCEACHRON, Madison, Wis., assignors to French Battery & Carbon Company, Madison, Wis., a Corporation of Wisconsin. Filed Oct. 10, 1921. Serial No. 506,913. 1 Claim. (Cl. 198—19.)

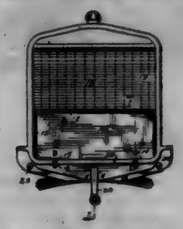


A machine for facilitating the assembly of electric cells having a gelatinous electrolyte, comprising a pair of superimposed conveyor belts, means for driving said belts in opposite directions, a heating medium through which the upper reach of the lower belt is arranged to travel, a group of operator stations near one end of the machine where the cells are partially assembled and placed on the lower reach of the upper belt to be conveyed to the other end of the machine, said operator stations including tables disposed substantially at the level of the lower reach of the upper belt to facilitate transfer of the partially assembled cells to said lower reach, and another group of operator stations near the opposite end of the machine where the partially assembled cells are removed from the lower reach of the upper belt, completely assembled and placed on the upper reach of the lower belt to be conveyed through said heating medium, said last mentioned operator stations including tables disposed substantially at the level of the upper reach of the lower belt.

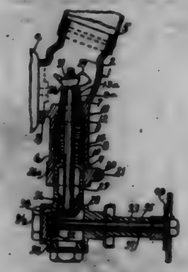
1,532,402. ELECTRIC FAN. CHARLES O. HALL, East Orange, N. J. Filed Jan. 15, 1924. Serial No. 686,278. 12 Claims. (Cl. 230—1.)

1. An electric fan construction comprising in combination, a motor, a drive member attached thereto, a hous-

ing arranged around the motor engaging the driving member and rotated thereby, a fan carried by the housing, and a cushion member arranged to urge the housing and drive member together.

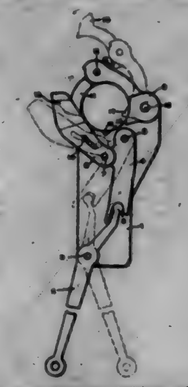


1,532,403. CIGARETTE HOLDER. HARRY H. HARNBROOM, New York, N. Y. Filed Dec. 2, 1922. Serial No. 604,526. 3 Claims. (Cl. 131—10.)



1. In a cigarette holder, in combination, a mouth piece having a reduced extension, a separable holder carried by the reduced extension, a longitudinal passage through the mouth piece and opening into the holder chamber, and outwardly opening longitudinal recess within the mouth piece exterior of the passage and opening into the holder chamber, an ejector movable within the recess and the holder chamber and means exterior of the mouth piece for moving the ejector.

1,532,404. RADIATOR PROTECTOR. THOMAS P. HARRIS, Clarinda, Iowa. Filed Jan. 5, 1924. Serial No. 684,594. 2 Claims. (Cl. 257—132.)

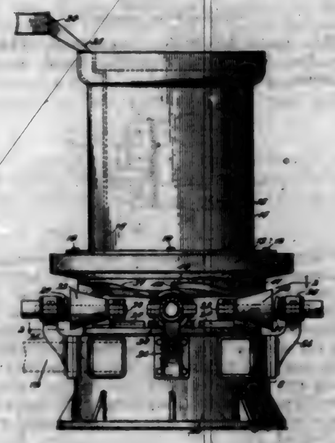


2. A radiator protector comprising a body portion made of resilient yielding material such as fiber board shaped to rest against the front of the lower portion of the radiator and between the sides of the radiator frame and to extend downwardly between the lower member of the radiator frame and the front of the radiator to a point spaced a material distance below the lower member of the radiator frame and to engage and rest upon portions of the automobile frame below the radiator and slightly in front of a vertical line at the front of the radiator, spring clip devices attached to the body portion and designed to engage the lower member of the radiator frame, whereby the radiator protector may be attached to a radiator by placing it against the front of the radiator and moving it downwardly until the clips engage the said cross member of the radiator frame, and during such downward movement the lower edge portion of the protector will be sprung forwardly to engage the portions of the automobile frame that are in front of the radiator to thereby cause the lower radiator frame member to serve as a fulcrum to hold the upper end of the protector against the radiator, and reinforcing metal binders applied to the side edges of the protector and extending from a point above the lower cross member of the radiator frame to a point adjacent to the top edge thereof.

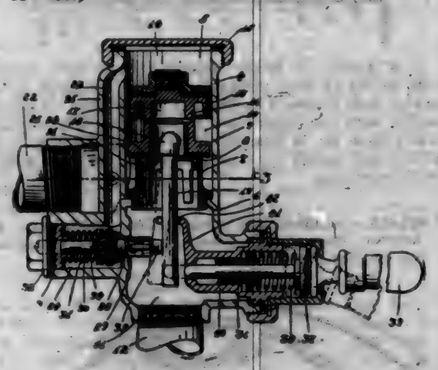
1,532,405. WATER CIRCULATOR. CHARLES C. HERBERT, San Jose, Calif. Filed Feb. 10, 1923. Serial No. 618,343. 4 Claims. (Cl. 103—89.)

1. A device of the character indicated comprising a body portion having a conduit passing therethrough, a propeller operatively mounted in said conduit, and driving connections thereto, resilient means for urging said driving connections apart from said body portion, and means for controlling the action of said resilient means.

1,532,406. WRENCH FOR PIPE OR TUBING. RICHARD DENNIS HILL, Wichita Falls, Tex., assignor to E. B. Zittel, Burkburnett, Tex. Filed Dec. 16, 1922. Serial No. 607,236. 2 Claims. (Cl. 81—66.)



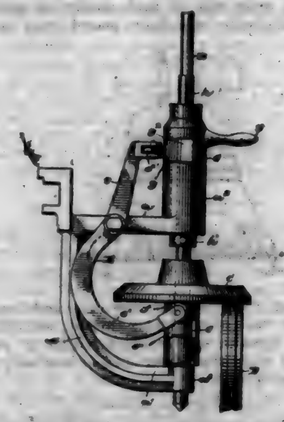
1. A wrench for pipe or tubing of the character described comprising a support; a fork shaped cam lever pivoted thereto, a hand lever pivoted to said support in association with said fork shaped cam lever, a clamping member pivoted to said fork shaped cam lever and means for providing pivotal and slidable motion thereof on said support, a clamping member pivoted to said support, a clamping member pivoted to said last mentioned clamping member and means thereon to engage the free end of said first mentioned clamping member.



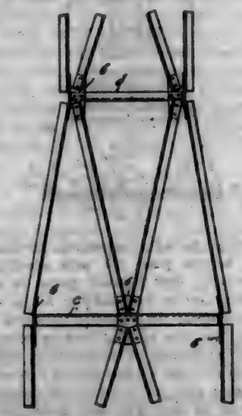
1,532,407. CONCRETE-MOLDING APPARATUS. JOHN S. HOBSON, Chicago, Ill., assignor to Massey Concrete Products Corporation, Chicago, Ill., a Corporation of Virginia. Filed Jan. 4, 1924. Serial No. 684,826. 21 Claims. (Cl. 25—30.)

1. A concrete molding apparatus comprising a vertically mounted centrifugal mold, vertical jolting mechanism therefor, and means for adjusting the degree of jolting movement secured by said mechanism.

2. A concrete molding apparatus comprising a vertically mounted centrifugal mold, a jolting mechanism therefor, and means for bringing said mechanism into and out of function with said mold to permit rotation of said mold with or without jolting.



1,532,408. FLUSH VALVE. ARTHUR E. HOMMEISTER, Cincinnati, Ohio, assignor to The John Douglas Company, Carthage, Ohio, a Corporation of Ohio. Filed June 28, 1922. Serial No. 570,344. 2 Claims. (Cl. 137—93.)



2. A valve device comprising two valves and having a single by-pass therein, one the main valve which controls a flow of water, the other an auxiliary valve mounted in the by-pass for controlling the main valve, means carried by the main valve adapted to actuate the auxiliary valve and to be rendered inoperative upon said auxiliary valve by the action of the main valve, a fixed guide for the first mentioned means, and means for rendering said first mentioned means operative upon the auxiliary valve.

1,532,409. BOBBIN-WINDING MACHINE. JAMES DANIEL JOYCE, Philadelphia, Pa. Filed Oct. 30, 1922. Serial No. 596,008. 4 Claims. (Cl. 242—27.)

1. In a winding machine, a non-lifting winding spindle, spindle driving means embodying two contacting friction members in driving connection with the spindle, and means for lifting the driven friction member out of contact embodying a lifting member, and a bell crank lever carried on the spindle and revoluble about the axis of the spindle.

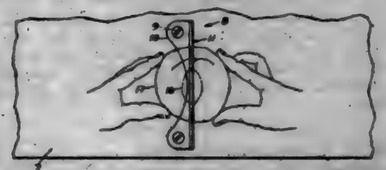
1,532,410. STRUCTURAL TOWER. RYOHEI KAGIWADA, Washington, D. C. Filed Apr. 25, 1923. Serial No. 634,449. 2 Claims. (Cl. 189—12.)

1. In a structural tower, the construction unit, consisting of a polygon composed of a set of horizontal members, a second polygon composed of a second set of horizontal members, the said pair of polygons being parallel to each other, and having a common axis, around which one of the polygons is disposed in respect to the other with a lead equivalent to one-half the angle subtended by the apex of said polygons, in combination with a plurality of diagonal members joining the said pair of polygons at their respective apexes and forming a plurality of triangles with the horizontal members of the polygons, substantially as and for the purpose described.

1,532,411. COIN SAVINGS BANK. JAMES A. KIDWELL, Lakewood, Ohio; Anna D. Kidwell, administratrix of said James A. Kidwell, deceased, assignor to The Bankers Savings and Credit System Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 2, 1921. Serial No. 466,869. 3 Claims. (Cl. 232—4.)

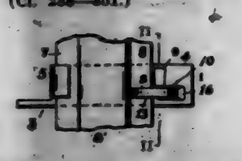
1. A savings bank comprising, a coin container having an opening in its base, a detachable closure for said

opening, locking means for said closure, said closure provided with a coin admission slot, a metal block secured upon the inner side of said closure on each side of said slot, duplicate oppositely placed runs in said



blocks, said ball runs inclined upwardy and laterally away from said slot on both sides thereof, and balls in said ball runs, opposite balls being actuated by gravity to make contact with each other and to normally close said coin admission slot.

1,532,412. COIN SAVINGS BANK. JAMES A. KIDWELL, Lakewood, Ohio; Anna D. Kidwell, administratrix of said James A. Kidwell, deceased, assignor to The Bankers Savings and Credit System Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 2, 1921. Serial No. 466,370. 8 Claims. (Cl. 232—4.)

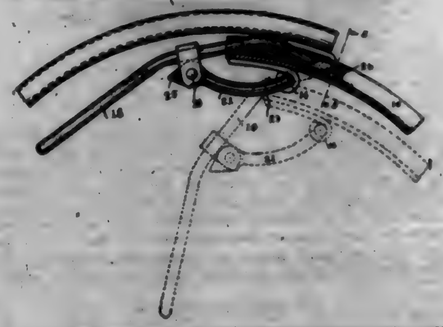


1. In a savings bank, a container, having an opening in its base, a bottom plate for said opening, means for detachably securing said bottom plate in said opening, a coin admission slot in said bottom plate, spring fingers alternately secured to the opposite margins of said coin admission slot, the tips of said fingers curved upwardly, and the tips of the fingers extending from one side of said slot overlapping the tips of the fingers extending from the other side of said slot, to prevent the coins in the bank from passing out of said slot, and guard means for said fingers, said guard means having coin deflecting surfaces.

1,532,413. STATIONARY KNIFE. OTONOSUKE KITA, Irvington, Calif. Filed Sept. 22, 1924. Serial No. 739,030. 1 Claim. (Cl. 146—30.)

A fruit knife of the character described, consisting of a single piece of sheet metal having a supporting base at its lower portion and a ring-like knife at its upper portion, the uppermost portion of the ring being slotted forming thereby a narrow entrance to the opening in the ring and a pair of vertically-positioned converging blades, the tips of said converging blades adapted for momentarily resting and centering the fruit thereon, and said converging blades further adapted to present a minimum cutting edge exposed to the fingers.

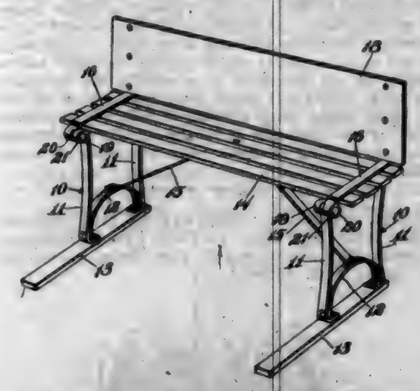
1,532,414. RAIL ANCHOR. CHARLES H. KNELL, Oakmont, Pa. Filed Nov. 16, 1923. Serial No. 675,081. 2 Claims. (Cl. 238—351.)



1. In a rail-anchor, a member having a vertical flange for engagement with the side of a rail tie and lying beneath the rail and having at one end means engaging one flange of a rail and at the other end a slot adjacent to the edge of the other flange of the rail, in combination with a key having a member projecting down through the said slot and locking the key to the said member when the key is rotated, and also having an upwardly extending resilient hook engageable at its end only with the upper surface of the adjacent rail-flange when the key is rotated.

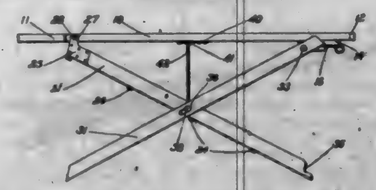
1,532,415. PICKER AIR INTAKE. HARRY W. KNOWLTON, Lowell, Mass., assignor to Knowlton & Newton Co., Inc., Lowell, Mass., a Corporation of Massachusetts. Filed June 23, 1924. Serial No. 721,640. 12 Claims. (Cl. 19—80.)

2. A picker air intake consisting of a main supply pipe having an inlet through which air is adapted to be drawn from outside a building; a mouth piece communicating with the inner end of said pipe and through which said air is adapted to be discharged into said picker; and means for closing said pipe when the picker is not operating.



1,532,416. RIM-OPERATING TOOL. JOSEPH P. KUTINA, Cicero, Ill. Filed Apr. 12, 1923. Serial No. 631,547. 1 Claim. (Cl. 157—1.)

In a tool for opening and closing transversely split tire rims, the combination of a lever having an arm projecting laterally therefrom at one end thereof, said lever being adapted to be positioned between the overlapped ends of the rim when the latter is open and to

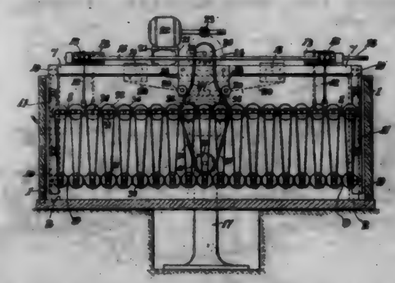


serve as a pry to force the inner of said overlapped ends radially inward in returning said inner end to its normal position in alignment with the other end, a link having an arm arranged parallel with the said laterally projecting arm of said lever and another part that is pivotally connected with said lever, the distance between said pivotal connection and said laterally projecting arm being greater than that between said connection and the arm of said link whereby said tool is adapted to lock said rim ends in their overlapped and open position.

1,532,417. CONVERTIBLE TABLE SETTEE. WILLIAM T. LETTS, St. Joseph, Mo. Filed Sept 13, 1924. Serial No. 737,547. 3 Claims. (Cl. 155—41.)

1. A table settee of the character described comprising a seat having supporting means, a section constituting either a back or a table, irons pivotally connected to the supporting means for the seat on one side thereof and adjacent the ends and adapted in one position to rest upon the seat and in the other position to extend vertically upward from the seat, the irons being angularly bent at their free ends, the section being attached to the inner faces of said angularly bent portions and the angularly bent portions extending across the section, the section being thus disposable either in a vertical plane on one edge of the seat to thereby constitute a back or in a horizontal plane adjacent to but in a plane above the opposite edge of the seat and the hinges being formed to support the irons in a vertical position but permit them to be turned downward into a position across the face of the seat.

1,532,418. COMBINED IRONING BOARD AND LADDER. HENRY C. LEWIS, Ontario, Wis., assignor of one-half to John Gibson, Ontario, Wis. Filed Apr. 14, 1922, Serial No. 552,539. Renewed Feb. 27, 1925. 1 Claim. (Cl. 228—4.)



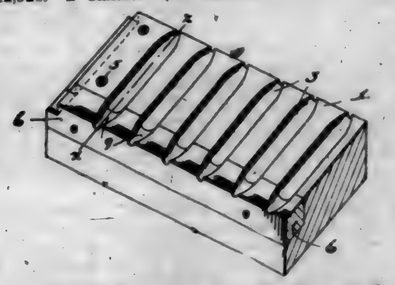
In a device of the class described, a board, a cleat having an opening therein mounted on the lower side of the board, a hook shaped fastening device passing through said opening and having resilient diverging legs engaging the edges of the opening, a pair of spaced leg members, and a transverse element connecting said members, the transverse element being adapted for engagement by the hook, a ladder mounted between the spaced legs and having one end pivotally connected near that end of the board opposite to that on which the cleat is mounted, and means for connecting said ladder near the central portion thereof, with the lower side of the board near the central portion thereof, said means comprising a resilient element secured to the board, a bail-shaped member having an upper straight portion for engaging the resilient element and the surface of the board and having its lower ends swingingly connected with the leg members and the ladder.

1,532,419. PROCESS FOR THE MANUFACTURE OF WHITE LEAD. GEORGE FREEMAN LLOYD, Brighton, and FRANK BOARDMAN CLAPP and FREDERICK HARPER CAMPBELL, Melbourne, Victoria, Australia, assignors to Commonwealth White Lead and Paints Proprietary Limited, Brighton, Victoria, Australia. Filed June 15, 1923. Serial No. 645,701. 10 Claims. (Cl. 23—71.)

1. In the manufacture of white lead, a process for the preparation of a basic acetate of lead mixture characterized by the treatment of litharge with an aqueous solution containing not less than 4½ nor more than 60 per cent of absolute acetic acid, in such proportion that there is present not less than 16 per cent nor more than 22 per cent of absolute acetic acid calculated on the weight of litharge originally present and that the finished mixture contains not less than 10 nor more than 78 parts per cent of water, at a temperature not exceeding 60° C.

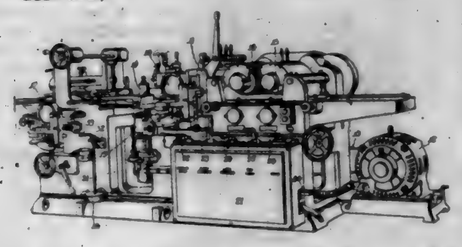
8. Process of making white lead, which comprises precipitating the same from an aqueous solution of a lead salt by a mixture of a carbonate and a bicarbonate of an alkali metal in the ratio of not less than 2 to 3 and not greater than 1 to 3 while maintaining the solution concentration, and treating the resulting product with a dilute aqueous solution of a lead acetate in quantity slightly in excess of the equivalent quantity of alkali metal salt adsorbed in the precipitate, and finally washing with water.

1,532,420. MACHINE FOR TREATING HANKS OF YARN. SAM SPENCER LORD, Whitefield, England. Filed May 19, 1924. Serial No. 714,485. 5 Claims. (Cl. 8—19.)



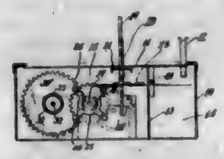
5. A machine for treating hanks with liquid, comprising vat means for the liquid, raisable and lowerable cage means; supporting rods fixed to the cage means; an adjustable member mounted on the cage means below the said rods; other supporting rods fixed to the adjustable member in vertical register with the first named rods; flat carrying members rotatably mounted on the said rods to receive the hanks; inter-meshing gear wheels provided on the upper carrying members; inter-meshing gear wheels provided on the lower carrying members; and a chain drive to drive one of the upper carrying members and one of the lower carrying members simultaneously.

1,532,421. SHINGLE FASTENER. HUGH MACINNES, Jersey City, N. J., and WILLIAM J. RILEY, Boston, Mass. Filed Feb. 28, 1923. Serial No. 621,718. 2 Claims. (Cl. 108—33.)



1. A shingle fastener embodying a body member provided with a plurality of converging shoulders in offstanding relation to the plane of said body member, and a plurality of locking members extending from the body member in opposite directions to one another.

1,532,422. CIGAR-HEAD-FORMING PLATE. JOHN D. MADLEM, Lititz, Pa. Filed May 13, 1924. Serial No. 712,921. 2 Claims. (Cl. 131—9.)



1. A head-forming plate for cigar molds, consisting of a rectangular strip of metal formed with a series of equidistant head-forming depressions in one face thereof and means for securing it in a recess cut in the face of a mold, whereby an old mold is reconditioned.

1,532,423. ELECTRIC-MOTOR CONTROLLER FOR WOODWORKING MACHINES. CHARLES J. MARSHALL, Beloit, Wis., assignor to P. B. Yates Machine Company, Beloit, Wis., a Corporation of Wisconsin. Filed Sept. 8, 1924. Serial No. 736,432. 4 Claims. (Cl. 144—114.)

1. In a planing-machine having an electric-drive motor for each of four rotary planing elements and an electric-drive motor for the feed-mechanism of the planing-machine, the combination of a housing for five electric circuit controllers, each having a shaft, one controller being provided for each of the specified motors, a handle for each controller shaft, two of such handles being at one level, two others at another, and the feed-motor controller-handle at an intermediate level, a sixth handle near the delivery end of the planing-machine and at substantially the same level as said feed-motor controller-handle, and a mechanical connection between said sixth handle and the feed-motor controller-shaft, whereby the latter may be operated by either of two handles.

1,532,424. TOY SAVINGS BANK. LOUIS MARX, New York, N. Y. Filed Oct. 19, 1922. Serial No. 595,552. 4 Claims. (Cl. 46—36.)

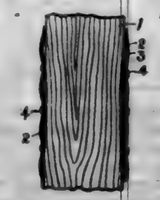
1. A toy savings bank comprising a savings receptacle, an amusement device carried thereby, a motor housed by the receptacle and connected to operate said device, mechanism for energizing said motor and a brake means for the motor normally set in braking condition and releasable by the depositing of a coin in the receptacle, said brake means and motor being inter-related so that the brake means when released is held out of braking action by the operation of the motor, and is self-resettable into braking condition when the motor is deenergized.

1,532,425. TIRE AND COMBINATION TIRE PROTECTOR AND ANTISKID DEVICE. FRED MARKWICK, Detroit, Mich. Filed May 17, 1923. Serial No. 639,590. 6 Claims. (Cl. 152—2.)

3. The combination with a tire having its tread portion provided with a seat extending circumferentially of the tire and of less width than the tread, the side portions of the tire being provided with channels extending radially and communicating with the said seat, of an anti-skid device positioned in said seat and extending about the tire, and anchoring means for said anti-skid device including yokes for extending transversely across a tire carrying rim, and means for extending through said channels and connecting the end portions of said yokes with opposite side portions of said anti-skid device.

1,532,426. FORD MOTOR ATTACHMENT. CHARLES W. METZ, Sidney, Nebr. Filed Sept. 7, 1922. Serial No. 586,636. 4 Claims. (Cl. 184—13.)

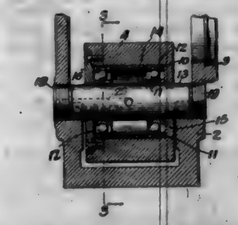
1. A crank case for motors of the type having a tubular oil line for conveying lubricant to the front end thereof, said crank case having a valve controlled guide opening in substantial alignment with the oil line for the reception of a cleansing and obstruction-removing element for insertion into the oil line.



1,532,427. TREATMENT OF CELLULOSE ESTERS FOR DYEING. RICHARD MEYZGER, Heidelberg, Germany, assignor to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed Oct. 18, 1924. Serial No. 744,494. 4 Claims. (Cl. 8—5.)

4. The process of treating cellulose acetate fibre for dyeing which consists in treating the fibre in a bath containing a salt of an acid ester of phosphoric acid and subsequently dyeing the fibre so treated in a dyestuff solution.

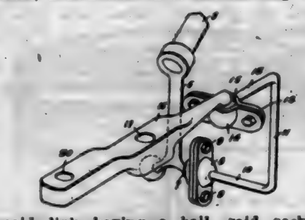
1,532,428. PROCESS OF PRODUCING FORMIC-ACID DERIVATIVES. KURT METER, Mannheim, and LUDWIG ORTHNER, Freiburg-Breisgau, Germany, assignors to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Bavaria, Germany, a Corporation of Germany. Filed July 3, 1922. Serial No. 572,721. 3 Claims. (Cl. 260—124.)



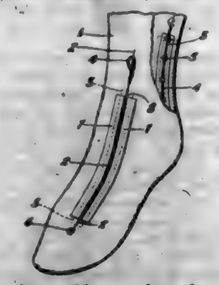
1. The process of producing formic acid derivatives which consists in causing carbon monoxid and ammonia to react under a pressure of at least 20 atmospheres and at a temperature surpassing 100 degrees centigrade.

1,532,429. FIXTURE FOR POULTRY HOUSES AND COOPS. ROBERT L. MILLER, Dallas, Tex. Filed May 3, 1923, Serial No. 636,417. Renewed Feb. 12, 1925. 2 Claims. (Cl. 119—25.)

1. In a fixture for poultry houses and coops, a support, and a chemical-receiving container having a bottom disposed below the support, ends, and vertically corrugated sides having convex parts arranged in juxtaposition to opposite sides of the support and concave parts spaced from the said opposite sides of the support to afford passages for the fumes of the chemical.



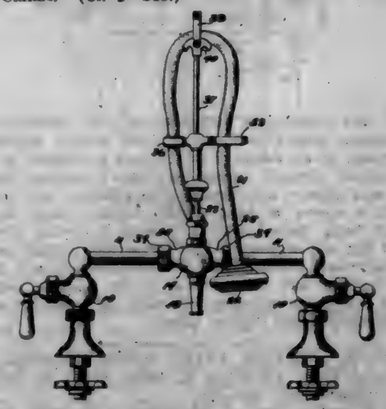
1,532,430. ANTIFRICTION JOURNAL BEARING. WILLIAM H. MILLSPAUGH, Sandusky, Ohio. Filed Nov. 1, 1922. Serial No. 598,341. 10 Claims. (Cl. 64—38.)



6. A structure of the class described comprising, in combination, a pair of rollers of large diameter affording a supporting bearing for a large cylinder journal; shafts for said rollers; anti-friction bearings interposed between said shafts and rollers; a centrally-swiveled rocking support having side walls enclosing said rollers and carrying said shafts; and means associated with said support providing a housing for the journal and journal bearings.

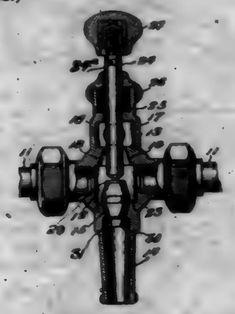
1,532,431. HEADLIGHT. ALEXANDER F. MITCHELL, Frost, Tex. Filed Sept. 16, 1924. Serial No. 738,050. 2 Claims. (Cl. 240—62.)

1. In a dirigible headlight, a lamp supporting arm pivotally supported intermediate its ends, said lamp supporting arm having a ball formed at one end thereof, an arm having an upwardly and inwardly extended portion, said last mentioned arm carrying socket members at its ends, a link secured to the steering rod of a vehicle, said link having a ball, said socket members adapted to accommodate the ball of the link and arm, and said lamp supporting arm adapted to move in a horizontal plane when the link is moved upwardly.



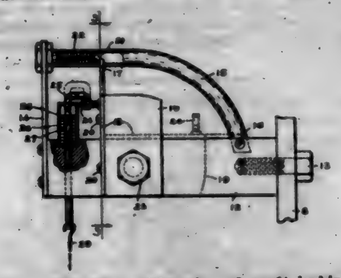
1,532,432. METHOD AND APPARATUS FOR FITTING SHOES. RAYMOND P. MORSE, Scarsdale, N. Y., assignor to Morse & Burt Co., Inc., Brooklyn, N. Y., a Corporation of New Jersey. Filed Mar. 15, 1921. Serial No. 452,518. 5 Claims. (Cl. 223—18.)

1. A device for making a foot form comprising a stiffened stocking slit along a line to permit removal, said slit being closed by a slittable paper strip carrying a cord for slitting said strip to permit removal from the foot without permanent deformation of the stiffened form.



1,532,433. WATER-SUPPLY FIXTURE. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Nov. 12, 1919. Serial No. 337,482. 8 Claims. (Cl. 4—148.)

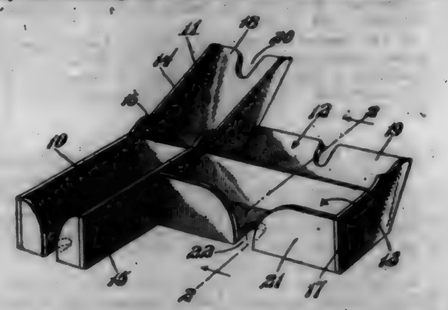
1. A fixture of the class described comprising a hot water cock, a cold water cock, a mixing cock to which the aforementioned cocks deliver, a spout leading from



said mixing cock, a spray tube nipple leading from said mixing cock, a valve in said mixing cock, a reciprocable plunger-type handle for said valve, and means for supporting the tube adjacent the mixing cock whereby the hand holding the tube may operate said valve without laterally directing the spray.

1,532,434. DOUBLE COCK. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Mar. 8, 1920. Serial No. 364,029. 5 Claims. (Cl. 251—22.)

1. A cock comprising a body portion having a valve chamber provided with two cone-seated outlets having seating surfaces of relatively large area, a valve stem mounted for reciprocal movement in said cock body, a double-coned valve having a rocking and rotatable connection with said stem, the coned surfaces of said valve being adapted to engage wedgingly the opposed cone-seated outlets over substantially their entire area so as to alternately close either of said outlets.

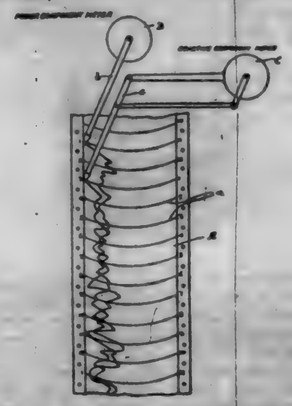


1,532,435. AUXILIARY SAFE AND VAULT LOCK. WALTER E. MURRAY, Fort Dodge, Iowa, assignor, by mesne assignments, to Peoples Investment Company, a Corporation of South Dakota. Filed June 8, 1921. Serial No. 475,977. 4 Claims. (Cl. 109—3.)

1. The combination with safe and vault locking means including locking-bolts and a main locking mechanism therefor, of an auxiliary lock having a support, a tumbler-block pivoted thereon, a tubular member carried by said support and having a longitudinal slot, an expansive spring in said tubular member, said tumbler block being formed with a portion projecting through said slot and engaged by said spring, said spring tending to move said tumbler-block to active position, and means for holding said tumbler-block in an inactive position, said holding means being releasable by abnormal movement of the main locking means.

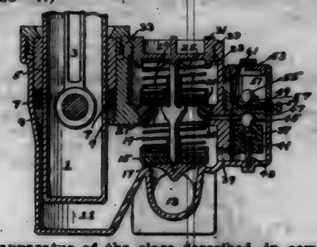
1,532,436. POSTING TRAY. JOSEPH M. MUSIL, Cleburne, Kans. Filed July 31, 1924. Serial No. 729,368. 2 Claims. (Cl. 211—28.)

1. A posting tray of the character described having forward and rear longitudinally extending compartments for the reception of checks and a pair of forward and rear transversely extending compartments for the receipt of deposit slips disposed at one end of the longitudinally extending compartments, there being a wall triangular in cross section and running from end to end of the tray and dividing the forward check compartment from



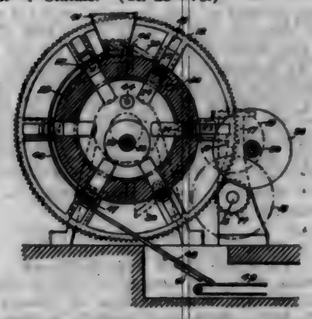
the rear check compartment and the forward deposit compartment from the rear compartment thereof, the rear deposit slip compartment and the rear check compartment having upwardly and rearwardly inclined walls intersecting the angular face of the dividing wall.

1,532,437. BELT. WILLIAM H. O'BRIEN, Denver, Colo. Filed Aug. 17, 1923. Serial No. 657,963. 2 Claims. (Cl. 241—8.)



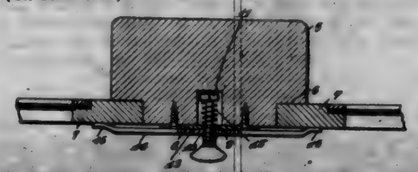
1. The combination of a belt and an attachment for securing the free end of a watch chain to said belt, said attachment comprising a strip of flexible material passed through an opening in the face of said belt adjacent the buckle thereof, said strip forming a loop on the outside face of said belt and having its extremeties extended in opposite directions and secured to the inside face of said belt.

1,532,438. GRAPHIC ELECTRIC METER. LOUIS A. PAINE, Toronto, Ontario, Canada, assignor to Lincoln Meter Company Limited, Toronto, Ontario, Canada. Filed Aug. 27, 1921. Serial No. 496,150. 1 Claim. (Cl. 234—5.5.)



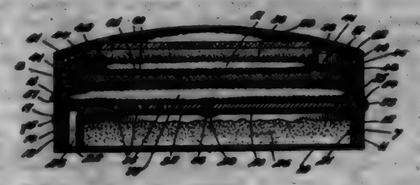
In a graphic meter, the combination with a moving chart having transversely arranged spaced divisions, of a watt meter having a rotatable arm adapted to swing across the chart and a re-active volt ampere meter having a rotatable arm adapted to swing across the chart, said arms being adapted to operate and mark said chart in a longitudinal spaced relation.

1,532,439. PUMP. HARVEY S. PARDEE, Chicago, Ill. Filed May 26, 1920. Serial No. 384,498. 8 Claims. (Cl. 103—7.)



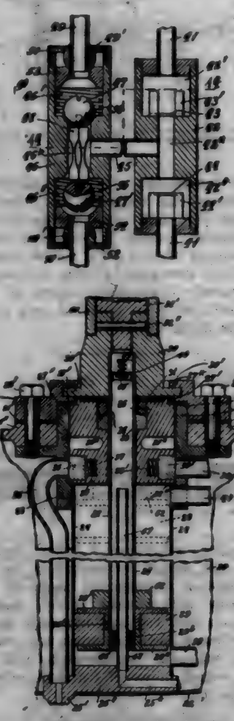
1. In apparatus of the class described, in combination, a pump having a piston and intake and discharge valves, means for drawing in air during each suction stroke and delivering it adjacent the discharge valve, the air being forced into the discharge port during the succeeding pressure stroke of the pump, and a check valve with restricted by-pass, for automatically priming the pump.

1,532,440. ROTARY BRICKMAKING MACHINE. THOMAS OTWAY PARTRIDGE, North Sydney, New South Wales, Australia. Filed June 19, 1922. Serial No. 569,506. 7 Claims. (Cl. 25—78.)



1. An improved rotary brick making machine comprising a rotatably mounted drum and means for rotating same, a radially disposed mould box in periphery of said drum, a pair of radially guided opposing plungers in said mould box, one of said plungers adapted to be operated by a roller moving on curved camways, an adjustable arm having a roller interior of the drum engaging the inner plunger for adjusting the capacity of said mould box, an eccentrically positioned free rotating roller within said drum, and an adjustable free rotating and opposing roller positioned outside the said drums, cooperating with the first-mentioned roller for exerting pressure on said opposing plungers.

1,532,441. LOCK. JOHN PAUL RANSDALE, College Park, Ga. Filed May 24, 1924. Serial No. 715,673. 1 Claim. (Cl. 292—210.)



A screen securing device including a spring pressed arm, said arm adapted to contact with adjacent screens to hold them in position, said arm adapted to be rotated to a vertical position and out of engagement with the screen, and means for engaging the arm and restricting movement of the arm.

1,532,442. COMPACT CONTAINER. ALBERT G. SAART, Attlebore, Mass., assignor to Saart Brothers Company, a Corporation of Rhode Island. Filed Jan. 19, 1924. Serial No. 687,175. 3 Claims. (Cl. 132—83.)

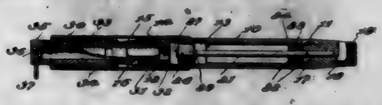
1. In a container of the type set forth, two hollow cover sections pivotally connected to each other, a mirror member pivotally supported between said sections, a powder-retaining member extending transversely of the one section and having an indentation, and a resilient locking member on the same section movable into said indentation.

1,532,443. LIQUID-PROJECTING DEVICE. ALBERT V. SAMMIS, Huntington, N. Y., assignor to Fire Gun Manufacturing Company, Huntington, N. Y., a Corporation of New York. Filed July 24, 1915. Serial No. 41,650. 35 Claims. (Cl. 299—97.)

1. In combination with a receptacle, a pump comprising a cylinder connected with the receptacle to withdraw liquid therefrom, said pump being provided with an outlet to discharge such liquid, a piston arranged to reciprocate in said cylinder, a handle for operating said piston, said handle being capable of turning relatively to the cylinder, a plug which is normally stationary and disconnected from the handle, said plug being arranged adjacent to said outlet and capable of turning

relatively to the cylinder about the same axis as said handle, a valve carried by said plug and controlling said outlet, and means for connecting said handle and plug so that they will turn in unison about the same axis.

19. In combination with a receptacle, a pump for discharging material contained in said receptacle, a casing connected with the pump, an intake tube located within said receptacle, and provided at one end with a ball one side of which engages said casing, and a yielding member engaging the other side of said ball.



30. In combination with a fluid-container, a double-acting cylinder pump adapted to expel the contents of said container, intakes for said pump, adjacent each end of the container, a valve casing located between said intakes and connected thereto, two gravity valves in said casing, another valve casing, a fluid-passage connecting the two valve casings, two suction valves contained in the second-named valve casing, and fluid-passage connections from said suction-valve casing to each end of the cylinder of said pump.

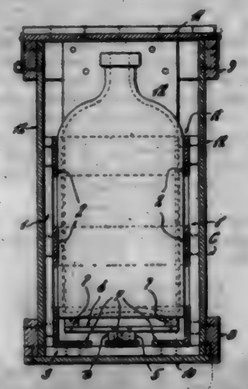
1,532,444. BUST-CONFORMING BRASSIÈRE. OLIVE SANDBANK, now by marriage Olive S. Cass, New York Mills, Minn., assignor of one-fourth to William Sandbank, New York Mills, Minn. Filed Apr. 17, 1922. Serial No. 553,859. 3 Claims. (Cl. 2—42.)

3. A brassière comprising a strip of flexible material adapted to embrace the body of the wearer substantially at the bust line, said strip having an area at its front central portion formed by stiffened members extending longitudinally of said strip across said area, said members being bent inwardly to form a trough adapted to extend transversely between the busts of the wearer, the portion of said strip in front of and at the outer side of said busts being flexible.

1,532,445. FOUNTAIN PEN. CLAUDE H. SCHOOLEY, Sioux City, Iowa. Filed May 1, 1923. Serial No. 635,916. 5 Claims. (Cl. 120—47.)

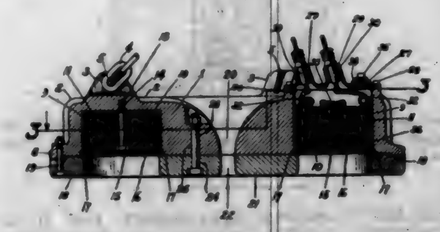
1. A fountain pen comprising a barrel having a bore enlarged at one end, means for mounting the pen in the last mentioned end, a plunger rod mounted to reciprocate longitudinally within said barrel, and a piston loosely mounted on said rod and normally positioned in the enlarged portion of the bore when the pen is in use, whereby it may move in synchronism with vibrations imparted to the barrel in writing and thereby cause the ink to flow to the pen.

1,532,446. PROCESS FOR IMPARTING NEW EFFECTS TO COTTON FABRICS. ALBERT SCHÖNHOLZER, Horn, Switzerland, assignor to the Firm Radmer & Co., A.-G., Horn, (Ct. Thurgau), Switzerland. Filed Feb. 11, 1924. Serial No. 692,172. 6 Claims. (Cl. 8—30.)



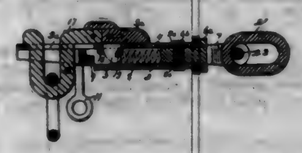
1. In the preparation of cotton fabrics for a treatment by acids for producing transparent or wool like effects, the step which comprises moistening at least part of the fabric so that is contains moisture to an extent of not less than thirty per cent of the weight of the dry fabric so moistened and before subjecting it to the acid treatment.

1,532,447. COOLER-DOOR CONTROL LOCK. THOMAS O. SCHRADER, Allentown, Pa., assignor to The Dent Hardware Company, Fullerton, Pa., a Corporation of Pennsylvania. Filed June 17, 1924. Serial No. 720,483. 3 Claims. (Cl. 202—241.)



1. A control locking device, comprising a keeper, a locking bolt for engaging said keeper having an extension, a housing in which said extension is journalled, a lever operating rod having a collar normally fitted within said housing to said extension, and the collar of said lever operating rod having a lug, a link pivoted to said lug and adjustably connected to the lug of said housing, for holding said link in one position substantially eccentric with respect to that of said lever operating rod, a coil spring in bearing contact at respective extremities with said lugs, to permit said lever operating rod in actuation to thereby cause said spring to assume a substantially opposite position with respect to the normal position of said link and said lock bolt freed of engagement with said keeper, substantially as and for the purposes described.

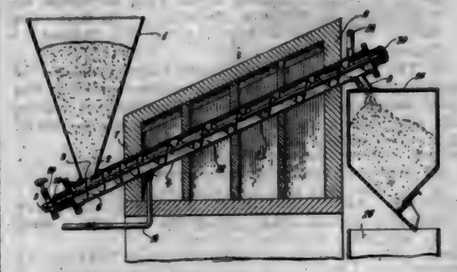
1,532,448. PACKING CASE FOR BOTTLES. WALTER G. SEABOLD, Alton, Ill., assignor to Illinois Glass Company, Alton, Ill., a Corporation of Illinois. Filed June 27, 1921. Serial No. 480,568. 3 Claims. (Cl. 217—54.)



1. A packing case for bottles comprising an inner crate having comparatively heavy non-resilient frame members, resilient cushion members secured to inner faces of said non-resilient frame members and adapted to contact with the periphery of the bottle, and an outer crate having comparatively heavy non-resilient marginal frame members, resilient cushion members secured to said non-resilient marginal frame members and engaged by the first mentioned non-resilient frame members, so as to provide cushions for the inner crate, a bottom secured to one of said marginal frame members, and a cover to close said outer crate.

1,532,449. LIFTING MAGNET. JOHN E. SEDERHOLM, St. Paul, Minn., assignor to American Hoist & Derrick Company, St. Paul, Minn., a Partnership, composed of Oliver Crosby, T. J. Johnson, and W. O. Washburn. Filed Jan. 7, 1922. Serial No. 527,679. 2 Claims. (Cl. 173—367.)

1. In a device of the class described, the combination, with a circular, metallic magnet case, having an annular recess formed in one face thereof, of a plurality of concentric coils arranged in said recess, an annular ring of insulating material between the coils, bolts passing up through said material into said casing with means thereon to retain the coils in said recess, means connecting said coils in series or in parallel, and inner and outer removable pole shoes secured upon the lower face of said case.



1,532,450. CHAIN SNAP LOCK. ELMER SEVERSON, Deerfield, Wis. Filed Jan. 2, 1925. Serial No. 292. 1 Claim. (Cl. 24—238.)

In a lock for tie chain snaps comprising a hollow body with a spring actuated slidable bolt within the body, a shackle adapted to pass transversely through the body with a member loosely connected to the rear end of the shackle by slotted straps, a portion of said member extending downward in the form of a hook, and adapted to be inserted through a mortise in the top of the body and engage the slidable bolt, in combination with a key for disengaging the bolt from the hook.

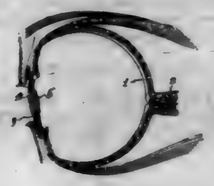
1,532,451. APPARATUS FOR MAKING GAS. HAROLD HARDY SMITH, Woolwich, Sydney, Australia, assignor to Minerals Separation North American Corporation, New York, N. Y., a Corporation of Maryland. Filed Feb. 5, 1921. Serial No. 442,628. 3 Claims. (Cl. 263—25.)

1. The combination with a retort shell, of a fire-box in which fuel is burned for heating the shell, means for feeding material to the retort, means for conducting products away from the retort, baffles for causing one end of the retort to be heated more highly than the other by the fire-box, and a treating device through which the gases pass for treating the gases coming from the retort also heated by said fuel.

1,532,452. TRAFFIC SIGNAL. GEORGE C. SPALLER, Cleveland, Ohio. Filed May 12, 1923. Serial No. 638,536. 7 Claims. (Cl. 200—52.)

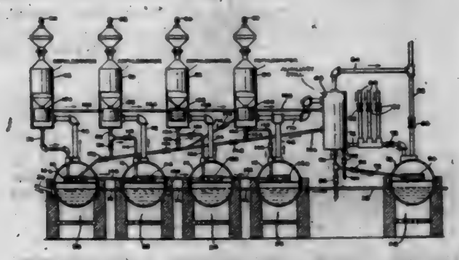
1. In a traffic signal system the combination of an overhead switch and a removable switch operating stand engageable with said switch and adapted to operate the same.

1,532,453. STOVE. JOHN STAUFFER, North Manchester, Ind., assignor to North Manchester Foundry Company, North Manchester, Ind., a Corporation of Indiana. Filed Nov. 3, 1923. Serial No. 672,484. 1 Claim. (Cl. 126—147.)



A major fire box comprising in one portion a body circular in horizontal section having a gap and in the other portion of an elongated body, in combination with a segment adapted to removably fill in the said gap and having an extension adapted to fit within the elongated portion of the body.

1,532,454. REFINING CRUDE ARSENIOUS OXIDE. ROBERT SUCHY and JOSEF MICHEL, Griesheim-on-the-Main, Germany, assignors to the Firm Chemische Fabrik Griesheim Elektron, Frankfort-on-the-Main, Germany. Filed July 3, 1924. Serial No. 724,040. 4 Claims. (Cl. 23—144.)



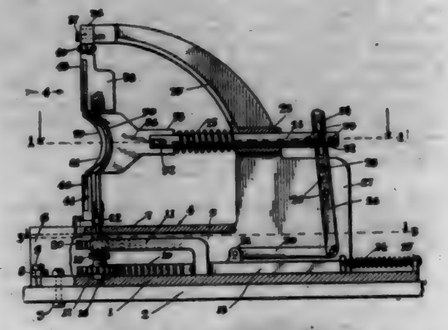
1. The method of refining crude arsenious oxide comprising dissolving said oxide in a sodium carbonate solution, separating off the undissolved matter and treating the filtered solution with carbonic acid gas to precipitate pure arsenious oxide.

1,532,455. ARTIFICIAL EYE. FERNANDO YUART SUNDERLAND, Detroit, Mich. Filed Feb. 21, 1924. Serial No. 694,209. 2 Claims. (Cl. 88—41.)

1. In an artificial eye, an apertured shell corresponding in shape to the outward surface of the human eye, and a lens so positioned with respect to the aperture as to require rays of light which enter the aperture to pass through the lens.

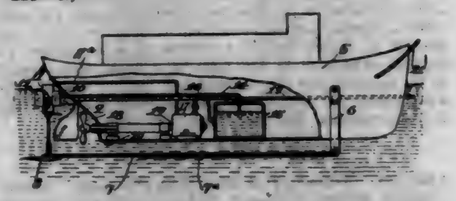
1,532,456. APPARATUS FOR SEPARATING COMPOSITE OILS INTO COMPONENT PARTS. FRANK E. VAN TILBURG, Minneapolis, Minn. Filed June 14, 1923. Serial No. 645,262. 5 Claims. (Cl. 196—106.)

5. Apparatus for separating composite oils into component parts comprising a plurality of main stills, a pan in the upper portion of each of said main stills, pipes connecting said pans in series, dephlegmators connected with said stills, a pan in each of said dephlegmators for collecting the condensate formed therein, pipes connecting said pans in series, and means for trapping back into the pans in said stills overflow from the pans in said dephlegmators.



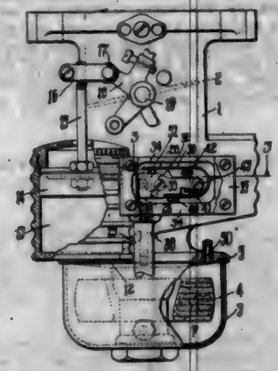
1,532,457. RADIATOR. CLINTON H. WENTWORTH and LLOYD H. WALLNER, Los Angeles, Calif.; said Wallner assignor to said Wentworth. Filed May 17, 1923. Serial No. 639,582. 10 Claims. (Cl. 257—130.)

1. A radiator comprising a finished framework including an upper manifold, a lower manifold, and connecting side members, and a core unit adapted to be inserted or removed through the front opening in said framework



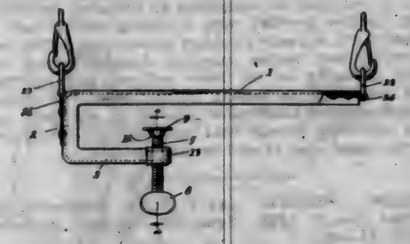
and having its upper end secured to a rear wall of the upper manifold and its lower end secured to a front wall of the lower manifold.

1,532,458. CLING-PIT ATTACHMENT FOR HAND PITTERS. JAMES B. WHIPPLE, Los Angeles, Calif. Filed July 19, 1924. Serial No. 726,982. 8 Claims. (Cl. 146—28.)



1. The combination with a hand pitter having arched jaws adapted to cut the meat of a peach and grip the pit, of means adapted to enter the cut and press the two halves of the meat apart and remove the meat from the pit.

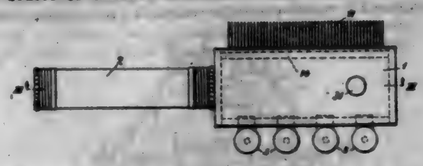
1,532,459. WAVE MOTOR FOR PROPELLING VESSELS. CLARENCE B. WHITE, Los Angeles, Calif. Filed Feb. 19, 1924. Serial No. 693,750. 6 Claims. (Cl. 115—4.)



1. In combination, a boat, a propeller therefor, a water turbine adapted to rotate said propeller a pump for pumping water into said turbine, said pump being adapted to draw water from the exterior of said boat, said pump having a piston, a plane connected to said piston, said plane being spaced below said boat and pivotally connected relative thereto.

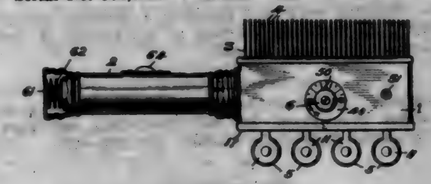
1,532,460. CARBURETOR. CHARLES E. WILLIAMS, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 6, 1920. Serial No. 401,676. 15 Claims. (Cl. 261—39.)

9. In a carburetor, a fuel mixture conduit, a fuel chamber in communication therewith, a passage leading from the upper part of the fuel chamber to the atmosphere, a heat responsive device tending to variably restrict said passage, means for housing and protecting said device, and manually controlled means for temporarily increasing the air pressure in said fuel chamber to cause increased discharge of fuel into said conduit.



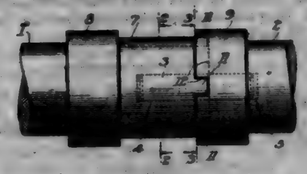
1,532,461. LUGGAGE CARRIER. THEODOR R. WILLWERSCHEID, St. Paul, Minn. Filed Nov. 7, 1921. Serial No. 513,259. 4 Claims. (Cl. 224—29.)

1. A luggage carrier for use in connection with running boards of automobiles, consisting of a channel bar shaped to extend transversely across the top, and around the outer edge of the running board to a point underneath the latter, the channel of the bar facing said running board, means carried by said bar, at a point adjacent the inner and outer edges of the running board, for attaching a tie strap, a clamping screw projected through said channel bar at a point underneath said running board and disposed at right angles to the latter, a nut threaded on said screw positioned within the channel of said bar, and a metallic casing frictionally surrounding said channel bar and loosely surrounding said screw, to keep said nut positioned within the channel.



1,532,462. ELECTRICAL MASSAGING INSTRUMENT. ARTHUR WINTERFIELD, New York, N. Y., assignor to Medical Electric Apparatus Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 28, 1920. Serial No. 420,127. 9 Claims. (Cl. 174—89.)

1. An electrical massaging instrument comprising a plurality of roller electrodes and a plurality of sets of bristle electrodes mounted on the face of the instrument, a source of current within said instrument, means for

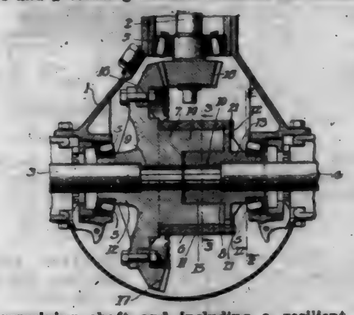


electrifying both said rollers and said bristle electrodes by said source of current and means for regulating the intensity of electrification of said electrodes.

1,532,463. ELECTROMEDICAL APPARATUS. ARTHUR WINTERFIELD, New York, N. Y. Filed Aug. 29, 1922. Serial No. 584,941. 7 Claims. (Cl. 174—89.)

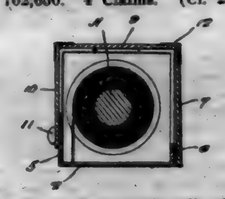
1. In an electro-medical instrument, a casing having a handle, electrodes provided on the exterior of the casing, an induction coil mounted within said casing, a source of current for energizing said coil, a secondary circuit for said coil, said circuit comprising said electrodes, a plurality of resistance elements in said secondary circuit, means for mounting said elements within said casing, and switch mechanism for governing the number of said resistance elements included in said circuit, said mechanism comprising a handle extending to the exterior of said casing and a contact finger mounted on said handle in the interior of the casing, cooperating with said elements and stop means limiting the angular movement of said contact finger.

1,532,464. CLUTCH. IRVING C. WOODWARD, Syracuse, N. Y. Filed Sept. 21, 1923. Serial No. 663,988. 8 Claims. (Cl. 64—106.)



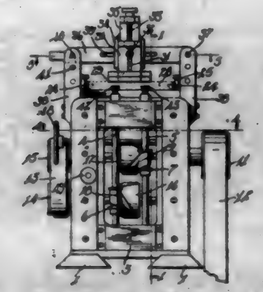
7. The combination with a pair of coaxial rotatable members, of a resilient annular element telescopically arranged with respect to a part of one of said members, said element and the other of said members having interlocking portions arranged to secure said element and other member against relative rotation while permitting a limited radial movement of said element relative to said other member, said part being rigid and of non-circular cross section, said resilient element being normally circular and distorted to conform to said rigid part whereby said members are yieldingly secured against relative rotation.

1,532,465. DIFFERENTIAL MECHANISM. IRVING C. WOODWARD, Syracuse, N. Y. Filed Oct. 27, 1923. Serial No. 671,132. 4 Claims. (Cl. 74—7.)



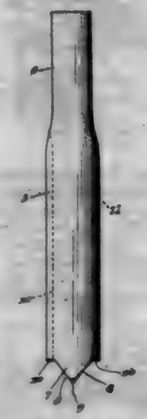
1. A vehicle drive mechanism comprising a pair of coaxial shafts, means for positively driving one of said

shafts, a coupling between said shafts comprising a member of non-circular form secured to one of the shafts and a coacting member mounted for rotation with



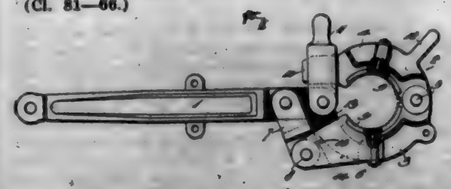
the remaining shaft and including a resilient element adapted to resiliently conform to the surface of said coacting non-circular member.

1,532,466. MUSIC-ROLL RECEPTACLE. MYRTLE A. ANDES, Huntington, W. Va. Filed Mar. 28, 1924. Serial No. 702,650. 4 Claims. (Cl. 206—52.)



1. In combination with a music roll, of a box therefor comprising a bottom, end walls extending upwardly therefrom, an upstanding wall formed on the forward edge of the bottom, an upstanding wall formed on the rear edge of said bottom, said upstanding walls extending for the full length of the bottom, a rear wall hinged at its lower edge to the rear upstanding wall, the upper edge of said rear wall extending substantially flush with the upper edges of said rear wall and extending substantially flush with the forward edge of the bottom, a front wall hinged to the forward edge of said top, the lower portion of said front wall overlapping the upstanding wall on the forward edge of the bottom and adapted to be secured thereto.

1,532,467. MACHINE FOR MAKING DOVETAIL SLOTS. JOHN RICHARD BARNETT, Cairo, Ill. Filed Mar. 12, 1923. Serial No. 624,595. 1 Claim. (Cl. 144—87.)



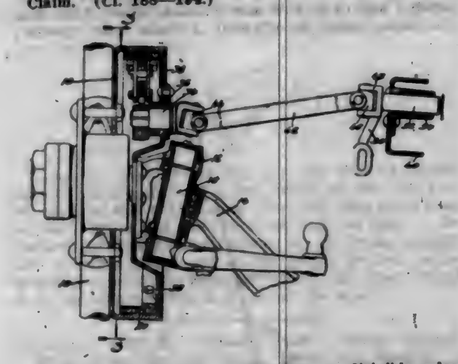
A device of the type described comprising a frame having vertical guides, a spindle carrying frame slidably received in said guides, means for securing said frame in adjusted position, a work support carried by said guides, means for adjustably securing said work support on said guides, work guiding members adjustably carried by said support, uprights carried by said support, an arm having a slot therein and being pivotally and adjustably carried by one of said uprights, a pin adjustably carried by the other upright for supporting the free end of said arm, a plate, a work engaging member, a screw for moving said work engaging member with respect to said plate, and means for locking said work engaging member and plate against movement, said means also supporting said arm and work engaging members.

1,532,468. ROCK-DRILL BIT. SAMUEL BAWDEN, Oakland, Calif. Filed April 5, 1922. Serial No. 549,926. 2 Claims. (Cl. 255—63.)

1. A rock drill bit comprising an elongated cylindrical body portion provided with a cutting end, a pair of diametrically opposite shoulders adjacent its cutting end, a cutting body having oppositely disposed beveled surfaces beginning at the inner ends of said shoulders and converging to form a cutting edge, and diametrically opposite longitudinal grooves in said body portion extending through said shoulders and terminating at the upper edges of said beveled surfaces.

1,532,469. WRENCH. LEE J. BLACK, Beaumont, Tex. Filed Nov. 5, 1923. Serial No. 672,955. 2 Claims. (Cl. 81—66.)

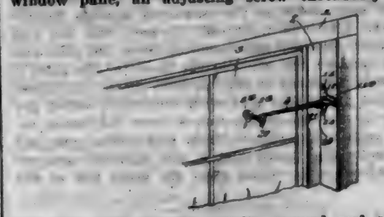
1. A wrench of the class described comprising a handle provided at its outer end with a laterally directed longitudinally curved extension, the outer curved edge of which functions as a cam surface, a work gripping device embodying a plurality of pivotally connected links, one of said links being bifurcated and the furcations straddling the curved extension with their free ends projecting beyond the cam surface, an abutment forming pin passing thru the projecting portions of the furcations and slidably contacting said cam surface, means pivotally connecting the free ends of the furcations with the handle inward of the extension, said means exerting a pull upon the furcations when the handle is swung in a predetermined direction and serving to



slide the pin on the cam surface, the free end portion of the remaining link being extended into parallelism with the handle, and a pivoted latch on the latter engaged with said free end portion.

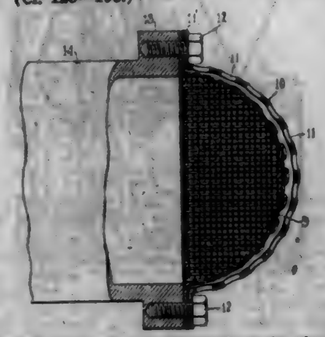
1,532,470. VEHICLE HAVING BRAKES. LLOYD BLACKMORE, Highland Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 8, 1923. Serial No. 623,719. 2 Claims. (Cl. 188—10.)

1. A vehicle having, in combination, front wheel brakes including bands each of which is anchored at one end and each of which has a cam at the other end, the cams being arranged clockwise from the anchored ends (regarding the vehicle with the front wheels on the left), rear wheel brakes including bands each of which is anchored at one end and each of which has a cam at the other end, the cams being arranged counterclockwise from the anchored ends, and driver-controlled connections for rocking the cams to apply the brakes.



1,532,471. VEHICLE HAVING BRAKES. CLIFFORD ARCHIE BOOM, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 15, 1923. Serial No. 625,306. 1 Claim. (Cl. 188—194.)

A vehicle having, in combination, a dirigible wheel movable about a substantially vertical steering axis, a relatively-movable chassis frame, a brake comprising a drum rotating with the wheel and a non-rotating retarding device, and means for operating the retarding device including a driver-controlled shaft having a universal joint in said steering axis and a second universal joint adjacent said frame and a part beyond the second universal joint which is slidably held by the chassis frame.



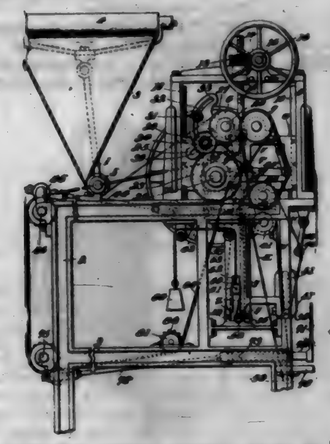
1,532,472. WINDOW PROTECTOR. PETER P. BROWN, Lusk, Wyo. Filed May 23, 1924. Serial No. 715,384. 3 Claims. (Cl. 292—251.)

1. A device of the character described comprising an arm, means whereby said arm may be swingingly supported at one end to extend in proximity to a pane of said window, a brace pivotally attached at one end to said arm and adjustably engageable at its other end with said supporting means for holding said arm in raised position and in adjusted angular relation to the vertical, a presser head adapted to engage with said window pane, an adjusting screw threadedly engaging

said arm and movable axially toward and away from the plane of said window pane, and a ball and socket joint connecting the ends of said screw which is proximate to said window pane and said presser head, whereby said presser head may be moved to and from position to engage said window pane.

1,532,473. EXHAUST FIRE SCREEN. CHARLES F. S. BYRNE, Janesville, Wis., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 12, 1920. Serial No. 395,790. 1 Claim. (Cl. 123—198.)

The combination with an internal combustion engine having an exhaust conduit discharging to the external atmosphere of a fire guard comprising a screen of fine mesh wire fabric adapted to prevent passage of flame therethrough arranged to cover the outlet of said conduit, and a shield having larger apertures than those of said screen mounted outside of and spaced from said screen.

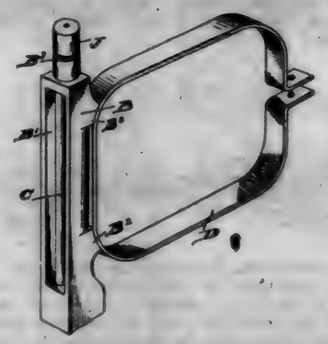


1,532,474. EXERCISING MACHINE. HENRY M. CHRISTOFFERSEN, Sidney, Nebr. Filed Feb. 25, 1924. Serial No. 695,056. 1 Claim. (Cl. 265—20.)

An exercising apparatus comprising an elevated platform, vertically disposed bars mounted in parallel relation upon the platform and provided at their inner opposite edges with guide grooves, pins passing trans-

versely through the standard and having end portions disposed beyond the rear surfaces of the standards, heads mounted upon the pins, a bar slidably mounted upon the pins and bridging the space between them and provided at a point between the pins with a lip disposed toward the space between the standards, springs mounted upon the pins and interposed between the bar and the standards, other springs mounted upon the pins and interposed between the bar and the heads of the pins, a board slidably mounted in the grooves of the standards and provided at its rear side with rack teeth which are engageable by the lip of the bar, a lever fulcrumed between its ends under the platform and having one end disposed under the board and a pin slidably mounted in the platform and resting upon the other end of the lever.

1,532,475. NAPKIN-FOLDING MACHINE. CHARLES H. COONS, Saugerties, N. Y., assignor of three-fifths to The Tissue Company, Saugerties, N. Y., a Corporation of New York. Filed Jan. 19, 1922. Serial No. 530,288. 21 Claims. (Cl. 270—67.)



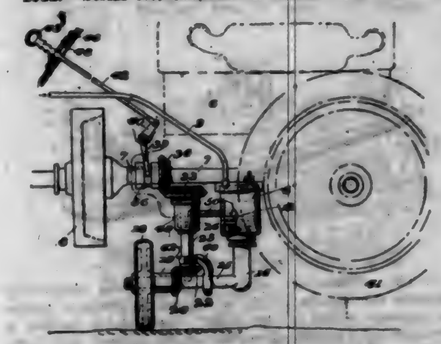
1. In a napkin folding machine, means for initially folding a web of paper, a pair of drawing rollers, cooperating cutting means for severing the folded paper, guiding means for such severed sheet, means for transversely folding such sheet arranged in spaced relation to said cutting means, and means for varying the distance between said cutting means and said last named folding means.

1,532,476. PROCESS OF GLACÉING FRUIT. WILLIAM V. CRUESS, Berkeley, Calif., dedicated, by mesne assignments, to the Citizens of the United States. Filed Sept. 10, 1924. Serial No. 736,916. 1 Claim. (Cl. 99—16.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

The process of glacéing fruit which comprises treating the fruit in sugar syrups of progressively increasing concentration, thereafter draining the fruit to remove excess adhering syrup, then allowing the adhering syrup to dry, and finally coating the syrup-covered fruit with a solution containing pectin and sugar.

1,532,477. GAUGE ATTACHMENT FOR FUEL TANKS. IRÁ F. DE TURK, Detroit, Mich., assignor to Clarence W. Wass, Detroit, Mich. Filed Nov. 22, 1922. Serial No. 602,533. 2 Claims. (Cl. 73—54.)

1. In a device of the character described, a fuel tank, a casting recessed to receive and expose a gauge glass and on its rear side provided with spaced lugs intermediate the ends thereof, a gauge glass supported in the upper and lower ends of the casting, a flexible strap secured intermediate its ends at spaced points to said lugs of the casting and extending horizontally laterally from the casting within the horizontal planes of the ends of the casting, means whereby to join the ends of the strap to secure the strap and the casting to the fuel tank with the strap in embracing relation with the

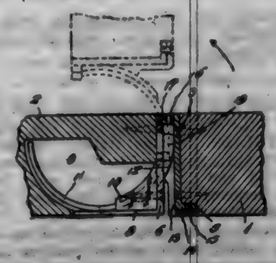


tank, a pipe connection between the casting and the fuel tank, an exteriorly screw threaded cylindrical shaped plug rotatably mounted in the casting adjacent the outer end of the connection of the pipe with the casting and below the lower side of said flexible strap and provided with a port whereby to establish communication between the tank and the gauge glass by way of said pipe connection.

1,532,478. MANUSCRIPT HOLDER FOR TYPEWRITERS. STELLA J. EDWARDS, Jackson, Miss. Filed Dec. 5, 1923. Serial No. 678,640. 1 Claim. (Cl. 20—28.)

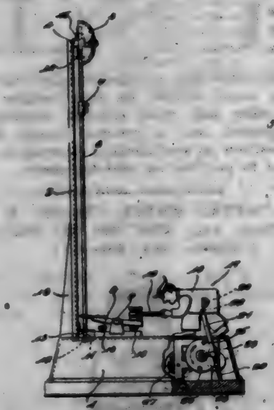
A manuscript holder for attachment to typewriters comprising an open frame having upper and lower cross bars, and side bars, said side bars projecting downwardly beyond the lower cross bar to provide attaching legs, said legs being provided at their free ends with laterally directed spaced fingers adapted to engage an existing part of the typewriter, and a plurality of pairs of opposed manuscript engaging clasps carried by the vertical side bars of said frame, the stationary jaws of said clasps being formed integral with the side bars of said frame.

1,532,479. HYDRAULIC HOIST FOR AUTOMOBILES. LOUIS P. FEDOWICZ, Brooklyn, N. Y. Filed Jan. 20, 1923. Serial No. 530,653. 1 Claim. (Cl. 180—1.)



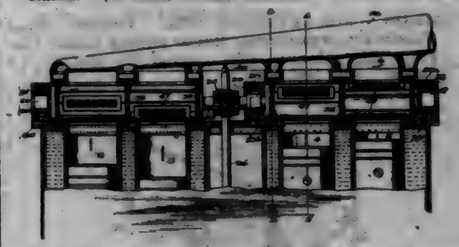
The combination with a vehicle having an engine provided with a drive shaft, of a cylinder carried by the vehicle adapted to receive fluid under pressure, a horizontal axle having one end extending upwardly and provided with a piston within said cylinder, a ground contact wheel carried by the other end of said axle, a vertical shaft carried by said horizontal axle for turning movement with relation thereto, beveled gears connecting said horizontal axle and said vertical shaft, a housing about the upper end of said vertical shaft, a gear carried by said housing feathered to said vertical shaft adapted to permit said shaft to slide with relation thereto, a gear upon said drive shaft and feathered thereto, and means for bringing said second gear in mesh with said gear carried by said housing for driving the ground wheel.

1,532,480. EYESHADE. JOHN W. FINCH, Los Angeles, Calif. Filed Apr. 10, 1924. Serial No. 705,495. 3 Claims. (Cl. 2—12.)



3. An eye shade comprising a single piece of flexible material shaped to form a nose bridge at the center of the material and the material extending both ways from the nose bridge and forming loops, and the ends of the material meeting and overlapping at the bridge portion and secured together and to the bridge portion, corresponding ends of the loops and the bridge being shaped to fit the contour of a face around the eyes.

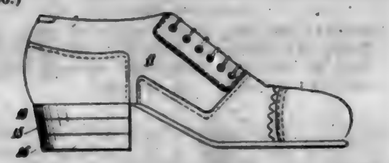
1,532,481. HINGE. NELSON HARRY FORBES, Detroit, Mich. Filed Nov. 11, 1924. Serial No. 749,238. 2 Claims. (Cl. 16—178.)



1. A hinge comprising a pair of substantially L-shaped members adapted to be secured to a door and the adjacent edge of the usual frame therefor respectively, the L-shaped member associated with the frame being disposed over a cavity provided in the frame, a reinforcement associated with the L-shaped member carried by the frame and disposed within the cavity, said L-shaped member and said reinforcement haing an arcuate slot provided therein, a curved arm slidable within said slot, the free end of said arm being adapted to be disposed within the cavity in the frame, and means for detachably securing the curved arm at its opposite end on the L-shaped member secured to the door.

1,532,482. FIGURE TOY. JOSEPH T. FORD, East St. Louis, Ill., assignor of one-half to Walter H. Fancher, East St. Louis, Ill. Filed Oct. 12, 1922. Serial No. 594,073. 2 Claims. (Cl. 46—40.)

1. In a toy of the class described, a figure having relatively stationary and movable pivotally connected parts, a rod having direct pivotal connection at its upper end with the movable part of said figure, said rod being provided between its ends on one edge with a beveled shoulder, a base on which said figure is mounted, a coiled spring connected at one end to said base and adjustably connected at its opposite end to the lower end of said rod to exert a downward pull on the rod, and a rotary driven disk disposed adjacent said rod and provided with laterally extending diametrically opposite pins for alternately engaging said shoulder.

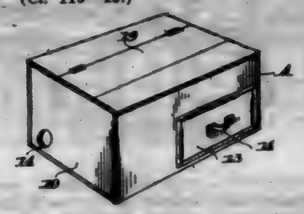


1,532,483. ROTARY VALVE. CHRISTIAN CELSUS FOSS, Pulaski, and DOUGLAS DEWEY DE LOACH, Savannah, Ga. Filed Sept. 7, 1923. Serial No. 661,411. 17 Claims. (Cl. 123—190.)

1. A rotary valve comprising a tubular valve casing having diametrically opposite ports formed through the walls thereof, and a valve comprising a carrying member mounted to rotate in the casing and having diametrically opposite openings respectively adapted to register at times with the corresponding openings of the valve casing and radially expansible means extending through diametrically opposite openings in the carrying member in engagement with the inner wall of the valve casing.

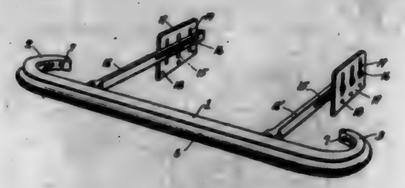
said radially expansible means being provided with an opening extending therethrough for establishing communication between the diametrically opposite ports of the valve casing at a certain time during rotation of the carrying member.

1,532,484. INTERCHANGEABLE BOOT AND SHOE HEEL. JOSEPH GÁSPÁR, New York, N. Y. Filed Nov. 10, 1923. Serial No. 673,891. 3 Claims. (Cl. 36—36.)



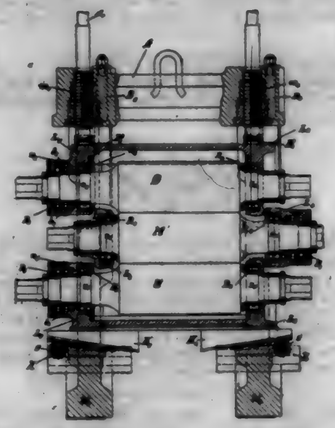
3. A heel comprising a permanent top plate, a backing element, a tread element on said backing element, a block retaining said tread element engaged with said backing element, and a common means holding said block in position on said backing element and said backing element in position on said top plate.

1,532,485. METAL WHEEL. EDWARD D. GILLESPIE, Lake Village, Ark. Filed May 31, 1924. Serial No. 717,123. 1 Claim. (Cl. 301—65.)



A cast metal wheel comprising a hub portion having an interior rectangular bore, side sections formed integral with the hub portion and converging toward their outer peripheral edges, a metal rim engaging the outer peripheral edges of the side sections, a bushing removably supported in the hub portion and being provided with a substantially rectangular outer peripheral formation, and with a longitudinally extending bore of conical formation having flared ends.

1,532,486. FOX-BREEDING DEN. VINCENT JAMES HARRINGTON, Summerside, Prince Edward Island, Canada. Filed Mar. 8, 1924. Serial No. 697,807. 2 Claims. (Cl. 119—19.)

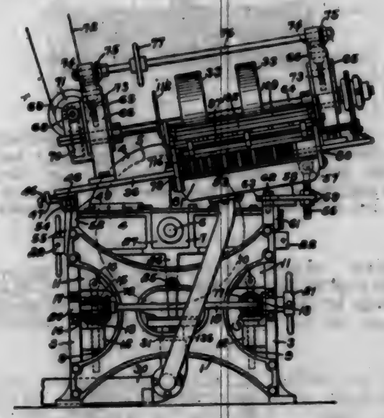


2. A device of the character described comprising a breeding den, having openings therein, a drawer nest operable from the outside of the den and provided with an opening designed to register with one of the den openings, the other den opening communicating with the outside.

1,532,487. AUTOMOBILE BUMPER. JEREMIAH HAYES, Everett, Wash. Filed July 28, 1923. Serial No. 654,864. 2 Claims. (Cl. 293—55.)

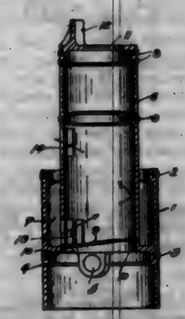
1. The combination with a vehicle frame comprising opposite side beams, of plates secured to the said beams at opposite sides of the frame; said plates having a plurality of vertical slots therein, a bumper bar, comprising a forwardly facing channel bar, a rubber cushion seated in the channel, supporting arms fixed at their forward ends to the bumper bar and having longitudinal slotted inner ends disposed adjacent the said plates and bolts extended through said slotted ends and through the slots of the plates to secure the arms at adjusted positions.

1,532,488. ROLLING MILL. RICHARD HEIN, Witkowitz, Czechoslovakia. Filed Dec. 26, 1922. Serial No. 609,122. 14 Claims. (Cl. 80—39.)



1. In a rolling mill, the combination, with the rolls and their journals, of journal bearings positioned in staggered arrangement, as set forth.

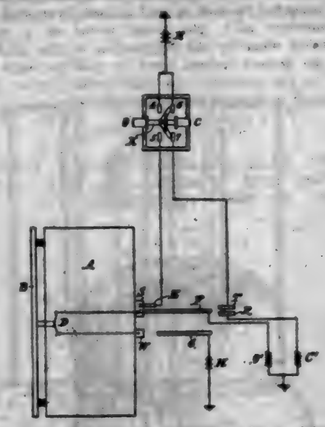
1,532,489. PROCESS FOR PRODUCING THE HYDROXIDES OF ALKALI METALS OR OF ALKALINE-EARTH METALS. ERNST HEINZE, Wiesdorf-on-the-Rhine, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Oct. 6, 1924. Serial No. 742,057. 2 Claims. (Cl. 23—184.)



1. The process of producing the hydroxides of the alkali forming metals, which process consists in treating an amalgam of an alkali forming metal with water in the presence of an alloy of iron with chromium, substantially as described.

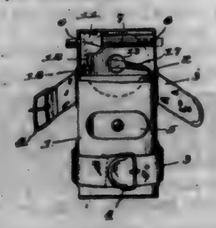
1,532,490. ROD-GRINDING MACHINE. JONATHAN A. HUNT, Salem, Mass., assignor to Frederick L. Emery, Lexington, Mass. Filed Aug. 17, 1920. Serial No. 404,112. Renewed Feb. 9, 1923. 87 Claims. (Cl. 51—215.)

1. A rod grinding machine comprising, in combination, a grinder, means including independently adjustable saddles and cooperating feed wheels to roll the ends of said rods transversely of the face of said grinder, means to contain a mass of rods, and means to feed said rods from the mass simultaneously to said saddles.



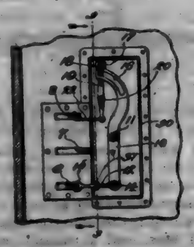
1,532,491. PISTON. THOMAS A. HUTSELL, Spokane, Wash., assignor to Hutsell Motor Company, Spokane, Wash. Filed Dec. 7, 1923. Serial No. 679,228. 3 Claims. (Cl. 123—71.)

3. The combination with the co-axial pump and motor pistons, of a closed head for the motor piston, said motor piston having spaced lower inlet ports and upper outlet ports and a laterally declining annular groove in the interior wall of the motor piston, and a bottom member for said piston seated in said groove with its lowest portion adjacent the inlet ports.



1,532,492. DOOR CONTROL. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Apr. 16, 1920. Serial No. 374,821. 12 Claims. (Cl. 268—7.)

1. The combination with a door and its operating motor of a door opening circuit for said motor and a door closing circuit for said motor, a contact mounted upon and movable with the door, and control means for



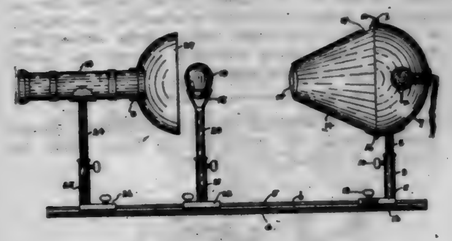
the two circuits located respectively in positions to be engaged by the door carried contact at the two extremes of the door movement.

1,532,493. SIGNAL LIGHT. WILL E. IVIE, Washington, D. C. Filed July 27, 1921. Serial No. 487,885. 3 Claims. (Cl. 177—329.)

1. A signal including a casing and means for attaching the same to the hand, a battery in said casing, an electric lamp engaging one terminal of the battery, an inertia controlled rod, means for mounting said inertia controlled rod in the casing to permit sliding movement thereof transversely to the hand, a weighted member carried by the rod, a contact carried by the rod and adapted to engage the other terminal of the battery, and means for holding said rod in either of two positions, said means being releasable through the inertia of the rod and weighted member.

1,532,494. AUTOMOBILE CLUTCH CONTROL. LESLIE JAMES, Chicago, Ill. Filed Apr. 19, 1924. Serial No. 707,749. 4 Claims. (Cl. 74—39.)

1. A control mechanism for use on planetary transmissions of automobiles comprising a lever having an arcuate slot and a branch communicating with the slot,

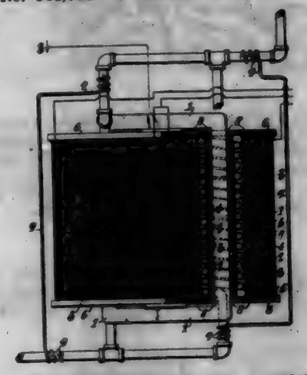


a lever fulcrumed intermediate its ends and having a bearing member normally received in said branch, and a link connected to said second named lever and adapted for connection with the brake pedal of a planetary transmission whereby the depression of the brake pedal swings the second named lever to position said bearing member in the arcuate slot and thereby move the first named lever a limited extent.

1,532,495. HAIR-RETAINER. ELIN O. JENSEN, San Francisco, Calif. Filed Nov. 18, 1924. Serial No. 750,567. 3 Claims. (Cl. 132—25.)

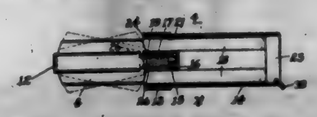
1. A hair retainer comprising an arcuate band arranged to fit around the back of the head of a wearer and having teeth formed integral therewith to engage the hair at the back of said head to normally retain said band in operative position, the front ends of said band being bent back inwardly with respect to said band to form loops arranged to engage and retain in position the front side locks of hair depending from the head of said wearer.

1,532,496. OBJECT-TESTING APPARATUS. JOHN A. JOHNSON, College Springs, Iowa. Filed Sept. 20, 1923. Serial No. 663,912. 5 Claims. (Cl. 99—6.)



3. In an object testing apparatus, a base support, a reflector mounted on the support, a shutter of funnel shape provided with a lens and mounted on the reflector, a holder for supporting an object to be inspected, said holder being adjustably mounted on the support for disposing the supported object at selected distances from the lens in line with the longitudinal axis of the reflector and said lens, and a tubular, optical instrument mounted to permit vertical and horizontal adjustments on the support with its longitudinal axis in line with the longitudinal axis of the reflector.

1,532,497. MATTRESS. ERBERT ASHBY JONES, Danville, Va. Filed Mar. 9, 1922. Serial No. 542,411. 2 Claims. (Cl. 5—345.)



1. A mattress for double beds comprising two similar longitudinal sections with parallel sides and a narrow central mattress section interposed on edge between them and projecting materially above the surfaces of the said two sections, thus forming a dividing wall.

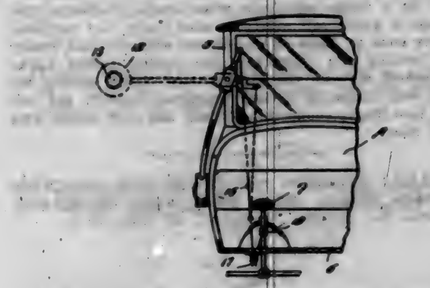
1,532,498. ELECTRIC-INDUCTION WATER HEATER. CHARLES KAISER, Atlantic City, N. J., now by judicial change of name Charles Caise. Filed Mar. 25, 1922. Serial No. 546,704. 7 Claims. (Cl. 219—47.)

1. In an induction heater, a core, a secondary coil wound around said core, a primary coil of wire wound around said secondary coil, said wire coil having provision for connecting it to an electric energising circuit, said secondary coil comprising a pipe adapted for connection in a water circulating circuit, and heat insulating means separating said pipe-coil from said core.

1,532,499. RAZOR-BLADE KNIFE. BEDFORD T. KAVANAUGH, Chicago, Ill. Filed Apr. 3, 1922. Serial No. 549,216. 26 Claims. (Cl. 30—12.)

1. In a device of the class described, the combination of means for grasping the blade including a guide, and a sheath moving through said guide adapted to cover or uncover both edges of the blade.

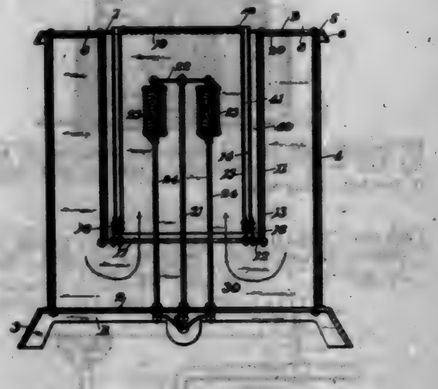
1,532,500. PROCESS FOR THE TREATMENT OF MAGNESITE OR DOLOMITE. GEORGE STIRES KILBOURN, Owen Sound, Ontario, Canada. Filed Feb. 6, 1923. Serial No. 617,378. 3 Claims. (Cl. 23—201.)



1. The herein described process for the extraction of lime from materials containing magnesium and calcium carbonates, which consists in first calcining the material

to be treated, slaking the same, then allowing it to settle in a suitable vessel and subjecting it to the action of a stream of water introduced therebeneath through a

screen of substantially 200 mesh, covered with a layer of porous material, whereby the lime is floated off and the magnesia remains.

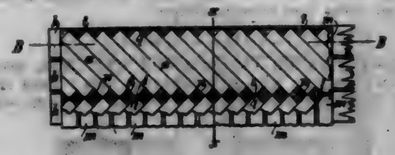


1,532,501. DIRECTION INDICATOR FOR MOTOR VEHICLES. EDWARD L. KING, Fonda, Iowa. Filed Feb. 18, 1924. Serial No. 693,024. 1 Claim. (Cl. 177—329.)

A direction indicator comprising a clamp member, a casing pivotally mounted on an extension on one end of said clamp member, an arm journalled in the casing, and having its axis disposed at a right angle to the axis of pivotal movement of the casing, said arm having a crank portion disposed exteriorly of the casing, a spring housed within the casing and connected at one end with the arm and at its other end with the casing, a contact member mounted in the casing and a contact plate mounted upon said portion on the clamp member insulated therefrom and disposed in the path of movement of the contact member which is mounted in the casing for engagement with said first mentioned contact member.

1,532,502. ELECTRIC HEATER. JOSEPH L. LAWRENCE, San Francisco, Calif., assignor to Herzog Electric & Engineering Company, San Francisco, Calif., a Corporation of California. Filed Aug. 15, 1922. Serial No. 581,951. 4 Claims. (Cl. 219—34.)

1. An electric heater, comprising a casing a base plate therefor and forming a closure for the lower end thereof, a top plate carried by the casing having air inlet and discharge openings formed therein, a casing attached to the top plate and interspaced with relation to the base plate, said casing communicating with the discharge opening at its upper end and with the inlet openings at its lower end, a flange secured to the lower end of said last named casing, a second casing supported

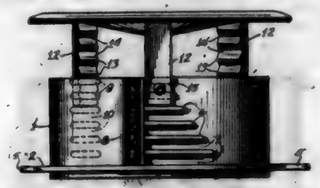


by the flange and interspaced with relation thereto to form a dead air space, and an electric heating element disposed within said second named casing.

1,532,503. CHLORIDIZING VOLATILIZATION PROCESS. HARAI R. LAYNG, San Francisco, Calif.; Hattie F. Layng administratrix of said Harai R. Layng, deceased. Filed July 27, 1921. Serial No. 487,995. 3 Claims. (Cl. 75—67.)

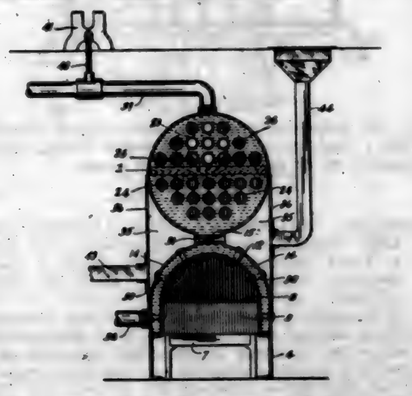
1. A method of chloridising volatilization which consists of heating a mixture of ore and chloridizer in a furnace and supplying an additional chloridiser in the form of a solution during the heat treatment of the ore to volatilize the values.

1,532,504. PARQUETRY-SLAT FLOORING. LEOPOLD LICHTENFELD, Vienna, Austria. Filed July 25, 1923. Serial No. 653,762. 2 Claims. (Cl. 20—75.)



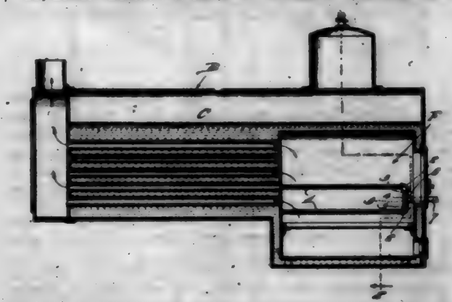
1. A flooring comprising a long flooring strip composed of grid battens arranged at right angles to the longitudinal direction of said strip, and parquetry slats glued side by side on said grid battens at an angle of 45° to the lengthwise direction of the latter in such a manner that the grid-batten ends project beyond the free corners of the parquetry slats.

1,532,505. VENTILATING DEVICE. DE WITT TAYLOR LYON, Chicago, Ill., assignor of one-half to Babet R. H. Lyon, Chicago, Ill. Filed Aug. 15, 1924. Serial No. 732,288. 4 Claims. (Cl. 98—49.)



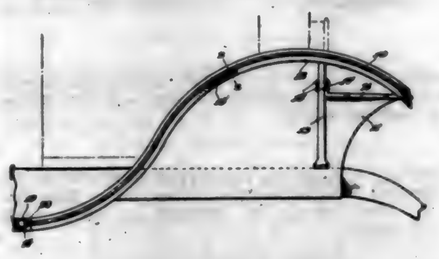
1. A ventilating device comprising an oblong wall of substantially elliptical shape, a plurality of supporting members carried by said wall on the exterior thereof,

said members being progressively longer from top to bottom of said wall, and a cover portion having legs arranged to fit over said wall and provided with means



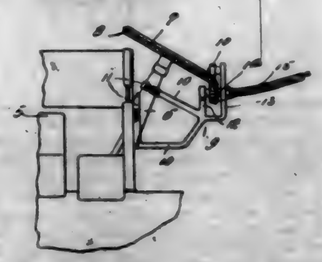
for engaging any of said supporting members for holding said cover in predetermined relation with respect to the top of the wall.

1,532,506. STEAM AND AIR HEATER. DONALD MCGREGOR, Tacoma, Wash. Filed June 16, 1923. Serial No. 645,764. 3 Claims. (Cl. 126—101.)



1. In a heater of the character described, a water arch forming the side and top walls for a fire box, a cylindrical boiler superimposed, longitudinally upon and having water circulating connection with the water arch and with air pocket along opposite sides thereof, and a plurality of air passages connecting the pockets, housing plates secured to the boiler and arch to inclose said pockets, a cold air inlet into one of said pockets and an outlet pipe from the other.

1,532,507. WATER CIRCULATION UNIT FOR BOILERS. JOHN L. MCKOWEN, Sapulpa, Okla. Filed May 15, 1922. Serial No. 561,069. 1 Claim. (Cl. 122—68.)

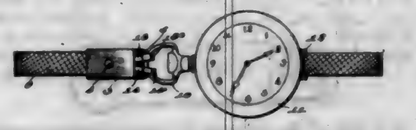


The combination with a boiler including a fire box surrounded by a portion of the boiler proper to form a water space around the fire box; of a pair of substantially U-shaped circulation units for heating the water passing therethrough, said units being supported on the inner faces of the vertical sides of said fire box over the grate, each of said units being composed of a pair of horizontally disposed spaced pipes connected at their open ends with the flue-sheet of the fire box and connected together at their opposite ends by a four-way coupling, a short pipe connected with the side extension of the coupling and leading to the aforesaid water space, and a combined drain and blow-off pipe connected to the rear extension and passing through the rear end of the boiler.

1,532,508. MOTOR-VEHICLE FENDER GUARD. LIONEL HALLECK MACDONALD, Kansas City, Mo. Filed Aug. 14, 1924. Serial No. 732,091. 7 Claims. (Cl. 293—57.)

1. In a motor vehicle, a wheel fender having a side flange, a guard rail overlying said flange and anchored at its ends to parts of the vehicle adjacent said fender for bracing and reinforcing the fender, saddle blocks interposed between the rail and said flange seating the rail, and fastening devices extending through the rail and said blocks connecting the rail and said blocks with said flange.

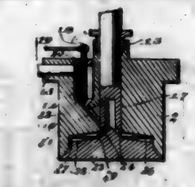
1,532,509. STEERING MECHANISM FOR TRACTORS. FRANK MAHOOD, Amity, Oreg. Filed Aug. 3, 1923. Serial No. 655,394. 1 Claim. (Cl. 180—77.)



A device of the class described comprising a supporting bracket embodying a pair of angularly disposed and spaced hanger arms provided at their free ends with clamps adapted to be connected to a steering rod post, said bracket also embodying a pair of vertically disposed long and short extensions disposed in spaced parallelism, said extensions being provided with aligned openings, a shaft journaled in said aligned openings and equipped with a pinion, operating means for said shaft, a hand wheel provided with teeth in mesh with the teeth of said pinion, an idler carried by the upper end of said long extension and engaging the peripheral portion of said hand wheel to maintain the same in mesh with said pinion, a frame provided with bearings, and a manually rotated shaft journaled in said bearings, said shaft being connected with the aforesaid operating means.

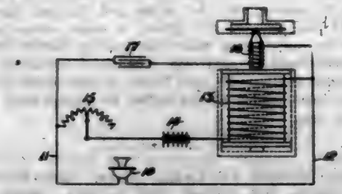
1,532,510. SAFETY CLOTHESPIN. THEODORE R. MATHEWS, Cleveland, Minn. Filed May 1, 1923. Serial No. 635,024. 1 Claim. (Cl. 24—137.)

A clothes pin comprising a pair of sections, pivotally connected together, the upper portions of the said sections forming head sections of the pin, the portions below the pivot forming the legs of the pin, one of said head sections being provided with sockets, a locking ring comprising a substantially semi-circular member having its free ends equipped with pivots to be received in said sockets, said locking ring being adapted to extend around and embrace the other head section, whereby the head sections may be locked when the leg sections are in operative engaging position.



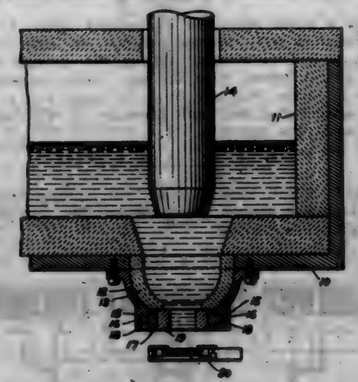
1,532,511. COUPLING. MEYER NATHAN MELTZ, Atlanta, Ga. Filed Aug. 23, 1924. Serial No. 733,843. 3 Claims. (Cl. 24—240.)

1. A coupling of the character described comprising a frame having a bottom plate, a pair of spaced apart side members upstanding from the bottom plate, and a top plate, said bottom plate extending at one end of the frame beyond the side members and beyond the top plate, a combined pivot element and securing device connecting the central portion of the top plate with the underlying portion of the bottom plate, a transverse partition extending between the side members of the frame rearwardly of the combined pivot element and securing device, thus dividing the frame interiorly into a rear compartment and a front compartment, the extending end portion of said bottom plate being at the front of the frame, said rear compartment being adapted for the reception of an end portion of a ribbon or tape, a pair of elongated attaching members having eyes at their inner ends through which said pivot element extends and having hooks at their outer ends, the outer end portions of said attaching members resting upon the extending end portion of the bottom plate in sliding contact therewith, and a spreader spring urging said attaching members apart.



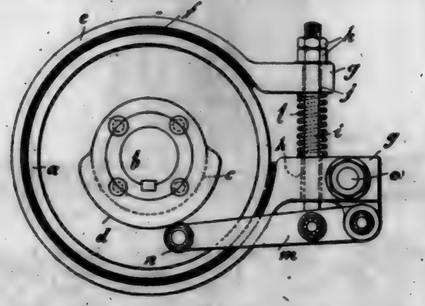
1,532,512. FUEL VALVE. JAMES ANDREW MURDOCK, Tulsa, Okla. Filed Feb. 19, 1923. Serial No. 620,066. 14 Claims. (Cl. 123—33.)

1. A movable valve having means forming an oil chamber adapted to be filled upon the suction stroke of an engine to which the valve is applied, said chamber having an outlet, and a screen extending up to the outlet which permits oil to flow directly upon the screen



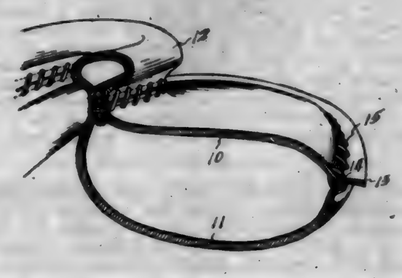
thereby spreading most of the oil in a thin film in readiness for injection into the engine cylinder upon a subsequent expansion stroke.

1,532,513. TELEPHONE CIRCUIT. EDWIN S. PRIDHAM and PETER L. JENSEN, Oakland, Calif., assignors to The Magnavox Company, Oakland, Calif., a Corporation of Arizona. Filed May 1, 1922. Serial No. 557,516. 8 Claims. (Cl. 179—1.)



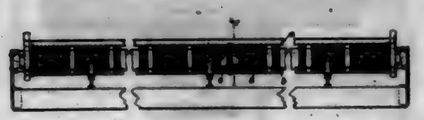
1. A telephone circuit for use with an electro-dynamic receiver of the type mentioned comprising a battery, an electro-magnetic winding for the receiver, a transmitter connected in series with the battery and winding and a movable coil for the receiver connected with the transmitter and in parallel with the battery and magnetic winding and including the said battery and magnetic winding in its circuit, the magnetic winding acting as a choke to prevent the modulated current of the movable coil from passing through the direct current circuit.

1,532,514. PLUNGER BASIN FOR GLASS-FEEDING BOOTS. HARRY RAYNES, San Francisco, Calif., assignor to Illinois-Pacific Glass Company, San Francisco, Calif., a Corporation of California. Filed Apr. 16, 1923. Serial No. 632,365. 2 Claims. (Cl. 49—55.)



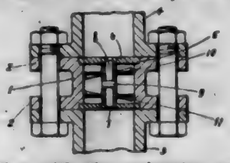
1. In a glass feeding boot, a basin secured to the bottom of the boot and surrounding the discharge orifice, said basin being formed with a rectangular opening with flanges at opposite sides, a frame slidably fitted upon the said flanges and a bushing carried by the frame forming the discharge orifice for the basin.

1,532,515. MECHANICAL BRAKE. CHARLES JOSEPH RHODES, Piedwick House, near Wakefield, England. Filed June 4, 1921. Serial No. 475,022. 2 Claims. (Cl. 188—135.)



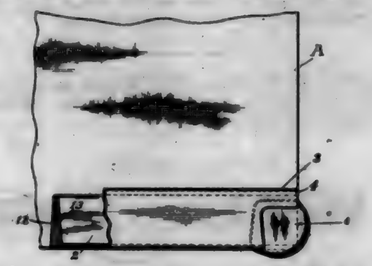
1. A shaft, a brake drum thereon, having a cam, a brake band bearing on the drum and having ends arranged at one side of the drum, a lever connected at one end to one of said ends and having means at the other end to bear on said cam, a member connecting the intermediate portion of said lever to the other end of the brake band, and a spring active to engage said lever with said cam.

1,532,516. HORSE COLLAR. JACOB FRED SCHOELLKOPF, Dallas, Tex. Filed Apr. 5, 1924. Serial No. 704,329. 5 Claims. (Cl. 54—19.)



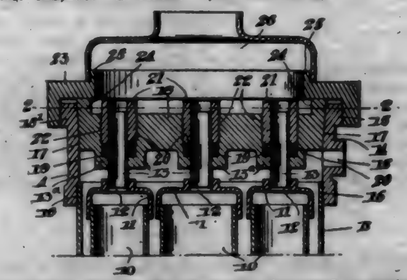
5. In a horse collar, an upper body cover, a lower body cover, a welt inserted between the edges of the covers, a line of stitches uniting the extreme outer edges of the covers with the welt which permits the covers to spread inwardly from the seam, and a thong laced around the seam and through the welt without compressing the covers.

1,532,517. REED STRUCTURE. GRANT SIPP, Paterson, N. J. Filed Dec. 6, 1924. Serial No. 754,248. 5 Claims. (Cl. 28—54.)



5. In combination, a supporting structure, a horizontally extending reed arranged and movable therein in an upright plane and including top and bottom horizontal bars and a post rigidly connecting them, and a brace extending from said structure and penetrated by and having the post slidable therein.

1,532,518. MIXER. STEWART SNELL and WILLIAM S. BRIDWELL, Indianapolis, Ind. Filed July 18, 1924. Serial No. 726,833. 1 Claim. (Cl. 48—180.)

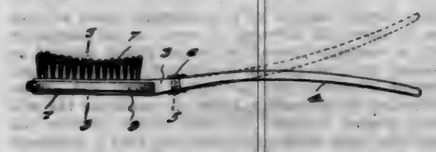


In combination with the carbureter and the intake manifold of an internal combustion engine, of a fuel mixer therebetween, comprising a gasket having a round bore communicating with the bores of the carbureter and the intake manifold and having flanges which are bolted to the flanges of the said carbureter and manifold, said gasket having its ends notched, plates seated in the notches and contacting with the ends of the carbureter and the manifold, a shaft journaled in central bearings in the plates and provided with a central hub, fans freely journaled on the shaft at the opposite sides of the hub, each of said fans having its blades struck at opposite angles whereby the said fans will turn in opposite directions, and said gasket having an air inlet port disposed adjacent to the fan nearest the manifold.

1,532,519. END CLIP FOR WINDOW SHADES. FRANK C. SYKES, San Francisco, Calif. Filed July 24, 1923. Serial No. 653,484. 2 Claims. (Cl. 156—31.)

2. A clip of the character described comprising an end section rounded in side elevation and also in cross section, and a pair of interspaced side sections formed integral with the end section, said side sections being resilient and forming gripping members, said side sections presenting parallel edges along one side and tapering edges along the other side.

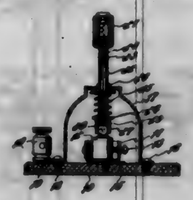
1,532,520. HEATER. JOSEPH ALEXIS OVILA TERRIAULT, Ottawa, Ontario, Canada. Filed Apr. 14, 1923. Serial No. 632,175. 1 Claim. (Cl. 122—511.)



A heater top of the character described comprising, in combination with a heater body, a sleeve formed with an upwardly and outwardly sloped inner side, and cylindrical on the outside, and screw-threaded at its

lower end on the inside to engage with said body portion, a cover formed with a plurality of spaced downward extending extensions having openings therein to receive fire tubes and sloped inwardly on the outside from the top to fit into the sloped sides of the sleeve, and means between the walls of said extensions and the fire tubes designed to form water-tight joints for the fire tubes, nut coupling means adapted to engage with the outwardly threaded portion of the sleeve and the top of the cover whereby the cover is pressed downwardly and snugly held in position.

1,532,521. ALCOHOLIC SOLUTION OF ANIMAL PROTEINS AND METHOD OF PREPARING THE SAME. DAVID THOMSON, London, England. Filed Sept. 1, 1921. Serial No. 497,708. 3 Claims. (Cl. 167—7.)



2. A method of producing alcoholic protein solutions which consists in subjecting a substance rich in animal protein to the action of a dilute alkali, next filtering, then adding dilute acid to cause precipitation, next separating the precipitate and dissolving it in dilute acid, and subsequently mixing the solution with a fluid containing alcohol in a strength of 60%.

1,532,522. TOOTHBRUSH. BENJAMIN F. WEAVER, Jr., Palmyra, Tenn. Filed Apr. 17, 1924. Serial No. 707,190. 1 Claim. (Cl. 15—172.)

A tooth brush of the class described comprising a brush head, the latter having a shank portion, a handle swivelly connected to said shank portion, means for holding said handle in adjusted position on said shank, said means comprising spring clips carried by the handle on opposite sides thereof and adapted for engagement with the adjacent portions of said shank.

1,532,523. DETECTOR. FRED WEINBERG, Schenectady, N. Y. Filed Aug. 11, 1923. Serial No. 656,809. 3 Claims. (Cl. 250—31.)

1. In a detector for wireless apparatus, the combination with a fixed crystal, of a movable arm, a contact wire carried thereby for contact with the fixed crystal, means whereby a crystal may be removably secured to the arm and means included in the securing means to provide a housing for the contact wire.

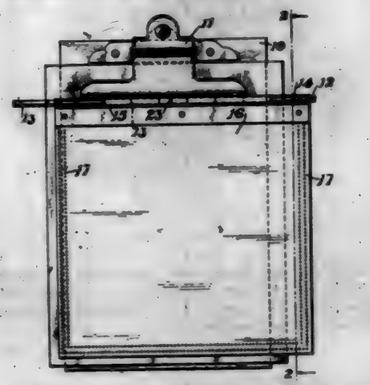
1,532,524. COMBINED CIRCUIT BREAKER AND FUSE RECEPTACLE. HARRY C. WENDLE, New Paris, and MERRIL HOLSOPPLE, Seanor, Pa. Filed June 16, 1922. Serial No. 568,713. 5 Claims. (Cl. 200—50.)

1. In a combined fuse and switch receptacle having pivoted knife switch and fuse terminals therein, a safety cover for said receptacle comprising sections hinged together and one of said sections being operatively connected with the knife switch, means carried by the other of said sections having a locking engagement with

the receptacle, and means for imparting a swinging movement to one of said sections on the hinge thereof and simultaneously imparting a relative sliding movement to both of said sections.

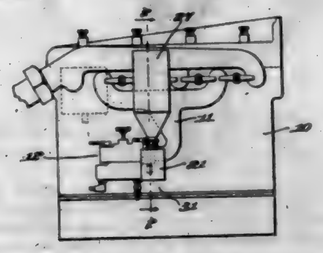
1,532,525. JUICE EXTRACTOR. WILLIAM C. YOUNKER and MIKE J. KELLY, Mason City, Iowa. Filed Mar. 10, 1924. Serial No. 698,268. 7 Claims. (Cl. 100—41.)

1. A device of the class described including a ring, a pair of sides attached to the ring, and a flexible member detachably connected to the lower ends of the sides.



1,532,526. FURNACE GRATE. GIOVANNI ZACH, Pola, Italy. Filed Mar. 24, 1921. Serial No. 455,015. 2 Claims. (Cl. 126—152.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

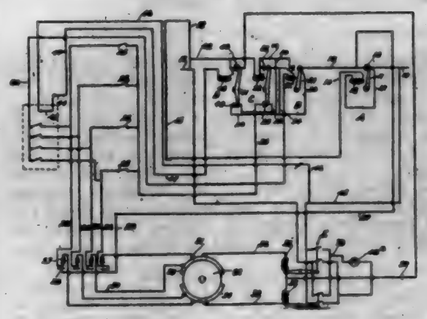
1. A grate including a plurality of notched bearing members, a series of parallel arranged grate bars carried by said members and having their ends engaging the notches of said members, each of said bars being of



substantially U-shaped cross-section in order to provide channels adapted to receive and retain ashes, each of said grate bars being provided with a notch, and a flange connected to one of said bearing members and extending into the notches of the grate bars.

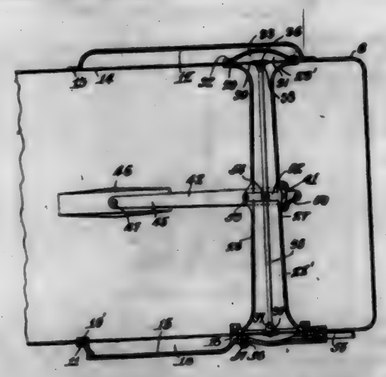
1,532,527. SLIDING COVER FOR TABLETS AND THE LIKE. ISABEL B. CASTO and REBECCA E. HOOPER, Half Moon Bay, Calif. Filed Feb. 23, 1924. Serial No. 694,588. 6 Claims. (Cl. 281—42.)

1. In combination with a pad of paper, a cover therefor, and means for mounting said cover upon a pad in a manner to permit the cover to be moved laterally of the pad, said cover being formed with a plurality of perforations through which a stylus point may be projected by which lines may be ruled on the paper as the cover is moved laterally of the pad.



1,532,528. APPARATUS FOR REMOVING CARBON FROM INTERNAL-COMBUSTION ENGINES. PHILIPPE D. CORMIER, New Bedford, Mass. Filed Aug. 23, 1923. Serial No. 658,894. 6 Claims. (Cl. 123—25.)

1. In an apparatus of the class described, an engine; a receptacle for liquid adapted to be temporarily secured thereto; a reservoir mounted on said receptacle and adapted to supply said receptacle and arranged to maintain an approximately given level of liquid in said receptacle, said reservoir being removably attached thereto by a single quick detachable securing device; and an air intake adapted to be immersed in liquid contained in said receptacle and to draw said liquid into said engine.

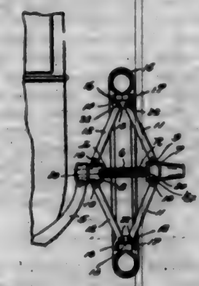


1,532,529. ELEVATOR SAFETY APPLIANCE. WALLACE E. DAY, San Francisco, Calif., assignor to Spencer Elevator Company, San Francisco, Calif. Filed Nov. 15, 1921. Serial No. 515,371. 3 Claims. (Cl. 187—29.)

2. An automatic elevator control including the combination with an elevator car adapted to travel along an elevator shaft and to stop at various floors, the elevator car being equipped with a normally closed door and the elevator shaft being provided with normally closed doors at the various floors, means for driving the elevator, a normally closed electric floor door circuit adapted to be broken when a floor door is opened, a normally closed car door circuit adapted to be broken when a car door is opened, normally opened floor door

button circuits adapted to be selectively closed at each floor to cause the elevator to travel to the respective floors, a normally opened car button circuit adapted to be closed to cause the car to travel to a selected floor, a circuit breaker in the car button circuit and a non-interference circuit having means for operating the said circuit breaker to open the floor button circuits and render the same inoperative from the time a passenger enters the car until he is leaving the car.

1,532,530. GAS INDICATOR FOR AUTOMOBILE DASHBOARDS. THOMAS M. EYNON, Philadelphia, Pa. Filed Mar. 17, 1921. Serial No. 453,165. 2 Claims. (Cl. 73—8.)



1. In a fluid pressure indicator for indicating the height of gasoline at an exterior point the combination of a tank, a bottom insert therefor having a relatively flat recess therein, a flat float adapted to fit into said recess in its lowermost position, a lever pivotally connected with said float whereby the float can lie flat upon the surface of the gasoline with variant angular directions of lever, a diaphragm, mechanical connections to operate said diaphragm from said lever and fluid connections operated by said diaphragm for indicating the height of the float.

1,532,531. TORPEDO. ACHILLE FABRIZIO, Elkton, Md. Filed Nov. 25, 1924. Serial No. 752,114. 2 Claims. (Cl. 102—25.)

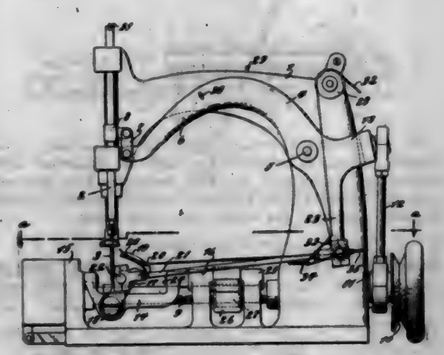
2. A device of the character described including a pair of telescoping cups enclosing explosive material and having their side walls made of a series of layers of strip material with one edge of the strip bent inwardly to provide a flange, and a disk secured to the inner side of the flange.

1,532,532. COMBINED SPARE-TIRE-RIM CARRIER AND REMOVER. JOSEPH G. FAY, Seattle, Wash., assignor of one-fourth to James K. McDowell, Seattle, Wash. Filed Aug. 7, 1922. Serial No. 580,026. 5 Claims. (Cl. 224—29.)

1. In a combined carrier and contracting device for a demountable rim, a non-rotatable mandrel having right and left hand screw threads thereon, a rim carrier comprising two internally threaded hub elements mounted upon said mandrel and engaging the respective threads thereof, rim-engaging members, spokes connected to the respective hubs and members, and hook devices carried by said members for detachably connecting a rim thereto.

1,532,533. COLLOIDAL SUSPENSION. JAMES E. HARRIS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 16, 1919. Serial No. 345,439. 28 Claims. (Cl. 250—27.)

1. A coating composition comprising colloidal particles of a salt of an alkaline earth metal in a colloidal solution.



12. A thermionic coating comprising the carbonate of an alkaline earth metal in suspension in a colloidal solution.

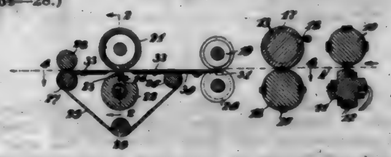
1,532,534. LEADER AND METHOD OF MAKING THE SAME. EDWARD R. HEWITT, Midvale, N. J. Filed Jan. 28, 1922. Serial No. 532,512. 1 Claim. (Cl. 43—28.)

A silkworm gut leader composed of light transmitting material treated with metallic particles to make the leader opaque.

1,532,535. SEWING MACHINE. GUSTAV J. KILIGAR, Brooklyn, N. Y. Filed Dec. 9, 1921. Serial No. 521,078. 4 Claims. (Cl. 112—241.)

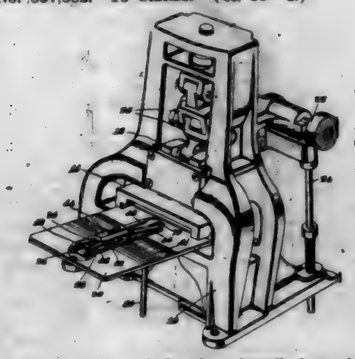
1. In a sewing machine, a frame, a reciprocating needle, a looper, means for reciprocating the needle, a link connected to said looper to operate the same and in turn reciprocated by said means in timed relation to the movement of the needle, a thread guide through which the thread passes to the looper movable with said link, a stationary thread guide through which the thread passes to the first guide, said stationary guide being disposed between the first guide and the looper, said frame having a third guide for directing the thread to the stationary guide and located further from the looper than the stationary guide but in the same direction.

1,532,536. CARD SUPPORT. CLAUDE W. KREBS, New York, N. Y. Filed July 5, 1924. Serial No. 724,462. 3 Claims. (Cl. 40—146.)



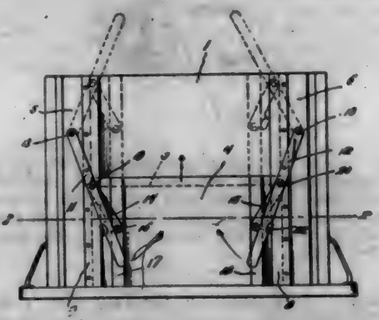
1. In a card support, in combination, a base, a non-flexible upright carried by the base, a flexible member carried by the non-flexible upright, a non-flexible member carried by the flexible member and means for holding a card carried by the last mentioned non-flexible member.

1,532,537. METHOD AND APPARATUS FOR CENTRIFUGAL CASTING. JAMES B. LADD, Ardmore, Pa., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Nov. 28, 1922. Serial No. 603,756. 14 Claims. (Cl. 22—65.)



1. A centrifugal casting apparatus comprising a rotatable casing in combination with a segmental mold and means connecting the mold segments with the casing and whereby the segments can be moved radially towards and from the center line of the mold.

1,532,538. MANUFACTURE OF SHINGLE STRIPS. SAMUEL M. LANGSTON, Wenonah, N. J. Filed Dec. 20, 1922. Serial No. 608,113. 29 Claims. (Cl. 164—28.)



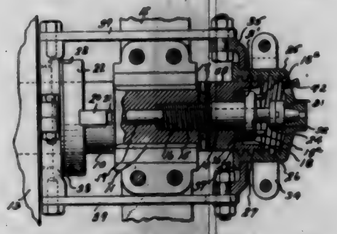
1. A machine for making shingle strips including rotary coacting members for forming a row of apertures in a sheet of material, a pair of rotary coacting members for slitting the sheet into strips along a line extending lengthwise of the sheet and intersecting said apertures to form one or more rows of laterally projecting tabs, and a pair of rotary coacting members for subdividing said strips transversely into sections of uniform length, said first mentioned members and said last mentioned member being driven at substantially the same peripheral speed, and said rotary members for slitting the sheet being driven at a higher peripheral speed.

1,532,539. MACHINE FOR TREATING VAMPS. HORATIO S. LYNESS, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 27, 1922. Serial No. 597,882. 16 Claims. (Cl. 33—4.)

1. In a machine of the class described, mechanism for ornamenting a vamp, means for locating the vamp to receive the ornamentation in the desired locality, and mechanism for indicating on the vamp in a predetermined relation to said ornamentation the point of attachment of an upper when the vamp is positioned for the ornamenting operation.

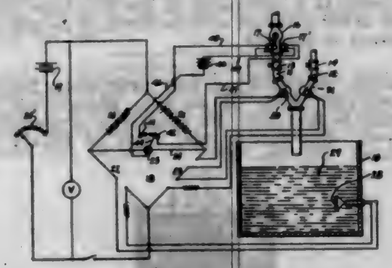
1,532,540. END-GATE CONSTRUCTION. RAY H. MCILWAIN, Jackson, Minn. Filed Oct. 16, 1924. Serial No. 744,019. 1 Claim. (Cl. 296—52.)

The combination with the end gate of a wagon body and having an opening in the lower portion thereof, a closure for the opening slidable on the end gate, means for raising and lowering the closure comprising a pair of levers pivoted at their upper ends to the end gate on the respective sides of the closure, a pair of links pivoted at their lower ends to the closure adjacent the respective sides of the closure, said links being pivotally connected to the intermediate portions of the respective levers, the free ends of the levers providing actuating handles, and means for limiting the downward swinging movement of the levers, said means comprising lateral extensions formed on the lower portions of the links, the free ends of the extensions terminating in hooks for engagement with the lower portions of the respective levers.



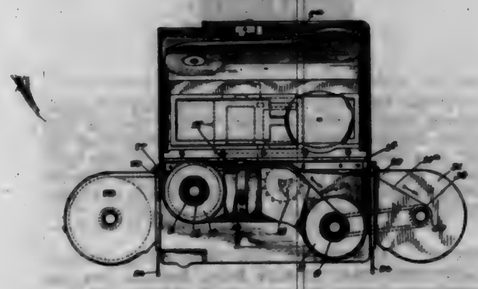
1,532,541. CUSHION CONNECTION FOR VEHICLE CONSTRUCTION. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 23, 1923. Serial No. 633,823. 5 Claims. (Cl. 267—54.)

1. A block of non-metallic yielding material for the purpose described adapted to be interposed operatively between two metallic parts which are to be connected thereby and having interstices formed on the faces with which the metallic parts engage.



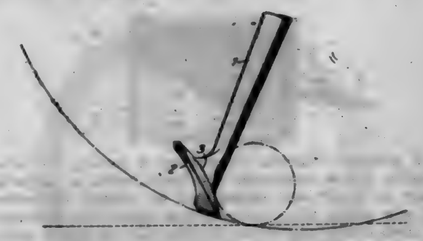
1,532,542. THRUSTING MECHANISM. THOMAS SPENCER MILLER, South Orange, N. J. Filed July 7, 1922. Serial No. 573,498. 8 Claims. (Cl. 192—97.)

1. In combination, a shaft, a friction member mounted thereon, thrust-producing means for said friction member comprising a thrust pin extending axially of and beyond the shaft, a chambered cap screw threaded on its interior enclosing the end of said pin, a bearing member carried by said cap and adapted to engage the end of said pin, means for moving said cap longitudinally of the axis of said shaft and thereby moving said thrust pin, and means provided with screw-threads engaging



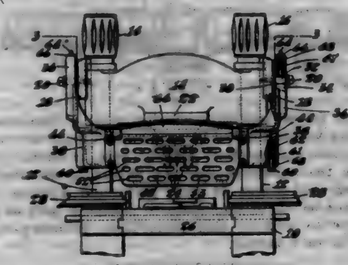
with the screw-threads of said chambered cap for resisting the movement of said thrust-producing mechanism, said cap serving as a receptacle for lubricating material.

1,532,543. CONTROLLING AND TEMPERATURE-COMPARING SYSTEM. RALPH W. NEWCOMB, Green Village, N. J. Filed May 28, 1924. Serial No. 716,356. 7 Claims. (Cl. 236—12.)



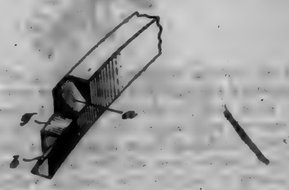
4. A bridge circuit comprising legs and a bridging portion having a measuring instrument therein, one of said legs comprising a thermometer resistance and an adjacent leg comprising two thermometer resistances in series.

1,532,544. ATTACHMENT FOR CAMERAS. HUGO NEWMAN, New York, N. Y. Filed Aug. 1, 1922. Serial No. 578,863. 13 Claims. (Cl. 88—17.)



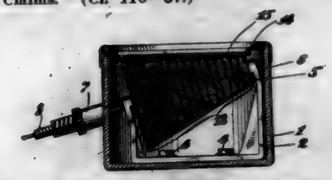
1. A camera comprising a casing, rotatable means mounted within the casing, a film magazine detachably connected to the outside of the casing and having a rotatable axle, and means connecting said axle to said rotatable means.

1,532,545. GOLF CLUB. WALTER B. PROBASCO, Mount Vernon, N. Y. Filed Dec. 11, 1923. Serial No. 679,916. 4 Claims. (Cl. 273—77.)



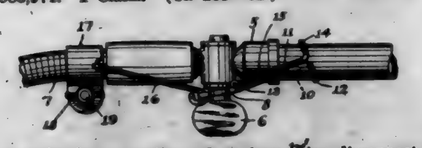
1. A golf club having its striking face convex, set at an angle oblique to the axis of the shaft and facing upwardly.

1,532,546. GUARD DEVICE. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 8, 1919. Serial No. 322,523. 28 Claims. (Cl. 74—105.)



5. In a heeling machine, a movable head, drivers secured thereto, a carrier depending at each side of the head, and a wall fixed to the carriers and guarding the drivers.

1,532,547. PISTON RING. JOHN ERNEST PRUYN, New York, N. Y. Filed Nov. 17, 1919. Serial No. 338,488. 1 Claim. (Cl. 74—109.)



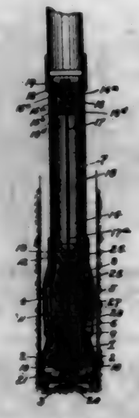
A piston ring having each of its ends provided with two inclined surfaces whose inclinations are in opposite directions and transversely of the ring, both of said surfaces extending from approximately the middle of one vertical wall of the ring and thence to a point adjacent the opposite upper and lower corners respectively thereof, and a horizontal rectangular surface intervening between the two inclined surfaces and having one of its edges at the middle of the vertical wall in which said inclined surfaces begin.

1,532,548. SPEEDOMETER. GEORGE RAMSEY, Brooklyn, N. Y. Filed Aug. 22, 1921. Serial No. 494,052. 20 Claims. (Cl. 116—57.)

2. A speed indicator comprising a frame, a colored rotative means associated with said frame, a rotatable shaft by which said means may be rotated, the colors on said means being complemental colors and arranged to blend due to persistence of vision and to appear white when said means is rotated at greater than a predetermined speed of rotation, said colors being arranged in bands with the cumulative color values in the bands being so proportioned that the bands progressively appear to turn white as the speed of said means is increased, a face plate provided with a window to expose a part of said member.

1,532,549. SAFETY HOSE CLAMP. NELSON RAMSIER, Arlington, N. J. Filed Aug. 24, 1922. Serial No. 583,974. 1 Claim. (Cl. 285—82.)

A device for preventing a hose from being disconnected from a gas fixture having in combination a collar, means on said collar to clamp it to said hose, a slotted plate to engage the handle of said gas fixture, arms pivotally connecting said collar to said plate and another pair of arms connected to said plate to engage a part of said gas fixture to prevent said plate from becoming disengaged with said handle.



1,532,550. IRONING MACHINE. CHARLES E. REDDIG, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 8, 1920. Serial No. 422,460. 1 Claim. (Cl. 68—9.)

In an ironing machine, an ironing roll, a movable shoe cooperating therewith, a gas burner pipe passing through said shoe and rotatably mounted therein, and means for moving said shoe into and out of engagement with said roll including cams mounted on and rotatable with said gas burner pipe whereby the flames from the latter are caused to impinge the working wall of the shoe when the latter is in ironing position and will be directed away from the working wall of the shoe when the latter is out of ironing position.

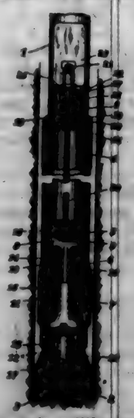
1,532,551. ROTARY DEEP-WELL-DRILLING APPARATUS. CLARENCE E. REED, Houston, Tex., assignor to Reed Roller Bit Company, a Corporation. Filed June 18, 1920. Serial No. 389,890. 20 Claims. (Cl. 255—71.)

1. In a deep well rotary drilling apparatus, the combination of a drill head, roller cutters including a cross roller cutter arranged with its axis extending transverse to the axis of the rotary drilling apparatus, a lubricant holder, means for feeding lubricant therefrom to the bearings of the roller cutters and a connection from the

cross roller cutter to said feeding means for operating the same, as a consequence of the cross roller cutter being driven by contact with the bottom of the hole substantially as described.

1,532,552. LUBRICATOR FOR DEEP-WELL DRILLS AND THE LIKE. OSWALD DUDA, Houston, Tex., assignor to Reed Roller Bit Company, a Corporation of Texas. Filed June 8, 1920. Serial No. 387,478. 26 Claims. (Cl. 255—71.)

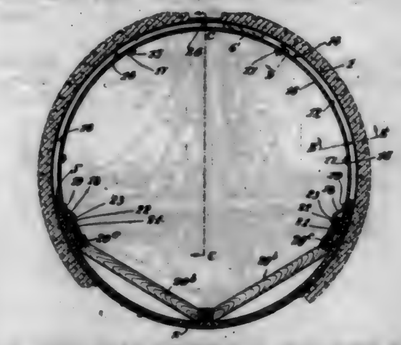
1. A tool for boring deep wells comprising a member carrying rotary cutting elements, a stem carrying said member and through which flushing fluid flows when the drill is in operation, a lubricant reservoir, a part operated by the flow of flushing water and means actuated thereby to effect the feed of the lubricant from the reservoir to the bearings of said cutting elements.



1,532,553. LUBRICATOR FOR DEEP-WELL DRILLS AND THE LIKE. OSWALD DUDA, Houston, Tex., assignor, by mesne assignments, to Reed Roller Bit Company, a Corporation of Texas. Filed Feb. 2, 1923. Serial No. 616,576. 7 Claims. (Cl. 255—71.)

1. The combination with a drill stem, a rotary cutter and a carrier in which it is journalled, of a lubricator comprising a barrel, a detachable cap, a piston in the barrel, a screw shaft for operating the piston, an actuator carried by the shaft and a base member for the barrel having water and lubricant passageways therethrough, and a socket closed at its bottom and receiving

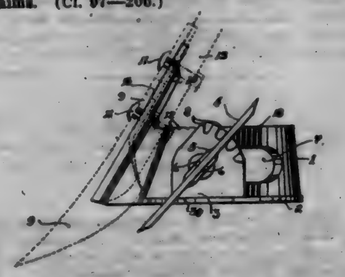
the plain lower end of the screw shaft removably, and a thrust bearing at the upper end of the screw shaft beneath the cap.



1,532,554. LUBRICATOR FOR DEEP-WELL DRILLS AND THE LIKE. OSWALD DUDA, Houston, Tex., assignor to Reed Roller Bit Company, a Corporation of Texas. Filed Oct. 21, 1922, Serial No. 596,109. Renewed Sept. 12, 1928. 4 Claims. (Cl. 255—71.)

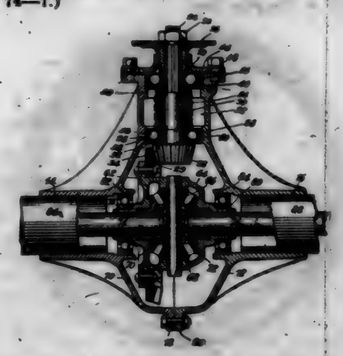
4. In rotary deep well drilling apparatus, a lubricant holder within the drill, a piston for forcing the lubricant therefrom, and means for operating the piston, said means including a member retarded in respect to the rotary motion of the apparatus and the piston by contact with the flushing fluid in the drill, and means for translating the difference between the rotative movement of the piston and the said means into a longitudinal movement of the piston, substantially as described.

1,532,555. STEEL FORM FOR AND METHOD OF APPLYING CEMENT LININGS TO PIPE LINES, TUNNELS, ETC. JOSEPH T. RICH, Kingston, N. Y. Filed Sept. 28, 1924. Serial No. 739,405. 28 Claims. (Cl. 25—131.5.)



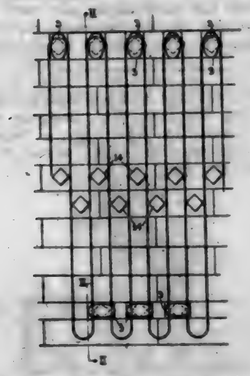
1. In forms for lining with cement pipe lines and the like, longitudinal bottom and side invert plates demountably fastened; arch plates and arch ribs, demountably fastened, supporting and wedging means at the abutments thereof; and means to space the outside periphery of the plates a predetermined distance from the inner periphery of the pipe line.

25. The herein-described process of applying to metal conduits an interior lining of mortar, which consists of first enclosing the ends of a plurality of lower clearance-spaces, then covering alternate clearance-spaces with sheet-metal forms which extend less than half-way up the sides of the pipe, then by wedging-action forcing said forms into the desired curvature and securely maintaining them in their adjusted position, then filling said enclosed alternate spaces with mortar and allowing it to set, next similarly covering and wedging and then filling said intervening spaces, then enclosing the complementary overhead space by means of contiguous overhead forms of sheet metal, next by wedging-action forcing said overhead forms into the desired curvature and securely maintaining them in their adjusted position, and finally filling said overhead space with mortar and allowing it to set.



28. A flexible mold-form of sheet-metal having a set of spacing-studs projecting from one face, for use in applying to pipes a lining such as of mortar, in combination with wedging-means for forcing said form into the desired curvature and maintaining the same in its adjusted position, and spacing-bulkheads for closing the ends of the clearance-space enclosed by said form.

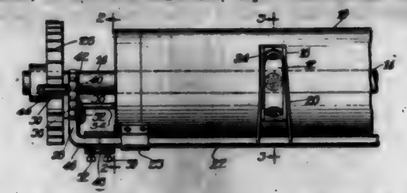
1,532,556. WING-SWEEP ATTACHMENT FOR PLOWS. M. T. SKINNER, Cleburne, Tex., assignor to Skinner Horse-Hoof Combination Sweep Co., a Corporation of Delaware. Filed May 31, 1924. Serial No. 716,958. 3 Claims. (Cl. 97—206.)



1. A wing sweep attachment for plows having a circular hoof shaped band with a tongue portion, the collar projecting upwardly and inwardly in an oblique line to the band; said tongue portion laterally curved on a line with the annular shape of the band to provide an interiorly curved recess to receive a plow foot to prevent its lateral play; means for adjustably affixing wing sweeps to the band, means for rigidly locking said sweeps thereto and means for marking the angle on each side of the band to which the sweeps are to be set.

1,532,557. REAR AXLE. ALFRED T. STURR, Flint, Mich., assignor to William C. Durant, New York, N. Y. Filed Sept. 15, 1922. Serial No. 588,336. 6 Claims. (Cl. 74—7.)

1. A device of the kind described which comprises a rear axle shaft and a transmission shaft at right angles thereto, a housing for said rear axle shaft comprising two complementary parts having alined bearing supports for the rear axle shaft and a neck portion extending at right angles to the axle shaft adapted to support bearings for the transmission shaft, a bearing for the transmission shaft which comprises a bearing rigidly mounted in said housing, a pinion on said transmission shaft, a bearing slidably mounted in said housing and adapted to bear against said pinion, a spring between said bearings and means for drawing said pinion and slidable bearing against the pressure of said spring.

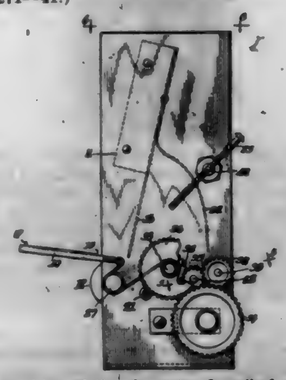


1,532,558. RESISTANCE-HEATER SUPPORT. RANDAL E. TALLEY, Irwin, Pa., assignor to George J. Hagan Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 4, 1922. Serial No. 579,627. 6 Claims. (Cl. 204—64.)

1. A stud for holding a resistance heater in proper position in a furnace and adapted to be secured to the wall of a furnace, and provided with a knife-edge forming the bearing for the resistance heater.

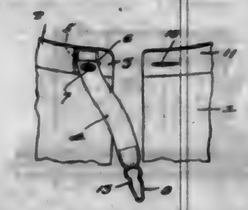
1,532,559. YARN-DYEING DEVICE. GEORGE T. THOMAYER, Albany, N. Y., assignor to Fuld and Hatch Knitting Company, a Corporation of New York. Filed May 15, 1924. Serial No. 713,530. 11 Claims. (Cl. 8—19.)

1. Apparatus of the type described which comprises, a dye tank, dye applying means in said tank, a rock shaft, a yarn guiding finger on said shaft, a toothed wheel, an arm on said shaft, a pin on said arm riding



on said toothed wheel, and means for adjusting the position of said pin on said arm.

1,532,560. DOOR MECHANISM. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to J. Edward Ogden, Mountainville, N. Y. Filed Oct. 11, 1922. Serial No. 593,710. 12 Claims. (Cl. 20—19.)

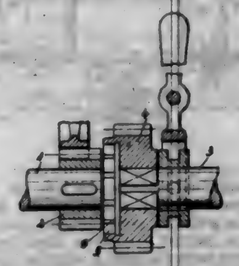


5. A door arranged for vertical and lateral movement, counterbalancing mechanism therefor and means for furnishing an additional counterbalancing effect during the break out movement including link supporting and swinging means comprising a plurality of inter-connected links foldable one on the other during the initial break out movement.

1,532,561. LABELING MACHINE. JOHN VAN BUREN, New York, N. Y., assignor to American Chicle Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 23, 1920. Serial No. 412,848. 33 Claims. (Cl. 271—41.)

1. A machine of the character described comprising, in combination, means for feeding a stream of sheets in overlapped relation, and means for imparting accelerated movement to the leading sheet of the stream to prevent interference between the leading sheet and a following sheet.

1,532,562. ATTACHMENT FOR THE NECKBANDS OF SHIRTS. MIKE VANSON, Plymouth, Pa. Filed June 19, 1924. Serial No. 720,998. 1 Claim. (Cl. 2—127.)

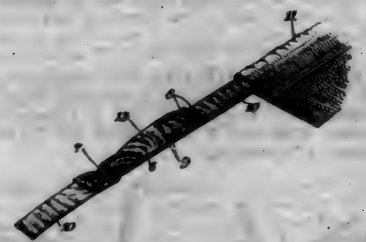


A shirt having a neck band provided with button holes, a strip of flexible material passing through one of the button holes and attached to the neck band, an eyelet passing transversely through the strip and spaced from the neck band, a continuous loop carried at the free end of the strip, said loop being formed from wire and having a circular end portion, and a pointed end portion and inwardly bowed portions provided at the sides of the loop between the circular and pointed end portions thereof.

1,532,563. ELECTRIC SWITCH. FREDERICK E. VOIGT, Los Angeles, Calif., assignor to Voigt Automatic Direction Signal Co. Filed Mar. 16, 1922. Serial No. 544,289. 2 Claims. (Cl. 200—59.)

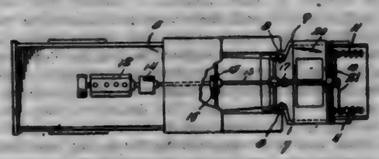
1. The combination with the steering mechanism of a vehicle, of a collar secured to the post thereof, a second collar secured to the steering wheel thereof, a ring member interposed between said collars adapted for rotary reciprocatory movement around the post of the steering mechanism, adapted to be yieldingly locked to said first and second mentioned collars, means for operating said ring member independently of said collars, and switch mechanism associated with said collars and ring member whereby upon a movement of either the first mentioned collar or said ring member electrical contacts will be made.

1,532,564. COUPLING. GRAF ALFRED VON SONNEFRAUNHOFEN, Friedrichshafen, Germany, assignor to Zahnradfabrik Aktien-Gesellschaft, Friedrichshafen, Germany. Filed Aug. 13, 1921. Serial No. 492,145. 5 Claims. (Cl. 192—108.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a coupling in combination, a spur wheel, an internally toothed clutch member, forming the coupling members, means for moving said clutch member in and out of intermeshing relation with said spur wheel, the teeth on said member being so proportioned that the gaps between the teeth of said internally toothed clutch member embrace each more than one tooth of said spur wheel.

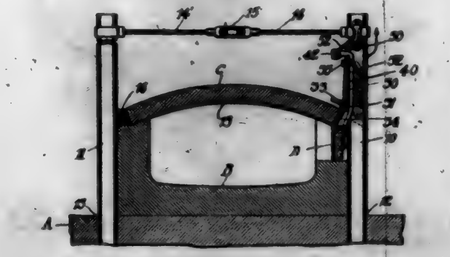
1,532,565. VEHICLE SPRING. OTTO CHARLES WINKSTOCK, Perkinsville, Vt. Filed Jan. 31, 1924. Serial No. 689,622. 1 Claim. (Cl. 267—47.)



A vehicle spring comprising a plurality of spring leaves and a series of unattached rubber strips inserted therebetween.

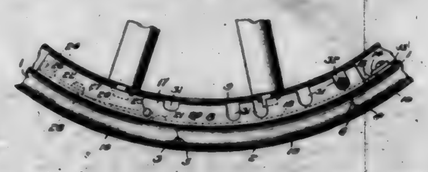
1,532,566. BODKIN AND FASTENER. EMMA NOLAN YOUNG, New York, N. Y. Filed Sept. 21, 1922. Serial No. 589,567. 2 Claims. (Cl. 24—150.)

1. As a new article of manufacture, a buckle comprising a pair of spaced-apart legs connected to each other at one end by a transverse member, the legs being of sufficient length to permit the device to be used as a bodkin, the other ends of the legs being bent upon themselves to form hooks having straight portions of substantial length which overlie the legs, the hooks being of sufficient length to pass through a band from back to front and from front to back and underlie the projecting end of the band when straightened, whereby the said end of the band will act as a protector for the points of the hooks.



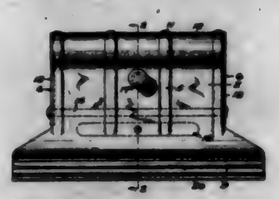
1,532,567. HIGHWAY SNOWPLOW. ROBERT A. ALDINGER, Town Line, N. Y. Filed Mar. 25, 1924. Serial No. 701,806. 2 Claims. (Cl. 37—42.)

1. In a snow plow, a frame adapted to be pivotally mounted upon the forward end of said vehicle, a frame embodying spaced parallel downwardly inclined arms, an open ended snow scoop arranged between the free ends of the arms and inclined downwardly, a bearing supported above said frame, a horizontal driven shaft jour-



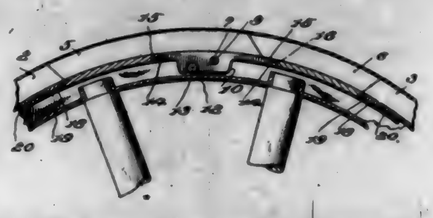
naled in said bearing, an exposed rotary bladed fan carried by said shaft, the blades of said fan sweeping across the open inner end of said scoop when the fan is operated, and rotary screws mounted in said scoop adjacent the opposite side walls thereof.

1,532,568. SKEWBACK FOR FURNACES. FRANK L. ANTISELL, Perth Amboy, N. J. Filed Apr. 28, 1923. Serial No. 635,196. 5 Claims. (Cl. 263—46.)



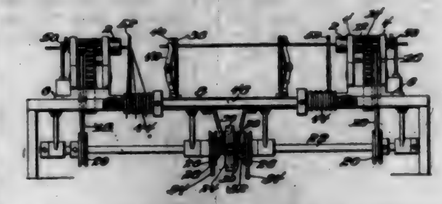
1. In a furnace having an arched roof and upright buck stays, a supporting skew back having an upright plate resting against said buck stays, a rib projecting from said plate opposite said buck stays and a downward extension of said plate below said rib inclined in a plane at a right angle to the thrust of said arch.

1,532,569. AUTOMOBILE TIRE RIM. EDGAR L. AVERA, Fort Valley, Ga., assignor to Interlocking Toggle Rim Company, Inc., Fort Valley, Ga., a Corporation of Georgia. Filed May 5, 1924. Serial No. 711,221. 8 Claims. (Cl. 301—31.)



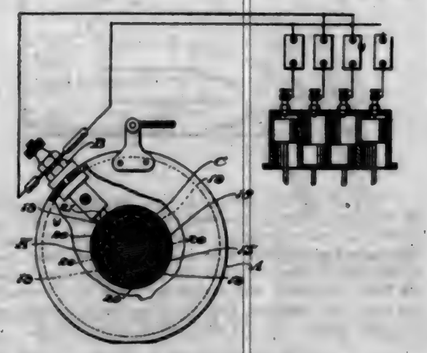
1. A tire supporting rim comprising a major rim section having a gap therein, a detachable rim section adapted to fill said gap to complete said rim, each of said rim sections having oppositely disposed circumferential flanges united by an intervening base portion, and means movably attached to one of said rim sections and adapted to engage the other rim section for constituting with said detachable rim section a toggle mechanism operable to force said detachable rim section into said gap, said detachable rim section having a circumferentially disposed extension projecting beyond the adjacent ends of the flanges of said detachable section and formed with a plurality of end faces arranged at unequal radial distances from the center of the rim and in stepped relation, and said major rim section having its base portion provided with a slot for receiving a portion of said extension in circumferential alignment with the said end face which is farthest from the center of the rim and also having on its inner side a lip spaced circumferentially from said slot and radially from the base portion of the major rim section to thereby form a recess for receiving a portion of said extension in circumferential alignment with the said end face which is nearer the center of the rim, said lip and said extension constituting means for interlocking the adjacent ends of said rim sections so as to prevent relative radial and transverse movements thereof.

1,532,570. SCRAPER. PIERRE BASMAISON, San Francisco, Calif. Filed Feb. 12, 1923. Serial No. 618,431. 3 Claims. (Cl. 145—47.)



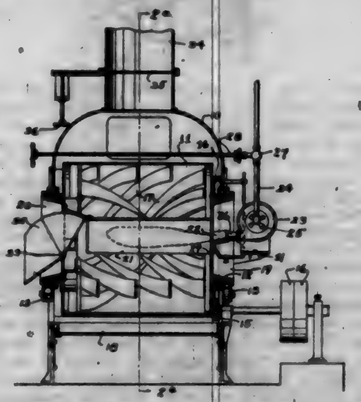
1. A scraper comprising a pair of pivotally connected jaws, a facing of conformable material on the inner surface of each jaw, a blade disposed between the jaws and having a rolled edge adapted to seat in said conformable material, and means for clamping the jaws on the blade.

1,532,571. AUTOMOBILE TIRE RIM. JOHN A. BEDINGFIELD, Fort Valley, Ga., assignor to Inter-Locking Toggle Rim Company, Houston County, Ga. Filed June 1, 1922. Serial No. 565,116. 12 Claims. (Cl. 301—32.)



1. A tire supporting rim comprising a section having an open portion or gap therein, a detachable rim section composed of relatively short sections having their free ends extending into and secured within the said open portion for completing the rim, and a hinge connection for the inner ends of said relatively short sections, said detachable rim section having portions arranged at the inner ends of the short section and adjacent said hinge connection for forming circumferentially spaced abutments adapted to provide a driving connection between said rim and the wheel to which it is applied.

1,532,572. YARN-SPLICING MACHINE. FRANKLIN W. BRAYSTEN, Central Falls, R. I., assignor to Manville Jenckes Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed May 27, 1923. Serial No. 564,142. 6 Claims. (Cl. 117—6.)



1. A yarn splicing machine having, in combination, two opposed longitudinally slotted twister spindles each provided with a pinion, a gear engaging each pinion and provided with a pulley, a driving shaft provided with pulleys connected with the gear pulleys by open and cross belts respectively, and mechanism under the control of the operator for selectively driving the shaft in opposite directions.

1,532,573. TIMER. CARL O. BRUNO, Chicago, Ill., assignor to Bigelow-Bruno Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 8, 1922. Serial No. 533,953. 5 Claims. (Cl. 200—26.)

4. A timer comprising a commutator adapted for connection to and rotation with a cam shaft, a casing arranged concentrically of the commutator, a pair of brushes mounted in the casing at one side of a diameter thereof, and segments in the commutator so arranged that when the latter is rotated each brush will successively engage two segments, and alternately with respect to the other brush.

1,532,574. ROASTER. WILLIAM G. BURNS, New York, N. Y., and HARRY RUSSEL MAXON, Muncie, Ind., assignors to Jabez Burns & Sons, a Corporation of New York. Filed Sept. 15, 1922. Serial No. 588,414. 17 Claims. (Cl. 34—5.)

2. In a roaster for coffee and like food products, the combination with means for producing a homogeneous elongated flame, of a container for material, and means for discharging the material in a sheet extending lengthwise of and adjacent said flame.

1,532,575. TRAFFIC SIGNAL AND SIGNBOARD. ANDREW B. CAMDEN, Durant, Okla., assignor, by direct and mesne assignments, to Joseph W. Allen and S. H. Allen, both of Temple, Tex. Filed Mar. 20, 1924. Serial No. 700,694. 1 Claim. (Cl. 40—39.)

In a device of the character described, a base, a stationary supporting shaft rising from the base, a sleeve rotatable upon said shaft, upper and lower end thrust bearings for said sleeve, upper and lower spiders carried by said sleeve and rotatable therewith, braces connected with elements of the lower thrust bearing and with the lower spider, the upper spider including arms formed with holes and the lower spider including arms formed with sockets, and sign plates having upper and lower trunnions engaged within said holes and sockets respectively, the upper edges of the sign plates terminating considerably below the upper spider whereby the sign plates may be moved upwardly to effect disengagement of the lower trunnions from the sockets and may then be subsequently moved downwardly to disengage the upper trunnions from within said holes.

1,532,576. GAME APPARATUS. GUSTAVE O. CARLSON, Wethersfield, Conn., assignor of one-third to Henry Hanson, Middletown, Conn., and one-third to Carl O. Hedstrom, Portland, Conn. Filed June 13, 1924. Serial No. 719,908. 5 Claims. (Cl. 273—100.)

4. In a game apparatus, a stake, and one or more collapsible rings composed of a plurality of interlocking links.

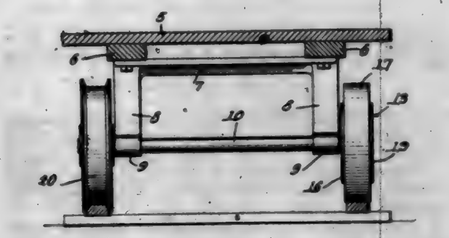
1,532,577. METHOD OF MAKING THE ARSENATE OF CALCIUM AND ANALOGOUS ELEMENTS. JOSEPH F. CULLEN, Midvale, Utah, assignor to United States Smelting, Refining & Mining Company, a Corporation of Maine. Filed Oct. 15, 1919. Serial No. 330,910. 9 Claims. (Cl. 23—53.)

1. The method of making arsenate or arsenates of alkalis earth metals which consists in mixing arsenic trioxide and a sufficient quantity of a hydroxide-forming compound of such metals to combine with the arsenic trioxide to form arsenites of such metals and causing the formation of such arsenites, and oxidising the arsenites to arsenates without material volatilization of arsenic by heating to high temperature in the presence of air.

1,532,578. METHOD OF MAKING THE ARSENATE OF CALCIUM AND ANALOGOUS ELEMENTS. JOSEPH F. CULLEN, Midvale, Utah, assignor to United States Smelting, Refining & Mining Company, Portland, Me., a Corporation of Maine. Original application filed Oct. 15, 1919, Serial No. 330,910. Divided and this application filed Feb. 12, 1925. Serial No. 8,678. 5 Claims. (Cl. 23—53.)

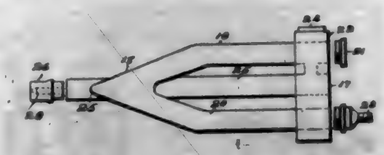
4. The method of making insecticide arsenate or arsenates of alkali-earth metals which consists in the oxidation at high temperature of arsenic trioxide and a hydroxide-forming compound of such metals mixed in substantially the proportions of their combining weights, and reducing the water solubility by additional hydroxide-forming compound.

1,532,579. METHOD OF TREATING PAPER. JUDSON A. DE CEW, Mount Vernon, N. Y. Filed June 19, 1923. Serial No. 646,480. 1 Claim. (Cl. 92—20.)



The process of treating paper-making fibres to be used in a slack sized paper, to render them more astringent, which consists in bringing them into contact before or during the paper-making process with an aqueous solution of calcium sulphate in which there is more calcium sulphate than in natural mill water, but not enough to act as a filler for the paper.

1,532,580. TIRE TOOL. ULYSSES G. EDWARDS, Grandview, Wash. Filed Sept. 23, 1924. Serial No. 739,849. 2 Claims. (Cl. 157—6.)



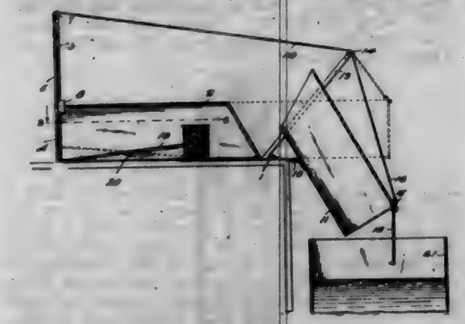
1. A tire tool comprising a pair of plier-connected members each being formed of a flat bar, the operating end of one of the bars being wedge-shaped and being provided at the side face thereof next adjacent the other of the bars with a notch, the other of the bars having its end portion tapered, and bent to one side to engage in the notch.

1,532,581. SAWMILL-CARRIAGE WHEEL. JOSEPH ELKINS, Blytheville, Ark. Filed Sept. 29, 1924. Serial No. 740,565. 2 Claims. (Cl. 295—10.)

1. In a saw mill carriage, an axle, a wheel having a grooved periphery mounted to rotate on the axle, a wheel on the opposite end of the axle, the last mentioned wheel including a hub section secured to the axle to move therewith, and a removable outer section mounted on the hub section and adapted to revolve around the hub section.

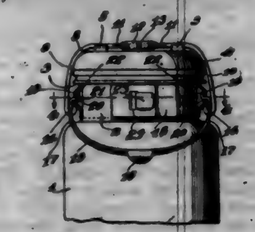
1,532,582. OIL BURNER. JAMES H. GRADEN and ZACK E. GRADEN, Ellenwood, Ga. Filed Oct. 27, 1922. Serial No. 597,280. 2 Claims. (Cl. 158—63.)

1. An oil burner having a fuel chamber and means for supplying fuel to the said chamber, said means comprising a hollow casing, a V-shaped tube having its ends in communication with the casing, fuel inlet means at one end of the V-shaped tube, an outlet tube extending from the casing and having its outer end penetrating the said fuel chamber, and valve means associated with the said casing and the said outlet tube thereof.



1,532,583. COMBINED TAIL LIGHT AND DIRECTION INDICATOR. RALPH A. GUTMON, Springfield, Ill. Filed Apr. 10, 1924. Serial No. 705,552. 1 Claim. (Cl. 116—45.)

A direction indicator comprising a bracket, a lamp housing mounted upon the bracket and having means for supporting a number plate, a bulb disposed within the housing, a cylindrical casing supported from the housing and having its end walls spaced from the end walls of the housing, said casing being provided at its side with an opening which is disposed opposite the plate supporting means of the housing, shutter members nested one within the other and having openings adapted to be moved to register with the opening in the casing, said shutter members having angularly disposed arms which are pivotally connected with the housing at the end walls thereof and which are disposed in the spaces between the end walls of the housing and the end walls of the casing and pull cables connected with the arms and passing through the side of the casing.



1,532,584. TRAP. OSCAR HANSON, Warder, British Columbia, and OTTO STJORNSTROM, Calgary, Canada. Filed Sept. 4, 1920. Serial No. 408,402. 1 Claim. (Cl. 43—76.)

A device of the class described comprising a fixed section, a movable section hingedly mounted adjacent said fixed section so as to move in and out of alignment therewith, a door slidably mounted on said fixed section, a cable connecting said door with said movable section and the weight of said door being sufficient to normally hold said movable section in alignment with said fixed section, said cable being only long enough to allow the door to partially close when the movable section is in alignment with the fixed section, and a

platform rockably mounted in the fixed section so as to close the opening allowed by the door when closed in the manner and for the purpose specified.

1,532,585. FASTENING DEVICE FOR JAR TOPS. LEWIS O. CULVER, West Pittstown, Pa. Filed Oct. 15, 1923. Serial No. 668,547. 3 Claims. (Cl. 215—37.)

1. In combination with a top and jar; projections on the top having aligned notches; a sectional fastening yoke engaging within the notches; means adjustably connecting the sections between the projections, and means on the jar connected with the fastening yoke for locking it in position, the first-named means being spaced from the top whereby it may be manipulated to adjust the yoke while in the locked position.

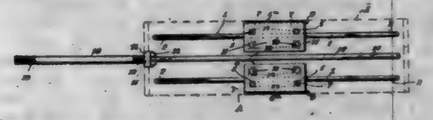
1,532,586. TROUSERS STRETCHER. MAX DIETRICH, Halle-on-the-Saale, Germany, assignor to Anton Schmid, New York, N. Y. Filed Nov. 14, 1923. Serial No. 674,619. 4 Claims. (Cl. 223—19.)

1. In a trousers stretcher, an extensible framework comprising a pair of longitudinally extending members and a pair of transversely extending members, each of said transversely extending members consisting of a pair of relatively movable sections, slidably interconnected in overlapping relation, a contractile spring coiled about the overlapping ends of said sections to normally hold said framework in extended position, one of said sections being provided with a groove and the other of said sections being provided with a pivotally mounted finger grip having a pin secured thereto, said pin being adapted to engage within said groove to hold said framework against the action of said spring in a closed position.

1,532,587. FURNITURE POLISH. WILLIAM F. HAYES and JOHN N. ARMSTRONG, Mineral Wells, Tex., assignors of one-third to B. E. Chapman and one-third to H. H. Milling, both of Mineral Wells, Tex. Filed Dec. 6, 1924. Serial No. 754,409. 1 Claim. (Cl. 134—24.)

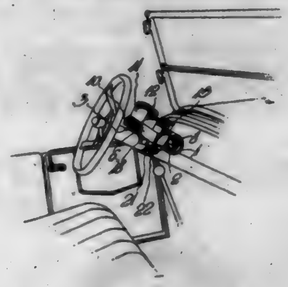
A furniture polish consisting of paraffin oil, 5 gallons; linseed oil, 20 ounces; rosin, 1½ pounds; oil of bay, 1½ ounces; and turpentine, ½ gallon.

1,532,588. PARACHUTE. OTTO HEINECKE, Berlin, Germany. Filed Apr. 13, 1921. Serial No. 461,174. 5 Claims. (Cl. 244—21.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



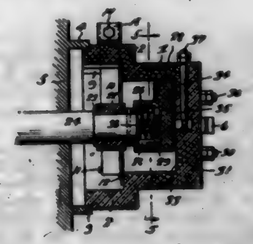
5. A parachute for aviators having a central air-hole at the apex thereof, a rope of convenient length attaching said parachute to the aircraft and adapted to bring said parachute into the position for opening after it has dropped far enough to be clear of the aircraft, a weak rope connecting with the parachute to one end of the rope attached to the craft, an envelope attached to the belt of the aviator, a lid for said envelope having a hole through which said weak rope passes, eyes on said lid and on the lower part of the envelope, a wire bent to form an open circle drawn through said eyes of said lid and envelope to fasten the lid to the envelope and attached between said attaching rope and said weak rope, substantially as described and for the purpose set forth.

1,532,589. CONCRETE AND METAL CROSSTIE STRUCTURE. VAN RENSSELAER CHOATE KING, Radnor, Pa., assignor to King's Concrete Cross Tie Corporation, New York, N. Y., a Corporation of New York. Filed June 21, 1924. Serial No. 721,897. 12 Claims. (Cl. 238—92.)



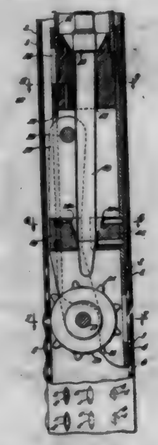
9. In a concrete and metal railway cross tie structure, the combination with an embedded reinforcing rod and a downwardly flanged, rail, clamp bearing and corner

guard plate having a threaded clamp bolt receiving socket of an upstanding anchor rod fixed to said plate and also to said reinforcing rod, the flanged plate bearing on the



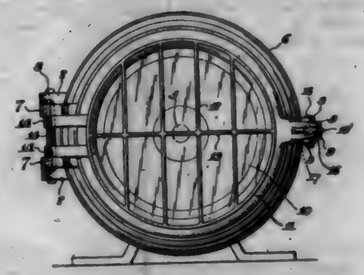
top margin and also on the upper side margin of the concrete and being spaced apart from the reinforcing rod by intervening concrete in which the anchor rod is encased.

1,532,590. COMBINATION SMOKING SET AND ADVERTISING DEVICE. HALMER C. KITTELSON, Minneapolis, Minn., assignor to Rasmus O. Olson, Minneapolis, Minn. Filed Apr. 17, 1924. Serial No. 707,199. 7 Claims. (Cl. 206—31.)



1. An article of manufacture comprising a horizontally elongated tubular container, a horizontally disposed channel-shaped holder at one side of and secured to said container, and an ash receptacle frictionally held in a portion of said holder, leaving the remainder thereof unoccupied for the reception of other articles, such as a box of matches and a package of cigarettes.

1,532,591. IGNITION TIMER. EUGENE KROKAVETZ, Cleveland, Ohio. Filed Apr. 19, 1923. Serial No. 633,208. 1 Claim. (Cl. 200—21.)



The combination with a timer casing having contacts in the end wall and an opening in the side wall thereof, of a shaft projecting into the casing, a distributor block mounted on the shaft and cooperating with said contacts, a spring between the end of the shaft and the block, pressing the latter axially against said contacts, the shaft being provided with a hollow cam member on the end thereof which fits within the distributor block, and the spring being confined within said hollow member, and a breaker arm mounted within the casing and projecting thru said opening, said breaker arm being operated by the cam and cooperating with a breaker point on the outside of the casing.

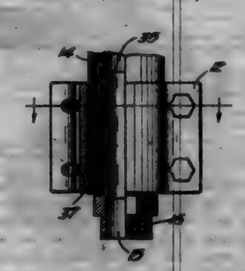
1,532,592. MEANS FOR FORMING WELL SCREENS. MARLON E. LAYNE, Houston, Tex., assignor to Layne & Bowler Corporation, Los Angeles, Calif., a Corporation of California. Original application filed Apr. 19, 1923, Serial No. 633,084. Divided and this application filed Jan. 22, 1924. Serial No. 687,717. 4 Claims. (Cl. 81—193.)

1. A well-screen forming tool comprising a body adapted to be longitudinally translated in a well casing in a perforating operation, a member pivoted on the body, the body and said member having opposed shoes, a perforator element journaled in said pivoted member and diametrically disposed to rotate in a vertical plane, said element having a plurality of relatively spaced punch members projecting from its periphery, and an independently operable wedge element adapted to have a wedge engagement between the opposed shoes to force the perforator element outwardly to cause the punch members to form screen apertures in the casing successively as the perforator element is rotated by a longitudinal translation of the tool.

1,532,593. HEADLIGHT. HENRY G. LEWIS, Philadelphia, Pa., assignor to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 15, 1921. Serial No. 477,636. 2 Claims. (Cl. 240—41.)

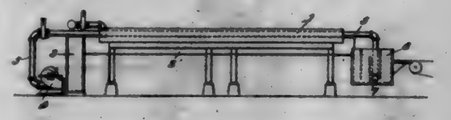
1. In a head light, the combination with the case, of a door comprising a frame with a lens therein, movable relatively to said case, a grated door movable relatively to said case and door first named so as to cover and uncover said lens, a bolt hinged on said frame, and a nut having a limited movement on said bolt whereby it is adapted to engage said door second named and prevented from engaging said door first named.

1,532,594. CAN OPENER. HERMAN LUSCHER, Far Rockaway, N. Y. Filed Aug. 20, 1924. Serial No. 733,104. 2 Claims. (Cl. 30—3.)



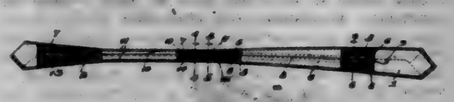
1. A can opener comprising an operating arm, a means for guiding and supporting said arm against the can cover, a bracket slidable on said arm to allow an operation of the opener on cans of various widths, a pair of depending arms on said bracket a cutting tool pivotally held between said arms, and a pin on one of said arms for limiting the swinging of said tool around its pivot in one direction.

1,532,595. MECHANICAL TOY. GEORGE L. MCMANNIS, Los Angeles, Calif. Filed Apr. 9, 1923. Serial No. 630,847. 1 Claim. (Cl. 272—31.)



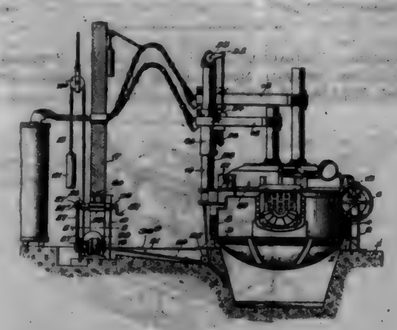
A toy racing machine comprising a circular casing formed with an internal downwardly inclined flange, a disk mounted within said flange and formed with an upwardly inclined flange resting at its edge adjacent the inner edge of said first inclined flange, leaving an annular slot between the adjoining edges of said flanges, said flanges forming a race track, racing devices mounted on said track and resting on both of said flanges, means for driving said devices around said track, one of said flanges being formed with an irregular surface so that contact therewith by said devices makes a noise.

1,532,596. HOSE CLAMP. MARTIN MADSEN, Monterey Park, Calif., assignor of one-half to Peter Madsen, Los Angeles, Calif. Filed July 18, 1923. Serial No. 652,298. 4 Claims. (Cl. 24—19.)



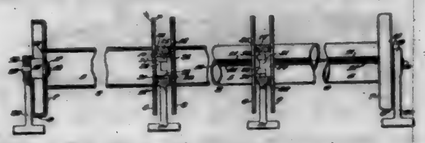
1. In a hose clamp, the combination of: a pair of oppositely disposed primary members having aligning slots; means for drawing said primary members together; and oppositely disposed secondary members disposed on a plane substantially perpendicular to the direction of movement of said primary members, and arranged to be forced inwardly by said primary members, and keys formed on said secondary members adapted to cooperate with said slots on said primary members for aligning said primary and secondary members.

1,532,597. PREVENTING FROTH ON PAPER MACHINES. WALTER E. METCALF, Hudson Falls, N. Y., assignor to Process Engineers, Inc., New York, N. Y. Filed Dec. 28, 1922. Serial No. 608,724. 1 Claim. (Cl. 92—38.)



In a paper machine, a head box, a flow box, a central box connected therewith, and a screen, a pipe terminating in a head having orifices therein submerged in said head box, baffles in said head box, and pump means for forcing water and fibres from said central box through said pipe and expelling the same through said orifices below the lever of the liquid in said head box.

1,532,598. NECKTIE. WILLIAM K. MEYER, New York, N. Y. Filed May 26, 1923. Serial No. 641,689. 2 Claims. (Cl. 2—146.)



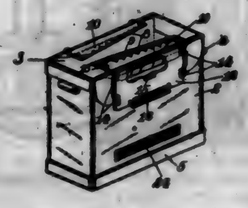
1. A necktie comprising two tying ends and a neckband consisting of folded material, said material being elastic, and a lining for each end, the lining of one end consisting of material elastic in the direction of the length of the tie, said elastic lining material being loosely stitched to the folded material, and the lining of the other end consisting of inelastic material, said inelastic lining being joined to said folded material by stitching extending through said lining and said folded material whereby the smaller tying end of said tie is rendered non-elastic in the direction of the length of the tie.

1,532,599. ELECTRIC FURNACE. WILLIAM E. MOORE, Beaver, Pa., assignor to Pittsburgh Research Corporation, a Corporation of Delaware. Original application filed Sept. 5, 1919, Serial No. 321,851. Divided and this application filed Sept. 12, 1921. Serial No. 500,187. 19 Claims. (Cl. 204—64.)

1. The combination with a tilting electric furnace of mechanism for adjusting electrodes in said furnace, said mechanism comprising motors mounted on a stationary support, drums operated by said motors and operating cables passing from the electrodes to and around said drums and carrying at their ends weights adapted to maintain them in frictional engagement with said drums.

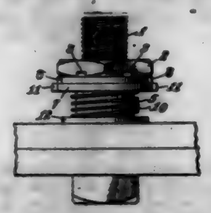
1,532,600. TUFT-YARN SPOOL. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Aug. 19, 1922. Serial No. 582,883. 8 Claims. (Cl. 242—123.)

1. A tuft-yarn spool for the carrier-frames of looms comprising a cylindrical barrel having end-heads, and hollow cylindrical gudgeons arranged coaxially of the heads and projecting outwardly therefrom with integral clutch-elements at their ends adapted for interlocking engagement one with another when the spools are placed end-for-end in series.



1,532,601. AIR PROPELLER. FRANK WM. RODNER, New York, N. Y. Filed Mar. 26, 1923. Serial No. 627,841. 11 Claims. (Cl. 170—160.)

7. In an air propeller, the combination of a hub, blades secured to said hub, strengthening ribs on said blades, a saddle, means to support said saddle from said hub, supporting members from said saddle to said blades, and compression and tension members connecting together the outer part of said blades and secured to said strengthening ribs.

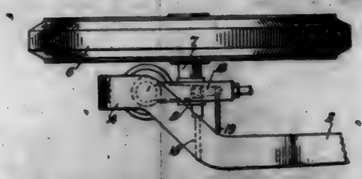


8. In an air propeller, the combination of a hub, blades secured to said hub, a saddle, means to support said saddle from said hub, compression members from said saddle to said blades, and supporting members from said compression members to said blades at a point adjacent the hub.

1,532,602. TOBACCO-USER'S ARTICLE. THOMAS E. RITCHIE, Beverly, Mass. Filed Oct. 3, 1922. Serial No. 592,110. 6 Claims. (Cl. 131—59.)

1. An article of the character described, comprising a box adapted to contain a plug of tobacco, said box having an open end, a blade removably mounted in one side of said box with its edge at the edge of said open end, and a cover for said end protecting the edge of said blade when the cover is in its closed position.

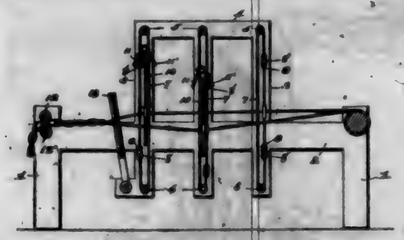
1,532,603. LOCK NUT. WILLIAM C. RUSSELL and JOHN F. CANADY, Pendleton, Oreg.; said Russell assignor to said Canady. Filed Dec. 26, 1923, Serial No. 682,024. Renewed Nov. 22, 1924. 1 Claim. (Cl. 151—2.)



In combination with a bolt and its nut, said nut having notches therein, a spool on the bolt and located between the work-piece and the nut and having notches in one flange thereof, a washer on the spool having projections thereon for engaging the notches in the flange and in the nut, a spring on the spool for holding the washer against the notched flange and means for detachably connecting one flange with the spool.

1,532,604. OVERFLOW ALARM. PETER SCHMITZ, New York, N. Y. Filed Dec. 18, 1922. Serial No. 607,481. 4 Claims. (Cl. 116—100.)

4. A device comprising a movable container constructed to occupy a receiving position when empty, and to move from such position when filled, and an alarm consisting of a coiled elastic strip, a bell carried by said strip, an arm extending from said strip, and a plate on said arm, located in the path of said container.

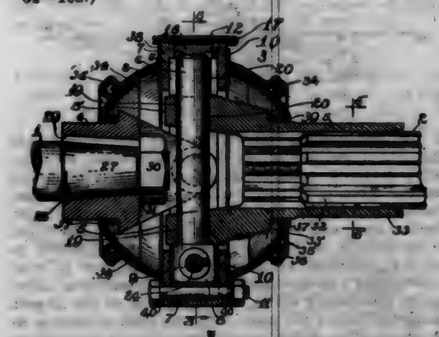


1,532,605. VEHICLE BODY SUSPENSION. BENJAMIN F. SEYMOUR, Washington, D. C. Filed June 22, 1920. Serial No. 390,825. 3 Claims. (Cl. 280—96.2.)

1. In a vehicle body suspension, the combination of a chassis, a wheel, an axle, a supporting post mounted on the chassis, an arm mounted on said post and supporting the axle, a pair of springs mounted on said post intermediate the arm and the chassis, collars interposed between said springs and the arm, and means for adjusting the tension of said springs, for the purpose set forth.

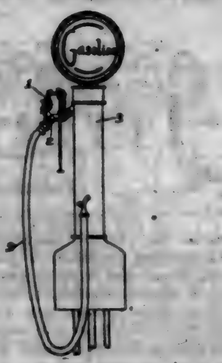
1,532,606. HEDDLE CONSTRUCTION FOR LOOMS. MICHAEL S. SOROKA, Atlanta, Ga. Filed Mar. 19, 1923. Serial No. 626,015. 1 Claim. (Cl. 139—91.)

In a loom, the combination with heddle frames embodying a plurality of heddles, certain of said heddles having substantially T-shaped means adjacent their upper ends projecting from opposite sides, the means on one side of the heddle adapted for detachable gripping engagement with one heddle frame and the means on the opposite side adaptable for similar engagement with another heddle frame, handle means also provided at



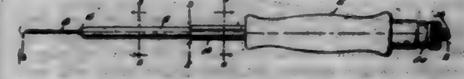
the upper ends of said heddles for expeditiously transferring each of the detachable heddles from one heddle frame to another to vary the normal alternate order of the warp threads.

1,532,607. METHOD OF MANUFACTURING SHEET METAL. LAWRENCE C. STEELE, Pittsburgh, Pa. Filed Apr. 18, 1922. Serial No. 554,573. 3 Claims. (Cl. 29—19.)



1. The method of manufacturing sheet-metal consisting in rolling the heated bars back and forth in the rolls keeping the metal from contact with the mill-floor during rolling until reduced to a gauge for matching and doubling, elevating the sheets to a point above the mill-floor, matching and doubling the sheets at this elevation, and passing the sheets while still in the elevated position back to the heating furnace.

1,532,608. TORQUE-CUSHIONING MEANS. OTTO E. SEBERLY, Moline, Ill., assignor, by mesne assignments, to William Mutschler, trustee, Goshen, Ind. Filed Dec. 14, 1922. Serial No. 606,991. 5 Claims. (Cl. 64—102.)

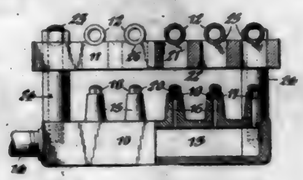


2. A cushioned torque universal joint including a pair of cross yokes disposed normally in quadrature and adapted to receive and deliver rotary power, yielding means interposed between the bearing parts of said yokes, a hollow inwardly facing yoke ring to hold said yokes and cushioning means in effective circular alinement, and diametrically disposed rigid means carried by said ring to secure one of said yokes demountably in coturnable relation to said ring, which ring is radially perforated to admit said yoke securing means endwise.

1,532,609. LIQUID-DISPENSING DEVICE. WILLIAM C. TAGGART, Big Rapids, Mich. Filed June 4, 1924. Serial No. 717,771. 2 Claims. (Cl. 221—100.)

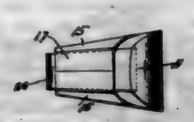
1. A pipe section to be inserted in the delivery line of a service station pump, a tank integral with said pipe and an imperforate wall between said tank and said pipe, a spout in said tank near its upper part, a visual-contents receptacle in communication at its top with said spout and having at its bottom a conduit communicating with said pipe section, and a shut-off valve in said conduit, a liftable measuring cup in said tank, and means adapted to lift said cup and tilting means adapted to empty said cup into said trough.

1,532,610. ELECTRIC HAIR-SINGEING TOOL. HORACE B. TAYLOR, Ogema, Saskatchewan, Canada. Filed Feb. 28, 1923. Serial No. 622,784. 3 Claims. (Cl. 219—39.)



1. An electric hair singeing tool including a casing element having a handle portion and an elongated tube extending therefrom at one end, the handle portion being formed with a bore in line with the tube and a recessed portion at the other end of substantially larger size than the bore, and a singeing element adapted for removable mounting and housing in said casing element having a plug removably connected to said handle portion mounted in the enlarged recess therein, means carried by said plug extending through the bore in the handle and the tubular casing, a heating coil carried by said last mentioned means and extending beyond the end of the tubular casing element, the plug having contact with said heating coil, and an attachment plug adapted for removable connection with the first mentioned plug for connecting said heating element in an electric circuit.

1,532,611. EYESHADE. CARL C. TAYLOR, Des Moines, Iowa. Filed Aug. 7, 1924. Serial No. 730,597. 2 Claims. (Cl. 2—12.)

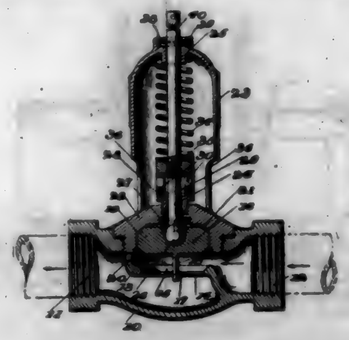


2. An eye shade comprising a strip of resilient material having a central transverse slot and hook members at its ends, said strip being bent to form two tubular members and having the hook members extended through said slot, and head engaging tabs on the tubular members.

1,532,612. GAS BURNER. ISRAEL B. TAYLOR, Buffalo, N. Y. Filed June 14, 1924. Serial No. 720,120. 4 Claims. (Cl. 158—99.)

1. A gaseous fuel burner, comprising a supporting base, a gas-receiving chamber, a plurality of burner nozzles rising from said base, a grate disposed above said nozzles in spaced relation thereto, said grate having rows of openings therein, and a plurality of individual flame bars sustained over said grate and substantially in line with said rows of grate-openings.

1,532,613. BRACELET HOOK. LOUIS E. VALCOURT, Providence, R. I., assignor to Louis Stern Co., Providence, R. I., a Corporation of Rhode Island. Filed Feb. 7, 1924. Serial No. 691,147. 4 Claims. (Cl. 24—236.)



1. A bracelet hook formed of a single piece of sheet stock folded upon itself to provide a body portion with an extending shank having a hook-shaped end and also a resilient tongue member for closing said hook, said body portion having integral folded-up top, bottom and side walls in box-shape formation to inclose and protect that portion of the tongue member extending through said body.

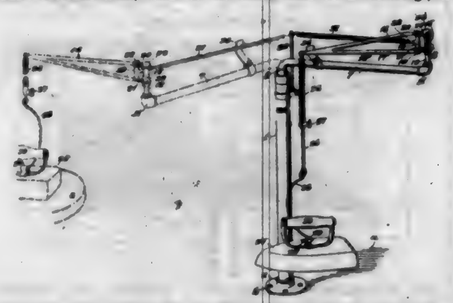
1,532,614. WATERPROOF CONTAINER. KARL WAIBEL, New York, N. Y. Filed June 12, 1924. Serial No. 719,587. 2 Claims. (Cl. 224—5.)

1. A device of the class described comprising a casing, curved to fit the shape of a person's wrist, means for strapping said casing to the wrist and the belt of a person, a cover cap for said casing, a bracket within said casing, a screw passed through said cap into said bracket, a pair of oppositely disposed pins or studs within said casing adapted to be engaged by the arms of said bracket from below upon the operation of said screw for tightly drawing said cap against said casing to provide a watertight seat for said cap, a knob at the upper end of said screw, a waterproof lining on the inner face of said cover adapted to hermetically seal the casing upon the home screwing of said screw and a moisture absorbing lining within said casing.

1,532,615. AUTOMATIC CUT-OFF AND CUT-IN VALVE. EDWIN COOPER WILLS, East Orange, N. J. Filed Feb. 29, 1924. Serial No. 696,012. 5 Claims. (Cl. 137—162.)

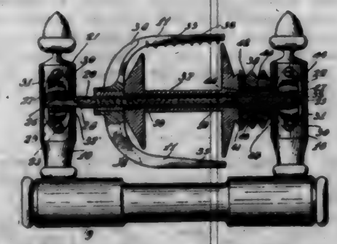
3. A cut-off valve including a valve body having vertically spaced valve seats, a valve member guided therein and shiftable between the said seats, a valve stem extending through the portion of the body adjacent to one of the seats and having connection with the adjacent side of the valve member, a fusible element around the valve stem exteriorly of the body, a valve stem guide in connection with the body forming a flat seat for one end of the fusible member, a nut against the other end of the fusible member having a threaded connection with the valve stem, a bonnet extending from the valve body, having a guide for the outer portion of the valve stem and having cut-away portions at its opposite sides adjacent to the valve body, and a spring around the valve stem compressed between the said nut and a portion of the said bonnet, and exposed to view with the said nut and the fusible element through the cut-away portions of the bonnet.

1,532,616. EQUILIBRATING MECHANISM FOR FLYING MACHINES. ERASTUS E. WINKLEY, Lynn, Mass. Filed June 25, 1918. Serial No. 241,860. 14 Claims. (Cl. 244—29.)



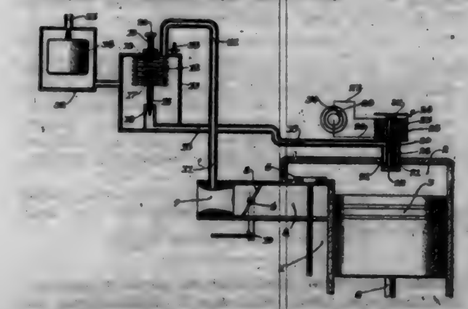
1. An equilibrating mechanism for flying machines comprising a guiding device, a lever connected with the guiding device, a main pendulum normally disconnected from the lever, a magnet carried by the pendulum, an armature carried by the lever, a battery in a circuit normally open, and an auxiliary pendulum adapted when the equilibrium of the flying machine is disturbed to close the circuit so as to energize the magnet to turn the lever and thereby impart a primary restoring movement to the guiding device, the energizing of the magnet serving to connect the lever with the main pendulum so that the guiding device is thereafter turned proportionately to the change in the angular relation between the main pendulum and the flying machine.

1,532,617. SUPPORT FOR TAILORS' IRONS. JOHN YOUNGBERG, Los Angeles, Calif. Filed Dec. 29, 1923. Serial No. 682,629. 5 Claims. (Cl. 68—9.)



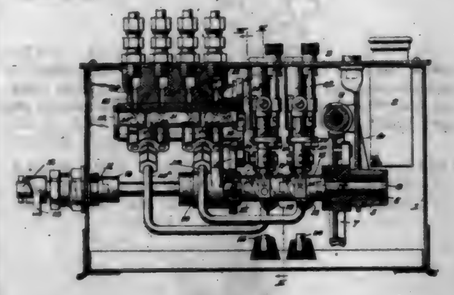
1. In combination with a pressing iron and a pressing board, a standard secured to said board, a bracket

swivelled in said standard, a bracket arm swivelled on said bracket, an elongate spring connected at one end to said bracket arm, and at its other end to a bearing; a



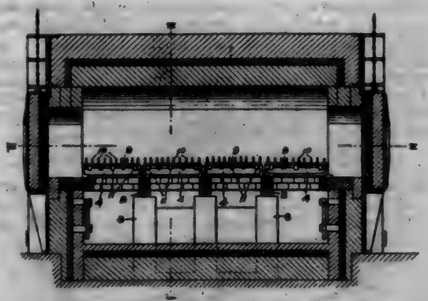
rod connected to said iron and extending through said bearing; and a set screw in said bearing for securing said rod in adjusted position therein.

1,532,618. SPINNING WHEEL. HYACINTHE ORIGÈNE BORDUAS, Montreal, Quebec, Canada. Filed May 16, 1921. Serial No. 469,970. 1 Claim. (Cl. 64—27.)



In a machine of the type described including a hollow shaft and a flyer keyed to said shaft, bearings rotatably supporting the ends of said shaft, said shaft being hollow thereby constituting an oil reservoir and having a passage communicating with one of the bearings for lubricating the latter, ball members supporting said bearings, clamping elements engaging said ball members, for supporting the bearings for universal movement, substantially, as and for the purposes set forth.

1,532,619. INTERNAL-COMBUSTION ENGINE. MILTON B. CHANDLER, Chicago, Ill., assignor to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 22, 1919. Serial No. 319,099. 3 Claims. (Cl. 123—119.)

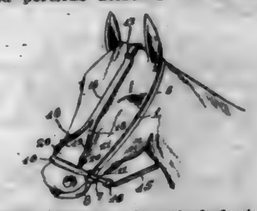


1. The method of feeding an internal combustion engine which consists in, creating a flow of air, causing the flow of air to generate a drop in pressure corresponding to the flow, creating a flow of fuel, causing the drop in pressure to control the flow of fuel, and directing the flow of air and fuel separately into a combustion chamber.

1,532,620. LUBRICATOR. THOMAS EMMET COLEMAN, Madison, Wis., assignor to Madison-Kipp Corporation, Madison, Wis., a Corporation of Wisconsin. Filed July 21, 1922. Serial No. 576,600. 6 Claims. (Cl. 184—27.)

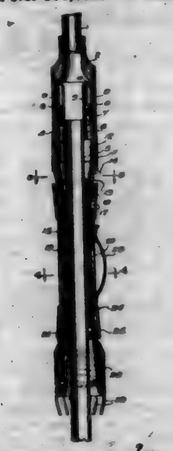
1. In a force feed lubricator, the combination of an actuating shaft; a pump operated thereby; a distributor casting provided with a plurality of conduits extending to the points to be lubricated; a distributor element mounted in said casting, said distributor element having a circumferential groove formed therein and a plurality of channels extending therethrough, said channels communicating at one end with said circumferential groove and at their opposite ends standing in alinement with the conduits through which the oil is to be forced; and means operable in timed relation with the pump for moving said distributor element step-by-step to cause the channels to register successively with the respective conduits.

1,532,621. ENAMELING FURNACE. ALAN D. DAUCH, Pittsburgh, Pa., assignor to George J. Hagan Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 27, 1923. Serial No. 659,443. 11 Claims. (Cl. 263—2.)



1. An enameling furnace having in combination therewith a plurality of beams or members arranged in spaced relation within the furnace and racks consisting of a plurality of longitudinal sections provided with pins for supporting articles and detachably supported by said beams or members.

1,532,622. BRIDLE BIT. EDOR ERICKSON, Philipsburg, Mont. Filed Aug. 8, 1924. Serial No. 730,459. 5 Claims. (Cl. 54—15.)



1. In a bridle bit, a mouth piece, bit rings at the ends of the mouth piece, a guiding and retaining member on the outer face of each bit ring, a nose band hav-

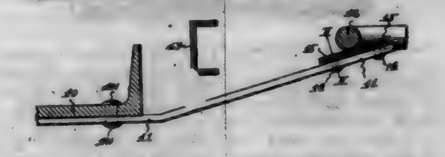
ing end portions extended between said guiding and retaining members and the bit rings and the extremities of said end portions attached to said bit rings, and

means whereby reins may be attached at their ends to the end portions of said nose band between said guiding and retaining members and the extremities of the nose band.

1,532,623. PUMPING DEVICE FOR OIL WELLS. JEREMIAH J. FITZPATRICK, Tulsa, Okla. Filed Nov. 24, 1923. Serial No. 676,799. 7 Claims. (Cl. 166—2.)

1. In a jet flow packer for oil wells, a housing adapted to be arranged at a distance from the bottom of the well, a partition extending transversely of said housing, well tubing depending from said partition forming a gas chamber within said housing beneath the partition, said partition being provided with openings for the passage of gas, the outer wall of said housing being provided with openings, and a member surrounding said housing and adapted to close said openings.

1,532,624. CONDENSER FOR MOTOR-VEHICLE RADIATORS. RANDALL D. GRIFFITH and CHARLES SCOTT HUNTER, Des Moines, Iowa. Filed Aug. 27, 1923. Serial No. 659,610. 3 Claims. (Cl. 257—25.)

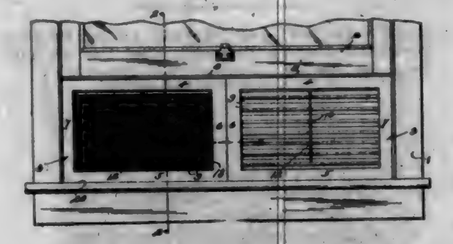


1. In a condenser of the class described, a hollow member having projecting hollow portions, adapted to drain to a common point, a tube entering said member at said point and projecting substantially into said member, open at its inner end and adjacent to said point and serving to reinforce the walls of said member.

1,532,625. PLAYING DEVICE. HENRY RIDGEWAY HART, Montclair, N. J. Filed July 9, 1923. Serial No. 650,537. 3 Claims. (Cl. 273—25.)

2. In an inflatable device, a cover, having an opening therein, a bladder having an opening therein, a valve tube having a threaded portion extending through the opening in the bladder and provided with a rimmed flange on the tube adapted to engage the inner side of the bladder, adjacent the opening, a rimmed washer through which the threaded portion of the tube extends lying over the outer side of the bladder adjacent the opening, a clamping nut threaded on to the tube and forcing the rimmed washer against the bladder to squeeze the latter against the flange and form an airtight union, the threaded portion of the valve tube extending through the opening in the cover and a clamping nut threaded on to the tube and clamping the cover against the first mentioned clamping nut to retain the bladder in proper position in the cover.

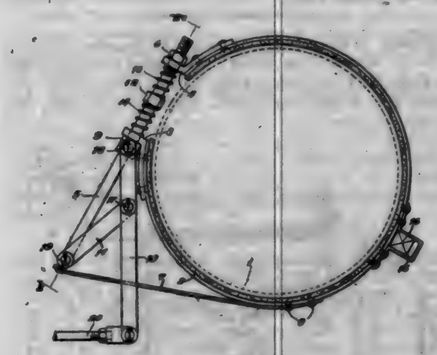
1,532,626. BRAKE-BEAM SUPPORT. BRODERICK HASKELL, Franklin, Pa. Filed May 10, 1924. Serial No. 712,326. 8 Claims. (Cl. 188—218.)



5. In a truck, the combination of a brake beam, a supporting bar affixed to a truck portion and extending transversely below the brake beam to afford a safety support in the event of detachment of the beam, and a combined anti-friction and bearing element associated with said supporting bar and interposed between said supporting bar and brake beam to provide a third or fourth point support for the latter upon the former, said bearing element having less resistance to frictional wear or abrasion than said brake beam.

1,532,627. PROCESS FOR THE PREPARATION OF AMINOAZO COMPOUNDS. KARL HEUSNER and MAX SIMON, Leverkusen, near Cologne-on-the-Rhine, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer & Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed July 24, 1924. Serial No. 727,984. 1 Claim. (Cl. 260—69.)

A process for the preparation of sulfaminoazo bodies consisting in coupling diazo-compounds of any kind with alpha-naphthylsulfaminic acid.



1,532,628. WINDOW VENTILATOR. JOHN S. MACKENZIE, Delaware, Ohio. Filed Aug. 1, 1923. Serial No. 655,120. 1 Claim. (Cl. 268—10.)

The combination with a frame, of a plurality of slats pivotally supported thereby, a plate associated with the upper rail of the frame, a spring finger having one end fixed to the plate, a rod pivotally connected with the slats, said rod having vertically spaced grooves in

its upper end adapted to be yieldably engaged by the finger to hold the rods and thus the slats in selected adjusted positions.

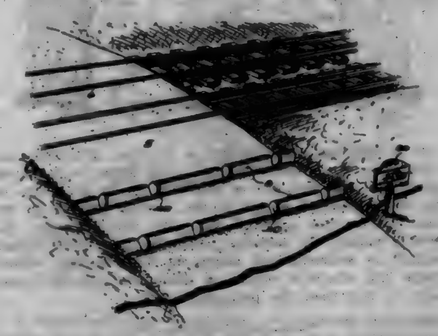
1,532,629. FRICTION BRAKE MECHANISM. CHAUNCEY L. C. MAGEE, Chicago, Ill. Filed Oct. 2, 1920. Serial No. 414,286. 8 Claims. (Cl. 188—77.)

1. In combination with a motor vehicle wheel, a friction brake therefor comprising a drum which turns with the wheel, a brake band on said drum, and toggle mechanism for contracting the band on the drum, comprising a support for the band, and a spring secured to said band to form a resilient support for said toggle mechanism, said spring having a pull or tensile strain imposed thereon by the operation of said mechanism.

1,532,630. ARRANGEMENT FOR LAUNCHING AEROPLANES IN THE AIR FROM THE GROUND OR FROM A VESSEL. NICOLAS EMILIEN MENTHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed July 28, 1924. Serial No. 728,751. 7 Claims. (Cl. 244—2.)

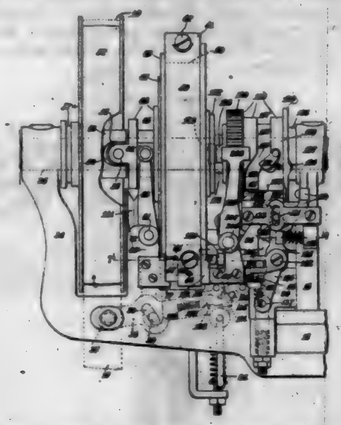
1. In a device for launching aeroplanes, the combination of a motor, a flywheel, a drum and a track all mounted to turn on a common vertical axis, a clutch between said flywheel and drum, a carriage on the track, and a cable connecting said drum and carriage.

1,532,631. FUNGICIDE, INSECTICIDE, AND BACTERICIDE COMPOUND. EMIL MOLS, Halle-on-the-Saale, Germany, assignor to The Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Mar. 21, 1923. Serial No. 626,634. 1 Claim. (Cl. 167—6.)



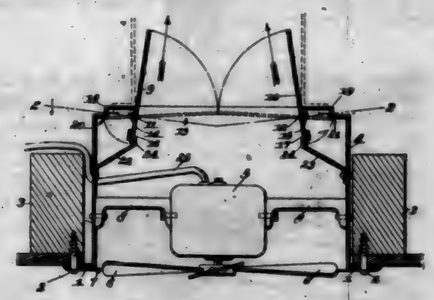
The process for producing dusting powders for plant protection purposes which process consists in vaporizing or subliming insoluble fungicides, insecticides or bactericides on to inert materials in finely divided state, substantially as described.

1,532,632. CLASP FOR BRACELETS AND LIKE ARTICLES OF JEWELRY. ALMYR L. NEWMAN, Warwick, R. I., assignor, by mesne assignments, to A. L. Newman Company, Cranston, R. I., a Corporation of Rhode Island. Filed Jan. 11, 1924. Serial No. 685,544. 4 Claims. (Cl. 24—232.)



1. An article of the type specified comprising a clasp-member having a hooked beak, an open-sided tubular sleeve rotatable within the hook to close the opening of the beak, and a finger-piece on said sleeve projecting through a slot in the hook and having its outer portion enlarged to overlap the edges of the slot, the finger-piece being inserted through an enlarged opening at the end of the slot formed by cutting away the metal to provide a flap-like tongue which is afterward bent back to close the end of the slot and to act as a stop to limit the turning movement of the sleeve.

1,532,633. ROADWAY. WILLIAM NOBLE and WILLIAM KENNEDY, Fort Dodge, Iowa. Filed Nov. 3, 1924. Serial No. 747,576. 3 Claims. (Cl. 238—3.)

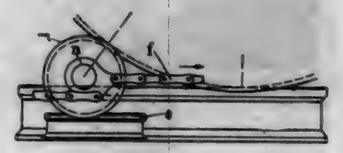


1. A roadway having a transverse ridge in the path of travel of vehicles to warn the operators of the vehicles of a dangerous place in the road, said ridge being provided with channels for the passage of the wheels of the vehicles.

1,532,634. STOPPING AND STARTING MECHANISM FOR SHOE-STITCHING OR OTHER MACHINES. JOHN ROGER OLIVER, Medfield, Mass., assignor to Reece Shoe Machinery Company, Boston, Mass., a Corporation of Maine. Filed Oct. 23, 1923. Serial No. 670,279. 15 Claims. (Cl. 192—140.)

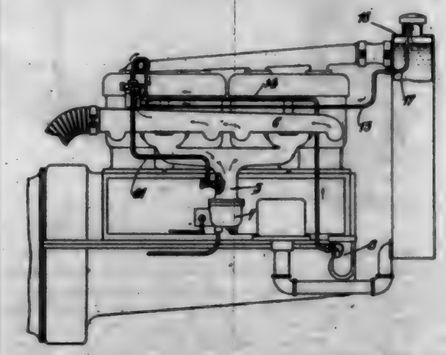
1. In a high speed power driven machine, a shaft, and a stop mechanism comprising means operative after disconnection of power for bringing the machine shaft to a stop without shock in an indeterminate position, and power operated means coming automatically into action subsequent to the stoppage for turning the shaft to a predetermined stopping position.

1,532,635. CEILING VENTILATOR. JUSTIN EDWARD OSBUN, Riverside, Calif. Filed Feb. 21, 1924. Serial No. 694,298. 4 Claims. (Cl. 230—11.)



1. A ventilator comprising a housing, shutters controlling an air outlet of the housing, hinge means upon which the shutters are so mounted as to gravitate to the closed position, a fan in the housing driving an air blast toward the outlet to hold the shutters open, deflectors within the housing preventing air from getting behind the shutters, and means on the deflectors behind which the shutters engage to limit the opening movement to less than the perpendicular.

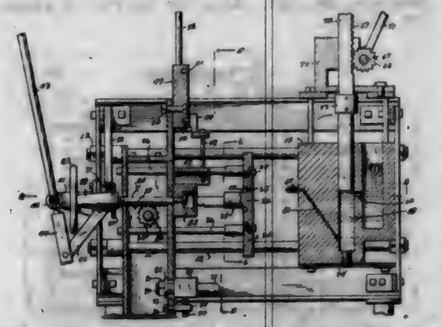
1,532,636. BLOCK FOR PAVING AND THE LIKE AND PROCESS FOR MAKING THE SAME. MONNOE LAWRENCE PATRIC, Des Moines, Iowa. Filed Aug. 27, 1924. Serial No. 734,544. 3 Claims. (Cl. 18—48.)



1. An asphalt block comprising asphaltic rock with approximately four to twelve percentum asphaltic content, of approximately fineness to pass a ten mesh screen with approximately ten percentum of a fineness to pass a two hundred mesh screen, mixed, heated and moulded while hot under great pressure.

1,532,637. RAILWAY-CAR DRIVING AXLE. HEINRICH POSENTRUP, Munster, Germany. Filed Dec. 16, 1924. Serial No. 756,290. 1 Claim. (Cl. 114—173.)

A device for driving railway cars, comprising in combination, two endless driving members; pairs of rotatory supports for them; means to rotate one of said pairs, two axles coupled with said pairs at opposite points thereof; two grooved wheels at each end of each axle; and auxiliary rails arranged inside of the rails of the track, and upon which auxiliary rails the inner pairs of grooved wheels run.

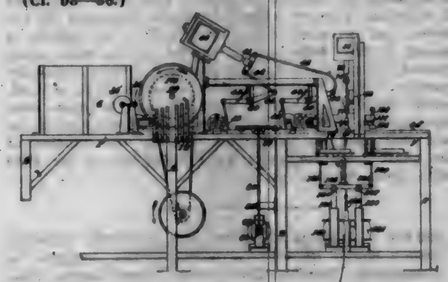


1,532,638. VAPORIZER. EDWARD B. RODGERS, Hoboken, N. J., assignor to Victory Vaporiser Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 4, 1922. Serial No. 592,316. 7 Claims. (Cl. 123—25.)

1. A vaporizer comprising a mixing chamber attachable to the exhaust manifold of an internal combustion engine, means for baffling and expanding exhaust gases and conducting the same to the mixing chamber, a conducting element for crank case gases communicating with said mixing chamber through said means, a water vapor conducting element leading to the mixing chamber, and means for introducing the mixture into the intake manifold of the engine.

1,532,639. MACHINE FOR REBABBITTING CONNECTING RODS. CLIFFORD T. SONDLEY, Newberry, S. C. Filed Apr. 24, 1924. Serial No. 708,784. 22 Claims. (Cl. 22—58.)

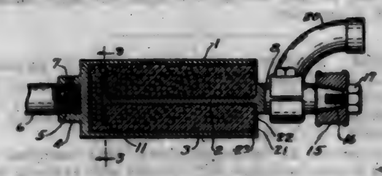
1. A machine for casting Babbitt metal within bearing yokes, the machine including a Babbitt metal pot having a discharge nozzle, a carriage movable toward or from the nozzle, a pair of dies mounted upon the carriage and adapted to clamp the article to which the Babbitt metal is to be applied between the dies, means for shifting said dies toward or away from each other, means for shifting the carriage as a whole and the dies toward the melting pot along a line passing through the axis of the discharge nozzle, one of said dies being provided with a sprue opening adapted to communicate



with the interior of the yoke and in which sprue opening the nozzle is adapted to extend, and means for forcing the molten metal out through said nozzle.

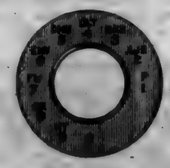
1,532,640. SULPHUR DYES. OSKAR SPENGLER and ALFRED THURM, Dessau, Anhalt, Germany, assignors to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Aug. 2, 1924. Serial No. 729,841. 3 Claims. (Cl. 260—29.)

2. The dyes containing sulphur being in the pulverized dry state dark powders soluble in alkali metal sulfide solution with a blue color and, when reduced, dyeing cotton from an alkaline vat deep red after oxidation; the dyes being obtained by treating with a sulphur halide the compound obtained by alkali fusion of a para-diazine having as members two 8-sulfo-1.2-naphthalene rings.



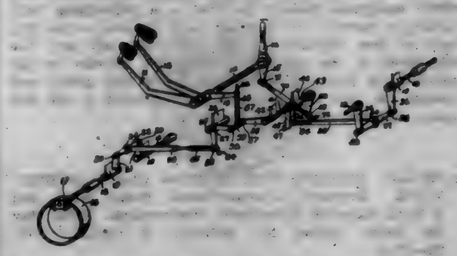
1,532,641. ORGANIZED APPARATUS FOR ASSEMBLING, SCORING, BREAKING, AND UNITING MEMBERS TO FORM A KNOCKDOWN BASKET. BARTLETT R. WILLIAMSON, San Francisco, Calif., assignor to John A. Williamson, San Francisco, Calif. Filed Sept. 11, 1923. Serial No. 662,078. 14 Claims. (Cl. 93—36.)

1. An apparatus for assembling side and bottom forming blanks in flat formation to provide a flat unit from which a basket is adapted to be subsequently folded, the same including means for scoring the blanks transversely to provide fold lines, and means for breaking the blanks on their scores.



1,532,642. MOTOR-VEHICLE-LIGHT BRACKET. EMMETT G. WRIGHT, Seattle, Wash. Filed June 11, 1923, Serial No. 644,724. Renewed Mar. 2, 1925. 3 Claims. (Cl. 240—52.)

1. A bracket for motor vehicle lights embodying a casing having a hub on one end with a threaded hole in it, a core having veins arranged in the shape of a V, a disc at the inner ends of the veins, a hub at the outer end of the veins, a resilient material between the core and the casing, an arm with a clamp on one end



by which it may be attached to the hub of the core, and its other end made so that a post may be attached to it, and a post with a means for attaching it to the end of the arm and a clamp for holding a lamp.

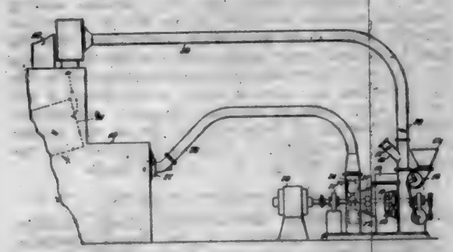
1,532,643. CALLING DEVICE. FRED L. BARR, La Grange, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Substitute for abandoned application Serial No. 525,931, filed Dec. 30, 1921. This application filed May 13, 1922. Serial No. 560,633. 7 Claims. (Cl. 179—90.)

1. An calling device for automatic telephone systems having a rotatable finger hole dial, impulse sending mechanism variably controlled by the dial in accordance with the finger hole used, digit designations for the finger holes, and letter designations for the finger holes also, the said letter designations being assigned to the holes according to a method which brings letters O and I in the same holes as the digits 0 and 1, respectively, thereby rendering it immaterial so far as the number of impulses transmitted is concerned whether the subscriber calls the said letters or the said digits.

1,532,644. BRAKING MECHANISM. PAUL BASTIEN, Cleveland, Ohio, assignor to the Rubay Company, Cleveland, Ohio, a Corporation. Filed Sept. 15, 1922. Serial No. 588,415. 5 Claims. (Cl. 188—106.)

1. Brake applying mechanism for vehicles, comprising brakes for the front and rear wheels of a vehicle, separate mechanisms for actuating the front and rear sets of brakes, manually operable levers for each of said mechanisms, a pair of aligned shafts rotatable relative to each other, one of said actuating mechanisms being connected to one of said shafts and the other of said actuating mechanisms being connected with the other of said shafts, and means adapted to couple said shafts

together for actuating said mechanisms in unison when one of said levers is operated, said means permitting independent rotation of one of said shafts for actuating only one of said mechanisms when the other of said levers is operated.



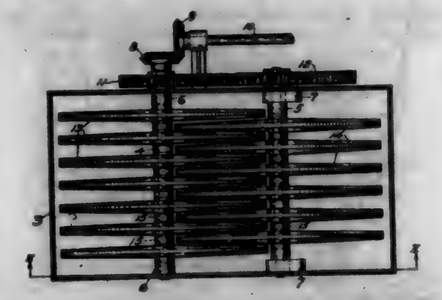
1,532,645. METHOD OF VULCANIZING RUBBER. CLAYTON W. BEDFORD, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 16, 1921. Serial No. 492,825. 6 Claims. (Cl. 18—53.)

1. A process of vulcanizing rubber that comprises admixing a zinc persulfide with rubber and applying heat thereto.

1,532,646. THIOCARBANILIDE DERIVATIVE. CLAYTON W. BEDFORD, Akron, Ohio, and ROBERT L. SIBLEY, Elizabeth, N. J., assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Aug. 12, 1918, Serial No. 249,580. Divided and application filed Nov. 24, 1919. Serial No. 344,252. Again divided and this application filed Oct. 2, 1922. Serial No. 591,946. 6 Claims. (Cl. 260—125.)

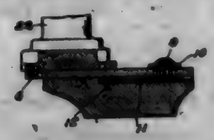
1. The thiourea derivatives constituting the reaction product of carbon bisulphide with the base formed by the reaction of less than two mols of hydrogen sulphide with one mol of a paranitroso body.

1,532,647. METHOD OF AND APPARATUS FOR PREPARING, FEEDING, AND BURNING PULVERIZED FUEL. LARS H. BERGMAN, Chicago, Ill., assignor to Raymond Bros. Engineering Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 14, 1924. Serial No. 706,415. 6 Claims. (Cl. 110—106.)



1. The method of preparing, feeding and burning fuel, which comprises feeding the fuel to a pulverizing mill, causing a current of hot gases from the flue to the furnace to pass through the mill, admitting air with the hot gases to the mill, controlling the amount of air admitted in relation to the amount of hot gases, and feeding the fuel by flotation on the current of air and gases from the mill to the furnace.

1,532,648. PROCESS FOR MAKING CLOTH SUBSTITUTE. MICHELE ANGELO BESSO, Rome, Italy, and F PAUL HABICHT, Schwanden, Switzerland. Filed May 26, 1919. Serial No. 300,011. 6 Claims. (Cl. 92—21.)

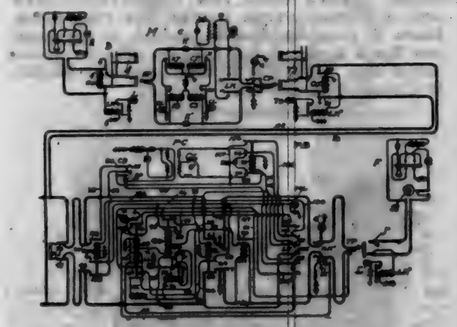


6. A process for the formation of a cloth substitute having a non-closed, naturally porous structure, comprising the suspension of fibres in a suitable fluid, their settlement in a layer of uniform thickness on the surface of a support and the application to the fibres of means to cause the fibres to adhere together so localised and for a sufficient time that they adhere together but on relatively short portions, and consequently secure the natural porosity and mobility of parts of a woven fabric.

1,532,649. FIBER-BEATING MACHINE. CHARLES P. BIRGER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 30, 1922. Serial No. 597,970. 4 Claims. (Cl. 92—26.)

1. A machine for beating fibers comprising a container, two power driven rotatable vertical relatively adjustable shafts disposed therein, and means mounted on each of said shafts for beating said fibers.

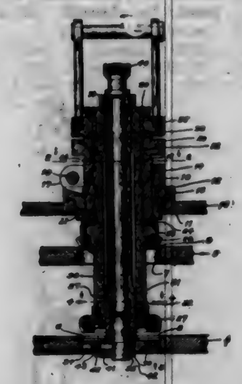
1,532,650. PORTABLE MILLING MACHINE. HUMPHRIES W. BREWER, Du Bois, Pa. Filed June 28, 1924. Serial No. 722,963. 4 Claims. (Cl. 90—12.)



1. In combination in a portable milling machine, a base plate or member, a slide plate interlocking with the base plate and mounted for reciprocation thereon, a vertical tool spindle mounted on the slide plate and carrying a downwardly projecting milling cutter, an upright casing bolted upon the slide plate in which the spindle is mounted for vertical movement and for a movement of rotation, a screw adjusting member mounted in the casing and swivelled to the upper end of the spindle, a second vertical drive spindle carried by the slide plate, gearing intermediate the two spindles, a third manually operable vertical spindle upon the slide plate, a horizontal shaft on the slide plate, gearing between such third spindle and said shaft, and interengaging means on said shaft and the base plate, whereby the rotation of the shaft from its operating spindle moves the slide plate along the base plate.

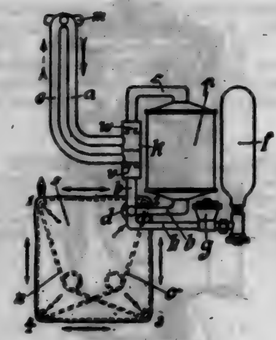
1,532,651. MANUFACTURE OF RUBBER GOODS. BRUCE KEITH BROWN, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a Corporation of Maryland. Filed June 13, 1924. Serial No. 719,845. 10 Claims. (Cl. 18—53.)

1. A method for the manufacture of rubber goods which consists in adding a small quantity of parabutyraldehyde to a rubber mix, fabricating an article from said mix, and vulcanizing the same.



1,532,652. TELEPHONE SYSTEM. HIRAM D. CURRIER and WILLIAM G. SHULL, Chicago, Ill., assignors to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 16, 1920. Serial No. 411,289. 17 Claims. (Cl. 179—42.)

2. A telephone system including a link circuit and a trunk circuit provided with a manual terminal for interconnecting subscribers' lines, and subscriber-controlled electromagnetic means for said trunk circuit for severing



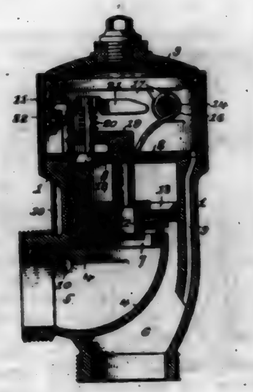
the talking conductors of the same when a subscriber signals for disconnection, and means for said trunk circuit for denoting a recall by the called subscriber.

1,532,653. VALVE-RESEATING TOOL. CLARENCE M. DAVISON, Baltimore, Md., assignor to Poole Engineering and Machine Company, Baltimore, Md., a Corporation of Maryland. Filed Nov. 16, 1922. Serial No. 601,269. 4 Claims. (Cl. 90—12.5.)

1. In a valve reseating tool for two axially aligned valve ports each having cylindrical portions and valve seats, the combination with an adapter, of a feed screw threaded in said adapter and comprising a bearing, an arbor moved axially by said screw and revolubly mounted in said bearing, two cutters on said arbor, the first cutter adjacent said screw and centered by said bearing with reference to the cylindrical portion of one port, the second cutter at the end of said arbor and means for centering said second cutter with reference to the cylindrical portion of the other port.

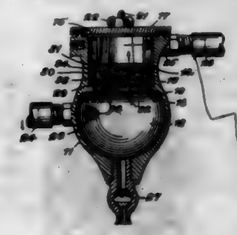
1,532,654. SELF-CONTAINED BREATHING APPARATUS. ALEXANDER BERNHARD DRÄGER, Lubeck, Germany. Filed June 9, 1921. Serial No. 476,237. 8 Claims. (Cl. 128—191.)

1. In a self-contained breathing apparatus, the combination of an air-purifying device, an oxygen container, breathing pipes connected with said device and container, breathing valves controlling said breather pipes, a breathing bag communicating with said pipes and arranged to receive revivified air, and means combined with said bag for automatically deflating the latter and expelling its contents into the apparatus.



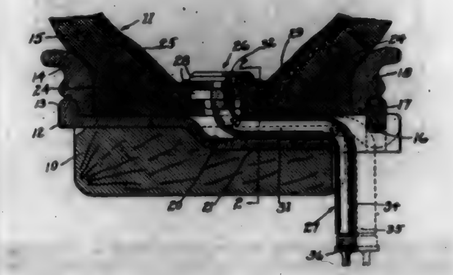
5. In an apparatus for providing breathing gas for the lungs, a breathing bag, and means carried by the latter for maintaining a superpressure in the breathing bag during the inhalation and exhalation periods.

1,532,655. IMPULSE TRANSMITTER FOR AUTOMATIC TELEPHONE SYSTEMS. JOHN ERICKSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 18, 1921. Serial No. 453,266. 9 Claims. (Cl. 179—90.)



1. The combination, with a calling device having a rotatable finger hole dial, of means for rotating the dial comprising a crank and a member carried thereby for engaging the dial in place of the finger of the operator, said member comprising an endwise movable mechanical finger having a bearing on the free end of said crank, and a handle common to said crank and member for rotating the crank and for operating the said member.

1,532,656. FLUSH VALVE. ROBERT E. FIVEY, Chicago, Ill. Filed Apr. 15, 1922. Serial No. 552,853. 2 Claims. (Cl. 137—93.)

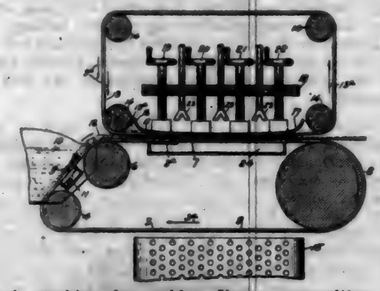


2. In a flushing valve of the type described, the combination of a valve housing, a main valve and its associated control piston and piston chamber, a relief valve associated with said piston chamber, a rock shaft mounted in said housing, manual means for turning said rock shaft in one direction, a spring tending to turn said rock shaft in the other direction, an arm on the rock shaft constituting an operating toe, and a trip lever pivoted at its mid-length to said relief valve with one end having fulcrum bearing beneath an abutment on the valve housing and the other end projecting into the path of the operating toe aforesaid.

1,532,657. AIR FILTER. ISAAC FLEISHER, New York, N. Y. Filed Jan. 17, 1922. Serial No. 530,003. 2 Claims. (Cl. 183—48.)

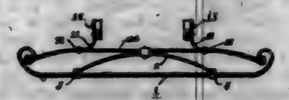
2. An air filter having in combination, a casing with communicating lower and upper chambers, the upper chamber having in its upper part an entrance, a cover hinged to the casing for closing the entrance, means for releasably locking the cover when closed, an outlet pipe leading from the upper chamber adjacent the entrance, said lower chamber of substantially a parabolic shape having in its upper part a tangentially disposed inlet pipe, a valve controlled nipple in the lower end of the lower chamber, an annular shoulder protruding inwardly from the wall of the casing at the passage between the chambers and above the inlet pipe of the lower chamber for causing the air to be deflected downwardly in a spiral course in the lower chamber, and alternately lapping porous plates and absorbent fibrous pads removably disposed in the upper chamber on said annular shoulder.

1,532,658. VALVE STEM FOR PNEUMATIC TIRES AND ACCOMMODATING WHEEL RIM THEREFOR. JAMES E. HALE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 21, 1919. Serial No. 305,828. 12 Claims. (Cl. 301—11.)



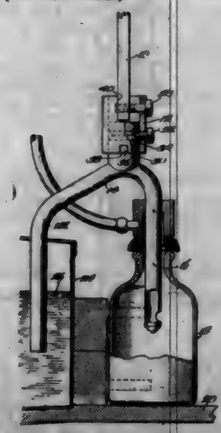
1. The combination with a wheel felloe, of a tire-retaining rim provided with a transversely disposed depressed portion forming a channel of substantially uniform depth adapted to receive the valve stem of a tire.

1,532,659. COLLAPSIBLE-TUBE-CLOSING MACHINE. THOMAS L. HARRISON, Philadelphia, Pa. Filed Apr. 30, 1924. Serial No. 710,021. 8 Claims. (Cl. 113—54.)



1. In a collapsible tube closing machine, the combination of oscillating clamping jaws adapted to cooperate to initially clamp the open end of a collapsible tube, a cam for actuating the jaws and a spring for forcing the jaws to perform the clamping, a toggle link pivoted near the end of one of said jaws, a flapper carrying a shoe pivoted at a point midway of said toggle link, a bow spring for normally holding tension on toggle link, flapper and shoe in its upright or closed position, and means coacting with the free end of said toggle link for causing said flapper and shoe to hinge across said jaws while jaws are in clamping relation through the yielding of bow spring, causing the flattened end of the tube to bend laterally across said jaw.

1,532,660. MACHINE FOR MAKING FIBROUS COMPOSITION. IAN D. PATTERSON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 10, 1922. Serial No. 588,645. 7 Claims. (Cl. 92—39.)



1. A machine for making fibrous composition comprising means for transporting the composition, and means for gradually compressing the same, said last mentioned means comprising a perforated flat pressure plate.

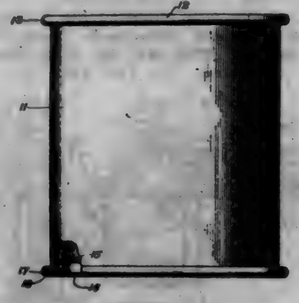
1,532,661. BUMPER FOR VEHICLES. WILLIAM CYRUS RICE, Grand Rapids, Mich. Filed Sept. 24, 1924. Serial No. 739,577. 8 Claims. (Cl. 293—55.)

1. A bumper for vehicles comprising: forward and rearward resilient portions extending transversely of the vehicle and inter-relatively hingedly connected at a point intermediate the ends of one of said portions.

1,532,662. CLUTCH. ARTHUR I. RISSER, Chicago, Ill., assignor to U. S. Bottlers' Machinery Co., Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 15, 1923, Serial No. 668,457. Divided and this application filed Apr. 7, 1924. Serial No. 704,558. 2 Claims. (Cl. 287—108.)

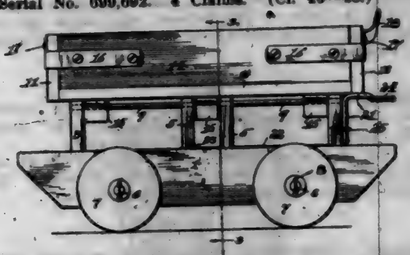
1. A clutch device for detachably connecting a siphon of a bottle filling machine to a siphon support, comprising a member secured to the support, a cylindrical opening in said member adapted to receive a cylindrical stem on the siphon to be connected with the support, means to secure the siphon stem against longitudinal movement within the opening in said member, and means to prevent rotation of the siphon stem within the opening in said member consisting of a lug on the stem adapted to enter a notch in the member, said notch and lug cooperating to limit inward movement of the stem within the member.

1,532,663. TREATMENT OF MOLTEN BATHS. PORTER W. SHIMER, Easton, Pa. Filed May 15, 1923. Serial No. 639,218. 23 Claims. (Cl. 148—15.)



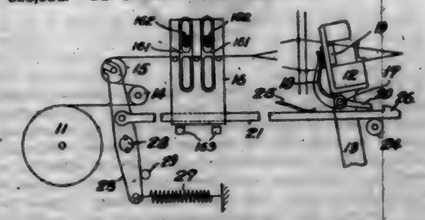
1. The method of purifying a molten bath of the character described which comprises subjecting the molten bath to the action of an alkali cyanide.

1,532,664. AUTOMATIC TELEPHONE SYSTEM. SIDNEY REYNELL SMITH, London, and JOHN SAVIN, Liverpool, England, assignors to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1921. Serial No. 434,857. 17 Claims. (Cl. 179—90.)



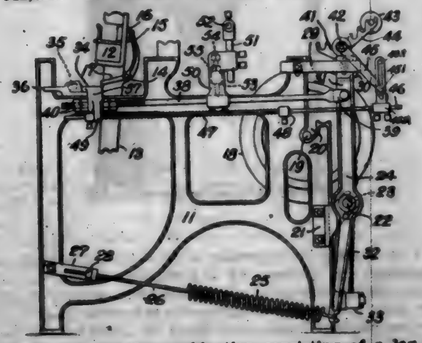
1. In a calling device for automatic telephone systems, a manually operable calling dial, a finger stop limiting the movement of said dial, impulse sending mechanism operated by said dial on its return, locking means operating to delay the return of said dial and effective to introduce a minimum time interval between successive actuations of said dial, and cooperating means between the said dial and locking means whereby the delay is omitted in case the normal time interval between successive actuations of said dial exceeds the minimum.

1,532,665. CONTAINER. CHARLES STOLLBERG, New York, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 28, 1921. Serial No. 518,203. 2 Claims. (Cl. 220—67.)



1. A container comprising a tubular body having a flangeless end portion, an end member welded to the body continuously along a zone extending entirely around the body, and having an outwardly extending flange, and a wire enclosed within said flange in a roll on the outside of the container, said roll gripping the wire against the side of the body and thereby reinforcing the welded joint.

1,532,666. TOY DUMP WAGON. JOHN WARDE and OTTO W. HOFF, Chicago, Ill. Filed Mar. 17, 1924. Serial No. 699,692. 4 Claims. (Cl. 46—48.)



1. A toy dump wagon comprising a frame on wheels, supporting members extending above the top of the frame, horizontal and inclined top margins on said supporting members, a pivot bar in said supporting members extending lengthwise of the frame, a wagon body swingingly mounted on said pivot bar and a hinged side member to the body.

1,532,667. MEANS FOR PROTECTING WARPS FROM DAMAGE IN LOOMS. WILLIAM H. BAKER, Montreal, Quebec, Canada. Filed Feb. 12, 1923. Serial No. 618,584. 24 Claims. (Cl. 139—115.)

1. In a loom having a warp-beam, a movably-mounted warp guide with which the warp is engaged on its way from the warp-beam, a lay, and protector-mechanism including a dagger and a frog, the latter connected operatively with said warp-guide for warp-slackening and lay-arresting purposes, the combination with said elements of yielding means holding said warp-guide in normal position, such means capable of arresting the lay without shock before completion of the beating-up movement of the lay by absorbing the momentum of the lay.

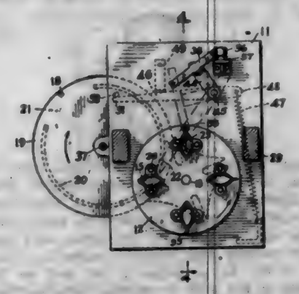
1,532,668. MEANS FOR PROTECTING WARPS FROM DAMAGE IN LOOMS. WILLIAM H. BAKER, Montreal, Quebec, Canada. Filed May 25, 1923. Serial No. 641,420. 27 Claims. (Cl. 139—115.)

1. In a loom, the combination consisting of a lay, a warp-beam, a whip-roll, a whip-roll support constituted of a swing-frame comprising a transversely-extending rockshaft arranged below the warp-beam and arms on which the whip-roll is mounted with capacity to rock relative to the arms in response to variations in the tension of the warp, and so that the whip-roll is carried forward and rearward by the swing-frame as the latter swings; protector-mechanism connecting with said swing-frame, and momentum-absorbing means holding the swing-frame in its normal position and operating to arrest the lay in its beating-up movement, without shock, when the protector-mechanism connects the lay with the swing-frame.

1,532,669. SHOOTING APPARATUS. EMIL A. BARTHEKI, St. Louis, Mo. Filed Apr. 26, 1924. Serial No. 709,114. 4 Claims. (Cl. 124—15.)

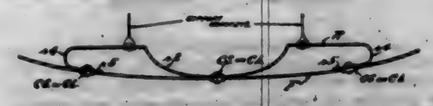
1. In a gun, the combination of a projectile-impelling hammer, spring means tending to advance the hammer, a lever in operative relation with the said hammer, a star-shaped trigger for operating the said lever, and a resilient element for preventing operation of said trigger in the wrong direction after having been actuated for operating the said lever.

1,532,670. TUBING SUPPORT. LESLIE J. BECHAUD, Coalinga, Calif. Filed Jan. 12, 1924. Serial No. 685,886. 7 Claims. (Cl. 103—219.)



1. An apparatus for locking tubing within a well casing comprising gripper slips carried by the tubing, and means adapted for placing under tension for forcing and retaining said gripper slips into locking engagement with said casing, said means being operable on the axial rotation of the tubing within the casing for moving said gripper slips into locking engagement with the casing and into released position therefrom enabling the ready adjustment of the tubing within the well casing after the same has been once locked therein.

1,532,671. WAIST-BELT HOLDER. ALBERT J. BENNETT, Chicago, Ill. Filed July 5, 1923. Serial No. 649,526. 2 Claims. (Cl. 241—9.)



1. A waist belt holder, comprising a pair of plate members connected together in spaced parallel relation by an end bend of a U form for abutment against the vertical edge of the flap of a garment, one member having a pair of marginal flanges for holding engagement with the edges of a waist belt, and the other member having a slot for engagement with the attaching means by which the meeting ends of the garment band are fastened together, the entry to said slot being in the upper edge of the member.

1,532,672. ARTIFICIAL-FLOWER MACHINE. SALVATORE BERTONA, New York, N. Y. Filed Sept. 20, 1924. Serial No. 738,750. 10 Claims. (Cl. 41—2.)

2. In a machine of the character described, a rotatable die table, a series of equally spaced dies on said table, a reciprocatory die cooperating with said spaced dies for impressing a blank, means for intermittently rotating said table for bringing each of said dies successively in alignment with said reciprocatory die, a pair of gripping jaws operatively connected to the table rotating means and adapted to grip a blank therebetween for removing the impressed blank from the die in which it is held, and for forwarding said blank to a delivery station, and stationary means for opening said jaws for causing said jaws to release said blank at said delivery station.

1,532,673. AUTOMOBILE BUMPER. JOSEPH H. BERTRAND, Jr., Albany, N. Y. Filed June 6, 1924. Serial No. 718,403. 3 Claims. (Cl. 293—58.)

3. In an automobile bumper; a flat spring rear member provided with spaced bracket attaching points between which is a forwardly curved arch, the ends of said member curved forward and inward to form U-shaped loops; cross bars with attaching means, attached to the free ends of the loops of said rear member; and a pair of substantially identically shaped flat spring front members, the central portion thereof offset edgewise, adapted to be attached to said cross bars with the offset either in the same or in reversed position relative to the horizontal axis of said front members.

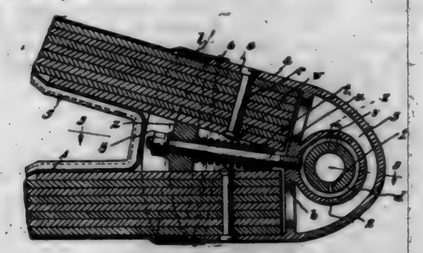
1,532,674. AUTOMATIC CALLING DEVICE. JOHN G. BLESSING, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 11, 1921. Serial No. 436,532. 12 Claims. (Cl. 188—185.)

8. In a governor, a rotatable shaft, a floating ring concentric with said shaft, friction devices attached to said shaft and adapted to engage the inside surface of said ring under the action of centrifugal force, a grooved pulley mounted on said shaft, and a steel wire arranged to engage the surface of the groove when the said ring moves responsive to the engagement of said friction devices.

1,532,675. AUTOMATIC CALLING DEVICE. JOHN G. BLESSING, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 14, 1921. Serial No. 437,283. 16 Claims. (Cl. 188—184.)

7. In a speed governor, a shaft, a rotatable frictional surface movable parallel to said shaft, and a second rotatable frictional surface movable radially with respect to said shaft.

1,532,676. AUTOMATIC CALLING DEVICE. JOHN G. BLESSING, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1921. Serial No. 438,996. 21 Claims. (Cl. 179—90.)

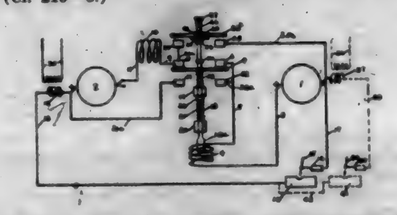


1. In a calling device, a combination of shunt and interrupter springs, a shaft having a cam fixed thereto, and mechanism associated therewith for operating said shaft during one period to directly engage and operate said shunt springs and during another period to alternately open and close said interrupter springs through the medium of said cam.

1,532,677. AUTOMATIC CALLING DEVICE. JOHN G. BLESSING, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 2, 1921. Serial No. 441,938. 11 Claims. (Cl. 179—90.)

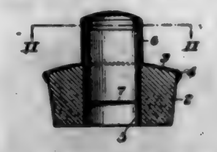
1. In a calling device, springs, a shaft carrying a gear on one end and a cam interrupter on the other end, said shaft movable endwise, a rotatable finger hole dial, a projection on said dial directly engaging said gear, said projection moving said gear shaft endwise while the cam is rotating to operate said springs.

1,532,678. VEHICLE SPRING. JAMES SCRIPPS BOOTH, Detroit, Mich. Filed Mar. 12, 1924. Serial No. 698,647. 15 Claims. (Cl. 267—41.)



7. In a spring assembly, the combination of a hollow unit anchor casing provided with an open mouth, a pair of springs having their large ends fitting into the said mouth, and wedging means for driving in between the spring ends longitudinally of the springs to anchor the ends of the spring in said casing.

1,532,679. GOLF CLUB. GEORGE W. BRADLEY, West Paterson, N. J. Filed Dec. 1, 1922. Serial No. 604,411. 1 Claim. (Cl. 273—81.)



A golf club having on its handle a longitudinal yielding relatively prominent rib arranged in general radial opposition to the club head and formed with an outer face and also with a lateral face in angular relation to each other and together forming a relatively sharp edge, whereby when the club is gripped in the player's hand the rib will be impressed into the flesh thereof and said lateral face will become effective to resist shifting of the club or hand in one direction on the axis of the handle.

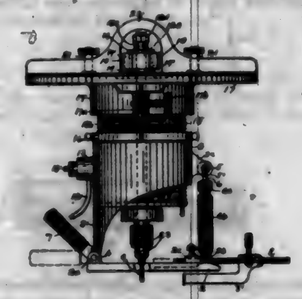
1,532,680. METHOD OF SUPPLYING CURRENT FOR ARC WELDING AND APPARATUS THEREFOR. HUGH A. BROWN and ALAN M. BENNETT, Erie, Pa. Filed Nov. 12, 1920. Serial No. 423,547. 29 Claims. (Cl. 219—8.)

1. The method of arc welding which consists in joining two sources of electric supply in series to strike the arc and then continuing the current from said sources in multiple.

1,532,681. TOP FOR BEVERAGE MIXERS. GERARD S. BRYCE, Mount Pleasant, Pa., assignor to Bryce Brothers Company, Mount Pleasant, Pa., a Corporation of Pennsylvania. Filed Jan. 14, 1924. Serial No. 685,977. 2 Claims. (Cl. 215—73.)

1. A closure of the character described, comprising a cork adapted to fit the mouth of a vessel, said cork having an opening therethrough, a plain faced spout extending through the opening in the cork, and a sheathing on top of the cork surrounding the spout, said sheathing having a downwardly and inwardly extending flange, the lower edge of the flange gripping the cork so that the upper portion of the cork is gripped between the spout and said lower edge of the flange, whereby the cork is secured against rotation relative to the spout and sheathing when the closure is applied and removed.

1,532,682. TEXTILE ROLL AND METHOD OF MAKING THE SAME. HERMAN F. BUSCH, Millvale, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Continuation of application Serial No. 636,139, filed May 2, 1923. This application filed Apr. 14, 1924. Serial No. 706,353. 22 Claims. (Cl. 19—143.)

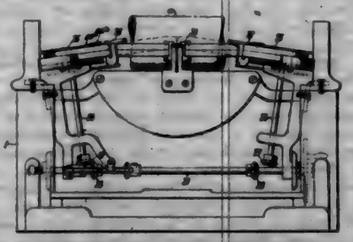


7. As an article of manufacture, a cot for textile rolls consisting of a tubular sleeve adapted to be slipped over a textile roll and formed from compressed artificial cork, the direction of compression of the cork being substantially parallel to the axis of the cot, substantially as described.

1,532,683. COMBINED MORTISING AND SHAPING MACHINE. RAY L. CARTER, Syracuse, N. Y. Filed Oct. 20, 1924. Serial No. 744,720. 11 Claims. (Cl. 144—134.)

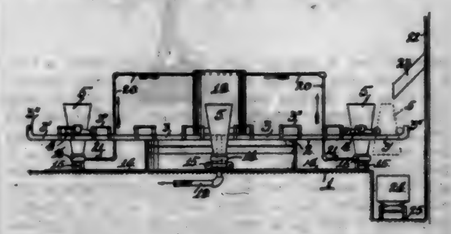
1. A combined router and shaper, including a base, a hollow split cylindrical holder pivoted to the base, means for tilting the holder relatively to the plane of the base,

a motor adapted to drive tools for performing work above and below said holder, said motor being disposed concentrically and loosely in said holder, means for con-



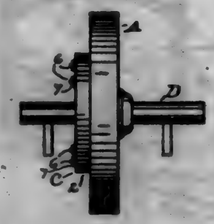
tracting the holder for preventing endwise movement of the motor, and means for adjusting the motor axially relatively to the holder when the clamping pressure is relaxed.

1,532,684. METHOD OF FACING WALL STRUCTURES. WILLIAM A. CARTER, Milwaukee, Wis. Filed July 9, 1923. Serial No. 650,469. 1 Claim. (Cl. 25—154.)



The method of forming a facing for a composite wall which consists in molding said facing and dividing it into blocks, filling in between said blocks to represent mortar and uniting the whole with the main wall.

1,532,685. TYPEWRITING MACHINE. CORNELIUS B. CORCORAN, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 17, 1920. Serial No. 359,235. 1 Claim. (Cl. 197—151.)

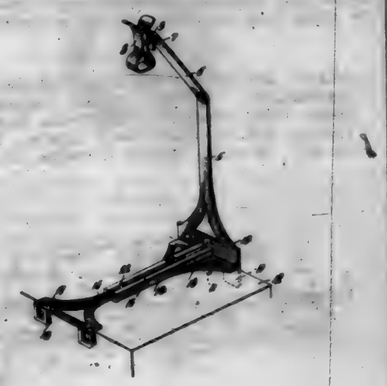


Ribbon-mechanism for a typewriting machine in which the platen is given a case-shift movement, comprising, in combination, a ribbon-vibrator normally holding a ribbon below the printing line, ribbon-vibrator-actuating means to position the ribbon for printing therethrough in lower and upper case, a ribbon-spool at each side of the machine adjacent the platen, the axes of said ribbon-spools being in the same vertical plane, parallel to the writing line, and diverging upwardly and laterally with respect to a plane perpendicular to the axis of the platen, a flanged roller to guide the ribbon in the proper direction from the spool, and a slotted guide for the ribbon between the roller and the printing point, the inclination and elevation of each spool and the corresponding guide-roller and slotted guide being such that the friction between the roller and the ribbon, due to the lifting of the vibrator for printing in upper case, will be avoided and interference with the proper drawing off of the ribbon from the ribbon-spool will be eliminated.

1,532,686. APPARATUS FOR THE DISTILLATION OF MATERIALS. STEPHEN HENRY CORFIELD, Santa Maria, Calif., assignor to Distillation Products Co., Phoenix, Ariz., a Corporation of Arizona. Filed Jan. 10, 1924. Serial No. 685,293. 8 Claims. (Cl. 203—6.)

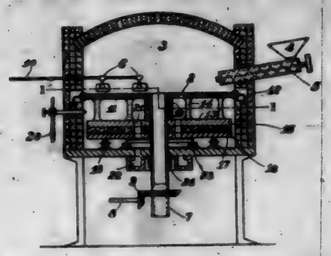
4. An apparatus for the distillation of materials comprising a distillation container having an open top and a grated bottom, said container diminishing in cross sectional area from top to bottom; means adapting said container to be moved into and out of charging and functioning positions; a chambered base member underlying the container; means for lifting and lowering said container from an into communicative association with said chambered base member; means for applying suction to said base member; and means for inverting said container when free from said base member.

1,532,687. BALANCING DEVICE FOR POLISHING WHEELS. FRANK DARLING and JOHN ROCHE, Battle Creek, Mich. Filed July 19, 1922. Serial No. 576,147. 1 Claim. (Cl. 51—169.)



A balancing device having in combination a disc-shaped body with a peripheral rectangular groove opening on one side, said groove having centrally-disposed arcuate slots formed through its bottom, arcuate weights carried in said groove, bolts passing through said slots and engaging said weights, binding plates passing over said bolts and nuts run onto said bolts over said plates whereby said weights may be adjustably secured within the groove of said disc, substantially as described.

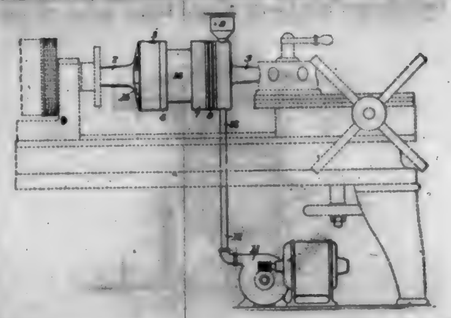
1,532,688. RADIO RECEIVER HOLDER. ARTHUR FRAUENSTEIN, Great Neck, N. Y. Filed Oct. 12, 1922. Serial No. 594,158. 1 Claim. (Cl. 248—30.)



A radio receiver holder comprising a body terminating in an enlarged portion at its lower end, spaced depending fingers formed on the enlarged portion, a right angularly disposed arm formed on the enlarged portion directly above the fingers, a T-shaped guide carried by the

arm, a slide arm slidably fitted in the T-shaped guide, the outer end of the slide arm being enlarged, depending ears formed on the enlarged end of the arm, the ears being disposed in spaced parallel relation to the fingers,

an upright guide pin carried by the slide arm and fitted in the T-shaped guide, means to clamp the slide arm in an adjusted position, and an angularly disposed supporting arm formed on the upper end of the body arranged over the guide.

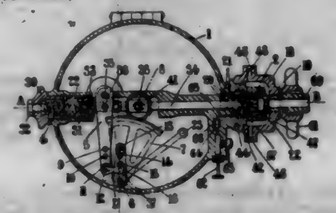


1,532,689. FURNACE. JOHN FITZPATRICK, Cincinnati, Ohio, assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed June 27, 1923. Serial No. 648,008. 3 Claims. (Cl. 263—35.)

1. A furnace including an enclosed material-heating chamber, a rotatable hearth therefor adapted to hold the material to be heated and having a hollow shaft about the axis of which the hearth rotates, means for charging the hearth adjacent its edge, and means for discharging the hearth through the hollow shaft, substantially as described.

1,532,690. METHOD AND APPARATUS FOR MAKING CENTRIFUGAL CASTINGS. PATRICK J. FLANNERY, New Castle, Pa., assignor to The Johnson Bronze Company, New Castle, Pa., a Corporation of Pennsylvania. Filed Nov. 22, 1922. Serial No. 602,527. 6 Claims. (Cl. 22—65.)

1. In apparatus for centrifugal casting, a mold, a live head adapted to rotate the mold and to support one end thereof, and a dead head adapted to support the other end thereof, the dead head having an opening for the

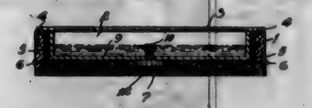


molten material to be cast and a second opening for the introduction of a cooling medium, substantially as described.

1,532,691. MANUFACTURE OF PUDDLED IRON. EDWARD L. FORD, Youngstown, Ohio. Filed Apr. 9, 1923. Serial No. 630,942. 5 Claims. (Cl. 75—48.)

1. In the manufacture of puddled iron, the step consisting of adding to the puddle bath an oxide of iron reagent having an artificially reduced oxygen content.

1,532,692. APPARATUS FOR INDICATING AND REGISTERING THE STROKE AVERAGE OF THE PISTON PRESSURE IN PRIME MOVERS, PUMPS, OR COMPRESSORS. JOSEF GEIGER, Augsburg, Germany. Filed Dec. 8, 1924. Serial No. 754,677. 17 Claims. (Cl. 73—186.)

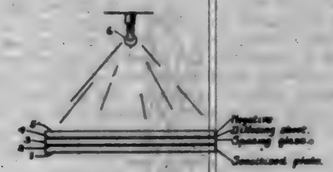


1. Apparatus for indicating the stroke-average of the piston pressure in piston prime movers, pumps and compressors comprising: an actuating member adapted to be controlled by the fluid pressure within the cylinder of the prime mover, pump or compressor but having no mechanical connection with the piston of the prime mover, pump or compressor; an indicating member; a scale on which the positions of the indicating member may be read directly in terms of the stroke-average of the piston pressure; an inertia mass associated with the indicating member; a speed increasing transmission device for transmitting the movement of the actuating member to the inertia mass; a stationary casing; and a spring member connected to the stationary casing and opposing the actuating member, the elasticity of the spring member being so chosen as to allow the inertia mass to remain at rest during occurring rapid changes of the fluid pressure in the engine, substantially as described.

1,532,693. MANUFACTURE OF SOAP. VICTOR HUGO GOTTSCHALK, Chicago, Ill., assignor to The American Cotton Oil Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 26, 1920. Serial No. 406,192. 5 Claims. (Cl. 87—16.)

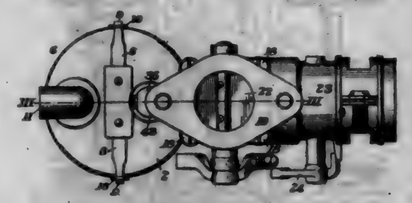
4. The method of producing semi-milled floating soap, which comprises subjecting freshly produced disintegrated, aerated and spray dried granulated or shredded soap to a suitable milling and plodding operation to convert the particles into a coherent and homogeneous product, and controlling such operation to retain sufficient air to cause the product to float.

1,532,694. VULCANIZING MACHINE. WILLIAM A. GWYNN, St. Louis, Mo., assignor to Susie E. Gwynn, St. Louis, Mo. Filed Apr. 14, 1922. Serial No. 552,580. 7 Claims. (Cl. 18—18.)



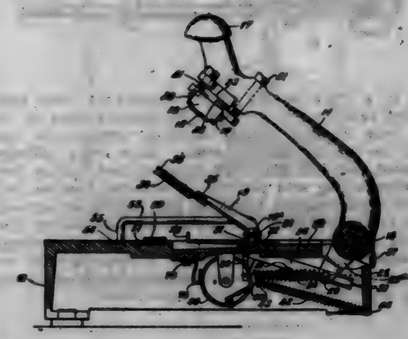
1. In a vulcanizing apparatus, in combination with a casing, a vulcanizing chamber having a top or cover welded thereon and projecting beyond the body of the vulcanizing chamber to form flanged supports mounted on the upper edge of said casing.

1,532,695. METAL BUILDING. WALTER C. HARTING, THOMAS A. SINDELAR, and CARL E. DAVID, Cleveland, Ohio, assignors to Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 27, 1920. Serial No. 361,786. 5 Claims. (Cl. 108—1.)



1. In a metallic building, the combination with a plurality of trusses, each having a centrally slotted ridge gusset plate, of ridge angle strips, having body portions adapted to fit said slots, the ends of said body portions being bent laterally to hold said ridge strips against longitudinal movement.

1,532,696. PROCESS OF MAKING HALFTONE PRINTING PLATES. ROBERT J. HAGGARD, Brooklyn, AMOS H. SPALDING, Arverne, and FRANK T. POWERS, Douglaston Manor, N. Y., assignors to Powers Photo-engraving Company, New York, N. Y., a Corporation of New York. Filed Sept. 23, 1921. Serial No. 502,756. 20 Claims. (Cl. 95—5.7.)

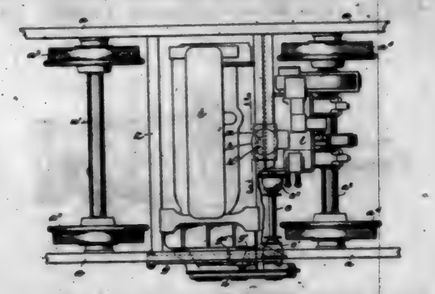


1. The process of making printing plates which comprises sensitising a plate, impressing on the sensitised plate by light action the shadows and dark intermediate tones only of an original, developing and etching the plate, resensitising the plate, impressing on the re-sensitised plate by light action all the tones of the original, and developing and etching the plate.

1,532,697. CARBURETOR. VICTOR R. HEWTLER, Detroit, Mich., assignor to Société du Carburateur Zenith, Lyon, France, a Corporation of France. Filed June 25, 1918. Serial No. 241,851. 1 Claim. (Cl. 261—1.)

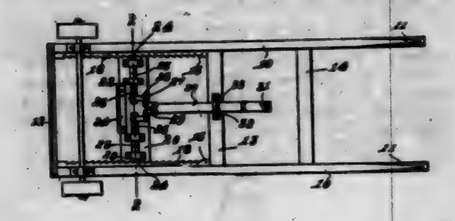
In a carburetor, a main body section, a float chamber secured against a lower surface of such body section, a gasoline inlet leading downwardly through the body section to the float chamber, a projecting portion on said main section having a channel therein for delivering fuel to a fuel outlet, a stem projecting downwardly from said section having a fuel well formed therein, a secondary body section fitting against said main section and having a mixing chamber formed therein, a fuel feeding tube extending into the aforementioned well, and a projecting member extending from said secondary body section, said member constituting a supporting means for said fuel feeding tube and having a fuel passage formed therein for cooperating with said fuel feeding tube.

1,532,698. PRINTING DEVICE. JOHN E. JOHNSON, Chicago, Ill., assignor to The Speedaumatic Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 20, 1923. Serial No. 618,805. 14 Claims. (Cl. 101—65.)



1. In a device of the type described, a base member for superting material upon which impressions are to be made, adjustable means for properly positioning the material comprising a pivotally mounted member having a vertically disposed guided rod at its end, said base member being provided with an arcuate slot into which said rod projects to a point below the surface of said base member.

1,532,699. BOGIE TRUCK FOR SELF-PROPELLED RAIL CARS. LYMAN C. JOSEPHS, Jr., Allentown, Pa., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 15, 1923. Serial No. 657,482. 5 Claims. (Cl. 105—62.)

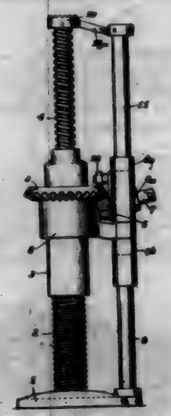


1. In a self-propelled bogie truck a chassis frame, springs to support the frame on the axles, a propelling

motor mounted on the frame, a change speed transmission, means to mount the transmission partly on the

driven axle and pivotal means to support it partly on the frame, and means to connect the motor with the transmission in driving engagement.

1,532,700. HAND TRUCK. WILLIAM P. KINSELLA, Bayside, N. Y., assignor of one-half to Bert G. Ball, Astoria, N. Y., and of one-half to Charles F. Heerlein, Long Island City, N. Y. Filed May 2, 1924. Serial No. 710,655. 3 Claims. (Cl. 280—57.)

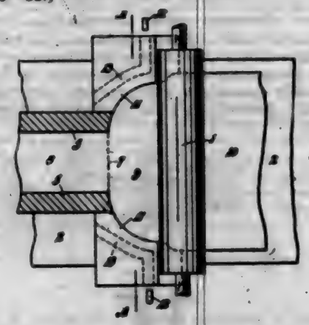


1. In a truck having sides connected by cross bars, ratchet bars secured upon the confronting sides of the side bars, a plate slidably mounted between the side bars, outwardly spring pressed latch bars slidably mounted upon the plate and engaging said ratchet bars for maintaining said plate in an adjusted position, and means connected with said latch bars for retracting them from engagement with the ratchet bars, said means comprising angle levers pivoted upon the plate and pivotally connected with the latches, and a longitudinally extending and movable member guidably mounted on the truck and connected with the angle levers.

1,532,701. CURTAIN-ROD FIXTURE. WILLIAM W. KOSMINSKI, Milwaukee, Wis. Filed Dec. 30, 1922. Serial No. 609,951. 2 Claims. (Cl. 156—24.)

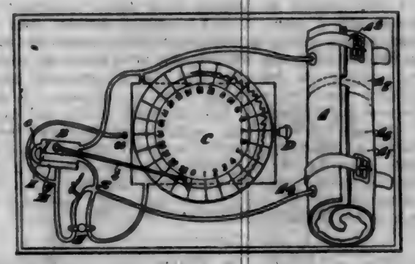
1. The combination of a bracket having clamping arms adapated to engage opposite sides of a vertical facing, means for drawing said arms towards each other, a support extending upwardly from said clamping arms and having a pair of spaced bars one of which is slotted, and an adapter having a slot extending upwardly from its lower edge thereby providing a downwardly extending finger adapted to be positioned between said bars, said slots in said bar and adapter being adapted to receive a portion of said adapter and bar, respectively.

1,532,702. LIFTING JACK. GEORGE LANE. Poughkeepsie, N. Y., assignor to Lane Brothers Company, Poughkeepsie, N. Y., a Joint Stock Association of New York. Filed Nov. 10, 1924. Serial No. 748,951. 8 Claims. (Cl. 254—102.)



1. A lifting jack comprising screws of opposite pitch fitting one within the other, a shell enclosing the two screws and provided with nuts at its ends to engage the screws, a gear fast to the shell, a support journaled on the shell, a rotary shaft mounted in the support, a gear thereon engaging the first named gear, and means connected from the base for preventing rotation of the support.

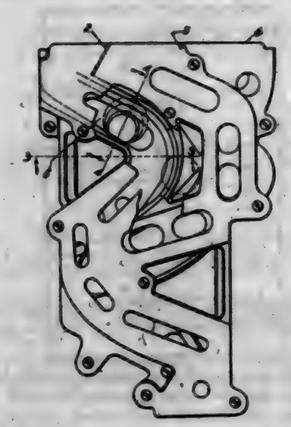
1,532,703. METHOD OF CONTROLLING THE ELASTICITY OF AN ELASTIC-METAL STRINGING. WILLIAM A. LARNED, Summit, N. J., assignor to The Dayton Steel Racquet Company, Dayton, Ohio, a Corporation of Ohio. Filed July 17, 1923. Serial No. 652,093. 4 Claims. (Cl. 117—58.)



1. The method of controlling the elasticity of a metal stringing comprising a number of wires wound together, which consists in varying the pitch on which the wires are wound.

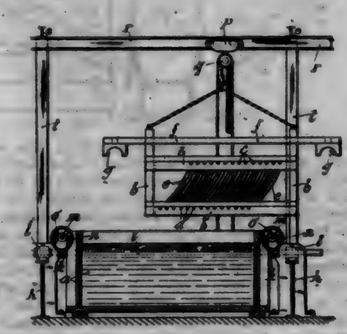
1,532,704. APPARATUS FOR PRODUCING A CONTINUOUS STRIP OF GLASS. ERNEST BRISTOW LE MARE, St. Helens, England, assignor to Pilkington Brothers Limited, Liverpool, England, a British Company. Filed Sept. 10, 1924. Serial No. 738,045. 10 Claims. (Cl. 49—83.)

1. In apparatus for producing a continuous strip of glass by rolling glass contained in a pool formed on one member of the rolling apparatus and fed from a melting tank, the combination with the said rolling apparatus of side walls confining the pool up to the pass thereof, and means adapted to maintain the said side walls at a high temperature.



1,532,705. METHOD AND APPARATUS FOR MEASURING PULSATING PRESSURES. ABRAM LEVIN, Simferopol, Russia. Filed July 14, 1924. Serial No. 726,053. 25 Claims. (Cl. 234—1.)

9. A method of recording blood pressure consisting in applying a flexible container to the body over an artery, inflating said container with an opposing pressure adapted to transmit the pulsations of said blood pressure, applying such opposing pressure also to one side of a manometric diaphragm, applying a nonpulsating counterbalancing pressure to the other side of said diaphragm, varying said opposing and counterbalancing pressures while maintaining the latter substantially equal to said opposing pressure, whereby said diaphragm is sensitively vibrately solely by the transmitted pulsations of the blood, employing the vibrations of said diaphragm to actuate one of cooperating marking and record elements and actuating the other of said elements by said variation of the opposing pressure.

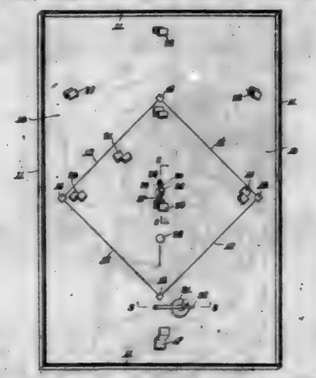


1,532,706. TELEPHONE PAY STATION. GEORGE A. LOKE, Hartford, Conn., assignor to The Gray Telephone Pay Station Company, Hartford, Conn., a Corporation of Connecticut. Filed Sept. 27, 1924. Serial No. 740,220. 1 Claim. (Cl. 194—1.)

A chute for pay stations having a discharge slot in one side thereof, its top comprising parallel ridges spaced successively at greater distances from the bottom of the chute, said bottom being inclined away from the

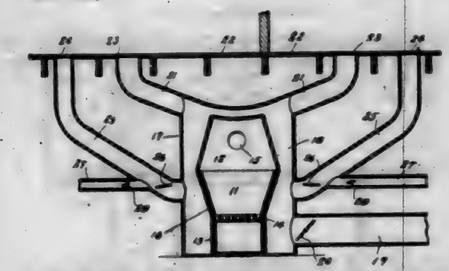
slotted side of the chute whereby coins of improper sizes are discharged through said slot.

1,532,707. MACHINE FOR TREATING SKEINS OR HANKS IN DYEING ROOMS. BARTHELEMY MAYOUX, St.-Etienne, France. Filed Jan. 6, 1922. Serial No. 527,348. 1 Claim. (Cl. 8—19.)



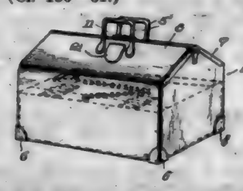
A machine of the character described comprising, a movable frame for supporting the skeins, means for supporting this frame, and mechanism for moving the frame along an endless path; said mechanism consisting of a main shaft and a plurality of transverse shafts, worm gears connecting said main and transverse shafts, said transverse shafts bearing eccentrics, and half collars upon the frame fitted to cooperate with said eccentrics.

1,532,708. BASEBALL GAME. IRVING B. MOORE, Watertown, Mass. Filed Apr. 15, 1922. Serial No. 553,187. 3 Claims. (Cl. 272—89.)



1. In a device of the class described, a board having thereon the representation of a base ball diamond; a batting device thereon; ball stopping devices in the position of the various players, that in pitcher's position having an opening through its vertical wall; a mem-

ber adapted to be manually held on said board in various positions; a ball-impelling plunger extending therethrough and adapted to pass through said opening in

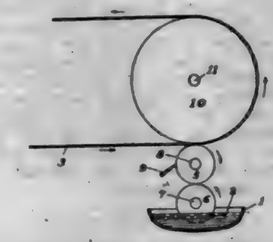


the pitcher's stopping device at various horizontal angles thereto; and resilient means secured to said member for actuating said plunger.

1,532,709. HEATING AND VENTILATING SYSTEM. RICHARD REED MORRILL, Palo Alto, Calif. Filed Aug. 21, 1922. Serial No. 583,264. 5 Claims. (Cl. 237—48.)

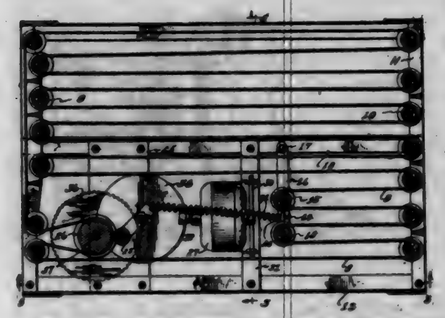
5. In a heating and ventilating system, the combination of a furnace, a hot air chamber surrounding said furnace, a fresh air supply pipe connected to said chamber, hot air pipes leading from the upper end of said chamber for conveying hot air to the building, downwardly inclined return pipes leading from the low portion of said building to the low portion of said chamber for returning the air thereto, a foul air discharge pipe connected to the low portion of each return pipe and opening to the atmosphere, an adjustable closure member in each discharge pipe for controlling the passage therethrough, and adjustable closure means arranged in each return pipe between said chamber and said discharge pipe.

1,532,710. SATCHEL. JOHN B. NELLEGAR, Jr., Chicago, Ill. Filed Mar. 21, 1921. Serial No. 454,067. 3 Claims. (Cl. 190—61.)



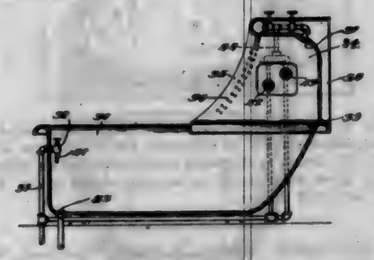
1. In a device of the character described in combination with a satchel constructed of flexible material and provided with a handle and lock, of a metallic receptacle for valuables snugly fitted in said satchel provided with a cover and lock, said receptacle carrying an eye-bolt rigidly secured thereto, a chain fitted in said eye-bolt and an opening in said satchel through which said chain may be projected.

1,532,711. METHOD AND APPARATUS FOR THE FORMATION OF PILING. DONALD MCGREGOR NEWTON, Montclair, N. J., assignor to MacArthur Concrete Pile & Foundation Co., Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 21, 1920, Serial No. 375,644. Renewed Oct. 14, 1924. 6 Claims. (Cl. 61—57.)



4. The method of forming piles which comprises inserting into a casing a ram normally movable with respect to the casing but having thereon means to limit the movement thereof when its end is adjacent the casing end, moving the ram into said casing until said means becomes operative, applying force to the ram to sink the ram and the casing into the earth to the full depth of the pile to be formed, withdrawing the ram, introducing a plastic foundation material into the casing, again inserting the ram and thereafter employing the ram to compact and to move said material, upon the withdrawal of the casing, into the cavity presented by such withdrawal.

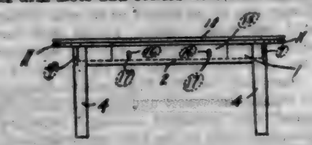
1,532,712. METHOD OF PRODUCING CONFIGURED PAPER. HERMAN C. ORCHARD, St. Louis, Mo., assignor to Orchard Paper Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 18, 1922. Serial No. 537,406. 2 Claims. (Cl. 41—21.)



1. The herein-described method of producing sheet paper marked with a visible configuration immediately within one of its surfaces and visible on both sides of the sheet without light passing therethrough, consisting in imprinting on one surface of the paper a liquid containing mineral oil mixed with rosin.

1,532,713. ADVERTISING DEVICE. GEORGE K. PARSONS, Detroit, Mich. Filed Apr. 7, 1922. Serial No. 550,385. 4 Claims. (Cl. 40—82.)

1. In a device of the character described, a frame having a display opening therein, a series of guide rollers journaled in the frame, a drive roller, an endless belt arranged to travel over said rollers and past the display opening, means for rotating the drive roller, and means for maintaining the belt in taut condition, comprising a tensioning roller over which the belt passes, a pivoted rod in which the tensioning roller is journaled, a tensioning spring secured to said rod and adapted to swing the rod and tensioning roller to take up all slack in the endless belt, a pressure roller arranged to hold the belt in contact with the drive roller, a pivoted bracket in which the pressure roller is mounted, and means whereby the tensioning spring may be secured to said bracket to urge the pressure roller toward the drive roller.

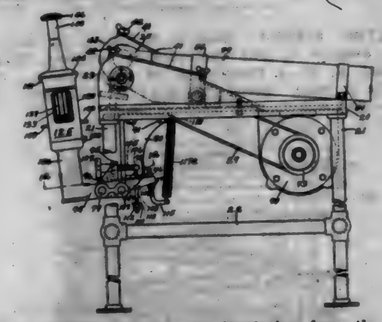


1,532,714. BATHTUB. LEON RIVERA PAUL, Chicago, Ill. Filed Mar. 7, 1924. Serial No. 697,550. 2 Claims. (Cl. 4—148.)

1. As an attachment to a bath tub, an arched hood provided at the bottom with a curved flange fitting over the roll-edge of the tub and made along its arched front edge with a tubular rim having rows of orifices inwardly directed, the hood comprising between the flange and the said rim an outer and an inner wall, there being in said inner wall a recess, water connections leading into the space between said walls, and control valves in said connections having handles seated in said recess.

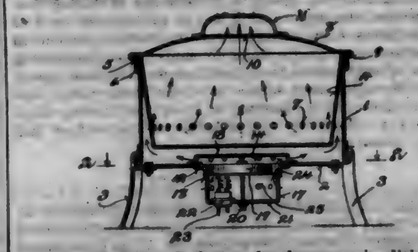
1,532,715. EXTENSION TABLE. ANTHONY PETRARCA, Cleveland, Ohio. Filed Sept. 17, 1923. Serial No. 663,039. 1 Claim. (Cl. 45—9.)

A table of the kind described, comprising side bars, end bars, legs, top board, side bar slides and leaf guide bars, the said guide bars being reduced on their upper sides at the ends thereof to form leaf recesses, and the end bars having leaf arm slots cut therein; leaf guide bars extended between the end bars inside the legs and having grooves cut therein; leaf arms adapted to slide in the leaf arm slots and rollers at their ends adapted to



slide in the leaf guide bar grooves; and end leaves fastened upon the said leaf arms, the said leaves being rounded off at their outer corners.

1,532,716. MILL. ALFRED G. PLACE and ALFRED E. JUPP, Youngstown, Ohio. Filed Jan. 27, 1922. Serial No. 532,115. 19 Claims. (Cl. 198—21.)



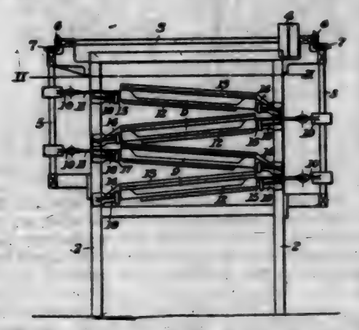
1. In a method of controlling the direction of travel of moving pieces of material, regardless of the length of such pieces, the steps which consist in providing a direction controlling means and utilizing a predetermined length of each piece to control said means, substantially as described.

1,532,717. INSULATION STRIPPING MACHINE. WILLIAM A. SCHILLER, Anderson, Ind. Filed Jan. 20, 1923. Serial No. 614,040. 10 Claims. (Cl. 15—21.)

1. A machine for stripping insulation from the leads of armature coils comprising, in combination, an insulation stripping device, a device for holding the armature with a portion of each coil lead enclosed, and means for moving one device relative to the other.

1,532,718. ELECTRIC DEHYDRATOR. LAMAR H. SHOVER, Milwaukee, Wis. Filed Oct. 20, 1924. Serial No. 744,841. 4 Claims. (Cl. 34—21.)

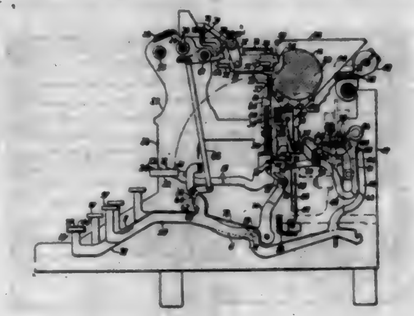
4. An electric dehydrator for hygroscopic disks comprising a main vessel having vertical side walls and a centrally apertured transverse bottom, said bottom having a notched circular flange surrounding said aperture



and having a guard plate spaced above said aperture, an electric heater comprising a casing having outwardly projecting lugs adapted to be passed through the notches in said flange and to be seated upon such flange, a heating element removably carried within said casing, said casing and heating element having apertures therethrough for the free passage of air upwardly into said vessel, a container for the hygroscopic disks removably positioned within the vessel and carried from the vertical walls thereof, said container having a plurality of regularly spaced apertures in its side walls adjacent the bottom thereof, and an apertured cover for said container.

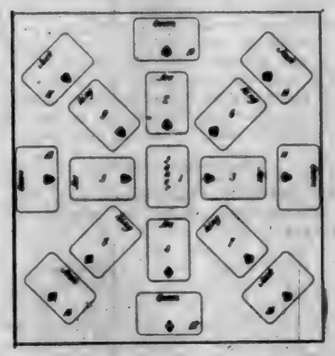
1,532,719. METAL REENFORCED-CONCRETE RAILWAY TIE. HERMAN SILVER, Minneapolis, Minn. Filed Aug. 8, 1924. Serial No. 730,879. 11 Claims. (Cl. 238—86.)

10. A metal reenforced concrete railway tie comprising a concrete body, sleeves extending through said body, and transverse end tie bars connecting said sleeves in pairs, said sleeves having shoulders from which said end tie bars are supported.



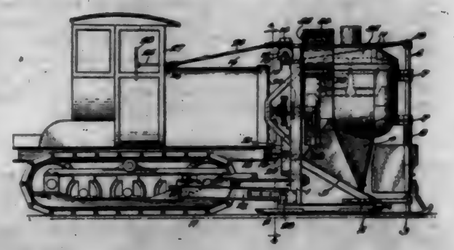
1,532,720. SIFTER. EDMUND S. SMITH, La Salle, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed June 1, 1923. Serial No. 642,774. 7 Claims. (Cl. 83—56.)

1. A sifter comprising a vertically extending main supporting frame, a screen, a horizontally extending flexible member attached to each end of said screen, each of said members being attached at its medial portion to said screen and at its ends to said frame, permitting motion of said screen in a single plane only, and means for reciprocating said screen in a rectilinear path, comprising an eccentric mounted on a vertical driving shaft and means connecting said eccentric to one end of said screen, substantially as described.



1,532,721. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 20, 1922. Serial No. 530,503. 34 Claims. (Cl. 197—72.)

1. A front-strike type-bar typewriting machine comprising type-bars, each having four types thereon, a platen, and a platen-shifting mechanism including a set of three shift-keys for shifting the platen in the same direction from its normal position to three different po-



sitions, and means, including shift-key-controlled stop devices, for stopping the platen in all four of said positions.

1,532,722. PLAYING-CARD GAME. AGDA E. WALL, Brooklyn, N. Y. Filed Jan. 31, 1924. Serial No. 689,669. 4 Claims. (Cl. 273—135.)

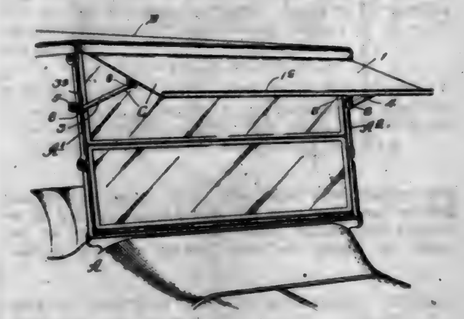
1. In a playing card game, a chart having card receiving spaces marked to represent the joker, aces, kings, queens and jacks, said spaces being arranged as follows: a joker space surrounded by annular series of ace, king, queen and jack spaces.

1,532,723. PLOW. ARTHUR B. WEBB, Watertown, Wis., assignor to Monarch Tractors Incorporated, Watertown, Wis., a Corporation of Delaware. Filed Dec. 21, 1923. Serial No. 681,982. 16 Claims. (Cl. 37—43.)

1. A plow including a downwardly and forwardly inclined substantially horizontal shovel; and an upright cutter located at and above a mid portion of said shovel.

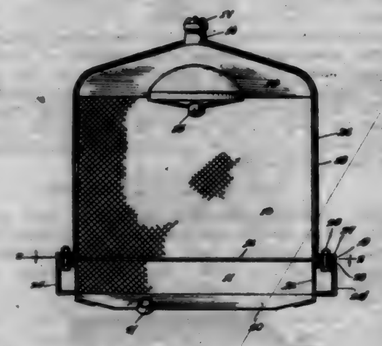
1,532,724. HOSIERY. DANIEL YOUNG, Brooklyn, N. Y., assignor to Young Inventions, Inc., a Corporation of New York. Filed Aug. 19, 1922. Serial No. 582,924. 4 Claims. (Cl. 66—4.)

1. An article of manufacture, a hose having a body portion and an upper cuff portion, said cuff portion from the body portion upward being of greater progressive thickness than said body portion thereby offering increased resistance to expansion of the cuff portion.



1,532,725. LAMINATED LANDING WHEEL OR THE LIKE. HARRY N. ATWOOD and GEORGE B. BAINS, 3d, Reading, Pa., assignors, by direct and mesne assignments, to Rubwood Inc., Lawrence, Mass., a Corporation of Massachusetts. Filed Dec. 24, 1920. Serial No. 432,940. 8 Claims. (Cl. 301—63.)

1. A wheel comprising a hub, a felly, and side walls united at their central portions to the ends of the hub and at their peripheral portions to the opposite sides of the felly, the said component parts of the wheel being made up of plies of fibrous material and bonding plies.

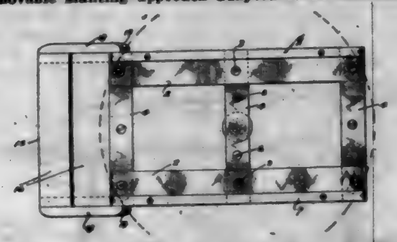


1,532,726. MOTOR-VEHICLE VISOR. JOHN BERG, Chicago, Ill., assignor to Metal Specialties Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 5, 1921. Serial No. 513,060. 7 Claims. (Cl. 296—95.)

1. A device of the character set forth, comprising a visor, means for connecting the rear upper portion of the visor with the top of an automobile, a pair of links having their front ends pivotally connected with the lateral edges of said visor, angle-form brackets pivotally

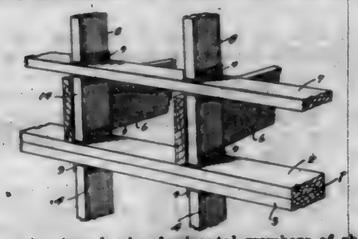
connected with the rear ends of said links, and post-clamps adjustably secured to the free flanges of said brackets.

1,532,727. RADIATOR. CLAUDE V. BIXLER, Frankfort, Ky. Filed May 11, 1923. Serial No. 638,833. 1 Claim. (Cl. 257—125.)



In a radiator for vehicle motors, the combination of a cross plate having an opening therein, a core section rigidly fixed to one side of the plate, and a complemental core section rigidly fixed to the opposite side of the plate to communicate with said first mentioned section through said opening, the plate forming a permanent connecting element between the core sections rigidly uniting said sections to form a core having the plate projecting at the side edges thereof and braced both transversely and longitudinally by the plate.

1,532,728. COMBINATION WORKSTAND AND TURNTABLE. FRANK J. BROSSY, Portland, Oreg., assignor of one-half to B. L. Schneer, Habana, Cuba. Filed Aug. 14, 1924. Serial No. 732,136. 4 Claims. (Cl. 104—44.)



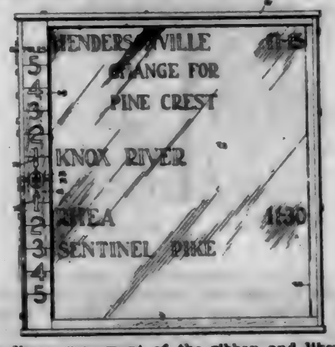
1. In a combination work stand and turn table for a motor vehicle, a standard, an open horizontal frame pivoted thereon presenting spaced runners for the ve-

hicle wheels, casters pivoted to the four corners of the frame for engagement with the ground surface and a removable slanting approach adapted to be interchange-

ably engaged with either end of the frame having projections extending from the sides thereof adapted to be brought into sliding engagement with the sides of the frame for locking the same against revolving motion.

1,532,729. SHRINKPROOF STUD SUPPORT. GUSTAF E. CARLSON, Oakland, Calif. Filed Oct. 16, 1923. Serial No. 668,926. 1 Claim. (Cl. 20—0.5.)

In a structure having horizontal members of shrinking material interposed between alined lengths of upright members, shoes receiving adjacent ends of the said lengths having pins of non-shrinking material extending into the the horizontal members and meeting therein so that one rests on the other for allowing the upper upright member to remain unaffected by the shrinking of the horizontal member.

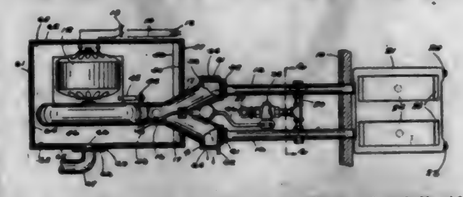


1,532,730. SMOKE AND GAS STRAINER AND FILTER. EMIL CHALUPA and THOMAS F. O'ROURKE, New York, N. Y., assignors to C. and O'R. Corporation, a Corporation of New York. Filed Jan. 7, 1924. Serial No. 684,829. 2 Claims. (Cl. 183—70.)

1. A smoke and gas strainer comprising a shell having an inlet at one end and an outlet at the other, in combination with cleats alined in series around the interior of the shell at desired intervals, wire mesh strainers, rings enveloping the edges of the strainers and having notches to pass one of the series of alined cleats and adapted to be turned on their axis to be arrested by the next series of alined cleats, and a baffle at the inlet end of the shell.

1,532,731. ROUTE INDICATOR FOR VEHICLES. PAUL H. COLEMAN and FRED W. STOUT, Lynch Mines, Ky. Filed Nov. 23, 1922. Serial No. 602,852. 5 Claims. (Cl. 40—42.)

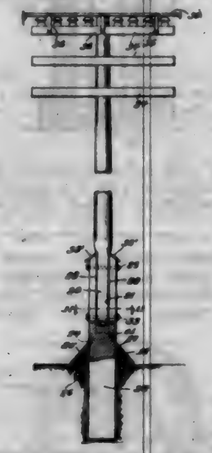
1. In a vehicle, an apparatus for indicating the route taken by road vehicles comprising in combination a casing provided with a transparent face, spools mounted for rotation within the casing, a ribbon having serially disposed thereon indicia designating the stations of a route and connected at its opposite ends with the spools, means connected with the running gear of the vehicle for causing feeding of the ribbon from either spool, and an arrow mounted on the face of the casing for designat-



ing the linear movement of the ribbon and likewise the serially disposed names of the stations of the ribbon, and means connected with the operating means of the spool for automatically alining the arrow with the directional movement of the ribbon when a change in the direction of the vehicle is had, and means for maintaining the arrow in its directional position.

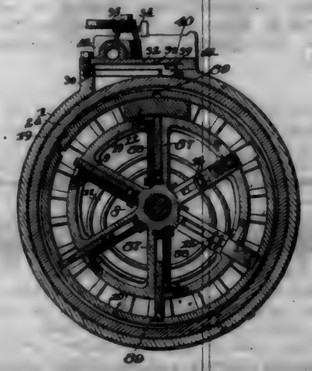
1,532,732. CIGARETTE HOLDER. DOUGLAS COLLINS, Salisbury, N. C. Filed Feb. 2, 1924. Serial No. 690,286. 6 Claims. (Cl. 131—10.)

1. The combination with a tubular holder having a socket head, of a longitudinally slidable ejector having a retaining-head adapted to project into the end of a cigarette and co-act with the socket head for retaining the cigarette.



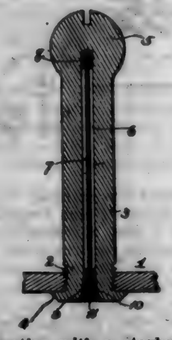
1,532,733. OIL-BURNING APPARATUS. FREDERICK A. DARCHSEL, Ottawa, Ontario, Canada. Filed Oct. 18, 1923. Serial No. 669,353. 3 Claims. (Cl. 158—28.)

3. An oil burning apparatus including a closed liquid chamber mounted in an enclosure; burner nozzles extended through said closed liquid chamber; heat retaining members mounted on said closed liquid chamber with certain of said members opposite the discharge end of said burner nozzles; supply and discharge pipes connected with said closed liquid chamber; air conducting pipes connecting said burner nozzles; an air supply pipe having extended portions connecting with said air conducting pipes; means for controlling passage of air into said air conducting pipes independently; means for forcing air into the air supply pipe; means for feeding the liquid fuel to said air conducting pipes; means for regulating the feed for the liquid to said air conducting



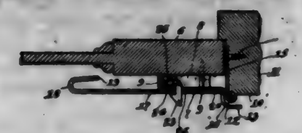
pipes; the air supply pipe having discharge valve openings adjacent the air conducting pipes; the means for closing the air conducting pipes comprising valves which are adapted when in open position to cover the discharge valve openings of the air supply pipe and permit free passage of the air into said air conducting pipes; the last mentioned valves serving when in closed position to cover the ends of the air conducting pipes and permit escape of the air from the air supply pipe to the surrounding atmosphere by way of said air escape valve openings.

1,532,734. POLE AND POST PROTECTOR. JOHN DEAN, Victoria, British Columbia, Canada. Filed Oct. 22, 1923. Serial No. 670,192. 3 Claims. (Cl. 20—100.)



1. The combination with a pole or the like provided with an annular groove, of a hollow frusto-conical member open at the top and bottom and adatped to surround the pole with the edges of the top extending within the annular groove and said pole being provided with spaced vertically disposed notches communicating with the groove and said conical member having spaced notches around its upper edge which register with the notches in the pole to provide ventilating passages.

1,532,735. VARIABLE CAPACITY PUMP. ERNEST BISHOP DICKERSON, Bishop, Tex. Filed Apr. 11, 1919. Serial No. 289,243. 21 Claims. (Cl. 103—120.)

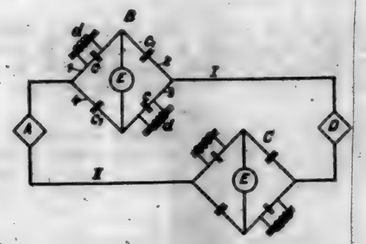


1. In a hydraulic transmission, a pump shaft, a rotor carried by the shaft including means defining a working chamber, said working chamber having extensions, blades carried by the rotor adapted to move in and out of the working chamber, an abutment adapted to enter the working chamber and toward which the blades are adapted to move, a reduction ring occupying said extensions, and means carrying both the abutment and said reduction ring adapted to move so as to shift the abutment and ring in corresponding degrees in respect to the working chamber in order to vary the fluid capacity of the working chamber.

1,532,736. STAY BOLT FOR BOILERS. ETHAN I. DODDS, Central Valley, N. Y., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Feb. 26, 1923. Serial No. 621,882. 3 Claims. (Cl. 85—15.)

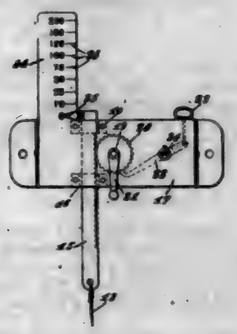
1. The combination with a staybolt having a telltale hole extending from its inner end approximately to but not through the outer end of the bolt, of an indicating rod located in said telltale hole and connected at its ends respectively to the bolt near respective ends of said telltale hole.

1,532,737. SAFETY LATCH FOR DOORS. ALBERT C. DOHRMANN, Chicago, Ill. Filed Mar. 13, 1922. Serial No. 543,172. 5 Claims. (Cl. 292—278.)



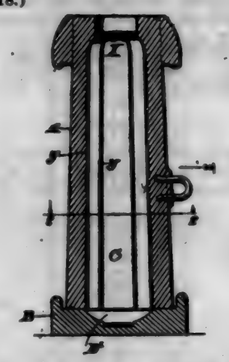
1. A safety latch for doors, consisting of a plate secured to the door, provided with an open hookilke slot, the hooks on which are outwardly curved, a hinged strap secured to the door frame passing through said slot adapted to be removed therefrom between said projections when the door is closed and means projectable through said strap for locking the door.

1,532,738. COMBINED BATTERY SHIPPING CRATE AND STAND. FRANK ENGEL, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Oct. 3, 1919. Serial No. 328,197. 3 Claims. (Cl. 217—5.)



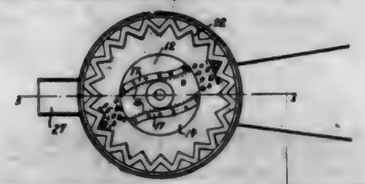
1. In battery packing structure, a box-like structure having a bottom piece, end pieces and side pieces, relatively heavy side bars mounted along the sides of said box-like structure and extending beyond the ends thereof to provide handling means, said end pieces having vertically extending reinforcing pieces which extend beyond the top of said box-like structure on one side only of said structure.

1,532,739. CIRCUIT ARRANGEMENT FOR MULTIPLEX CABLE TELEGRAPHY AND TELEPHONY. HEINRICH FASSBENDER, Charlottenburg, and ERICH HABANN, Waidmannslust, near Berlin, Germany, assignors to Deutsche Telephonwerke G. m. b. H., Berlin, Germany. Filed Aug. 22, 1921. Serial No. 494,389. 2 Claims. (Cl. 178—51.)



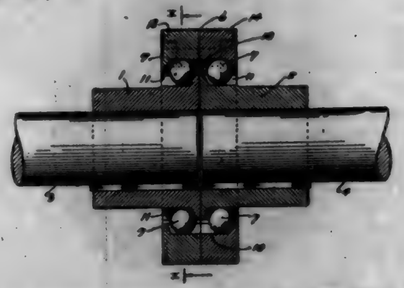
1. In an arrangement for multiplex telegraphy or telephony on lines by means of high frequency oscillations, the combination of a line, a station's receiving device and a Wheatstone-bridge by which the said device is connected with the line, the bridge containing in two opposite branches condensers and in two other opposite branches condensers in parallel with inductance coils, the latter being provided with subdivided iron cores, two diagonal points of the bridge being connected with the incoming and outgoing part of the line whilst two other diagonal points are connected with the leading-to wire of the said receiving device, whereby the range of waves entering the receiving device is separated by the graduation of the iron core-subdivision from a higher range of waves not entering the receiving device, substantially as described.

1,532,740. INDICATOR. TYSON THADDEUS FERREE, Ashboro, N. C. Filed Dec. 26, 1923. Serial No. 682,751. 2 Claims. (Cl. 40—70.)



1. In apparatus of the class described the combination with a rotatable indicator and flexible means connected thereto for actuating the same, of a rack attached to said flexible means, yielding means for holding the indicator and the rack normally in one position, a graduated member adjacent the rack, means on the rack and cooperating with the graduated member for designating positions of the indicator connected to the rack, a gear for rotating the rack, and means detachably engaging the gear for holding the gear and rack against movement.

1,532,741. INGOT MOLD. EMIL GATHMANN, Baltimore, Md., assignor to The Gathmann Engineering Company, Baltimore, Md., a Corporation of Maryland. Filed Aug. 20, 1923. Serial No. 658,370. 4 Claims. (Cl. 87—18.)

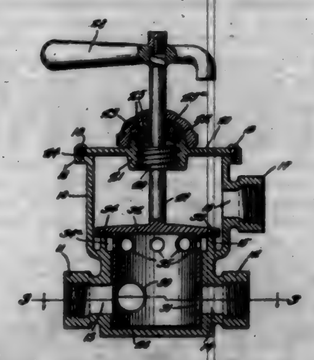


1. An ingot mold having a chamber formed with corrugated side walls and with a necked-in end portion into which the corrugations extend and merge.

1,532,742. ROCK CRUSHER. ALVAH D. HADSEL, San Francisco, Calif., assignor of one-half to Frederick N. Woods, jr., San Francisco, Calif. Filed Oct. 19, 1922. Serial No. 595,645. 2 Claims. (Cl. 83—46.)

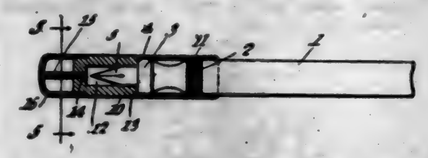
1. In a centrifugal rock crusher, a rotor adapted for receiving the rocks centrally and discharging them peripherally, said rotor comprising a hubbed disk adapted for securing to a shaft, a centrally perforated disk axially aligned with the hubbed disk, and a pair of similar spacing members between the disks extending entirely across the disks spaced from the central portion thereof and secured to both disks.

1,532,743. FLEXIBLE COUPLING. ALVAH D. HADSEL, San Francisco, Calif., assignor of one-half to Frederick N. Woods, jr., San Francisco, Calif. Filed June 4, 1923. Serial No. 643,457. 2 Claims. (Cl. 64—91.)



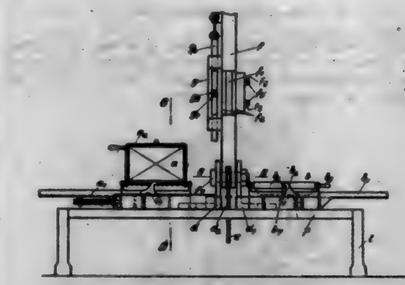
1. A flexible coupling comprising two cylindrical elements having external longitudinal grooves therein stopping short of the ends of the elements, a ring adapted to encircle adjacent ends of the elements so as to leave an annular space around the same having registering internal grooves therein stopping short of its respective ends and balls engaging registering internal and external grooves the ring being dimensioned to allow of limited longitudinal and tilting motion of the elements relative to the ring.

1,532,744. GUARD FOR HYPODERMIC SYRINGES. GEORGE N. HEIN, San Francisco, Calif. Filed Apr. 26, 1924. Serial No. 709,151. 6 Claims. (Cl. 128—218.)



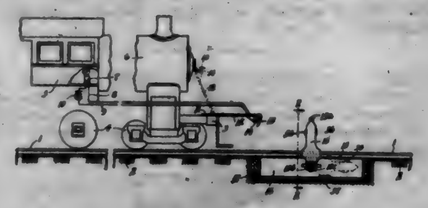
1. A hypodermic construction including a tubular guard open at its opposite ends and formed at one end with a contracted tubular extension having a laterally opening recess, a barrel for longitudinal reception within the guard and provided with a conical tip for reception within said tubular extension, a needle base provided with a conical recess at one end for the reception of the conical tip and adapted for reception within said tubular extension through said laterally opening recess, means for holding said needle base from rotation within said extension, said needle base adapted for longitudinal movement within the extension and precluded from removal from the extension when at its limit of movement in either direction.

1,532,745. MIXING VALVE. CLARENCE C. HICKERSON, Tulsa, Okla. Filed Apr. 11, 1924. Serial No. 705,884. 1 Claim. (Cl. 277—18.)



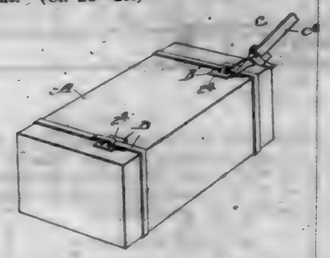
In a device of the character described comprising a hollow body provided in one side near one end with a pair of inlets, and provided near its other end with an outlet, a chamber within the first mentioned end of the body, a flange within the body constituting a valve seat, the internal diameter of the flange being greater than that of the chamber to define an annular space, a cover closing the other end of the body and having a central hub portion formed with a steep thread, a cylindrical sleeve valve rotatable within the chamber and having openings adapted to register selectively with said inlets and having an outstanding flange carrying a gasket adapted to engage upon said seat for cutting off the flow, the valve having a plurality of holes communicating with said annular space, a stem on the valve extending beyond the cover and equipped with a handle, and a threaded enlargement on the rod co-acting with the threaded hub.

1,532,746. FOUNTAIN PEN. WILLIAM LEONARD HOPER, Manhattan, Kans. Filed Sept. 2, 1924. Serial No. 735,853. 3 Claims. (Cl. 120—42.)



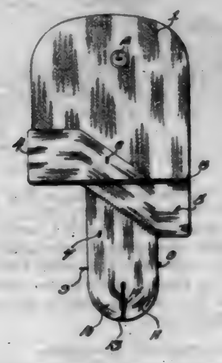
1. A fountain pen attachment comprising a sleeve for insertion on a pen barrel and having a chamber to house the pen point with a tube extending longitudinally from the front end of said chamber to facilitate filling of the pen and to protect the point thereof.

1,532,747. APPARATUS FOR SPLICING FILMS. WILHELM HOHMANN, Delitzsch, near Halle, Germany, assignor to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Feb. 17, 1923. Serial No. 619,729. 16 Claims. (Cl. 154—42.)



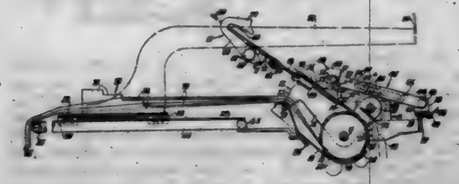
1. Apparatus for removing from a film a portion of the photographic layer comprising means for clamping the film along substantially parallel lines transversely thereof on opposite sides of and immediately adjacent to the portion to be removed, a planing tool and means associated with the clamping means for guiding the tool transversely over the clamped portion to cause removal of the photographic layer.

1,532,748. FOG CROSSING SIGNAL. HANS A. HOLM, Minneapolis, Minn. Filed May 9, 1924. Serial No. 712,162. 6 Claims. (Cl. 246—196.)



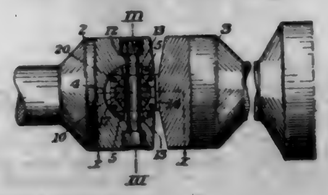
3. A contact device adapted to be positioned adjacent a train track comprising a horizontal shaft, bearings in which said shaft is journaled, an arm journaled on said shaft, spring-pressed members slidable on and non-rotatable relatively to said shaft at each side of said arm and adapted to engage the same, a tongue and groove means on said arm and members respectively adapted to hold said arm in vertical or horizontal position, an arm journaled on the end of said shaft, and means secured to said shaft adapted to be engaged by said arm to turn said shaft and move said arm from horizontal and vertical position.

1,532,749. PACKAGING DEVICE AND METHOD. CHARLES R. HULTGREN, Chicago, Ill., assignor to S. Karpen & Bros., Chicago, Ill., a Corporation of West Virginia. Filed Nov. 3, 1923. Serial No. 672,681. 4 Claims. (Cl. 24—23.)



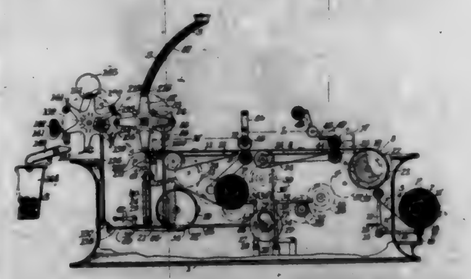
1. A packaging device comprising a clip and a metal tape having one end secured to said clip, said clip being formed with a loop adapted to permit the free end of the tape to be passed therethrough, said loop being deformable to enable it to grip the tape.

1,532,750. KNITTED CAP. ELMER N. JOHA, Milwaukee, Wis., assignor to Reliable Knitting Works, Milwaukee, Wis., a Corporation. Filed July 2, 1923. Serial No. 648,997. 4 Claims. (Cl. 2—172.)



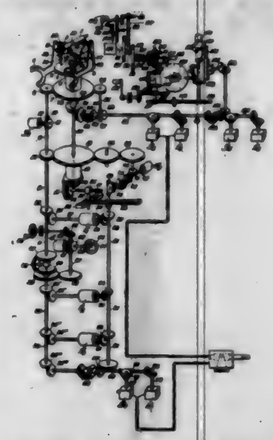
1. A cap comprising a crown, a continuous knitted band entirely encircling the lower portion thereof and having straight portions joined by rack knitted portions, and knitted ear flaps joined along diagonal lines to said rack knitted portions and having rounded selvedged outer end.

1,532,751. TYPEWRITING MACHINE. ARTHUR A. JOHNSON, Washington, D. C., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 12, 1921. Serial No. 484,048. 21 Claims. (Cl. 197—126.)



1. In a typewriting machine, in combination, a traveling carriage having a front bar extending transversely thereof, a revolubie platen, a platen-lifting swing-frame pivoted on said carriage, said frame comprising a front paper-table, and a link, having pins thereon, pivoted on said front bar in front of the pivotal axis of the swing-frame, so that, when its free end is pressed against the front paper-table and said frame swung to lift the platen, the pins will enter perforations in the work-webs in use to align superposed forms thereon and then advance the leading edges of the webs to predetermined positions.

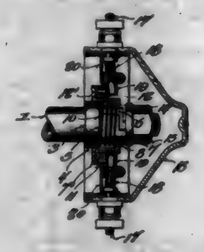
1,532,752. ROLLING-MILL-SPINDLE COUPLING. LANE JOHNSON, Pittsburgh, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 12, 1924. Serial No. 737,278. 5 Claims. (Cl. 64—107.)



1. In a coupling, a rotary member provided with a pair of projections at one end thereof, a second rotary member having a bifurcated end adapted to receive said projections, said bifurcated end having its opposed interior surfaces of concave cylindrical form, slippers seated within said concave surfaces to turn about the axis thereof and slidably fitting said projections, a cylindrical spacer block arranged between said slippers with its axis intersecting said projections, and means journaled on said block and adapted to prevent relative rotary movement between said slippers when said rotary members are uncoupled, substantially as described.

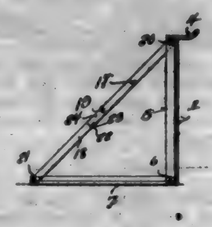
1,532,753. AUTOMATIC FILM-SPOOLING MACHINE. JOHN G. JONES and HAYWOOD G. DEWEY, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 31, 1923. Serial No. 642,398. 33 Claims. (Cl. 242—55.)

10. A machine for automatically assembling roll film cartridges and comprising means for positioning a spool, means for automatically engaging the end of a strip of paper with such spool, means then automatically actuated for turning said spool to wind the paper thereon, means automatically operative when the spool has made a predetermined number of turns to feed thereto a strip of film, said turning means thereafter operating automatically a predetermined amount to complete the winding of predetermined lengths of film and paper thereon and means then automatically operative for applying a sealing band to the rolled cartridge.



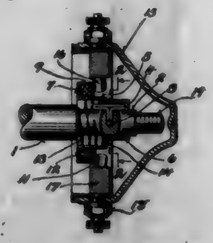
1,532,754. ARRANGEMENT FOR THE TELECONTROL OF GUNS OR THE LIKE. PAUL KAMINSKI, Berlin-Pankow, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Aug. 25, 1921. Serial No. 495,290. 11 Claims. (Cl. 89—41.)

1. In a signalling device for the electric remote control and transmission of movements, a sighting device in a control station for the remote control of guns, search lights, range finders, telescopic sights, or the like, which are trained either by hand or by mechanical power, on a "follow the pointer" principle,—means for transmitting the vertical movements of said sighting device by electrical transmitters located in the control station and electrical receivers placed on the controlled objects direct upon the receivers of search lights, range finders, or telescopes (not coupled with the guns), means for transmitting to the receivers on the guns the same vertical movements of the said sighting device in the control station and to impart to these receivers on the guns at the same time an additional movement corresponding to the ballistic inclination involved by the distance of the target prevailing at the time,—means for converting concurrently during this aforementioned operation the uniform alteration of the range into the ununiform alteration of the ballistic inclination,—in combination with means for transmitting the horizontal movements of the said sighting device in the control station by suitably designed electric transmitters at the control station to suitably designed receivers on the controlled object,—means for simultaneously imparting to the receivers on the search lights, range finders, telescopes, etc. the concentration correction necessary for hitting the target, this concentration correction being automatically constructed during the movement of the said sighting device in the control station, means for imparting the same movement to the receivers on the guns and further, as an addition, to impart to them the necessary deflection angle from the control station, means for transmitting to the receivers of range finders and telescopes coupled to guns, this last mentioned adjustment and for transmitting by means of a special receiver, the amount of the deflection angle by itself, and means for rendering the vertical movements of the said sighting device in the control station and of all controlled objects independent of their horizontal movements.



1,532,755. TIMER. ADAM W. KAUFMAN, Milwaukee, Wis. Filed June 17, 1922. Serial No. 568,980. 4 Claims. (Cl. 200—24.)

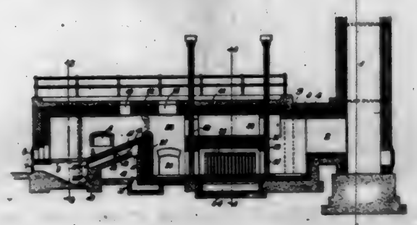
3. A timer comprising a housing, a plurality of contact members carried by the housing, a timer shaft positioned centrally of the housing, a sleeve secured on the timer shaft and provided with a bayonet groove, a rotor slidably mounted on said sleeve and provided with a nib



engaging said bayonet groove, and yieldable means for holding the rotor into engagement with the contact members.

1,532,756. COMBINATION STEP PLATE AND LUGGAGE CARRIER. ADAM W. KAUFMAN, Milwaukee, Wis. Filed Aug. 18, 1922. Serial No. 582,629. 2 Claims. (Cl. 224—29.)

1. A combined step plate and luggage carrier for a running board, comprising a roughened plate adapted to lie above and substantially parallel to the running board or to extend upwardly therefrom, a base pivotally joined to the outer portion of said plate, pivotally joined arms pivoted to said base and plate and adapted to retain said plate at an angle to the running board and adapted to fold beneath said plate, and a latch for retaining said plate when substantially paralleling said running board.

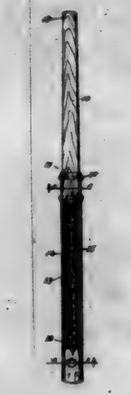


1,532,757. TIMER. ADAM W. KAUFMAN, Milwaukee, Wis. Filed Feb. 9, 1923. Serial No. 617,915. 3 Claims. (Cl. 200—24.)

3. A timer comprising a rotary shaft, a casing surrounding said shaft and having a plurality of yielding contacts, a rotor surrounding said shaft and having a cylindrical portion spaced from said shaft, an insulating ring mounted upon said cylindrical portion, a metallic

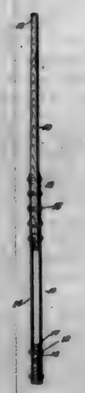
contact carried by said ring and electrically connected to said rotor, a spring surrounding said shaft and urging said rotor outwardly to cause its outward face to bear against said yielding contacts, and means for effecting a driving engagement between said shaft and rotor, whereby said rotor is positively driven by said shaft and freely floats thereon.

1,532,758. INCINERATOR. EDGAR BOYD KAY, Washington, D. C. Filed May 23, 1924. Serial No. 715,458. 20 Claims. (Cl. 110—8.)



1. An incinerator having a fire chamber, a grate, and an ash pit, a chimney and a combustion chamber forming a direct communication between the fire chamber and the chimney, a drying hearth located in an extension of the fire chamber over which the products of combustion pass to the combustion chamber and through which a current of air may be passed, and a charging opening through which material to be destroyed may be deposited on the drying hearth.

1,532,759. PICKER STICK. DANIEL A. KEATING, Bridgeport, and JAMES B. TATEM, Putnam, Conn., assignors of one-half to The American Tube & Stamping Company, Bridgeport, Conn., a Corporation of Connecticut, and one-half to James B. Tatem, doing business as James B. Tatem & Son, Putnam, Conn. Filed June 19, 1924. Serial No. 720,953. 15 Claims. (Cl. 139—157.)

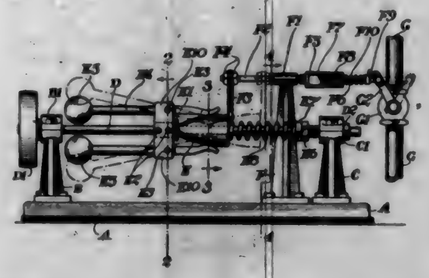


1. A picker stick having its upper portion of wood and its lower portion formed of a single piece of metal in tubular form throughout its length.

1,532,760. PICKER STICK. DANIEL A. KEATING, Bridgeport, and JAMES B. TATEM, Putnam, Conn., assignors of one-half to The American Tube & Stamping Company, Bridgeport, Conn., a Corporation of Connecticut, and one-half to James B. Tatem, doing business as James B. Tatem & Son, Putnam, Conn. Filed June 19, 1924. Serial No. 720,954. 7 Claims. (Cl. 139—157.)

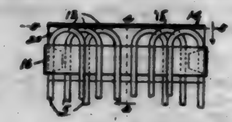
1. A picker stick having substantially its upper half of wood and substantially its lower half of two separate lengths of spaced-apart oppositely-disposed metal side plates, said plates being supported in spaced relation at their opposite ends and disposed in substantially parallel relation throughout their length.

1,532,761. PICKER STICK. DANIEL A. KEATING, Bridgeport, and JAMES B. TATEM, Putnam, Conn., assignors of one-half to The American Tube & Stamping Company, Bridgeport, Conn., a Corporation of Connecticut, and one-half to James B. Tatem, doing business as James B. Tatem & Son, Putnam, Conn. Filed June 19, 1924. Serial No. 720,955. 12 Claims. (Cl. 139—157.)



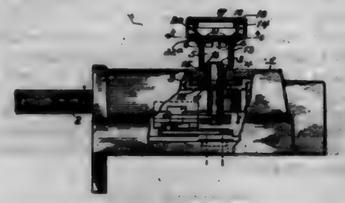
1. A picker stick having substantially its upper half of wood and substantially its lower half of two separate lengths of spaced-apart oppositely-disposed metal side plates, said plates being supported in spaced relation at their opposite ends and disposed in substantially parallel relation throughout their length.

1,532,762. PICKER STICK. DANIEL A. KEATING, Bridgeport, and JAMES B. TATEM, Putnam, Conn., assignors of one-half to The American Tube & Stamping Company, Bridgeport, Conn., a Corporation of Connecticut, and one-half to James B. Tatem, doing business as James B. Tatem & Son, Putnam, Conn. Original application filed June 19, 1924, Serial No. 720,954. Divided and this application filed Dec. 27, 1924. Serial No. 758,337. 8 Claims. (Cl. 139—157.)



1. A picker stick having its upper portion of wood and its lower portion of a single piece of metal channel-shaped in cross section and having its lower portion folded to provide opposite spaced-apart integral side walls.

1,532,763. GOVERNOR. ISAAC D. KENNER, Knoxville, Tenn. Filed Apr. 14, 1923. Serial No. 632,174. 7 Claims. (Cl. 264—15.)



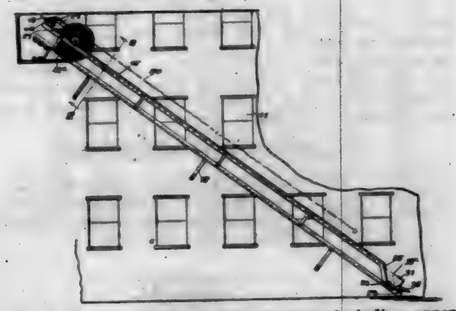
1. In a mechanism of the kind described, the combination of a member to be controlled, a rotary shaft, a member slidable and non-rotary on said shaft and having an inclined face, means connecting said member and the member to be controlled, an abutment on the shaft for limiting movement of the sliding member in one direction, yielding means pressing the sliding member toward said abutment, and centrifugal members pivotally supported on the shaft for pressing on the inclined face of the sliding member transversely to the length of said shaft, substantially as described.

1,532,764. RAKE. HERBERT G. KIMBER, Oakland, Calif. Filed Aug. 8, 1922. Serial No. 580,468. 4 Claims. (Cl. 55—114.)

1. In a rake, a plurality of tines, said tines having their attaching ends each formed with a return bend, holding means for said tines comprising a plate bent to lie against opposite sides of the tines and also extending over the attaching ends, and a strip extending parallel to the plate through all the return bends of the tines and secured to the plate.

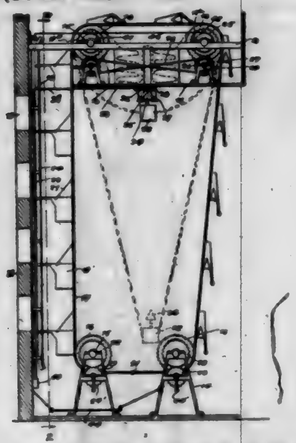
1,532,765. LOCK. CHARLES LEDIN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Sept. 7, 1923. Serial No. 661,417. 4 Claims. (Cl. 292—359.)

1. The combination with a lock spindle and a member operatively connected therewith, of a knob shell rotatably mounted on said member and means carried by said knob shell for operatively coupling the same to said member.



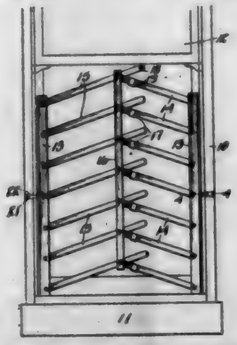
1,532,766. CONTAINER. ABRAHAM HOYT LEVY, New York, N. Y. Filed Mar. 14, 1922. Serial No. 543,788. 2 Claims. (Cl. 206—56.)

1. As a new article of manufacture, a container for goods in the form of a block, stick, losenge or the like, including a seamless, tubular body-portion the wall of which is thin enough to permit manually peeling the wall off the goods without cutting in order to expose a new end-section thereof for consumption and yet thick enough to withstand wear tending to expose the goods in the ordinary usage of the container for the purpose intended; the body-portion being provided with a hand-hold which is formed integral with the container and is connected



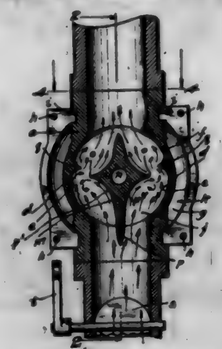
therewith by a neck-portion which at its junction with the hand-hold is much smaller in diameter than the latter and is surrounded there with a flange that shields the fingers from contacting with the body-portion and neck-portion and becoming soiled.

1,532,767. FIRE ESCAPE. LEON M. LITTLE, Dublin, Ga. Filed Aug. 21, 1923. Serial No. 658,635. 7 Claims. (Cl. 227—7.)



1. In a fire escape, an inclined frame including upper and lower trackways, a roller rolling on said upper trackways, and a chute normally wound on said roller and having one end connected to the upper end of the lower trackway, said roller delivering the chute to the lower trackway during its downward movement along the upper trackway.

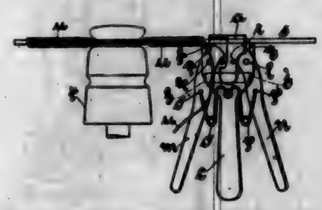
1,532,768. FIRE ESCAPE. LEON M. LITTLE, Dublin, Ga. Filed Aug. 21, 1923. Serial No. 658,636. 4 Claims. (Cl. 227—10.)



1. The combination with a building having vertically alined window openings; of an upper frame structure above the upper window openings and projecting from the building, a similar lower frame arranged below the upper frame, guide wheels arranged horizontally in spaced pairs on said frames, flexible elements running over the guide wheels of the upper frame and adapted to be led around the guide wheels of the lower frame, buckets carried by said elements, arms projecting forwardly from said buckets, guide ways carried by the building and receiving said arms to guide said buckets, means for detachably connecting the ends of respective flexible elements to form endless flexible elements, a weight to which said ends may be alternatively connected, releasable latch means beneath the upper frame structure for engaging and holding said weight in an elevated position, and means for supporting the flexible elements and buckets on the upper frame structure when the weight is held in an elevated position.

1,532,769. SAFETY DEVICE FOR WINDOWS. CHARLES H. MCELROY, Indianapolis, Ind. Filed July 16, 1924. Serial No. 726,406. 6 Claims. (Cl. 189—79.)

1. A device for preventing the passage of unauthorized persons through windows, comprising a pair of substantially parallel uprights for engagement with the window frame said uprights having outwardly projecting lugs adapted to fit within recesses in the window frame, spaced cross bars carried by said uprights in substantially parallel relation, a central supporting element secured to the adjoining ends of each pair of said cross bars, one or more of said cross bars extending along its cooperating cross bar and having means for securing the same in alinement therewith, substantially as set forth.

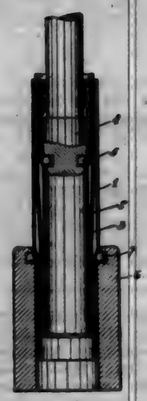


1,532,770. MIXER FOR GASOLINE ENGINES. HERMAN F. MADER, Portland, Oreg. Filed Sept. 6, 1923. Serial No. 661,295. 5 Claims. (Cl. 48—180.)

2. In a gasoline engine, a conduit-section interposed between the carburetor and the intake manifold, such conduit being made with an enlarged cross section at its middle, a partition located in said enlargement, extending centrally and longitudinally therein, said partition enlarging laterally approximately at the middle of said enlargement of the conduit section, one end of said partition projecting into the inlet end of said conduit section such end of said partition presenting equilateral parabolic surfaces thereby to divert the stream of fuel mixture so as to impact upon the encompassing wall portion of said enlargement, the wall portions of said enlargement having lateral projections located slightly beyond said projections of the partition, the cross-

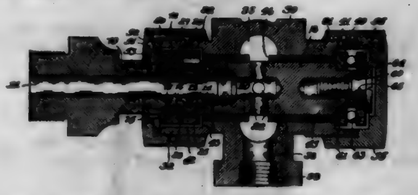
sectional area of the passageway between said projections of the partition and the wall of said enlargement being approximately equal to that of the ends of said conduit, and the cross-sectional area of the remaining space of said enlargement being greater than that of said ends.

1,532,771. HAND TOOL FOR CONNECTING TELEPHONE AND LIKE WIRES TO INSULATORS. PETER THORVALD NIELSEN, Kolding, Denmark. Filed Aug. 15, 1922. Serial No. 582,068. 2 Claims. (Cl. 140—117.)



1. A hand tool for coiling the binding wire of telephone and the like wires connected to insulators, comprising a hooked plate fitted with a handle by means of which it can be turned about the line wire with the hook placed on the latter, the plate being adapted to engage the binding wire in order to coil it around the line wire when the tool is thus turned, and a cutter fitted with an operating lever and pivoted to the plate so as to cooperate with the latter for cutting the binding wire at the completion of the coiling.

1,532,772. PROCESS FOR PRODUCING NONPEROXIDIZABLE ETHER. DIRK ROELOF NIJE, Leiden, Netherlands, assignor to Naamlooze Vennootschap: Nederlandsche Gist- en Spiritusfabriek, Delft, Netherlands. Filed Jan. 7, 1925. Serial No. 1,087. 3 Claims. (Cl. 260—151.)

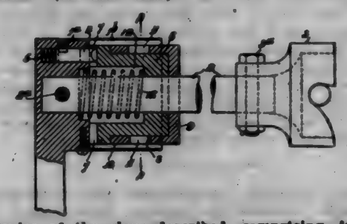


1. The production of non-peroxidizable ether by a process which consists in treating ether with an excess of benzidine, and filtering the ether from said excess.

1,532,773. METHOD OF MOUNTING THE HEATING ELEMENTS IN ELECTRIC-HEATING APPARATUS. ERNST REINFRID ISIDOR NORDSTRÖM and ERNST OSCAR JOHANSSON, Stockholm, Sweden, assignors of one-half to Hugo Teodor Tiliquist, Stockholm, Sweden. Filed May 19, 1923. Serial No. 640,246. 2 Claims. (Cl. 219—19.)

1. A method of mounting the heating element of electrical heating apparatus between an inner member and a sleeve-like outer member, consisting in compressing the sleeve like member until the air is substantially exhausted from between the heating element and the inner and outer elements and close contact between the latter is established.

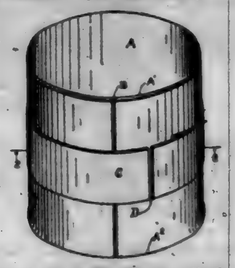
1,532,774. SWIVEL COUPLING. JOHN W. PAGE, Chicago, Ill. Filed Mar. 10, 1921. Serial No. 451,168. 5 Claims. (Cl. 285—96.)



1. In a swivel coupling, a rotatable part having its end surrounded by a stationary casing, a port entering the casing and communicating with a port in the rotatable part, a collar slidably mounted on the rotatable part within the casing adapted to form a closure with the inner end of the casing, and means for preventing leakage between the collar and the rotatable part, said means comprising a junk ring with a piston ring.

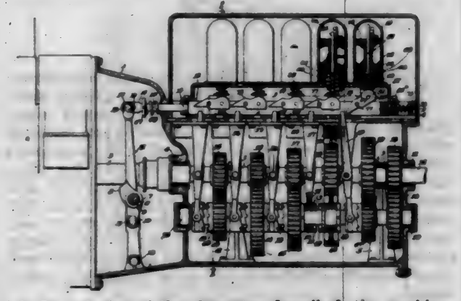
1,532,775. EXCAVATING SHOVEL. JOHN W. PAGE, Chicago, Ill. Filed Apr. 24, 1922. Serial No. 556,168. 4 Claims. (Cl. 37—117.)

1. In a device of the class described, the combination with a suitable shovel, of supporting means pivoted thereto behind the center of gravity thereof, hauling means pivotally secured to the front of the shovel, a block with a double-grooved sheave attached to the supporting means, one of the grooves being larger than the other, and a holding-chain running from the front of said shovel over said sheave to the hauling means, that part of the holding-chain running over said sheave having its major portion adapted to run in the smaller groove of the double-grooved sheave and provided with an enlargement adapted to run up on the larger groove thereof.



1,532,776. MEANS FOR STARTING INTERNAL-COMBUSTION ENGINES. HORACE ARTHUR PYRAH, Denton, England. Filed May 29, 1923. Serial No. 642,268. 1 Claim. (Cl. 123—185.)

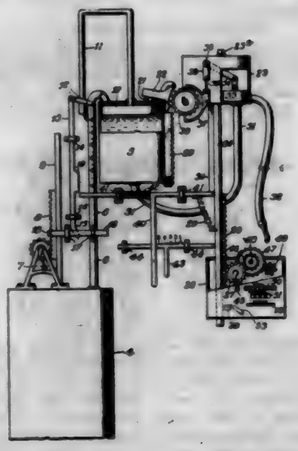
A device of the class described, comprising, in combination, a rotatable and axially shiftable clutch shaft, a crank handle secured to said shaft and having a socket encircling the end of the shaft, a sleeve mounted upon said shaft and having a plurality of teeth in its end



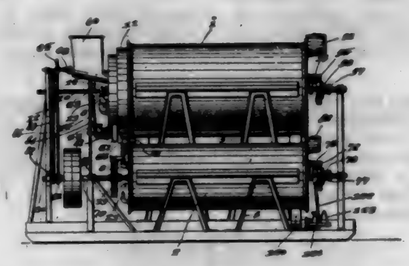
face, spring operated members carried by the socket and adapted to engage the teeth of the sleeve when the handle is rotated in one direction, a stationary cylindrical member encircling said sleeve, said member having a diagonal slot formed therein, and a stud carried by said sleeve and engaging said slot, the arrangement being such that upon reverse rotation of the clutch shaft said shaft and sleeve are axially shifted.

1,532,777. PISTON-RING HOLDER. FREDERICK REICH, Elizabeth, N. J. Filed Dec. 8, 1920. Serial No. 429,242. 12 Claims. (Cl. 29—86.4.)

8. In a device of the character described, the combination of an open ended cylinder of spring metal set at a predetermined diameter provided with an opening extending from end to end, whereby the cylinder is permitted to expand and contract, and a member adapted to be placed on said cylinder and to hold the same under compression.



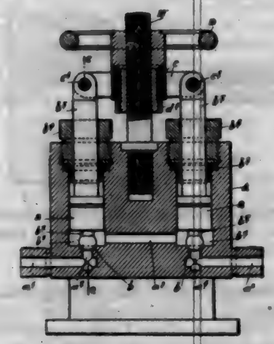
1,532,778. SPEED-CHANGING TRANSMISSION. BERNARD J. RIEDMILLER, Scranton, Pa. Filed July 24, 1923. Serial No. 653,535. 14 Claims. (Cl. 74—58.)



1. In a device of the character described, the combination with a shaft-clutch actuating member, and a constant-mesh gear set including a series of gear-clutches operating in connection with certain of the gears of said set, of a bar shiftable forwardly and rearwardly by said shaft-clutch actuating member, actuating means carried by said bar to shift the several gear-clutches into engagement upon the forward movement of said bar, means for normally holding said gear-clutches in disengaged position, means for bringing a selected gear-clutch actuating means into operative position, and automatic means tending to return said selected gear-clutch actuating means to its normal inoperative position upon rearward movement of the reciprocable member.

1,532,779. LIQUID MEASURING AND DISPENSING DEVICE. ANDREW H. ROIKJER, Los Angeles, Calif. Filed Dec. 19, 1923. Serial No. 681,608. 11 Claims. (Cl. 221—95.)

1. In a liquid measuring and dispensing device, the combination of a reservoir adapted to contain a measured quantity of liquid, a relatively small receptacle arranged adjacent said reservoir and adapted to move along a vertical axis, a reciprocable bar by which said receptacle is supported, means for arresting movement of the receptacle in either direction along its axis, flexible communicating means between said reservoir and said receptacle, and means for discharging liquid from the latter.



1,532,780. CONCENTRATOR. GEORGE E. C. ROUSSEAU, Oakland, Calif. Filed Sept. 9, 1921, Serial No. 499,440. Renewed Sept. 4, 1924. 6 Claims. (Cl. 83—86.)

1. In a concentrator, the combination with an upper unit having rotating screens for removing the coarse gangue and grading the remaining material, means for feeding slime and water to this unit under a head of water pressure and a water outlet having a control valve; of an outlet for the coarse gangue and outlets for the respective grades, other lower units to which the last named outlets lead respectively, means therein for separating the values from the remaining material and collecting said values, in separate receptacles, and means for reciprocating the screens longitudinally.

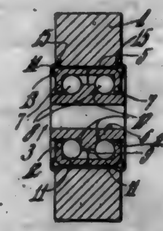
1,532,781. STOPCOCK AND SHUT-OFF COCK FOR PRESSURE-FLUID PIPING. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed June 29, 1923. Serial No. 648,550. 4 Claims. (Cl. 277—83.)

1. A stopcock for fluid pressure piping comprising a valve casing, valves movably mounted in a pair of chambers formed in said casing, the seats for said valves being formed in said casing adjacent the ends of a communicating duct between said chambers, said duct being in a different plane from the plane of the sections

of an interrupted discharge duct formed in said casing and controlled by said valves, and means for simultaneously opening and closing said valves.

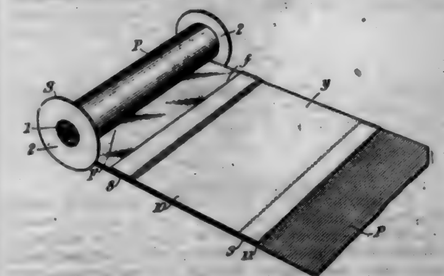
1,532,782. FLUORESCENT SCREEN. SAMUEL E. SHEPPARD and LEON W. EBERLIN, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 14, 1922. Serial No. 606,942. 17 Claims. (Cl. 250—84.)

1. An intensifying screen having a layer containing a fluorescent salt and a rear supporting layer, the supporting layer comprising a cellulosic compound and carrying fine particles of material of a color pronouncedly different from that of the fluorescent salt and rendering the backing layer opaque.



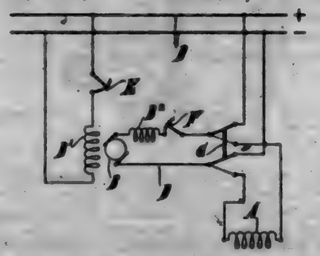
1,532,783. FLUORESCENT SCREEN. SAMUEL E. SHEPPARD and LEON W. EBERLIN, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 1, 1924. Serial No. 690,071. 10 Claims. (Cl. 250—84.)

1. An X-ray fluorescent screen comprising an active layer, a rear supporting layer, and a front protective layer, the front protective layer comprising a cellulosic composition carrying in suspension finely divided light-diffusing material.



1,532,784. SKATE ROLL. ARTHUR L. STAPLES, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed June 17, 1922. Serial No. 569,103. 9 Claims. (Cl. 208—181.)

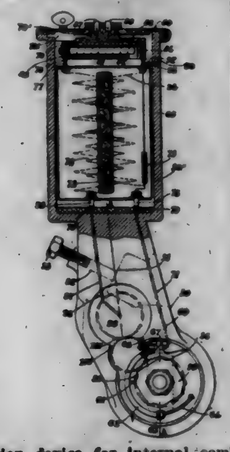
1. In a skate roll in combination, an annular tread member, an antifriction bearing comprising an inner bearing ring and two outer bearing rings provided with cooperating ball races having balls therein and a locking sleeve interposed between said outer bearing rings and said annular tread member, said sleeve having enlargements extending both outwardly and inwardly at



each end thereof for both retaining the outer bearing rings together and for securing the tread member thereon.

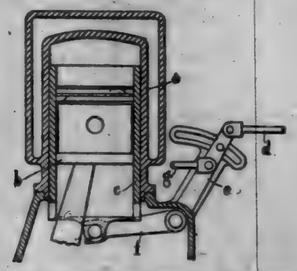
1,532,785. PASTER BAND FOR ROLL FILMS. ALBERT F. SULZER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 8, 1924. Serial No. 705,126. 10 Claims. (Cl. 95—0.)

1. A photographic film cartridge including a spool, a flexible strip of protective material wound thereon, a flexible strip of film interwound therewith, and a paster band adapted to fasten an end of the film strip to the protective strip, being normally fastened to one of the strips, said paster band having an adhesive resisting area and an adhesive area, the adhesive area being normally folded to lie adjacent the adhesive resisting area.



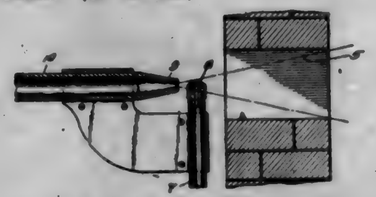
1,532,786. SPARKLESS CIRCUIT CONNECTION. HERMANN SUNDHAUSSEN, Bredeney-on-the-Ruhr, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Feb. 19, 1915. Serial No. 9,348. 2 Claims. (Cl. 175—294.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A device for exciting a magnet coil with a current of comparatively short duration and avoiding sparks on interrupting the circuit which includes said coil, said device comprising an electro-dynamic condenser, an external source of voltage, and a double-throw switch adapted to



connect said electro-dynamic condenser alternately to said source and to said magnet coil, said electrodynamic condenser being formed by a dynamo having a stator winding connected to said source and a rotor winding connected to said double-throw switch, the rotor of said dynamo being free of any external mechanical load.

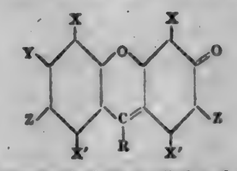
1,532,787. IGNITION DEVICE FOR INTERNAL-COMBUSTION ENGINES. HARRY ELDRED TAYLOR, Paris, France. Filed Nov. 8, 1921, Serial No. 513,766. Renewed Aug. 28, 1924. 2 Claims. (Cl. 123—148.)



1. An ignition device for internal combustion engine embodying a single metal frame having formed therein a recess by means of which it is liable to be secured on a corresponding protruding portion of the engine and a hollow part which forms a casing, an induction coil removably mounted in said casing, an interrupter for the primary current and a rotary distributor for the secondary current mounted on said frame, and electric connections between the induction coil on the one hand and the interrupter and the distributor on the other hand.

1,532,788. APPARATUS FOR VARYING THE COMPRESSION SPACE IN INTERNAL-COMBUSTION-ENGINE CYLINDERS. CHARLES ANTHONY VANDERVELL, Acton, England. Filed Nov. 28, 1922. Serial No. 603,830. 2 Claims. (Cl. 123—48.)

1. An internal combustion engine comprising in combination with a working cylinder, a piston, a stationary open ended sleeve lining the interior of the working cylinder having one open end projecting into the compression space and receiving the piston, and means capable of adjusting the position of the said stationary sleeve within the working cylinder with the said one open end at different distances from the head of the cylinder so as to adjust thereby the compression space between the cylinder head and the piston, as set forth.

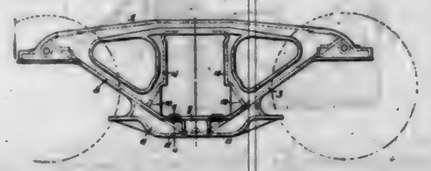


1,532,789. ART OF SCALING METAL OBJECTS. WALTER J. VOLLRATH, Sheboygan, Wis., assignor to Polar Ware Company, Sheboygan, Wis., a Corporation of Wisconsin. Filed Dec. 8, 1923. Serial No. 679,400. 3 Claims. (Cl. 75—198.)

1. The method of scaling metal objects which consists in subjecting them, while confined in a chamber and while in heated condition, to an acid-spray.

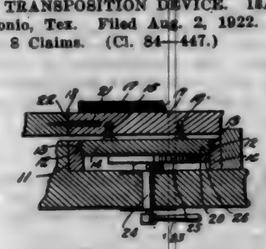
1,532,790. PYRONE DYE. MAX WEILER, Elberfeld, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Feb. 1, 1924. Serial No. 690,087. 3 Claims. (Cl. 260—62.)

1. The herein described new dyestuff of the pyrone series having most probably the following general formula:



in which X includes hydrogen, alkyl and the carboxylic group; Y and X' include hydrogen and the hydroxy group; Z includes hydrogen and the carboxylic group and R represents an aromatic nucleus, which dyestuffs are, after being dried and pulverized, generally red to yellow to green-black powders, generally scarcely soluble in water but sometimes easily soluble in water as sulfonic acids, easily soluble in dilute caustic soda solution, partly with a strong fluorescence with a yellow to red coloration, dyeing wool from acid baths from yellow-orange to brown and after chroming from red-orange to brown-red shades fast to alkali, fulling and to potting, substantially as described.

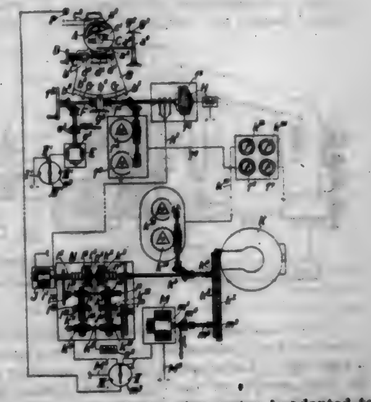
1,532,791. VISOR. CARL I. WILLS, Chicago, Ill., assignor to Metal Specialties Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 24, 1921. Serial No. 455,190. 4 Claims. (Cl. 296—95.)



1. A device of the character set forth, comprising a pair of brackets, each bracket having a standard-portion equipped at its upper end with a forwardly extending projection provided with an eyelet and each bracket having a forwardly and upwardly extending rod-form segmental arm, a visor having at its rear upper edge lateral projecting pintles freely entered in said eyelets, clips secured to the lateral edge portions of said visor some distance from the pivot, said clips being provided with slots, U-form clips engaging said first-named clips and provided with perforations registering with said slots and receiving the end portions of said curved arms, and clamping-screws connected with said last-named clips and engaging the edge portions of said first-named clips.

1,532,792. CAST SIDE FRAME FOR CAR TRUCKS. HARRY H. WOLFE, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Jan. 2, 1923. Serial No. 610,250. 4 Claims. (Cl. 105—205.)

1. A cast side frame for car trucks having a spring seat and a diagonal tension member united with the spring seat at the end thereof, the spring seat having an opening therethrough at its junction with the tension member.



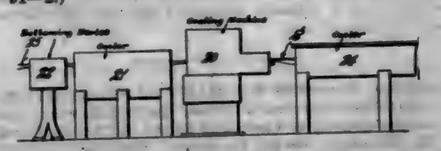
1,532,793. TRANSPOSITION DEVICE. ISAIAS ZEPEDA, San Antonio, Tex. Filed Aug. 2, 1922. Serial No. 579,231. 8 Claims. (Cl. 84—447.)

3. A transposition device for pianos including a keyboard the key levers of which include inner relatively stationary sections and outer movable playing sections, slidable connections between the sections, a slidable member disposed longitudinally beneath the keyboard and having openings in its lower face and a toothed rack, spring pressed pins engaged in the openings, a gear engaged with the rack, fulcrum means for the playing portions of the levers carried by the slidable member, means on the slidable member and engaging with the last-named portions of the levers for preventing lateral pivotal movement thereof, means at the ends of the piano for receiving the ends of the keyboard when the latter is shifted, and means on the gear for rotating the same.

1,532,794. FIRE-CONTROL APPARATUS FOR NAVAL GUNS. WALTHER AKEMANN, Berlin-Dahlem, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Mar. 13, 1924. Serial No. 699,026. 4 Claims. (Cl. 89—41.)

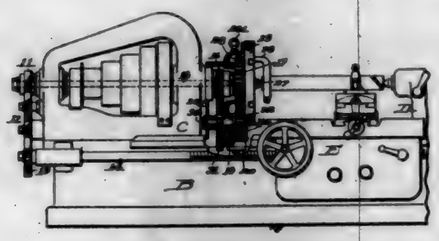
1. A fire control apparatus for naval guns, comprising a firing device having a stabilized and non-stabilized firing tongue, a main transmitter for transmitting angular movements, a common motor for driving said non-stabilized firing tongue and said transmitter, a receiver in connection with said transmitter, a gun elevating motor, and a switch device controlled by said receiver and in turn controlling the angular movements of said elevating motor whereby said elevating motor is adapted to execute an angular movement equal to the angular movement of said transmitter.

1,532,795. FLUORESCENT SCREEN AND METHOD OF MAKING SAME. FRANK BALCH, Salem, Mass. Filed Dec. 26, 1922. Serial No. 609,081. 10 Claims. (Cl. 250—84.)



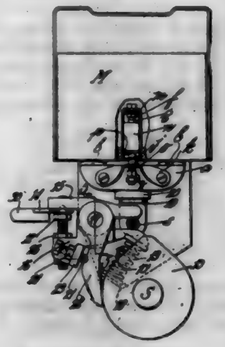
1. The method of making a fluorescent screen that comprises the mixture of fluorescent material with a binding composition, the binding composition comprising a cellulose ester in solution and being free from materials having a low boiling point, and forming a film of such mixture.

1,532,796. FLUORESCENT SCREEN. FRANK BALCH, Salem, Mass. Filed Jan. 10, 1923. Serial No. 611,872. 7 Claims. (Cl. 250—84.)



1. A fluorescent screen having an active layer comprising a mixture of fluorescent material and a binder, the binder comprising cellulose acetate.

1,532,797. APPARATUS FOR COATING CONFECTIONS. ALONZO LENTON BAUSMAN, Springfield, Mass., assignor to National Equipment Company, Springfield, Mass., a Corporation of Massachusetts. Filed Jan. 12, 1924. Serial No. 685,848. 8 Claims. (Cl. 91—2.)

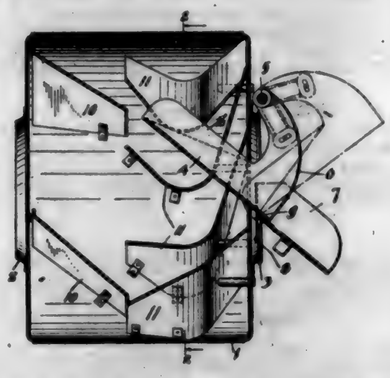


1. In combination, means for applying a bottom coating to confections, recessed supporting means for the coated confections on which means the bottom coatings rest until they are hardened, and means for subsequently applying a second bottom coating to the confections.

1,532,798. LATHE ATTACHMENT. CONSTANT BOUILLON and HOWARD R. BLAKESLEE, Torrington, Conn., assignors to The Hendey Machine Company, Torrington, Conn., a Corporation of Connecticut. Filed Mar. 1, 1922. Serial No. 540,274. 4 Claims. (Cl. 82—28.)

1. The combination of a housing having a hub, a face or driving plate journalled thereon, a dead center secured in said hub, a pinion which can be attached or secured on the live spindle of the lathe, and gearing carried by said housing which will be driven by said pinion when the attachment is in place.

1,532,799. MAGNETO. PHELPS BROWN, IRA E. HENDRICKSON, HAROLD H. CLARK, and TERRENCE G. LOUIS, Springfield, Mass.; said Hendrickson, Clark, and Louis assignors to Wico Electric Company, West Springfield, Mass., a Corporation of Massachusetts. Filed July 18, 1923. Serial No. 652,352. 17 Claims. (Cl. 123—149.)



1. In a magneto, of the type wherein an armature is moved into and out of contact with magnetic poles, a pivoted arm engageable with the armature and adapted to move it away from its poles, a second pivoted arm carrying an abutment adapted to engage and move the first arm, cam means adapted for operation from the engine, and a follower interposed between said means and the second arm.

1,532,800. PROCESS FOR MANUFACTURING HYDROQUINONE. HERMANN EMDE, Berlin-Lankwitz, Germany, assignor to Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Filed Aug. 9, 1921. Serial No. 490,889. 5 Claims. (Cl. 260—154.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. The process of making hydroquinone which consists in heating quinhydrone with a watery mixture of a ferrous salt and an alkaline earth carbonate.

1,532,801. CONCRETE-MIXING MACHINE. JOHN P. FABER and WALTER MULLER, Dunellen Borough, N. J., assignors, by mesne assignments, to Ransome Concrete Machinery Company, Plainfield, N. J., a Corporation of New Jersey. Filed Dec. 8, 1920. Serial No. 429,049. 11 Claims. (Cl. 83—73.)

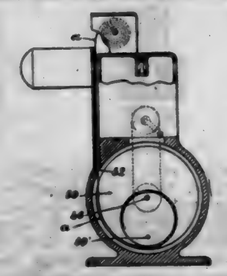
1. In a mixer the combination of a rotatable drum having a hollow cylindrical body and heads with charging and discharging openings therein, a series of blades extending from a point near the discharge opening to the medial part of the drum on the interior thereof, the said blades being wider at their medial portions than at their ends having one edge secured to the inner side of the cylindrical portion and extending inwardly therefrom and being bent longitudinally intermediate their ends to form lifting and mixing scoops, a series of blades similarly secured and positioned extending inwardly from the head with charging opening and having their inner ends approximately in circumferential line with the inner ends of the first named blades, but not overlapping and being disconnected and spaced therefrom on said circumferential line.

1,532,802. UMBRELLA OR PARASOL. WILLIAM F. FRIETNER, Newport, Ky. Filed June 26, 1923. Serial No. 647,820. 5 Claims. (Cl. 135—16.)

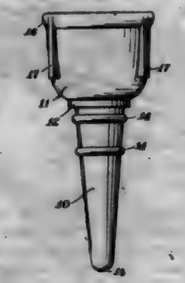
1. In an umbrella fan, a wing adapted to be attached to the upper portion of said umbrella and manually operative means adapted to revolve said wing in one direction when said handle is rotated intermittently.

1,532,803. PIPE WRENCH. LEWIS D. FOWLER, Oklahoma City, Okla. Filed June 6, 1924. Serial No. 718,281. 2 Claims. (Cl. 81—98.)

1. A wrench comprising a handle member having near one end a laterally-extended jaw disposed at substantially right angles to the length of said handle member and having a convex terminal, said jaw being serrated along its outer edge and terminal, and a jaw member pivoted on the end of the handle member and having a serrated face opposed to the serrated face of said first-named jaw and terminal and an angular face serrated for opposed cooperation with said serrated terminal whereby an article may be gripped at three equidistant points of contact of said first-named jaw and angularly disposed faces of the other jaw.



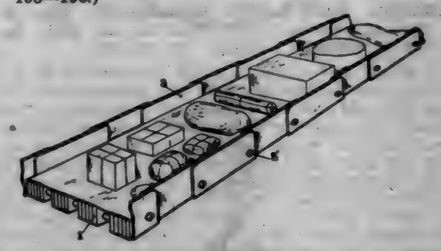
1,532,804. FOUNTAIN BRUSH. WALTER GARNER, Comanche, Tex. Filed Mar. 11, 1924. Serial No. 698,493. 1 Claim. (Cl. 15—131.)



As an article of manufacture, an elongated hollow body forming a fluid container, said body being formed in its top and at one end with a diagonally disposed nipple, said nipple being closed at its outer end and said closed end being provided with discharge openings, said nipple being also formed at its point of connection with the body with a circumferential groove, a thimble surrounding said nipple for rotation about the same, the inner end of said thimble being bent into said groove to provide a swivel joint, said thimble being provided between its ends with an apertured partition cooperating with the adjacent end of said nipple, the adjacent end of said thimble being constructed to form a bristle retaining flange, said thimble being also provided with a laterally directed finger piece by means of which it is rotated.

1,532,805. MOTION-PICTURE APPARATUS. PIERRE SYLVAIN GAURIAT, Paris, France, assignor to Pathe Cinema, Anciens Etablissements Pathe Freres, Paris, France. Filed Mar. 15, 1923. Serial No. 625,288. 2 Claims. (Cl. 242—55.)

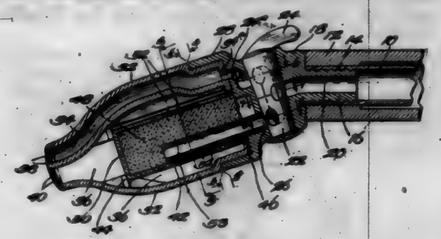
1. In a motion picture apparatus, the combination with the driving mechanism for the film, of a receiving chamber for the film, provided at the lower part of the apparatus, and having an opening through which the film is adapted to be led, a disc rotatably mounted in said chamber, means operatively connected to said driving means for rotating said disc, a member provided with an inclined face adapted to press constantly the edge of the film upon said disc, and a stud carried by said disc, at right angle with the latter.



1,532,806. ICE-CREAM CONE. DAVID GREEBE, Baltimore, Md., assignor to Maryland Baking Company, a Copartnership composed of Joseph Shapiro, Isaac Shapiro, Nathan Shapiro, and Samuel Shapiro, Baltimore, Md. Filed Sept. 7, 1923. Serial No. 661,420. 6 Claims. (Cl. 99—11.)

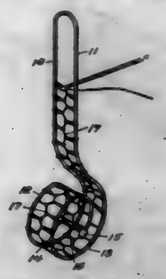
1. An ice cream cone having on the outer surface of the cone near the top a plurality of vertical ribs to prevent too snug nesting of telescoped cones.

1,532,807. ENDLESS CONVEYER BELT. GEORGES GETTING and ADRIEN JONAS, St.-Denis, France. Filed June 11, 1921. Serial No. 476,759. 1 Claim. (Cl. 198—196.)



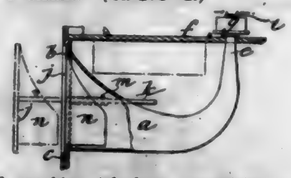
In an endless conveyer belt, a plurality of flexible straps placed side by side with their faces in abutting relation and edges thereof capable of engagement with the face of a pulley or drum, pins extending transversely through said straps and projecting outwardly beyond the sides thereof, and a plurality of rows of plates extending at right angles to the plane of the conveying surface of said belt, said plates being pivotally mounted on said pins and arranged to constitute articulated overlapping flanges forming longitudinal channels for the reception of goods to be conveyed.

1,532,808. LOOM PICKER. EDWARD J. GILLIGAN, South Hadley, Mass. Filed Nov. 30, 1923. Serial No. 677,854. 3 Claims. (Cl. 139—159.)



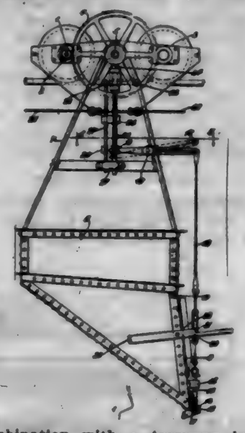
2. The combination with a picker stick of a picker comprising, a body of raw hide secured to the picker stick and provided with a tapered opening converging forwardly from the picker stick, and a tapered ferrule of hard fiber composition fitted in said opening for serving as the shuttle strike, the rear side of said ferrule having direct abutting contact with said picker stick.

1,532,809. DISHWASHER NOZZLE. ALFRED O. GIRARD, Chicago, Ill., assignor, by direct and mesne assignments, of one-third to B. B. Lipsner, one-third to Paul Sporer, and one-third to Milton A. Dreyfus, all of Chicago, Ill. Filed Apr. 24, 1922. Serial No. 556,190. 5 Claims. (Cl. 299—84.)



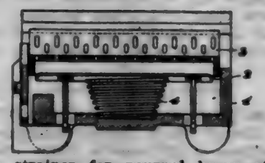
1. A dish washer nozzle of the class described having two groups of perforations for spraying the dishes and comprising two independent passages terminating in the groups of perforations, one of said passages being formed to hold a quantity of soap to be dissolved, a third passage for supplying water under pressure to the nozzle, the passages being so related in size as to insure the projection of sprays from the respective groups of perforations, and means for selectively directing water from said third passage through said independent passages to the groups of perforations.

1,532,810. LACE-MAKING IMPLEMENT. EDLA M. GOURLEY, Overton, Nebr. Filed Jan. 21, 1924. Serial No. 687,566. 2 Claims. (Cl. 66—17.)



1. A device of the class described, comprising an implement formed from a section of wire in elongated U-shape with the terminals bent in volute form, and combined stops and caps on the ends of the volute portions to retain the product, and means for uniting the caps.

1,532,811. CABINET FOR USE WITH SOUND-REPRODUCING DEVICES. EDWARD ALFRED GRAHAM, Brockley, England. Filed Aug. 29, 1924. Serial No. 735,022. 3 Claims. (Cl. 274—2.)



1. A loud speaking telephone comprising a cabinet, a sound amplifying trumpet enclosed therein and arranged with the open mouth of the trumpet coincident with an opening in one wall of the cabinet and a cover arranged opposite the open mouth aforesaid, said cover being constructed to serve as a sounding board and sound deflector and adjustable toward and from said mouth in a plane substantially at right angles thereto so as to vary the volume of the sound emitted from the trumpet and to modulate such sounds, substantially as described.

1,532,812. AUTOMATIC RELEASE FOR TRAMWAY BUCKETS. FREDERICK W. GRICE, St. Louis, Mo., assignor to Broderick & Bascom Rope Co., St. Louis, Mo., a Corporation of Missouri. Filed Feb. 8, 1924. Serial No. 691,512. 18 Claims. (Cl 105—242.)

1. The combination with a tramway bucket, a discharge door for the tramway bucket, and a carriage for the tramway bucket, of mechanism supported by the carriage and operated constantly during and as an incident to the travel of the carriage for unlatching the tramway bucket.

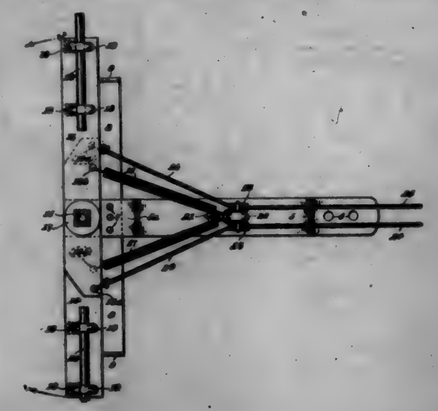
1,532,813. GREASE STRAINER FOR JOURNAL BOXES. FRANCISCO FLORES GUERRA, Mexico City, Mexico. Filed Nov. 12, 1924. Serial No. 749,523. 1 Claim. (Cl. 308—88.)

A grease strainer for pournal boxes of locomotive driving wheels, comprising a curved alloy body composed of 90% lead, 9% antimony and 1% tin, provided with oval conical perforations disposed in staggered position.

1,532,814. PHOTOGRAPHIC SENSITIZER AND METHOD OF MAKING SAME. GURNEY O. GUTEKUNST, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 21, 1921. Serial No. 509,438. 8 Claims. (Cl. 260—41.)

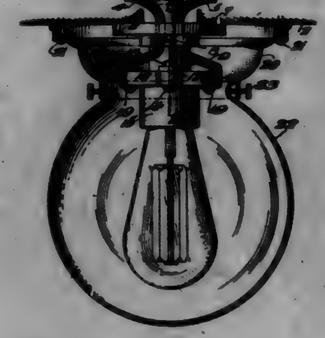
1. A carbocyanine dye effective for sensitizing photographic emulsions in the ultra-red region of the spectrum and produced by the action of a strong base in an alcoholic solution with a low water content on a 6-acetamino-quinaldine alkyl-halide in the presence of a condensing agent.

4. The process of making a carbocyanine dye by the action of a strong base in an alcoholic solution with a low water content on a 6-acetamino-quinaldine alkyl-halide in the presence of a condensing agent until a dye effective for sensitizing photographic emulsions and having a maximum effect at about 730 $\mu\mu$ is produced.



1,532,815. TONGS. WILLIAM J. HAHN, Philadelphia, Pa. Filed Mar. 26, 1923. Serial No. 627,607. 1 Claim. (Cl. 294—36.)

A device of the character described including a thin elongated shank member having a straight edge and opposite thereto an edge formed with a widened region adjacent each extremity, one of the extremities constituting a fixed jaw and the other extremity constituting a fixed handle, two bell crank levers each having their short arms bifurcated, the furcations of one bell crank lever disposed on the opposite sides of the widened region adjacent said shank handle and pivoted thereto, the furcations of the other bell crank lever disposed on opposite sides of the widened region adjacent said shank jaw and pivoted thereto, the long arm of one bell crank lever being formed to constitute a handle cooperative with said shank handle, the long arm of the other bell crank lever being formed to constitute a jaw cooperative with said shank jaw, the bifurcated short arms of the bell crank levers crossing and extending a distance beyond the straight edge of said shank member, and an adjustable connection pivotally connecting said bell crank levers, beyond the straight edge of said shank member, the extremities of said connection being pivoted between the furcations of the short arms of said bell crank levers, substantially as described.

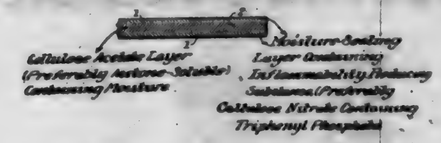


1,532,816. WHIP-ACTUATING DEVICE. PETER B. HANSEN and MELVIN HANSEN, Vivorg, S. Dak. Filed Dec. 6, 1923. Serial No. 678,945. 1 Claim. (Cl. 280—178.)

In a device of the type described, a reversely bent supporting bracket, an upright fastened to one end of said bracket, upper and lower arms pivoted on said upright, hook-shaped whip clamping bolts carried by each arm, a perpendicularly extending angular eye bolt connected to the intermediate portion of the reversely bent bracket, a spring connected to each arm outwardly of its pivot point and to the eye of said bolt, a transversely extending bar mounted on the end of the bracket to which said upright is fastened and having perpendicular end portions adapted to engage the ends of the arms for limiting their movements in the direction they are pulled by said springs, a pair of pulleys connected to the eye of said bolt, and a flexible cord attached to

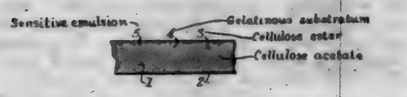
the inner end of each arm and passing over said pulleys for permitting the arms to be moved against the pull of said springs.

1,532,817. ELECTRICAL FITTING. FREDERICK E. HARTWIG, Philadelphia, Pa. Filed Aug. 22, 1924. Serial No. 733,461. 2 Claims. (Cl. 240—85.)



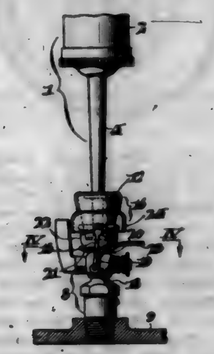
1. In an electrical fitting, a cap portion shaped for tool accommodation and having a threaded bore therein for the reception of the threaded end of a pipe, said cap having formed integral therewith a bottom wall closing one end of said bore, horizontal flanges extending from each side of said cap portion substantially flush with the bottom surface thereof, and integral therewith, an elongated opening through each of said flanges for receiving the socket supporting means, an electrical socket in abutting relation with the underside of said flanges and means passing through said flange openings for removably clamping said socket to said flanges.

1,532,818. COMPOSITE FILM. JAMES H. HASTE, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 2, 1922. Serial No. 591,862. 2 Claims. (Cl. 95—9.)



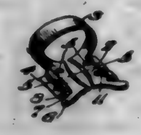
1. A composite film comprising a layer of cellulose acetate containing moisture which induces flexibility

therein, said layer being covered on each face thereof with a layer which restrains the exit of said moisture



from said first named layer, said second named layer containing inflammability-reducing substances.

1,532,819. PROCESS FOR PREPARING PHOTOGRAPHIC FILMS. JAMES H. HASTE, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 14, 1924. Serial No. 706,378. 4 Claims. (Cl. 91—69.)



3. In the process of making a film having a light sensitive gelatino-silver-halid layer attached by a substratum to a nitrocellulose coating on a main acetone-soluble cellulose acetate layer, the steps of applying to said main layer a relatively thin coating of nitrocellulose varnish containing acetone to promote adhesion between said coating and main layer, partially drying said coating, applying over said partially dried coating a gelatinous substratum-forming liquid composition insufficient to remove said coating but containing a volatile nitrocellulose solvent to promote adhesion between said coating and said substratum, and drying together said superposed coating and substratum.

1,532,820. DEVICE FOR INTRODUCING FLUIDS INTO THE CYLINDERS OF INTERNAL-COMBUSTION MOTORS. DONALD MCKNIGHT HEPBURN, Philadelphia, Pa. Filed Dec. 12, 1921. Serial No. 521,890. 1 Claim. (Cl. 285—171.)

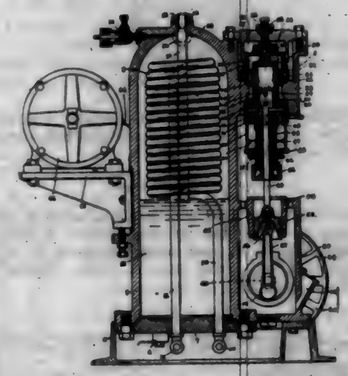
The combination with a nozzle for syringes of a resilient tapered tip adapted to seat against the mouth of a priming cup of an engine, a cap-piece within which the tip is housed, said cap piece having an expanded lower part constituting a surrounding splash guard, and toggle clamp mechanisms associated with the cap piece whereby said tip may be detachably secured to the priming cup with the resilient tip compressed to maintain a fluid tight seal.

1,532,821. RUBBER-DAM CLAMP. JAMES W. IVORY, Philadelphia, Pa. Filed May 14, 1924. Serial No. 713,130. 7 Claims. (Cl. 32—20.)

1. In a rubber dam clamp, tooth engaging and clamping jaws, connected by a bow spring, each jaw having dam-holding means of a curvilinear formation, convex at its inner end, and having an outer upwardly deflected terminal.

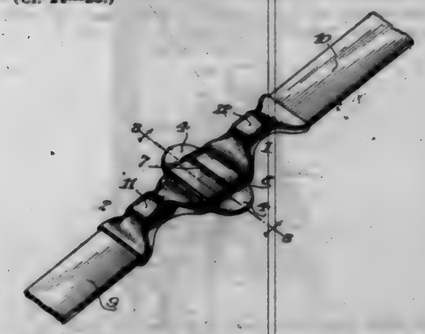
1,532,822. TOOL HANDLE. IRVING S. KEMP, Evansville, Ind. Filed May 10, 1923. Serial No. 638,065. 3 Claims. (Cl. 145—61.)

1. A handle for hammers, hatchets and the like comprising a grip portion sufficiently long to accommodate the operator's hand and being substantially elliptical in general outline in cross view, and having oppositely disposed upper and lower convex surfaces defined in cross view substantially by arcs, such arcs being so positioned that circles produced therefrom respectively intersect each other, said convex surfaces being of materially great length to provide a relatively wide rounded surface at the top and also at the bottom of the handle, there being an upper pair and a lower pair of substantially flat sides on said grip portion, the upper and lower sides merging into said upper and lower convex surfaces respectively, the upper sides diverging from each other and the lower sides diverging from each other.



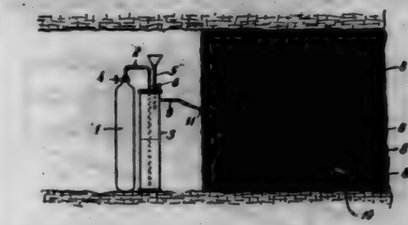
1,532,823. CORSET. REGINA B. KIRBY, Somerville, N. J. Filed May 17, 1924. Serial No. 713,893. 1 Claim. (Cl. 128—291.)

A bandage support comprising a hip corset of elastic material and provided with a horizontal slit in the lower portion of the front and a horizontal slit in the lower portion of the back, flaps secured by their top ends to



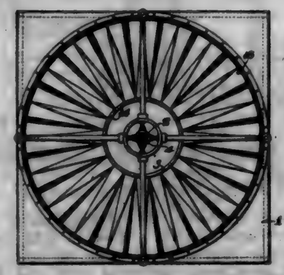
the outside upper portion of the front and back of said corset, said flaps being located above said slits and adapted to have the ends of a bandage secured thereto, said slits being adapted to have a bandage passed therethrough, and the resilient corset in the region of said horizontal slits tending to hold said bandage flat and maintain it yieldably in position.

1,532,824. REFRIGERATING APPARATUS. GEORGE F. KNOX, Milwaukee, Wis. Filed Mar. 27, 1922. Serial No. 547,071. 2 Claims. (Cl. 62—116.)



1. In an apparatus of the class described the combination of a closed chamber; means for admitting a refrigerating fluid to said chamber; means for automatically controlling the amount of fluid admitted to said chamber to prevent an over-charge; means for withdrawing said fluid from said chamber in a liquid form and supplying it to a refrigerating apparatus, whereby it may absorb heat and be converted into a gaseous form; power driven means for compressing said gas; means for conducting said gas from said refrigerating apparatus to said compressor and from said compressor back to said chamber; and means for circulating a cooling medium within said chamber, whereby said gas may be cooled and liquefied.

1,532,825. JOINT. JOHN W. LESLIE, Evanston, Ill. Filed Oct. 25, 1920. Serial No. 419,447. 12 Claims. (Cl. 24—23.)



3. A connecting element for forming a joint in box strap ends or the like comprising a pair of oppositely extending members, each adapted to be secured individually to a box strap end, and to guide the same as it is fed longitudinally therein, and means in the connecting element, for deflecting said binder ends relatively to permit the same to clear each other as they are fed into overlapping position.

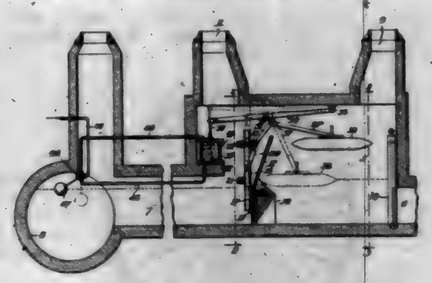
1,532,826. TREATMENT OF COAL. RUDOLF LESSING, London, England. Filed Sept. 12, 1921. Serial No. 500,180. 14 Claims. (Cl. 262—3.)

1. The method of treating massive mineral coal which comprises subjecting the coal at a temperature below the decomposition temperature of the organic coal constituents to the action of an agent capable of weakening the bond of union between the organic constituents of the coal by chemical action, and thereafter separating the said constituents thus weakened to the desired extent by the action of such agent.

1,532,827. ROTARY FAN. GEORGE C. LEWIS, Philadelphia, Pa. Filed Feb. 21, 1923. Serial No. 620,342. 1 Claim. (Cl. 170—168.)

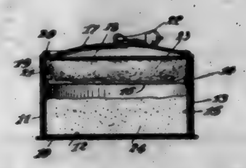
In a rotary fan of the multiple-blade type, the combination of a casing to support a fan shaft, a fan shaft adjustably supported in said casing, a plurality of counterpart blades which each embody oppositely inclined intake edges and leaving edges, and the body portion of each of which is composed of three radially-extending surfaces the continuous peripheral edges of which are of greater breadth than the continuous basal edges,—a hub fixed to said shaft and to which the basal edges of the blades are secured at an angle to its axis,—means for securing said basal edges to the rotary hub at an angle to its axis,—a cylindric rim encompassing the peripheral edges of the blades and to which said peripheral edges are secured at an angle different from that of the connection of the basal edges with the hub,—and means for securing said peripheral edges to said rim,—whereby in the mounting a radial twist is imparted to each blade.

1,532,828. SIGNAL BLADE. BENJAMIN F. LOLLIS, Berwyn, Ill., assignor of one-half to Otto S. Flath, Chicago, Ill. Filed Nov. 25, 1921. Serial No. 517,457. 3 Claims. (Cl. 246—482.)



2. A signal blade composed of sheet metal provided with rigidifying surfaces along the longitudinal axis and adjacent to the longitudinal edges of the sheet to constitute a self supporting blade, and a bracket member of comparatively thin metal, channeled intermediate of its sides, with the intermediate channeled portion formed to provide a comparatively wide flat surface adapted to extend flush with the depressed flat sur-

face of the blade intermediate of the longitudinal edges thereof and integrally secured to the blade to provide an imperforate front surface, the rigidifying surfaces at the longitudinal axis of the blade increasing in width toward

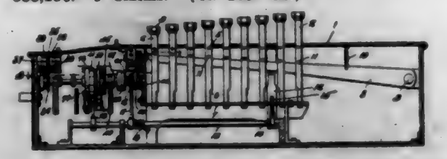


one end of the blade, with the points of attachment between the blade and the bracket member being arranged to compensate for differences in expansion and contraction between the blade and the bracket member.

1,532,829. SEWAGE-FLOW REGULATOR. HENRY L. MCMILLAN, Chicago, Ill. Filed Apr. 29, 1921. Serial No. 465,579. 10 Claims. (Cl. 137—78.)

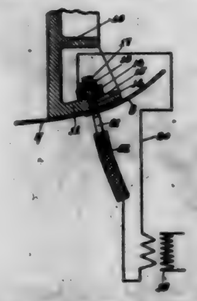
1. In a flow regulator, the combination of a chamber, a control gate therein, a float in said chamber, a bell crank lever fulcrumed in said chamber, the long arm of said lever being connected with said float, and a toggle connection between the short end of said lever and said gate, said bell crank lever and said toggle connection being proportioned to close the gate upon rising movements of the float inversely proportional to the increased flow through a fixed opening resulting from an increased water head.

1,532,830. CONTAINER. JOSEPH A. MARCHAU, Montreal, Quebec, Canada. Filed Mar. 28, 1924. Serial No. 702,595. 4 Claims. (Cl. 132—82.)



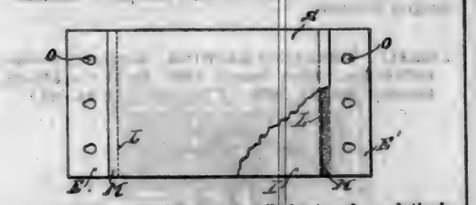
1. In a container, in combination, a bottom member having upwardly extended sides, a removable sifting member having a foraminous top and sides abuttable upon the bottom capable of placement within the bottom member and a top member having downwardly extended sides capable of abutment upon the sifting member when the top member is placed within the sides of the bottom member, a space being formed between the top member and the sifting member.

1,532,831. PRESERVING AND PACKING OF FOODS. MARION G. MARTIN, Canajoharie, N. Y. Filed May 17, 1922. Serial No. 561,606. 2 Claims. (Cl. 99—8.)



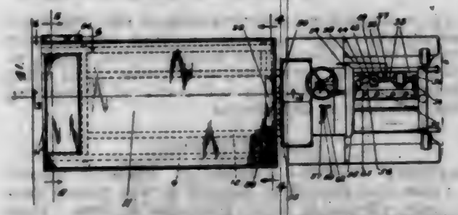
2. A method of preserving nuts, which consists in enclosing the same in a suitable receptacle together with a vegetable charcoal.

1,532,832. CALCULATING MACHINE. JAMES F. MAYS, Lexington, N. C., assignor of one-fourth to A. M. Kistler, Morganton, N. C., and one-fourth to D. E. Rhyne, Lincolnton, N. C. Filed May 8, 1922. Serial No. 558,156. 9 Claims. (Cl. 235—82.)



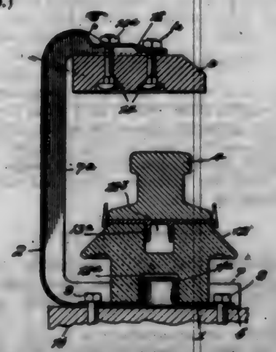
1. In a calculating machine separate dial mechanisms each including a key actuated driving wheel, a floating wheel, a spring controlled by the driving wheel for storing energy, projections on opposite faces of the floating wheel in staggered relation, separate levers mounted for engagement with the projections on opposite sides of the floating wheel respectively, and separate cams directly engaging the levers to shift them successively into wheel holding positions.

1,532,833. ELECTRIC-WELDING JIG. JOSEPH W. MEADOWCROFT, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 6, 1922. Serial No. 586,410. 23 Claims. (Cl. 219—4.)



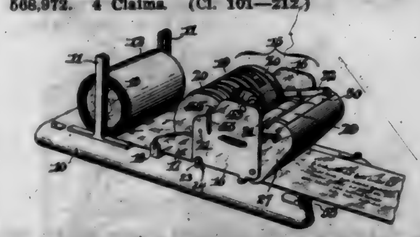
1. An electric welding jig comprising a frame supporting in assembled position the members to be welded together, welding plugs carried by said frame at the points at which it is desired to make electric welds in the said members, a movable electrode, and means connecting said welding plugs and electrode in a welding circuit.

1,532,834. STENCIL SHEET. JAMES H. RAND, North Tonawanda, N. Y. Filed Apr. 14, 1922. Serial No. 552,792. 9 Claims. (Cl. 41—3.5.)



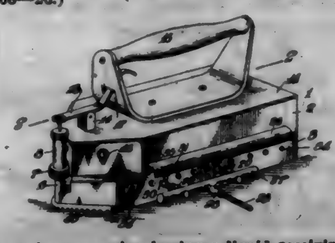
1. A stencil comprising a stencil sheet and a relatively heavy strip attached to each of two opposite margins for attaching the stencil to a holder, said strips being constructed to interengage with the holder.

1,532,835. PORTABLE PARTIAL-LOAD AND FULL-LOAD WEIGHING DEVICE. ALLEN SCHLABACH, Hubbard, Oreg. Filed Jan. 9, 1924. Serial No. 685,189. 9 Claims. (Cl. 265—41.)



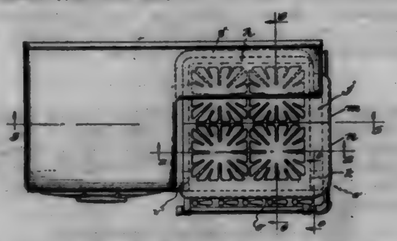
1. A portable partial load and full load weighing device comprising a portable motor propelled vehicle mounting a frame and a subframe, means for supporting the subframe within the frame upon hydraulic cylinders having pistons and piston rods adapted to raising the subframe through pistons and piston rods actuated by liquid under pressure, means for supplying pressure within the cylinders by pumping, weighing mechanism mounting the subframe, and means for leveling the weighing mechanism.

1,532,836. THIRD-RAIL SUPPORT AND PROTECTION-BOARD BRACKET. ERNEST E. SCHMID, Hollis, and WILLIAM H. SCHNEIDER, Freeport, N. Y. Filed Apr. 25, 1924. Serial No. 708,874. 5 Claims. (Cl. 191—30.)



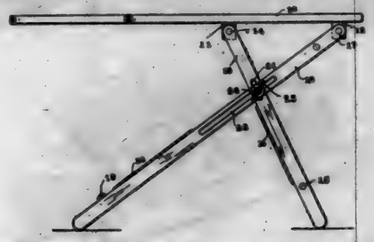
1. A third rail support formed from sheet metal comprising a base, an integral upstanding flange at the edge of said base substantially surrounding the same, an upstanding projection approximately at the center of said base, a third rail insulator stool resting on said base between said flange and said projection and means outside the circumference of the base of said insulator stool and inside said flange for securing said support to a railway tie.

1,532,837. PAPER HOLDER. HIRSTEN SKIDDER, Reading, Pa., assignor to International Advertising Specialty Company, Wernersville, Pa., a Corporation of Pennsylvania. Filed June 17, 1922. Serial No. 568,972. 4 Claims. (Cl. 101—212.)



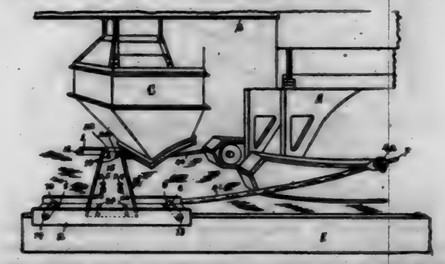
1. A device of the character described comprising means for supporting a strip of paper in roll formation whereby it may be withdrawn as required by unwinding of the roll, a printing roller carrying type adapted to engage the paper and be rotated by frictional engagement therewith to print successive imprints at spaced intervals along the paper during its withdrawal, means comprising an endless band and a transfer device for inking the type, and means operable by rotation of the printing roller to intermittently progress the inking means.

1,532,838. IRON. HARRY S. SHAW, Atlantic City, N. J. Filed Feb. 1, 1923. Serial No. 616,263. 4 Claims. (Cl. 68—26.)



1. In an iron, a casing having a liquid receiving chamber and having a portion of its bottom ironing surface formed by a substantially plane surface and another portion formed by a rotatably mounted roll, means within said casing to effect the internal heating of the ironing surfaces and the liquid chamber, and a valve controlled steam discharge communicating with said chamber.

1,532,839. STOVE GRATE AND SUPPORT. ALVIN G. SHERMAN, Detroit, Mich., assignor to Detroit Vapor Stove Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 23, 1923. Serial No. 676,520. 8 Claims. (Cl. 126—39.)

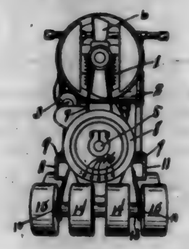


1. In a cooking stove, an outer sheet metal shell construction forming the splasher board and provided with bent offsets continuing directly downward to form the burner pit and forming grate seats, and a removable grate structure which seats by gravity on the said grate seats, the seats and grates having interlocking portions to prevent the grates sliding off.

1,532,840. IRONING BOARD. JOHN A. SLAMA, Racine, Wis. Filed July 14, 1922. Serial No. 575,121. 1 Claim. (Cl. 68—10.)

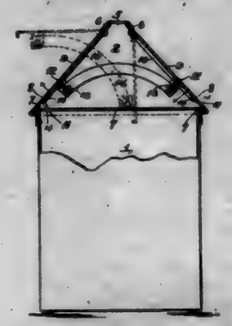
In an adjustable and collapsible ironing board a body portion, two transversely arranged reinforcing members secured to said body, a pair of legs pivoted to each reinforcing member, said pairs of legs being crossed, each pair of legs being provided with elongated slots, the slots of said pairs of legs registering, a spacing sleeve interposed between the inner pair of legs, a pivot bolt passing through said slots and said spacing member and a thumb nut screw threadedly engaging said pivot bolt for securing said bolt in position in said slots.

1,532,841. SUBGRADER. ROBERT W. STATTON, LEONARD L. STATTON, JAMES F. STATTON, and CHARLES V. STATTON, Eldorado, Ohio. Filed Oct. 23, 1924. Serial No. 745,335. 2 Claims. (Cl. 94—45.)



1. A sub-grader comprising two carriages spaced apart and having rollers adapted to revolve upon tracks which form the side walls of the proposed roadway, an I-beam with its end rigidly connected to said carriages and spanning the space therebetween, an inverted channel shaped drag member of same width as said beam and located therebelow and spaced therefrom, manually operable screws located near each of the four corners of said beam and extending through said drag member and adapted to hold the drag member in suspension and providing means whereby the drag member may be adjusted with relation to said beam, blades adjustably attached to the forward face of the drag member, and means whereby the device may be drawn forward.

1,532,842. PROCESS OF UNITING THICK METAL PLATES BY ELECTRIC WELDING. RICHARD STRESAU, Wauwatosa, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Jan. 12, 1923. Serial No. 612,264. 8 Claims. (Cl. 219—10.)

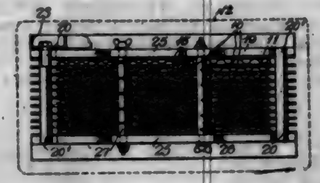


1. In electric arc welding, the process of uniting separate metal plates which consists in arranging in proximity the edges of plates to be united, compressing the metal of the plates in the line of their adjacent edges to form a welding groove, and fusing the edges of the plates in the region of such groove to weld the plates into an integral structure.

1,532,843. VIBRATING MACHINE. ROBERT C. STUBBS, Dallas, Tex. Filed June 2, 1922, Serial No. 565,421. Renewed Feb. 11, 1925. 5 Claims. (Cl. 94—43.)

1. A vibrating machine comprising an operating motor and fly-wheels actuated thereby, a hanger therefor bolted rigidly to said motor, shafts mounted in said hanger, variable means for unbalancing said fly-wheels, and rollers mounted on and balancing said shafts for transmitting the vibrations of said machine.

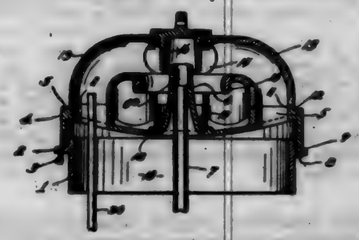
1,532,844. WASTE RECEPTACLE. ROBERT T. SUDDENDORF, Cincinnati, Ohio, assignor to Witt Cornice Company, Cincinnati, Ohio. Filed Feb. 8, 1924. Serial No. 691,409. 2 Claims. (Cl. 220—82.)



1. A hood for a waste receptacle, comprising a plurality of convergent sides, two of said sides having openings convergent upwardly, doors hinged on pivots out of alinement with each other at the opposite sides respectively of said hood and swingable through said openings, and a rigid bar extending from one door to the other and hinged to both.

1,532,845. BLEACHING AND WASHING COMPOSITION. BERTRAND S. SUMMERS, Port Huron, Mich. Filed Dec. 17, 1921. Serial No. 523,170. 2 Claims. (Cl. 8—2.)

1. As an article of manufacture, a mixture of dry bicarbonate of an alkali metal and calcium hypochlorite.

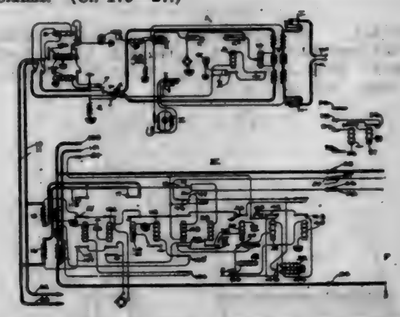


1,532,846. ELECTRICAL CONDENSER. CHESTER H. THORDARSON, Chicago, Ill. Filed Mar. 31, 1920. Serial No. 370,061. 7 Claims. (Cl. 250—41.)

4. An electrical condenser comprising interleaved dielectric and conducting elements, the conducting elements being of wave-like transverse formation to provide at the sides thereof passages for a cooling liquid, said dielectric elements extending transversely and longitudinally beyond the margins of the conducting elements,

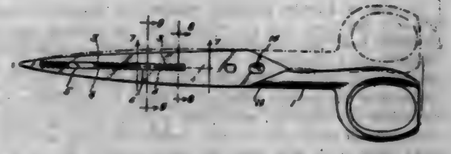
means for tying the structure together, combined with means to interlock with the dielectric elements to hold them from movement in their planes.

1,532,847. OIL BURNER. NATHAN R. TERRELL, Kansas City, Mo. Filed Apr. 26, 1921. Serial No. 634,716. 5 Claims. (Cl. 158—91.)



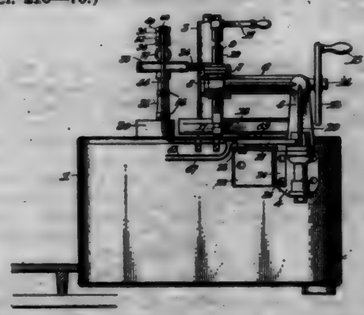
1. In an oil burner, a base plate, spaced air conduits leading from said base plate and converging toward a point centrally of and above said plate to form an air chamber and being formed in their upper wall with an opening axially alined with said plate, a vertical fluid nozzle carried by said plate in axial alinement with said opening, and an inverted tubular heat conducting element depending through said opening and supported by said conduits, the periphery of said element being spaced slightly from said nozzle.

1,532,848. LOOM FOR HAND WEAVING. JOSEPHINE MARIE WEIL, New York, N. Y. Filed Feb. 4, 1921. Serial No. 442,395. 2 Claims. (Cl. 139—33.)



1. A loom embodying means for securing opposite ends of the warp and separating means located intermediate the warp securing means and comprising a wire screen having a suitable mesh forming substantially rectangular openings and composed of a series of transverse and horizontal wire strands.

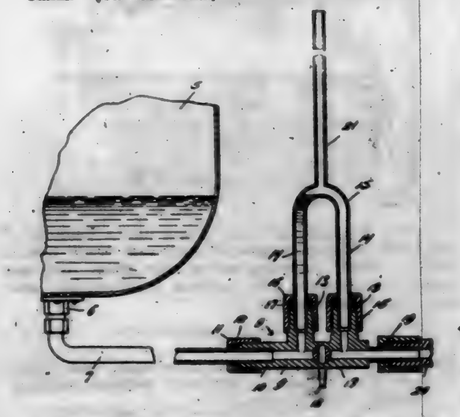
1,532,849. SEMIAUTOMATIC TELEPHONE SYSTEM. BERNARD D. WILLIS, Oak Park, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 22, 1918, Serial No. 241,355. Renewed Sept. 18, 1922. Serial No. 589,017. 39 Claims. (Cl. 179—27.)



1. In a telephone system, a trunk line, a plurality of automatic switches associated with said trunk line, a simplex circuit superimposed on said trunk line, and means for operating said switches simultaneously over said superimposed circuit.

1,532,850. SCISSORS. ABRAM TOWNSEND YARD, Maplewood, N. J. Filed Feb. 9, 1924. Serial No. 691,541. 8 Claims. (Cl. 30—13.)

1. Scissors comprising a blade carrier having longitudinally extending undercut grooves opening in the blade engaging face of said carrier and a tongue receiving recess communicating with said undercut grooves, and a blade having tongues projecting from one face thereof and positioned to engage said grooves to retain the blade in pressed engagement with the carrier.

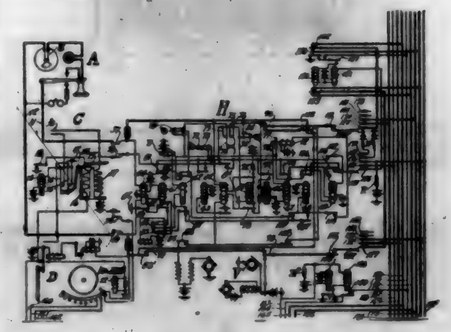


1,532,851. ELECTRICALLY-OPERATED SAFETY LOCK FOR CENTRIFUGAL DISCHARGING MACHINES. WILLIAM E. ZUCCARELLO, Longmont, Colo., assignor of one-fourth to Lars P. Pilkaer, Denver, Colo. Filed Jan. 8, 1924. Serial No. 685,070. 11 Claims. (Cl. 210—70.)

1. In a machine of the character described having a rotatable shaft, the combination with a rotatable standard on said machine, a lock arm for engaging said

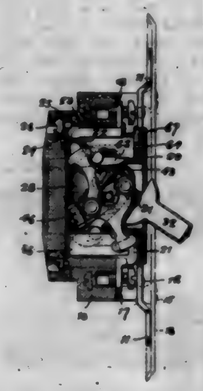
standard to prevent rotation of the same, a magnet in circuit with an electric power source for actuating said lock arm, and means operated by said shaft when the same is rotating at high speed, to close the circuit through said magnet.

1,532,852. RESERVE-SUPPLY-TRAPPING MEANS FOR GASOLINE TANKS. ALFRED R. ADAMS, Detroit, Mich. Filed Apr. 10, 1924. Serial No. 705,561. 1 Claim. (Cl. 158—46.5.)



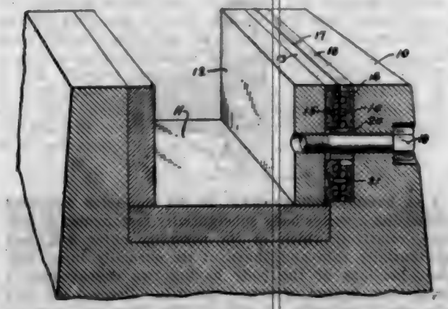
A reserve supply trapping means for gasoline tanks wherein the tank has an outlet from the bottom, and a gasoline feed pipe extending substantially horizontally therefrom comprising a cast body member having a horizontally arranged tubular section formed with an axial bore having an enlarged portion at one end for receiving the end of said feed pipe, a packing gland threaded on said end of the section to form a liquid tight joint with said pipe, the other end of the section having a reduced external diameter for receiving another feed pipe connection thereon, the central portion of the section of the body member having spaced parallel upstanding nipples formed thereon, and provided with bores communicating with said axial bore, and enlarged at the end portions to form sockets, an inverted Y-shaped pipe member having the similar adjacent ends positioned and mounted in said pockets of said nipples on the body member, and secured therein, in fluid tight relation, the outer end of said pipe member extending upwardly above the horizontal plane of the top of the tank, and a valve in said body member controlling the passage through the axial bore therein between said nipples, said Y-shaped pipe member trapping a predetermined quantity of gasoline in the tank, and providing a by-pass in the feed pipe around said valve.

1,532,853. COMBINATION HALTER AND BRIDLE. SALVADOR S. AGUILAR, San Francisco, Calif. Filed Apr. 30, 1924. Serial No. 709,999. 4 Claims. (Cl. 54—6.)



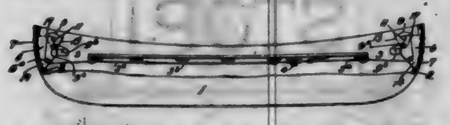
1. A combined halter and bridle including a halter, a metal band extending through the nose band of the halter and having slots at its ends for securing a bit frame thereto, a bit frame having lugs to connect it with the slots in said metal band and a chain having its ends connected to said bit frame and passing under the horse's jaw.

1,532,854. AUTOMATIC TELEPHONE SYSTEM. ALBERT ANDERSEN and WILLIAM A. CHAPIN, Chicago, Ill., assignors to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 23, 1920. Serial No. 432,818. 14 Claims. (Cl. 179—18.)



1. In a telephone system, calling and called lines, an automatic connector switch, means whereby the subscriber on one of said calling lines may establish a connection with one of said called lines by means of said switch, a holding trunk, and means responsive to the restoration of the receiver at the called substation for transferring the connection of the calling line to the said holding trunk.

1,532,855. ELECTRIC SWITCH. CARL ERIC ANDERSON, Stratford, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 22, 1921. Serial No. 524,215. 18 Claims. (Cl. 200—67.)



1. An electric switch comprising a chambered insulating body, a sheet metal supporting bridge therefor, a single frame plate integral with said bridge and offset at substantially right angles thereto, and extending into the chamber of said insulating body, and a switch mechanism mounted on said frame plate and comprising an oscillating member straddling the upper margin of the plate, and a second oscillating member straddling the lower margin of the plate.

1,532,856. PRESSURE-RELIEVING MEANS FOR DRAWING PRESSES. BINGHAM T. ANDERS and JOHN DILOT, Milwaukee, Wis., assignors to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Oct. 17, 1924. Serial No. 744,097. 4 Claims. (Cl. 113—28.)

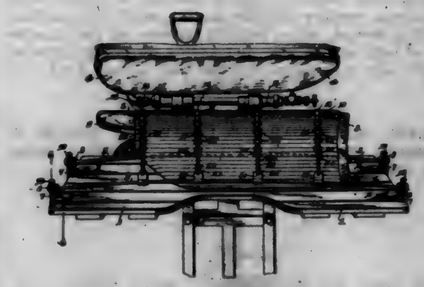
1. Pressure relieving means comprising hardened metal plates provided upon their opposed faces with cutting edges, in combination with a plate of softer metal disposed between the hardened plates and subjected to shearing action when the pressure upon the hardened plates exceeds the normal resistance of the interposed plate.

1,532,857. ENGAGING AND DISENGAGING GEAR FOR SHIPS' BOATS. JAMES D. ANDREW, Englewood, N. J., assignor, by mesne assignments, to Welin Davit & Boat Corporation, a Corporation of New York. Filed Oct. 9, 1922. Serial No. 593,405. 7 Claims. (Cl. 9—23.)

1. In engaging and disengaging gears for ships' boats, the combination with a pivoted tripping hook, of a hook-mounting bracket comprising two spaced and laterally-extending plates between which said hook is pivoted, each of said plates having integrally formed bearing and attaching ring-guiding portions, and means for actuating said hook to swing about its pivot to engaging and disengaging positions respectively.

1,532,858. MANUFACTURE OF YEAST. RAYMOND F. BACON, Pittsburgh, Pa., assignor, by mesne assignments, to The Fleischmann Company, a Corporation of Ohio. Filed July 31, 1919. Serial No. 314,564. 8 Claims. (Cl. 195—30.)

1. In the art of yeast manufacture, the process of producing yeast which comprises preparing a yeast nutrient solution containing sugar material and yeast nourishing inorganic salts, propagating yeast therein with aeration, and adding extraneous vitamino-containing material, in amounts sufficient to produce high percentage yields of yeast relative to the amounts of sugar and salt nutrients employed.

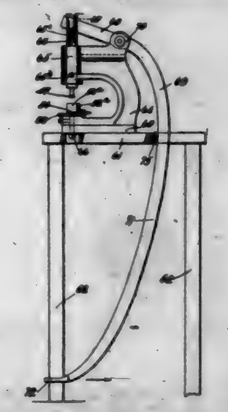


1,532,859. SELF-DEFENSE SHOOTING DEVICE. WILLIAM H. BALCH, Philadelphia, Pa. Filed June 23, 1924. Serial No. 721,797. 3 Claims. (Cl. 42—1.)

1. A shooting device including a support; a battery mounted thereon; a fire arm mounted thereon; a pulley rotatably mounted thereon; a contact finger carried thereby, and controlling means for rotating the pulley to bring the finger into engagement with the connections from the spark coil and battery to complete a circuit therethrough for actuating the fire arm.

3. A shooting device including a pair of housings; straps connecting the housings for attaching them to the body of the user; fire arms mounted in each housing; controlling means connected with the fire arm in one housing and adapted to be attached to one arm of the user, and controlling means connected with the fire arm of the other housing and adapted to be attached to the other arm of the user, the fire arms being actuated by raising the arms of the user.

1,532,860. ATTACHMENT FOR IRONING PRESSES OR MACHINES. ISAAC R. BARKSDALE and EDWARD MARTIN O'CONNELL, Glendale, Calif., assignors to Clyde C. Rambo and Bessie T. Wood, both of Los Angeles, Calif. Filed Nov. 20, 1923. Serial No. 675,878. 1 Claim. (Cl. 68—9.)



An attachment for ironing presses or machines comprising a set of flexible holding elements each having each terminal portion thereof provided with a set of spaced attaching devices, two sets of resilient coupling elements, one of each set of coupling elements being detachably connected with one of a set of attaching devices, and a pair of anchoring elements, each of said anchoring elements being common to and connected to a set of coupling elements.

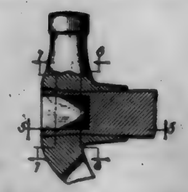
1,532,861. APPARATUS FOR ATTACHING SHOE PARTS. REINHARD E. BARTELS, Lynn, Mass. Filed June 9, 1922. Serial No. 567,068. 7 Claims. (Cl. 1—19.)

8. An apparatus of the class described, comprising means for holding in relatively assembled positions two

members comprising a shoe part and a stiffener, said stiffener having attaching elements at each end, and a hammer having a pair of spaced striking heads actuable

to strike one of said members opposite the attaching means at both ends of said stiffener to fasten said members together.

1,532,862. METHOD AND MEANS FOR FIXING SHANK STIFFENERS IN SHOES. REINHARD E. BARTELS, Lynn, Mass. Filed June 12, 1924. Serial No. 719,678. 14 Claims. (Cl. 36—76.)

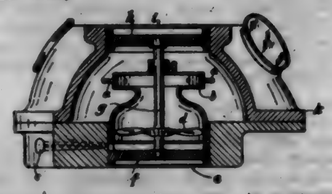


14. A shoe comprising a sole member, a headed member carried thereby and having its head lying against one face thereof, and a pronged stiffener on the opposite face of said sole member and having its prongs clinched in said sole member within the area of said head.

1,532,863. CALENDAR-PAD FASTENER. SAMUEL B. BARTOLD, Chicago, Ill. Filed July 24, 1924. Serial No. 728,083. 4 Claims. (Cl. 40—120.)

3. The combination with a back and a pad of calendar or other sheets therefor, of a one-piece wire fastener bent to have a mid-portion and end portions transverse thereto, with the end portions bent to have loops at their outer ends and transverse intermediate portions joining the loops to said mid-portion, said fastener being applied to the back with its loops in front of the same and extending through the back and through holes in the pad to support the latter, said intermediate and mid-portions being to the rear of the back, and a clip on the back and engageable with said mid-portion on springing the same under the clip for detachably locking the fastener to the back.

1,532,864. WEDGE FOR TOOL HANDLES. JOSEPH F. BARHAM, Evansville, Ind., assignor, by mesne assignments, to Evansville Tool Works, Incorporated, Evansville, Ind., a Corporation of Indiana. Filed Jan. 8, 1923. Serial No. 611,238. 2 Claims. (Cl. 306—35.)



1. A handle-holding wedge of the character described comprising a wedge body substantially rectangular in side view, relatively thick at its normally outer end, and substantially thin and sharp at its normally inner end, inner portions of the body having two concave-convex formations spaced apart, oppositely directed in end view and diagonally directed in side view and merging into each other on substantially ogee lines in end view, said formations providing on each side of the wedge a trough-like recess diagonally directed, substantially half the width of the wedge at its sharp edge and gradually decreasing in width and depth toward the thick end of the wedge, the relatively thick outer portions of the wedge being free of said concavo-convex formations.

1,532,865. TRAFFIC SIGNAL. MILO H. BECK, Oilton, Okla. Filed Sept. 3, 1924. Serial No. 735,594. 2 Claims. (Cl. 40—125.)

1. A traffic signal including spaced carrier devices adapted to be supported in a roadway, a signal bearing element mounted for oscillation relative to said carrier devices, a spring coupled to one of said carrier devices and operative against one face of the signal bearing element, and a spring coupled to the other carrier device and operative against the other face of said signal bearing element, said springs coacting to maintain the signal bearing element yieldably in vertical position.

1,532,866. VAPORIZER FOR INTERNAL-COMBUSTION ENGINES. LEONHARD BECKER, Wiesbaden, Germany. Filed Feb. 1, 1924. Serial No. 690,012. 1 Claim. (Cl. 48—180.)

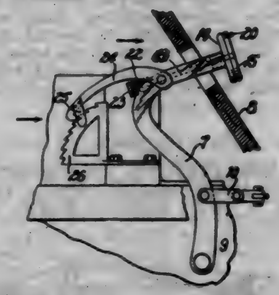
A vaporizer for internal combustion engines, comprising a case having an inlet for communication with the carbureter of the engine to receive the gaseous mixture

therefrom, and also having an outlet opening for communication with the engine intake to deliver the vaporized mixture thereto; a vertical shaft in said case supported in at least one of said openings; a hollow body carried by said shaft and having an open inlet end which is disposed immediately opposite and adjacent to the inlet opening in the case, to permit the gaseous mixture entering said case to pass directly into said body; and a series of bent spraying tubes attached to the periphery of said body and through which the mixture is adapted to flow, whereby said body will be automatically rotated at high speed solely by the reaction of the mixture on said tubes during its passage therethrough, and said mixture will be discharged from the tubes in the form of an extremely fine mist.

1,532,867. RADIATOR FOR TRANSFORMER TANKS. ROBERT V. BINGAY, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Oct. 1, 1920. Serial No. 414,146. 1 Claim. (Cl. 257—191.)

The combination with a transformer tank of a plurality of detachable radiators therefor comprising upper and lower headers and connecting pipes, a connection from the tank to the upper header below the top thereof, the top of said header being removable to permit access to all of said pipes and means between the radiators and tank to allow draining of the radiator independently of said tank, said means being also adapted to prevent draining of the tank on removal of the radiator.

1,532,868. BRAKING DEVICE. JASPER BLACKBURN, Webster Groves, Mo. Filed Oct. 10, 1921. Serial No. 506,567. 5 Claims. (Cl. 74—81.)

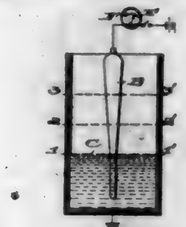


1. A braking device comprising in combination with an automobile having service and emergency brakes, a pair of levers for operating said brakes, brake rods attached to said levers, a foot lever for operating said brake rods, a dog formed integral with said foot lever, a pivotally mounted pawl provided with ratchet teeth adapted to normally engage with said dog secured to said automobile, and a foot rod for releasing said pawl from engagement with the dog.

1,532,869. SIDE CLOSURE FOR AUTOMOBILES. JASPER BLACKBURN, St. Louis, Mo. Filed Feb. 6, 1922. Serial No. 534,378. 2 Claims. (Cl. 296—45.)

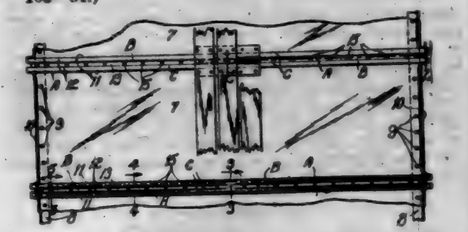
1. A side closure for automobiles comprising a frame composed of an upper and a lower section having their side members hingedly secured together, pins adapted to be inserted through the hinges for holding said frames in extended position, a textile covering secured to each frame, and a free depending flap formed integral with the lower edge of each textile covering said flap extending below the section which carries it, in combination with an automobile having doors which have their inside and top faces hingedly mounted so as to form a storage place for said closures when not in use.

1,532,870. BRAKING DEVICE. JASPER BLACKBURN, Webster Groves, Mo. Filed Sept. 25, 1923. Serial No. 664,675. 3 Claims. (Cl. 74—81.)



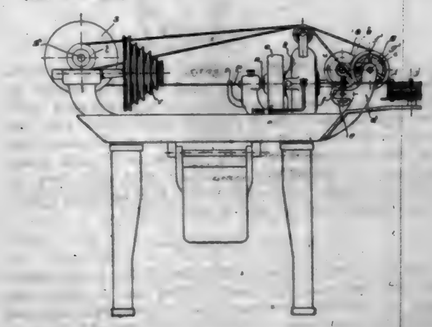
1. A braking device comprising a brake lever, brake rods carried by said lever, a hook pivotally carried by said lever, a toothed segment located adjacent said brake lever, and means carried by said brake lever and contacting with said hook for raising and maintaining said hook out of engagement with said segment, said means adapted to be moved out of contact with said hook for lowering the same into contact with said segment, whereby said brake lever is held in set position.

1,532,871. LEVEL-INDICATING DEVICE. FRANZ GEORG BLOCH, Boblingen, Germany. Filed Dec. 1, 1920. Serial No. 427,648. 5 Claims. (Cl. 219—40.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



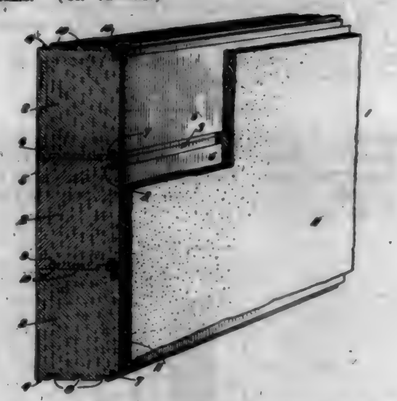
1. The combination with a body of liquid, of a resistance element extending downwardly into the liquid to a predetermined level and an electric circuit connected to

the top of the resistance element and providing a terminal at a level below the lower end of the element whereby the circuit includes the resistance element and a



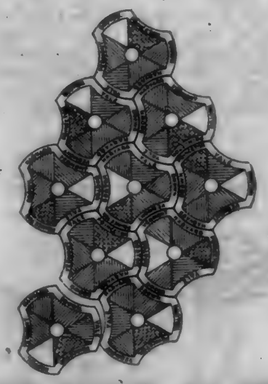
gap filled by the liquid, the resistance element having a high specific resistance increasing substantially uniformly from top to bottom.

1,532,872. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Apr. 30, 1924. Serial No. 709,977. 15 Claims. (Cl. 108—54.)



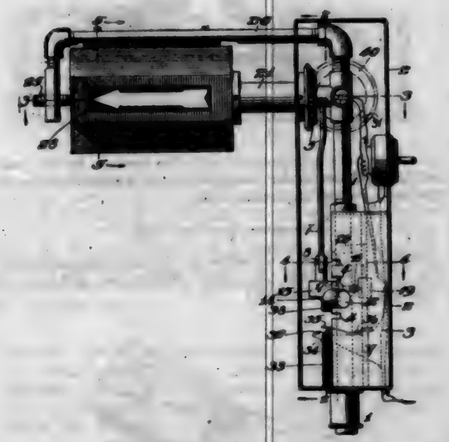
1. A car roof comprising metal roof sheets having upwardly offset side marginal portions that are lapped for a portion of their width and positively secured together to form hollow upstanding seams whose cross sectional shape changes from an inverted channel section at the ridge into a section at the eaves comprising two inverted channels that are separated by an upwardly opening channel of a width corresponding substantially to that of the sheet lap.

1,532,873. WIRE REDUCING. LOUIS GUSTAVE BÉGOUET and PAUL ALBERT BÉGOUET, Geneva, Switzerland. Filed Dec. 5, 1921. Serial No. 520,110. 2 Claims. (Cl. 78—21.)



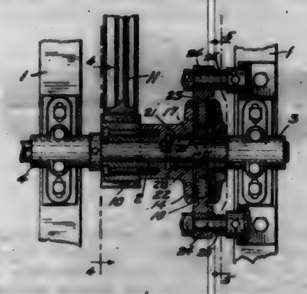
1. In a wire-drawing machine for reducing very coarse wire at once to very wire, the combination of a pair of coacting hammers having a series of reducing rings formed into steps differing only slightly in diameter and connected by conical intermediate portions adapted to take a firm grip on the wire; a wire-feeding mechanism; and operating means for the hammers.

1,532,874. BUILT-UP PANEL. HARRY W. BROADY, Bayside, N. Y., assignor, by mesne assignments, to American Balsa Wood Corporation, a Corporation of New York. Filed June 14, 1921. Serial No. 477,475. 5 Claims. (Cl. 72—38.)



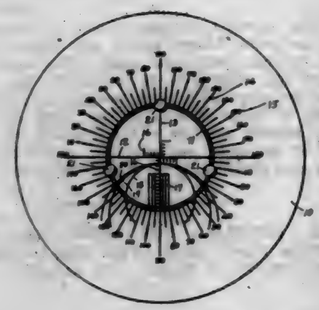
1. A composite panel comprising a base built up of a plurality of sections abutting each other edgewise and fastened together, some of such abutting sections having in each of the adjacent corners between an outer surface and the abutting edges, a substantially half section of a surface keying groove, whereby the assembling and fastening together of two abutting panel sections will form a complete surface keying groove, and a plastic coat applied on the surface of the panel and keyed within such surface keying grooves.

1,532,875. PUZZLE. JAMES BROWN, Pawtucket, R. I. Filed May 22, 1922, Serial No. 562,613. Renewed Feb. 12, 1925. 2 Claims. (Cl. 273—137.)



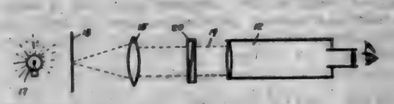
1. A puzzle comprising a plurality of units, each of identical configuration and having alternate convex and concave edge surfaces, each unit having a plurality of substantially triangular color configurations on the face thereof with a color configuration disposed adjacent each curved edge of the unit, the convex edge of one unit registering with the concave edge of another unit with similar color configurations adjacently positioned.

1,532,876. SIGNAL FOR AN AUTOMOBILE OR OTHER VEHICLE AND STREET AND ROAD PURPOSES. HARRY E. BROWNE and WALTER M. BROWNE, Plainfield, N. J. Filed July 23, 1923. Serial No. 653,086. 2 Claims. (Cl. 116—43.)



1. In a signal of the character stated, a horizontally mounted rotatable body, a series of signals on the periphery of said body, an inclosure for said body, stationarily supported thereover, said body having in its side an opening in register with either of said signals and through which a desired signal is displayed, a horizontal rotatable shaft carrying said body, a bevel gear wheel on said shaft, a second bevelled gear meshing with the first mentioned bevelled gear, a handle, and a connecting rod for said handle and last mentioned wheel whereby the body may receive rotary motion to an extent relatively to the signal that is to be displayed through said opening in said inclosure.

1,532,877. AUTOMATIC BRAKE FOR STRAIGHT-LIFT ELEVATORS. HERMAN JOSEPH BUCK, Ellwood City, Pa., assignor to Mathews Conveyer Company, Ellwood City, Pa., a Corporation of Pennsylvania. Filed Aug. 30, 1919. Serial No. 320,858. 3 Claims. (Cl. 192—18.)



1. The combination, with a driving shaft, of a pinion loosely mounted thereon, gearing connected with and driven by said pinion, means connecting said shaft with said pinion for driving said pinion from said shaft, said means being arranged to permit the pinion to exceed the speed imparted to it by said shaft, a brake mechanism connected with said pinion, and means bringing said brake mechanism into operation when the speed of the pinion exceeds the speed normally imparted to it by said driving shaft, and to stop said pinion when the application of power to said driving shaft is interrupted or discontinued.

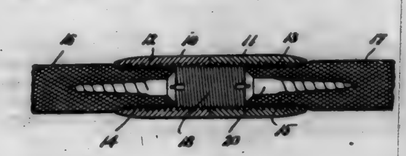
1,532,878. LENS PROTRACTOR. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Onepiece Bifocal Lens Company, Indianapolis, Ind., a Corporation. Filed July 12, 1923. Serial No. 651,075. 3 Claims. (Cl. 88—56.)

1. A protractor for use in making bifocal lenses formed of transparent material, and chart lines and numerals placed thereon including curved lines adapted to register with the division line between the bifocal surfaces of bifocal lenses or lens blanks.

1,532,879. PRISM-MEASURING DEVICE IN PARALLEL SYSTEMS. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Onepiece Bifocal Lens Company, Indianapolis, Ind., a Corporation. Filed July 23, 1923. Serial No. 653,369. 6 Claims. (Cl. 88—56.)

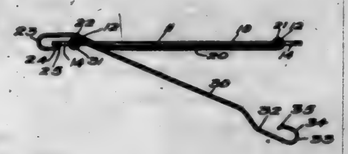
1. Apparatus for measuring the powers of lenses, including an axially adjustable target, means for supporting the lens to be tested, a telescope focused for infinity, and a prism measuring device in the parallel ray system between the telescope and lens when supported on said lens holder, whereby both the focal and prismatic powers of a lens may be measured.

1,532,880. MIRRORED LENS PROTRACTOR. LUCIAN W. BUGBEE, Jr., Indianapolis, Ind., assignor to Onepiece Bifocal Lens Company, Indianapolis, Ind., a Corporation. Filed June 7, 1924. Serial No. 718,499. 2 Claims. (Cl. 88—56.)



1. A protractor for optical purposes including a transparent plate, an inwardly reflecting coating on one surface thereof, and protractor markings on the other surface thereof.

1,532,881. BAKING AND COOKING UTENSIL. GAETANO CAPPI, San Francisco, Calif. Filed Aug. 16, 1924. Serial No. 732,440. 1 Claim. (Cl. 53—6.)



A baking utensil comprising a pair of comparatively shallow, perforated hinged pastry pans adapted to form a crust forming mold, said pans each bearing offset peripheral lips adapted to fit one within the other to serve as shearing edges when brought into closed relationship, to shear off, or trim, the outer edge of the contents, thereby forming a bend around the molded contents of the mold, and retaining means adapted to maintain said hinged pans in closed relationship.

1,532,882. COUPLING FOR ROPE. BENJAMIN H. CARPENTER, Boston, Mass. Filed May 22, 1924. Serial No. 715,058. 3 Claims. (Cl. 24—123.)

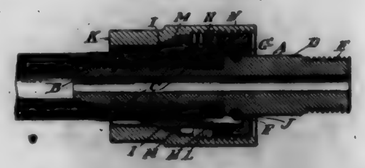
1. A coupling of the class described having internally threaded, separable body portions; ropes having their ends tightly bound and compressed by a material readily engageable by screw threads, and forced into said body portions; whereby the said ends are further compressed; means to still further compress said ends in said body portions and cause a closer engagement of said ends and said internal threads; and means to unite said body portions.

1,532,883. HAIR WAVER. CHARLES R. CARPENTER, Robbinsdale, Minn. Filed Feb. 25, 1924. Serial No. 695,047. 12 Claims. (Cl. 132—41.)

5. A hair waver embodying a frame, and a pair of resilient hair clamping and binding members pivotally mounted at opposite ends and extending longitudinally across opposite sides, respectively, of said frame, each of said members terminating in a portion offset outwardly from and formed to detachably engage the adjacent frame end.

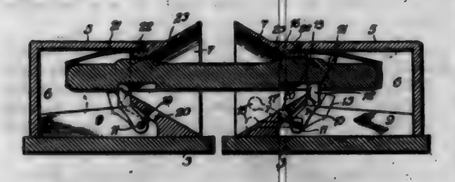
1,532,884. VEHICLE BRAKE. CHARLES W. CHAPIN, Louisville, Ky. Filed July 3, 1924. Serial No. 724,120. 1 Claim. (Cl. 74—39.)

A brake operating device for an automobile including an angle bracket adapted to be mounted on the instrument board of the automobile and having longitudinally alined slots, a leaf spring carried by the bracket, and a notched rod slidable through the slots of the bracket



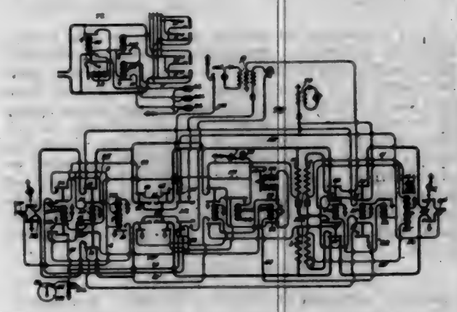
and urged into engagement with the bracket by the said spring, and means for connecting the slidable rod with the brake rod of the automobile.

1,532,885. HINGE. CHARLES N. CORTELL, Mamaroneck, N. Y. Filed Apr. 25, 1923. Serial No. 634,414. 3 Claims. (Cl. 16—128.)



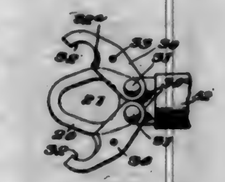
1. In a receptacle comprising a body member and a cover member, the combination of a hinge knuckle on one member, a pintle coaxial therewith extending beyond the knuckle at both ends, a curled edge on the other member designed to receive the ends of the pintle transversely during assembly and to be swung into interlocking position, the curled edge being provided with an open slot slightly longer than and designed to receive the knuckle, and means for locking the parts against disengagement when in assembling position.

1,532,886. HOSE COUPLING. IRVING COWLES, Chicago, Ill., Filed Feb. 4, 1921. Serial No. 442,565. 25 Claims. (Cl. 285—36.)



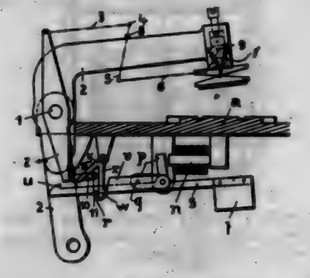
1. A hose-clamp or coupling including a member terminating at one end in a plurality of flexible fingers, the inner faces of the latter normally presenting a discontinuous substantially cylindrical surface, said member and fingers constituting a single, integral structure, said fingers having substantially inflexible free end portions constituting substantial portions of said fingers, and very flexible shank-portions to thereby permit the said free end portions to be moved a substantial distance bodily radially to engage hose of considerable different outer diameters while the inner faces of said fingers are maintained in position to present a substantially cylindrical surface common to all thereof.

1,532,887. MINING-CAR COUPLING. EDGAR A. CUNNINGHAM and HARRY HOMAD, Mallory, W. Va. Filed June 12, 1923. Serial No. 644,879. 2 Claims. (Cl. 213—176.)



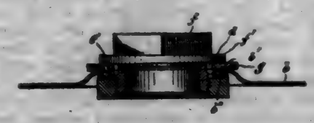
1. In a mining car coupling, a housing member having a flaring mouth, a weighted locking member pivotally mounted within said mouth and having an offset portion with square shoulder, a coupling bar with longitudinal recess in its under face with a shoulder, against which said flat shoulder engages, and a spring extended inwardly in said member and bearing on the inner end of the coupling bar.

1,532,888. TELEPHONE SYSTEM. HIRAM D. CURRIER and WILLIAM G. SHULL, Chicago, Ill., assignors to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1920. Serial No. 396,401. 23 Claims. (Cl. 179—43.)



5. In a toll line system, a built-up toll line switched through at a switching station, means whereby disconnection at said switching station automatically builds up a different toll line therethrough and transmits signals to both ends of said different toll line.

1,532,889. TERMINAL CONNECTER. HARRY P. DAVIS, Hempstead, N. Y. Filed Oct. 19, 1921. Serial No. 508,781. 3 Claims. (Cl. 173—269.)

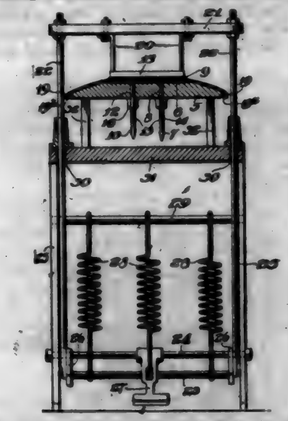


2. In a terminal connecter, an engaging plate having an opening therethrough, locking jaws pivotally mounted on said plate, each of said jaws formed with a recess in the abutting edge portion thereof opposite each other respectively, and in closed position of the jaws forming an opening registering with the opening in said plate, projections on said jaws adapted to extend into the plate opening and engage the sides thereof to lock said jaws in closed position, and adjacent edge portions of said jaw recesses inclined toward said engaging plate to form cam surfaces with the jaws in closed position.

1,532,890. ADDRESSING MACHINE. HERMANN DAUTACH, Berlin-Groszlichterfelde, Germany, assignor to Adrema Maschinenbau G. m. b. H., Berlin, Germany. Filed Oct. 22, 1920. Serial No. 418,863. 8 Claims. (Cl. 101—57.)

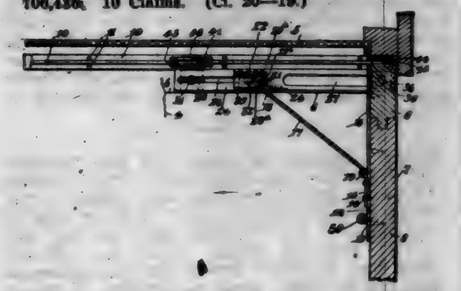
1. In a device of the kind described in combination a machine bed, a carrier adapted to move towards and away from said bed, means for permanently keeping said carrier moving, a pad movably connected to said carrier, a printing plate adapted to travel along said bed underneath said carrier, electric means for influencing the position of said pad relatively to said carrier and means connected with said plate for causing said electric means to change the position of said pad relatively to said carrier.

1,532,891. METHOD OF PRODUCING AND ATTACHING CLOSURES FOR SHEET-METAL CONTAINERS. CHARLES T. DRAPER, Cleveland, Ohio, assignor to The Draper Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Apr. 9, 1917, Serial No. 160,660. Patent No. 1,426,021, dated Nov. 21, 1922. Divided and this application filed Oct. 21, 1922. Serial No. 596,051. 3 Claims. (Cl. 29—148.2.)



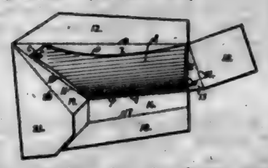
1. The herein described method for securing an anchorage member to a sheet metal structure, which consists in circularly piercing the sheet metal, flanging the edge of the circular opening thus produced, nesting a correspondingly flanged annular anchorage member with said flanged edge, one within the other, forcibly interlocking the flanged members substantially in parallel relation beneath an annular sheet metal seat, and meanwhile restraining one of said flanged members from retraction with respect to the other to insure their complete interlocking action.

1,532,892. APPARATUS FOR FORMING AND SHAPING HAT BRIMS. FRANK A. EARHART, Philadelphia, Pa. Filed June 8, 1922. Serial No. 566,677. 3 Claims. (Cl. 223—31.)



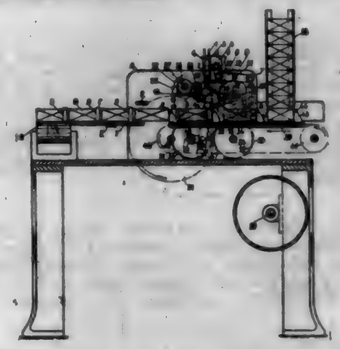
1. In an apparatus of the character stated, a heated die having pins secured to its outer periphery, holes

through said die and a plurality of plates having spurs depending therefrom and passing through the holes



in said die, wedges passing through slots in said spurs, a plunger above said plates, and means including a foot treadle for actuating said plunger.

1,532,893. TRAVELING HINGE. JESSE C. EAST, Columbus, Ga. Filed Apr. 14, 1924. Serial No. 706,436. 10 Claims. (Cl. 20—19.)

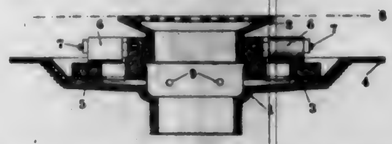


1. In a traveling hinge of the character described, a slotted roller supported element, a double hinge element comprising a central portion having a leaf pivoted to each end thereof, means carried by said supported element for connecting one of said leaves thereto, said other leaf being adapted for connection with a door, and guide means adapted to move in a slot of said element while in engagement with a door, to project said door at right angles to said slotted element when being moved to closed position.

1,532,894. SHIPPING CONTAINER FOR PLOWSHARES. AUGUST J. ECGMAN, Omaha, Nebr., assignor to Eggers-O'Flyng Company, Omaha, Nebr., a Corporation of Nebraska. Filed July 18, 1923. Serial No. 652,349. 1 Claim. (Cl. 206—46.)

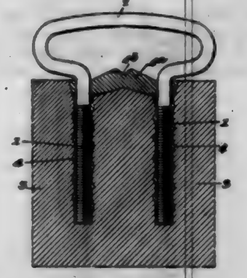
A shipping container for plowshares, comprising an integral sheet of corrugated board having a trapeziform central portion, a trapeziform flap at one of the longitudinal edges of said central portion, a quadrangular wing at the opposite longitudinal edge of the central portion, a trapeziform flap at the outer edge of said wing, triangular wings at each end of said central portion, and flaps at the outer edges of said triangular wings.

1,532,895. MACHINE AFFIXING LABELS OR THE LIKE. GUSTAV FRITZ HALANK, Dresden, Germany, assignor to the Firm: Johann Carl Müller, Dresden, Germany. Filed July 3, 1924. Serial No. 723,978. 3 Claims. (Cl. 216—54.)



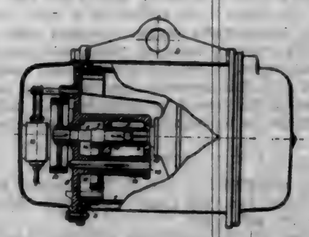
2. In a machine for affixing labels or the like to continuously fed articles, the combination with a vertically reciprocating pile of labels, of a pair of removable members adapted in initial position to receive a label from said pile and to form a continuous surface, means adapted to move over said surface to apply adhesive to the latter prior to the lowering of the label pile, means for moving said members apart after receiving a label, so as to withdraw the latter from the surface of one of said members, bringing it into contact with the article to be labelled, and means for subsequently removing the label from the other member and applying it to the article.

1,532,896. BULLETIN-DISPLAY FRAME. WILLIAM H. HALL, Cicero, Ill., assignor to American Hotel Register Company, Chicago, Ill. Filed June 6, 1924. Serial No. 718,407. 6 Claims. (Cl. 40—64.)



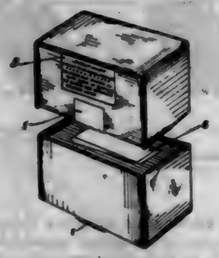
1. A display frame comprising a body having inturned lateral edges forming grooves, a bulletin card having its edges disposed in said grooves, a title card holder adapted to be inserted into the upper ends of said grooves and provided at its upper edge with a downturned flange adapted to form the upper exposed portion of the frame, and a title card carried by said holder above the exposed portion of the bulletin card, said holder being removable to permit change of the title card.

1,532,897. DRAIN. JOSEPH HIRSHSTEIN, Cleveland, Ohio. Filed July 10, 1922. Serial No. 574,005. 5 Claims. (Cl. 285—38.)



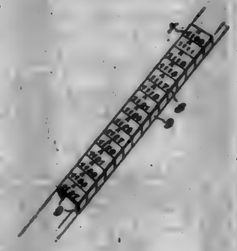
1. In a device of the class described, the combination of a drain, a sheet of water proof material, a clamping member for holding said material in engagement with the drain, and a pivoted member carried by the drain and bearing on the clamping member to hold it in clamping position.

1,532,898. BOX HANDLE. WALTER E. HOLLAND, Philadelphia, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 6, 1920. Serial No. 363,720. 13 Claims. (Cl. 10—125.)



1. The combination of a box member having an undercut recess; a handle member extending therein; with a cast material in the recess bonded to the handle member.

1,532,899. TOOTHED GEARING FOR DRIVING THE DRUM OF PULLEY BLOCKS. FRIEDRICH HOLTSCHMIT, Duisburg, Germany. Filed Sept. 11, 1924. Serial No. 737,160. 1 Claim. (Cl. 74—7.)

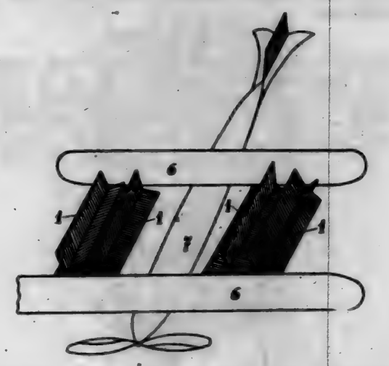


The combination with a casing and a drum rotatably mounted therein, said drum having an internal gear, of a removable end piece closing one end of the casing and having a shaft-supporting frame projecting into the interior of the drum, a drive shaft rotatably mounted in said frame at the axis of the drum, fixed gear shafts mounted in said end piece and frame and arranged about the drive shaft, said fixed shafts extending through the end piece and provided with oil holes external thereto, a pinion on the drive shaft, and a train of gearing on said fixed shafts connecting said pinion with said internal gear.

1,532,900. ADHESIVE BINDING STRIP FOR CLOSING AND RECLOSING PACKAGES. FRANK H. HOUGHLAND, Cincinnati, Ohio; Lillian Houghland, administratrix of said Frank H. Houghland, deceased, assignor to William F. Zent, Memphis, Tenn. Filed Nov. 7, 1921. Serial No. 513,523. 3 Claims. (Cl. 229—6.)

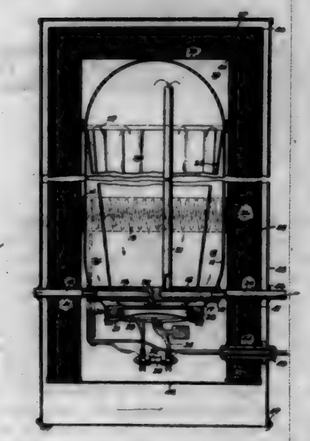
1. Means for closing and reclosing a package, comprising directions, a reclosing binding strip detachably connected to the directions and partly concealed within the package, a binding strip for closing said package and means for adhesively attaching said directions and binding strip to the package, substantially as set forth and for the purposes specified.

1,532,901. IDENTIFICATION OR LAUNDRY TAG. WILLIAM J. HUMPHREY, Cleveland, Ohio. Filed Oct. 24, 1923. Serial No. 670,504. 3 Claims. (Cl. 283—18.)



1. Means for identifying and designating the number of articles of clothing or the like to be packaged together, said means comprising sets of tags arranged in strips, similar serial numbers and characters on each tag of a set, and different serial numbers and characters on each set, the last numeral of the serial number and the character being the key to designate the articles.

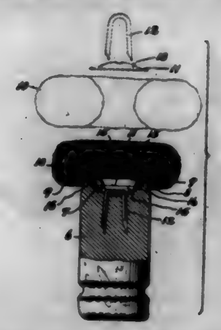
1,532,902. AEROPLANE. JEAN BAPTISTE IMMERS, Brussels, Belgium. Filed Dec. 27, 1924. Serial No. 758,447. 3 Claims. (Cl. 244—13.)



1. In an aeroplane, the combination with a fuselage, an aeroplane engine, and wings extending substantially transversely in relation to the longitudinal axis of the fuselage, of a pair of mutually interengaging rotary sustaining elements each consisting of a plurality of longitudinal plane surfaces arranged radially at equal angular intervals in cross-section and mounted on a rotary shaft, the two shafts lying in the same horizontal plane and ex-

tending substantially parallel to the longitudinal axis of the fuselage and symmetrically on either side respectively of the vertical plane of the said longitudinal axis;

and of means, forming an operative connection between the said shafts and the aeroplane engine, for rotating the said two shafts in opposed directions; substantially as described.



1,532,903. WATER HEATER. ARTHUR J. KRECHER, Berkeley, Calif. Filed Apr. 10, 1923. Serial No. 631,067. 21 Claims. (Cl. 219—39.)

1. In a liquid heater, a metallic tank, means for supplying heat to the tank, and means for providing a circulatory path for the liquid in the tank.

1,532,904. SCOURING IMPLEMENT. RUSSELL B. KINGMAN, Orange, N. J., assignor to The Chore-Utensile Corporation of America, West Orange, N. J., a Corporation of New Jersey. Filed May 14, 1924. Serial No. 713,182. 2 Claims. (Cl. 15—200.)

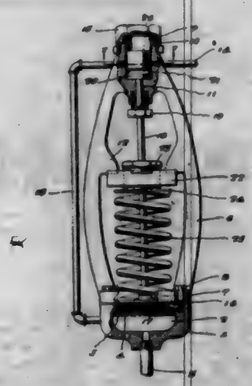
1. A scouring implement, comprising an annular spongiform abrading element, a handle member having at one end a socket, and means for attaching the former to the latter consisting of a keeper plate having its central portion seated in said handle socket, the marginal peripheral portions of said keeper plate being engaged over the inner circumferential portions of said abrading element to clamp the same against the marginal portions

of said handle socket, and a fastener extending through said central portion of said keeper plate into the body of said handle member.

1,532,905. THERMOSTATIC URINAL AUTOMATIC FLUSHING APPARATUS. JAMES J. LAWLER, Mount Vernon, N. Y. Filed July 24, 1924. Serial No. 728,006. 11 Claims. (Cl. 4—100.)

1. In an automatic flushing apparatus, the combination with the object to be flushed, of a waste outlet for said object, a flush water supply, a control valve for said supply, fluid pressure operated means for opening and closing said valve, a relief valve in said waste outlet for varying said fluid pressure to operate said valve controlling means, and means for operating said relief valve upon a change in temperature within the waste outlet.

1,532,906. CALENDAR. ISAAC LEIBOWITZ, Brooklyn, N. Y. Filed Jan. 22, 1924. Serial No. 687,678. 1 Claim. (Cl. 40—113.)

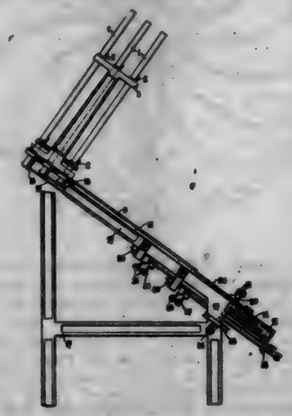


A calendar device, comprising a holder member provided in its upper end with a downwardly extending pocket terminating at its lower end in a receiving slot contiguous to the rear wall of said pocket, a removable back-plate within said pocket having its lower end engaged in said receiving slot, a rotatable member mounted on said back-plate, a pad of monthly calendar leaves

fixed to said rotatable member having radially arranged date bearing panels, said rotatable member having radial fingers projecting from its periphery in correspondence with said date bearing panels of said calendar leaves, and

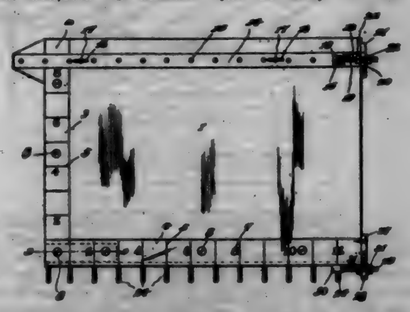
said holder member having in its front wall an opening to display a date bearing panel registered therewith and in its front and rear walls indented notches to give access to a finger for actuating said rotatable member and calendar pad.

1,532,907. FLUID-PRESSURE REGULATOR. WILLIAM LONG, Parma, Idaho, assignor of one-half to Evan G. Johnson, Parma, Idaho. Filed Mar. 2, 1923. Serial No. 622,824. 2 Claims. (Cl. 137—53.)



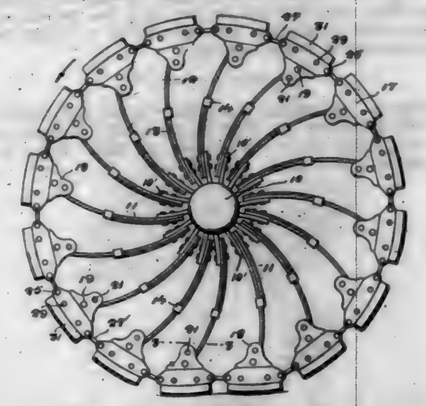
1. A fluid pressure regulator comprising, with a base having a fluid chamber therein open at one side, a yoke secured on the open side of the base and provided with a piston valve cylinder, a diaphragm secured over the opening of the fluid chamber, a pipe leading to said fluid chamber from the fluid container to be regulated, a pipe leading from the fluid chamber and opening laterally into the valve cylinder, a discharge pipe leading from the valve cylinder at a point substantially diametrically opposite said first opening, a head bearing on the diaphragm, a stem connected with said head with its remaining end slidably received within the valve cylinder, a piston valve carried by said stem within the valve chamber and provided with a peripheral groove, a ring fitted around said stem and held in fixed position by the yoke, an adjusting nut carried by said ring around the stem, and a spring bearing between the adjusting nut and the head connected with said stem.

1,532,908. PLASTIC COMPOSITION FOR ARTICLES OF MANUFACTURE. WILLIAM S. LOWE, Haverhill, Mass. Filed Oct. 27, 1922. Serial No. 597,311. 1 Claim. (Cl. 106—30.)



A plastic composition comprising filaments of undried oak wood, said filaments not exceeding five thousandths of an inch in thickness and eight inches in length and saturated with sodium silicate.

1,532,909. MACHINE FOR COMPOSING AND JUSTIFYING LINES OF PRINTING TYPES. ALFRED LUBAC, Paris, France. Filed Mar. 29, 1923. Serial No. 628,503. 4 Claims. (Cl. 276—20.)

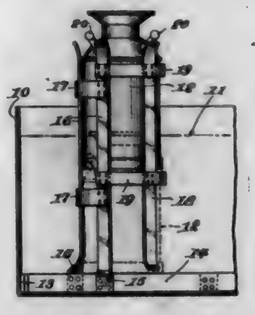


1. In a machine for composing and justifying the lines of the printing types, several ranges of channels with convex bottoms, a supporting heel in their lower part, a sole in the same for supporting the types when the channels are not in position, and a wing in the same, for impeding the types from falling back during ejection, and means to arrange the channels perpendicularly to a single inclined plane serving as slide.

1,532,910. GLASS-CUTTING TABLE. LAURENCE V. MCCANN, Jeannette, Pa. Filed Mar. 13, 1924. Serial No. 698,974. 3 Claims. (Cl. 33—30.)

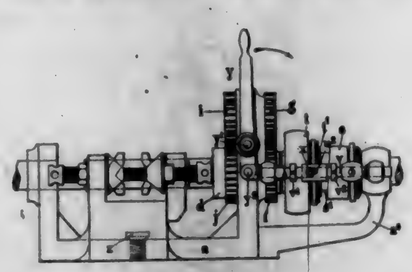
3. In a glass-cutting table, the combination with a table body, of a pin bar slidably mounted on the body, a bearing plate secured to an end edge of the body and having a slotted portion projecting beyond said edge, an eye bolt having its shank extended through the slotted portion of the bearing plate and its eye engaged over the pin at the adjacent end of the pin bar, and securing nuts mounted upon the shank of the eye bolt and adapted to be turned home against the opposite sides of the bearing plates.

1,532,911. SPRING WHEEL. EUGENE K. MCLAIN, Webster City, Iowa. Filed May 14, 1920. Serial No. 381,376. 2 Claims. (Cl. 152—30.)



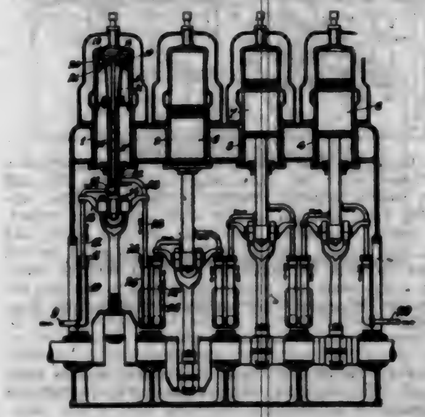
1. In a vehicle wheel, a hub having arched spring spokes radiating therefrom and all of said spokes being arched in the same direction, a rim made up of spaced members each carrying a compressible shoe and each having a loose connection with each other, means pivotally connecting the spokes to the respective rim section, means in the path of engagement with the spokes, designed to be contacted by each spoke in the expansion thereof when the same is brought out of ground contacting engagement to tilt the rim section pivoted to the spoke to cause the same to exert a kicking action against the ground surface.

1,532,912. COLLAPSIBLE GRATE. EARL MCMAHAN, Portland, Oreg., assignor of one-half to Albert L. Hagar, Council, Idaho. Filed Sept. 3, 1924. Serial No. 735,649. 1 Claim. (Cl. 126—30.)



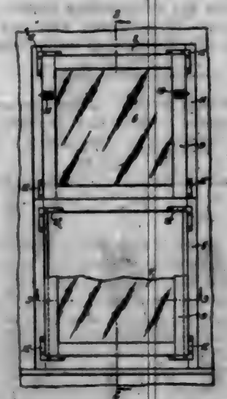
In a collapsible grate of the character described, a frame comprising spaced parallel members, each including pivoted sections adapted to be arranged in end to end relation for use, and capable of being folded one beneath the other when not in use, each member having a plurality of spaced openings, inverted substantially U-shaped cross bars connecting said members and having their parallel extremities received by the corresponding openings in said member and adapted to be removed to permit the frame to be folded, legs supporting the frame adjacent the corners thereof, and adapted to be separated therefrom when not in use, each leg being adapted to be received by one of the openings in the adjacent member of the frame, and a flattened portion arranged adjacent the upper end of each leg to provide opposed bulged portions upon which the frame reposes.

1,532,913. CAN HOLDER. ALFRED MAJOR, Holland, N. Y. Filed Aug. 20, 1924. Serial No. 733,209. 8 Claims. (Cl. 31—4.)



1. The combination with a cooling tank for milk cans of a can holder supported on the bottom of said tank and designed to maintain an empty can in an upright position as it rises to the top of the tank, and also allow said can to gravitate as it is filled.

1,532,914. APPARATUS FOR BORING THE CONNECTING RODS AND BEARINGS OF INTERNAL-COMBUSTION ENGINES. MARIUS KLEBER MAKAREWICZ, Courbevoie-Seine, France. Filed Dec. 6, 1922. Serial No. 605,220. 1 Claim. (Cl. 77—2.)

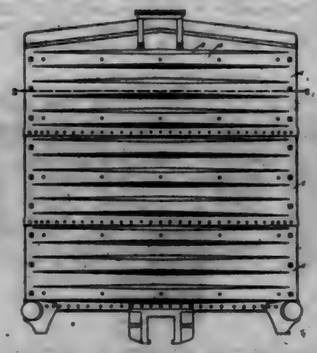


An apparatus of the character specified, comprising a platform, means for fixing the work thereon, a head perpendicularly and rigidly mounted on said platform, bearings carried by said head, a sectional nut supported by one of said bearings, a tool holding shaft mounted in said bearings, said shaft having a threaded part engageable in said nut and supported by one of the bearings, a loose pulley mounted on said shaft, means for communicating a rotating movement to said shaft, means for transmitting rotary movement to said nut and in the same direction as said shaft, and at a lower speed, whereby to create a differential movement and giving to said shaft reduced displacing movement, means for putting the nut into and out of gear with the loose pulley, said means comprising a fork adapted to engage the nut, and a second fork adapted to engage the loose pulley, a shaft carrying said forks, the first named fork being fixed on to said shaft, the second fork loosely mounted on the said shaft between a pair of stops fixed thereon and provided with a pair of notches, whereby the second named fork and the pulley may be put out of gear, and a hand lever pivotally mounted on said platform and articulated at its lower end to the end of the last named shaft whereby to operate the said forks.

1,532,915. INTERNAL-COMBUSTION-ENGINE PISTON. OLIVER MARGETSON and WALTER PERCY WIDDOWSON, London, England. Filed Aug. 23, 1921. Serial No. 494,568. 5 Claims. (Cl. 123—176.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

5. A multiple cylinder internal combustion engine comprising in combination a steam circulating system of pipes, piston passages, pipe connections having relatively movable parts, and heat interchangers, the pipe connections connecting the passages in the pistons in series during the running of the engine and when it is at rest, and the heat interchangers arranged in the system of piping between the pistons.

1,532,916. WINDOW CONSTRUCTION. ARCH LAWRENCE MASON, Meadville, Pa. Filed Dec. 4, 1923. Serial No. 678,540. 1 Claim. (Cl. 20—56.1.)

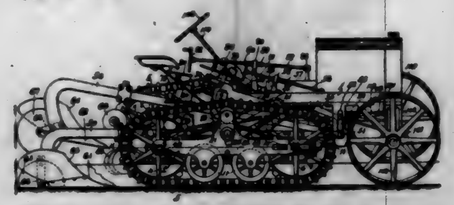


In a window construction, a sash including inner and outer sections arranged one within the other, the vertical rails of the outer section having flanges and corresponding rails of the inner section having grooves for receiving said flanges to limit the outward movement of the inner section, and the top and bottom rails of one section having beveled unobstructed edges engageable with correspondingly formed edges of the top and bottom rails of the other section, and latching means carried by the inner section and engageable with the outer section to retain said sections in closing position.

1,532,917. ROTARY UNDERREAMER. WILLIAM MERRIMITH, Huntington Beach, Calif., assignor of one-third to V. W. Bailey, Pasadena, Calif., and one-third to W. H. Taylor, South Pasadena, Calif. Filed Apr. 14, 1924. Serial No. 706,342. 6 Claims. (Cl. 255—75.)

1. In a device of the character described, the combination of a body adapted to be secured to a rotatable stem, carriages mounted upon the sides of said body so as to be moved laterally with respect to the axis thereof, cutters mounted on said carriages, a control member rotatably secured to said body, and linkage connecting said carriages and said member whereby rotation of the latter will move said carriages.

1,532,918. SHEET-METAL CAR-END CONSTRUCTION. LANGDON MOORE, Chicago, Ill., assignor to Walter P. Murphy, Chicago, Ill. Filed Oct. 1, 1920, Serial No. 568,582. Renewed June 15, 1922. 16 Claims. (Cl. 105—410.)



1. A metal panel for car ends having a plurality of corrugations therein formed with side walls and connecting portions, said connecting portions increasing constantly in width from center to ends and merging into each other at their ends.

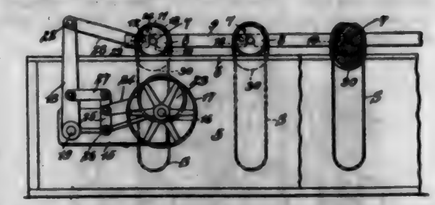
1,532,919. BAND BRAKE ACTING IN BOTH DIRECTIONS OF ROTATION. MAXIMILIAN MÜLLER, Tempelhof, near Berlin, Germany. Filed Apr. 4, 1922. Serial No. 549,585. 9 Claims. (Cl. 188—140.)

1. In a brake mechanism comprising a brake drum; a band associated with said drum; band stops on said band; stationary stops adapted for association with said band stops; and a roller intermediate said stationary stops and connected to said band.

1,532,920. TRACTOR. SWENEY MUNSON, Fowler, Colo. Filed June 27, 1919. Serial No. 307,202. 3 Claims. (Cl. 97—50.)

1. In a tractor, two crawlers, two plows, headed in the same direction a main frame, and means for simultaneously vertically adjusting one crawler and one plow independently of the other crawler and plow and independently of the traveling movement of the crawlers.

1,532,921. PROCESS FOR DYEING WITH DYESTUFFS OR DYESTUFF-PRODUCING BODIES INSOLUBLE OR SPARINGLY SOLUBLE IN WATER. FERDINAND MÜNZ, Fechenheim-on-the-Main, Germany, assignor to Leopold Cassella & Co., Gesellschaft mit beschränkter Haftung, a Corporation of Germany. Filed Sept. 8, 1924. Serial No. 735,690. 1 Claim. (Cl. 8—5.)



A process of dyeing with dyestuffs and dyestuff-producing bodies insoluble or sparingly soluble in water, by applying them together with organic solvents not miscible with water and soaps in an aqueous bath.

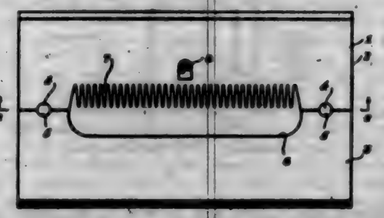
1,532,922. END WALL STRUCTURE FOR RAILWAY CARS. WALTER P. MURPHY, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 30, 1922. Serial No. 609,868. 3 Claims. (Cl. 105—410.)

1. In a metallic wall for railway cars comprising a flat attaching member serrated at one edge having the portions between the serrations bent to form connecting flanges, a metal panel having corrugations formed therein extending to opposite edges of said panel, the serrations of said attaching member fitting into said corrugations, and said flanges secured to said panel.

1,532,923. DYEING MACHINE. MATILDA NAGLE, Brooklyn, N. Y. Filed Dec. 18, 1923. Serial No. 681,316. 3 Claims. (Cl. 8—19.)

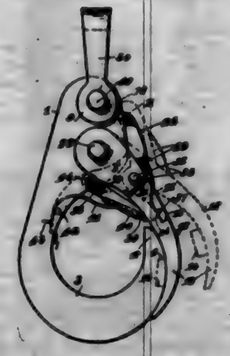
3. In combination with a dye vat, a shaft transversely positioned above the bath, supporting wheels for said shaft, loosely mounted thereon, an elongated skein supporting drum mounted on said shaft, means for imparting bodily longitudinal movement to said shaft and drum, and means operated by the wheels when moving in one direction for imparting an axial rotative movement to the shaft and drum with respect to the dye vat to spread or separate the parallel strands of the skein thereon.

1,532,924. MOLD. WILLIAM E. NELSON, Kansas City, Mo. Filed Oct. 20, 1924. Serial No. 744,803. 8 Claims. (Cl. 25—121.)



1. A mold comprising a platform, a removable rail at one edge thereof, a vertically disposed arm spaced outwardly from said rail and edge, means pivotally connecting the lower end of said arm with the platform, a thrust device carried by the upper end of said arm for forcing the aforesaid rail inwardly, and releasable means connecting the intermediate portion of said arm with the platform to hold the arm against outward swinging under the influence of said thrust device.

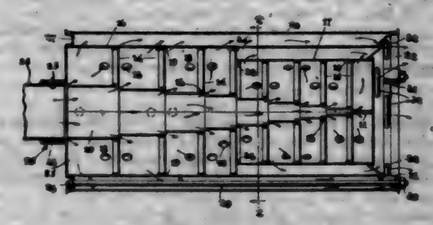
1,532,925. DUPLICATOR. JOHN EDWARD NORMAN, Leicester, England. Filed May 10, 1923. Serial No. 637,951. 2 Claims. (Cl. 101—131.)



1. In a duplicator of the type wherein a plurality of components or elements of the kind herein referred to require to be held together, locking and releasing means for said components comprising a clamp member extending across the components, and arranged in bearings at its opposite ends so that it can be rotated and operate with an eccentric movement upon the components, said clamp member being provided with journal pins of different lengths at its opposite ends for permitting its insertion and removal into and from its bearings.

1,532,926. PUNCHING DIE. HUBERT NOTEBOOM, Philadelphia, Pa. Filed Apr. 12, 1924. Serial No. 706,197. 1 Claim. (Cl. 64—20.)

A comb forming punch comprising a carrying body, a comb-shaped cutter carried thereby having a plurality of comb tooth forming teeth thereon, which gradually increase in thickness from their free edges to the main body of the cutter and are of the uniform thickness at their free edge for a predetermined longitudinal distance after which they gradually increase in thickness towards said carrying body.

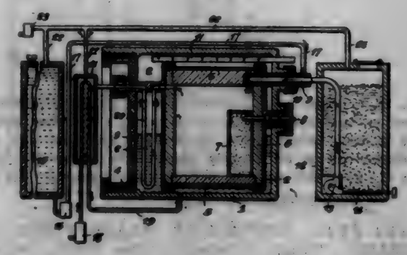


1,532,927. SAFETY HOOK. THEOPOLIS NOWLAND, Newport, R. I. Filed June 16, 1924. Serial No. 720,314. 7 Claims. (Cl. 24—241.)

1. A safety hook comprising a shank having a hook element extended therefrom, a retaining element pivotally connected to the shank and overlapping and engaging in the outer edge of the hook element to close the same, a spring controlled locking member pivotally connected at one end to and projecting from the outer edge of said retaining element, said locking member engaging in one side edge of said shank for locking the retaining element in closed position, and a spring controlled shifting member pivotally connected to the shank and bearing against said retaining element for automatically shifting it to open position when the locking member is released and further exerting a holding pressure on the locking member when the latter engages in the shank.

1,532,928. MUFFLER. MICHAEL JOSEPH O'CONNOR, Bloomingdale, N. J. Filed July 17, 1923. Serial No. 652,133. 21 Claims. (Cl. 137—160.)

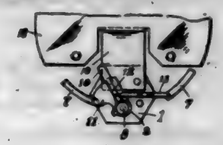
1. In a muffler for explosive engines, an annular outer chamber, a conical tube concentric therewith said tube having stepped integrally formed cylindrical portions, separate secondary chambers between the tube and the outer chamber, and passages connecting the secondary chamber respectively to the outer chamber and to one of the steps of the conical tube, substantially as set forth.



1,532,929. METHOD OF AND APPARATUS FOR CAPPING DETONATORS. JOHN M. OLIN, HENRY H. WOOD, and JOHN B. SMITH, East Alton, Ill., assignors to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Filed Dec. 30, 1922. Serial No. 609,953. 13 Claims. (Cl. 86—20.)

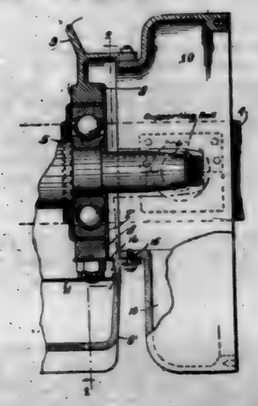
9. In a machine for sealing detonators, the combination with a carrier having holders for the shells, of sealing compound supplying means adapted for cooperation with said carrier and the shells thereon, said carrier having a table for supporting said connections, and a gage on said table adapted to position the terminals within the shells, in order to cause the compound to form plugs within the shells and over said connections.

1,532,930. METHOD AND MEANS OF PRODUCING HEAT. JOHN HUGH O'NEILL, Springfield, Mo. Filed Dec. 5, 1919. Serial No. 342,884. 4 Claims. (Cl. 110—1.)



3. The method of producing heat for power purposes which consists in initially igniting a charge sufficient to raise the temperature of a combustion chamber to a point sufficient to dissociate a liquid comburent, then feeding a regulated quantity of liquid comburent from one source and a regulated quantity of metallic fuel from another source to said combustion chamber to sustain a continuous combustion.

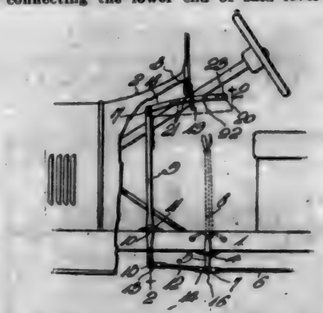
1,532,931. PROCESS FOR THE DIRECT COOLING OF GOODS. ANTON JENSENIUS ANDREAS OTTESEN, Copenhagen, Denmark. Filed Dec. 27, 1920. Serial No. 433,408. 5 Claims. (Cl. 99—14.)



1. A process for refrigerating or freezing goods which comprises subjecting the goods to the direct action of a liquid comprising cool brine and glycerine.

1,532,932. PRESSURE GAUGE. JOHN R. PADESKY, La Crosse, Wis., assignor to National Gauge & Equipment Company, La Crosse, Wis. Filed Feb. 26, 1924. Serial No. 695,812. 1 Claim. (Cl. 73—109.)

In a pressure gauge, a graduated dial, a pivoted unitary yoke device comprising a crank arm and pointer, the crank arm being located above the pivoted end of the pointer, said crank arm having a slot extending in line with the pointer, a Bourdon tube and a metallic member having one end thereof rigidly connected with said tube and the other end thereof provided with a hook engaged in said slot, said member being also provided with a return bend intermediate its length, said member being of bendable material, for the purpose specified.

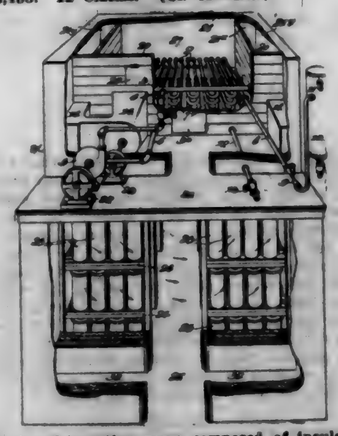


1,532,933. PACKING FOR ENGINE CRANK CASES. VICTOR W. PAGE, New York, N. Y. Filed Aug. 16, 1921. Serial No. 492,700. 4 Claims. (Cl. 121—194.)

1. In a crank case construction having a removable lower portion and a bearing support, a packing strip, said packing strip being secured to said support so positioned as to frictionally engage the removable portion of the crank case, as and for the purpose set forth.

1,532,934. AUTOMOBILE BRAKE-OPERATING MEANS. PHILIP PALMGREN, Yates Center, Kans., assignor to J. C. Culver, Yates Center, Kans. Filed Oct. 27, 1924. Serial No. 746,180. 3 Claims. (Cl. 74—89.)

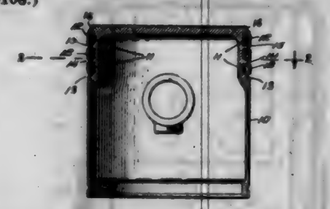
1. In combination with an automobile having a transverse brake-controlling shaft under the front floor boards, said shaft having a downwardly projecting arm; a vertically disposed lever spaced forwardly from the left-hand end of said shaft and disposed sufficiently in advance of the driver's seat to prevent obstruction of the doorway at the left-hand end of said seat, fulcrum means for said lever mounted on the frame of the machine, means connecting the lower end of said lever with the



aforesaid arm, a hand-grip in rear of the upper end of said lever and operatively connected with the latter, and means for holding the lever in different positions.

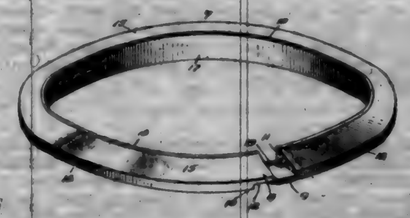
1,532,935. DEVICE FOR ELECTRICALLY ILLUMINATING CARD CABINETS. JOHN SHELTON PATTON, University, Va. Filed Oct. 4, 1923. Serial No. 666,553. 3 Claims. (Cl. 240—4.)

1. The combination with a card index cabinet and with a drawer thereof, of an electric lamp supported in said drawer at the front portion thereof, said drawer having an opening in the bottom, and means to close or break the lamp circuit by the movements of said drawer respectively to the outer and inner positions.



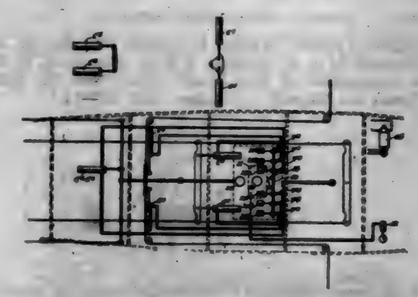
1,532,936. ICE-CREAM-HARDENING ROOM. JACOB G. PECK, Portland, Oreg. Filed Nov. 7, 1924. Serial No. 748,453. 12 Claims. (Cl. 62—102.)

11. A refrigerating room composed of insulated floor, walls and ceiling with a similar insulated vestibule in communication with the lower part of said room, a horizontal partition baffle dividing said room into an upper and lower chamber and having a brine pan opening, skeleton shelving within the lower chamber to



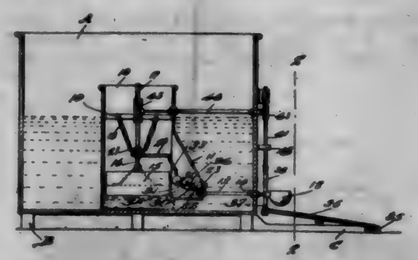
receive the containers of material to be chilled, a brine pan held in said opening and above said shelving, vertical transverse and longitudinal baffle walls in the upper chamber at the front and side of said pan, refrigerating coils in said upper chamber and located over said pan, portions of certain of said coils extending into the pan to chill the contents thereof, means to circulate a refrigerant through said coils, and means for drawing air from said lower chamber at one side into said upper chamber and delivering it to the coils at one corner, causing it to pass over and around the coils to the diagonally opposite corner and then delivering the air back in to the lower chamber at the side opposite to which it left the lower chamber, defrosting ducts located over the coils, a pump to pump the brine from the tank to the defrosting ducts for defrosting purposes, said vertical transverse baffle partitions dividing said upper chamber into a front and back compartment, a header and control valves for said defrosting ducts located in the back compartment adjacent to said partition, said vertical transverse partition having a door to give access to said valves, the front wall of the room also having a door to permit entry into said front compartment, a vestibule at the front of the room with an entrance door from the outside, said room having a door communicating with the vestibule, said vestibule being of a height approximating that of the lower chamber, the roof of said vestibule constituting a support for the defrosting pump and a motor for operating the same.

1,532,937. PISTON FOR INTERNAL-COMBUSTION MOTORS. DOCK J. PEELER, Nashville, Tenn. Filed June 3, 1922. Serial No. 565,697. 1 Claim. (Cl. 74—108.)



A piston including a cylindrical body having spaced encompassing channels with the side walls of the lands between the channels uniformly reduced in curved lines toward the outer faces thereof, and a packing ring engaging in each of the channels, the packing rings being rectangular transversely with the side faces in parallel relation, the spaces between the rings and lands uniformly increasing in area outwardly, to receive the lubricant and prevent it from being carried past the rings at both the upward and downward stroke of the piston or from pumping air past the piston.

1,532,938. PISTON RING. DOCK J. PEELER, Nashville, Tenn. Filed Feb. 10, 1923. Serial No. 618,273. 1 Claim. (Cl. 74—109.)



A piston ring comprising a compressible split body portion having its forward and rear faces each bevelled to provide a plane surface at the outer edge of said body of less width than the inner edge thereof and further to provide a plane surface at the inner portion of each of said faces, the bevel on said forward face being of materially greater width than the bevel on said rear face whereby the plane surface on the rear face will be of greater width than the plane surface on said forward face, the plane surface on the forward face being of less than half the width of the bevelled surface of said face, the plane surface on the rear face being of the same width as the width of the bevelled surface on said face, the bevel on the rear face extending at a greater angle than the bevel on the forward face, the plane surface on the outer edge of said body portion being substantially half the width of the inner edge of said body, and the split terminal portions of said body overlapping each other and formed with oppositely disposed shoulders of triangular contour and oppositely disposed circumferentially extending opposed flat edges.

1,532,939. STABILIZER. GUSTAVE A. PEELS, Jr., Lynchburg, Va. Filed June 23, 1922. Serial No. 570,967. 13 Claims. (Cl. 244—29.)

1. In an airplane stabilizer, a gyroscope, a contact element carried by the shaft of said gyroscope, a plurality of contact plates adapted to engage with the contact element of said gyroscope and movable in any direction with respect to said element, a source of current connected with each of said plates and with said contact element, and a plurality of separate means, one in circuit with each of said plates for altering the position of said plates.

1,532,940. HOG WATERER. CLARENCE NOMER PETERSON, Polk, Nebr. Filed Oct. 29, 1924. Serial No. 746,592. 5 Claims. (Cl. 119—76.)

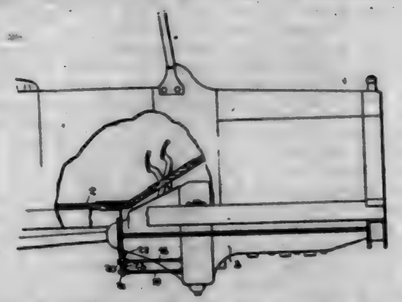
1. In a device of the character described, a receptacle provided at one side with an auxiliary chamber having its bottom at a higher level than the bottom of the receptacle itself, an outlet pipe leading from said chamber and carrying a trough, a normally elevated float located within the receptacle, and treadle actuated means operatively connected with said float for moving the same downwardly and forcing the water therebelow into said chamber.

1,532,941. CADDY BAG. GEORGE L. PIERCE, Brooklyn, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Oct. 26, 1923. Serial No. 671,017. 1 Claim. (Cl. 150—1.5.)

A golf bag comprising a substantially cylindrical member, an opening in the side of said member, closed by a flap cut from and integral with said member, the line of cutting defining said flap the uncut portion constituting a hinge, and a backing within the cylindrical member attached to said member and around said opening, whereby an inner pocket is formed.

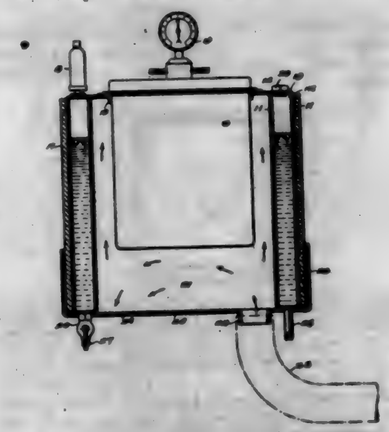
1,532,942. SHOE. GEORGE L. PIERCE, Brooklyn, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Nov. 22, 1924. Serial No. 751,627. 7 Claims. (Cl. 36—14.)

5. A shoe comprising a filler sole, a sole of greater area secured thereto having a projecting margin, an upper and an insole secured together and to the filler sole, a foxing stitched to said margin at the edge of the filler sole, and an outsole secured to the bottom of the sole of greater width, the foxing being secured to the upper and the said sole margin being secured to the edge of the outsole.



1,532,943. CHALKLESS BILLIARD-CUE TIP. JOSEPH S. PIGA, Owendale, Mich. Filed June 14, 1924. Serial No. 719,984. 4 Claims. (Cl. 273—70.)

4. A billiard cue tip consisting of cork having a texture altered by the action of an acid.

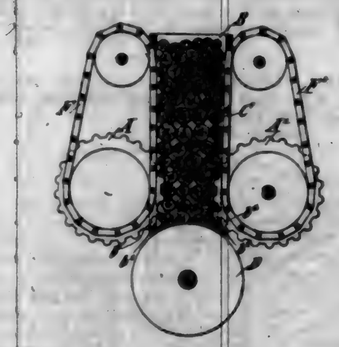


1,532,944. OIL-LEVEL-INSPECTION ATTACHMENT. HAROLD R. PUFFER, Jefferson, Iowa. Filed June 16, 1924. Serial No. 720,279. 8 Claims. (Cl. 137—139.)

1. An oil level inspection attachment for motor vehicles comprising a frame adapted to be secured to and extend through the floor board of a motor vehicle and provided with a closure plate therefor, and shiftable

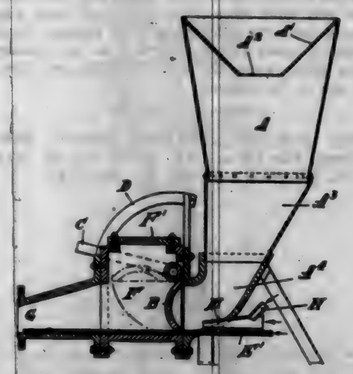
means pivotally connected to and depending from the inner face at one end of said frame for opening and closing the oil cocks.

1,532,945. PRESSURE-COOKER ATTACHMENT. HARRY QUIGLE, Hastings, Nebr., assignor to Mrs. Lucy Quigle, Whittier, Calif. Filed Aug. 8, 1923. Serial No. 656,097. 2 Claims. (Cl. 126—20.)



1. As a new article of manufacture, a receptacle, a pressure cooker removably suspended in said receptacle, said receptacle having an inlet adapted to be connected with an exhaust to receive products of combustion and having an outlet for said products, said receptacle having double walls forming a water chamber, said chamber being separated laterally from the cooker to form a steam or hot air space therebetween so that the steam or air heats both the cooker and the water chamber, together with an inlet for said water space adapted to be connected with an air pump for placing the water under pressure and with a valve controlled outlet adapted to receive a hose.

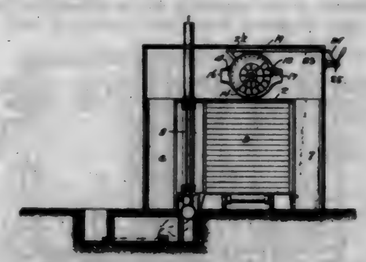
1,532,946. APPARATUS FOR FEEDING CONTINUOUS-WORKING WOOD GRINDERS and METHOD THEREOF. WILHELM RABUS, Heidenheim-on-the-Brens, Germany, assignor to American Voith Contact Company, Inc., New York, N. Y., a Corporation of New York. Filed June 14, 1924. Serial No. 720,422. 11 Claims. (Cl. 83—75.)



1. An apparatus for feeding continuous working wood-grinders, comprising a magazine or hopper, rotary means

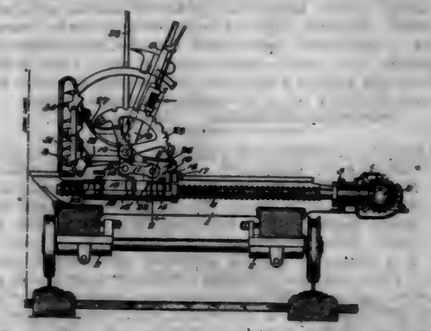
having spaced projections entering laterally into and between the sides of separate portions of the charge of the magazine in the proximity of the grindstone, for

constricting the charge by pressing the same laterally inwardly and simultaneously downwardly against the grindstone.



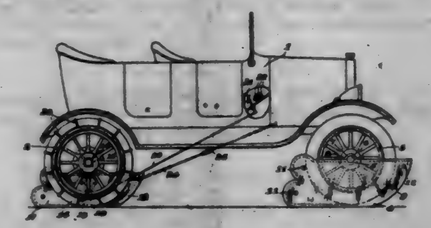
1,532,947. MIXING AND DISCHARGING CONCRETE. ERNEST LESLIE RANSOME, Plainfield, N. J. Filed July 18, 1916. Serial No. 109,909. 3 Claims. (Cl. 83—73.)

1. An apparatus for mixing concrete and the like comprising a vessel of greater depth than width, provided with an opening at the top, a compressed air nozzle at the bottom thereof having a fluid discharge opening of smaller area than the opening at the top of the vessel, and a valve at the lower part of the vessel for the discharge of its contents, said valve having a concave surface opposite the nozzle disposed in a substantially vertical plane.



1,532,948. DRYING APPARATUS. CLAUDE REES and CHARLES F. HINE, San Francisco, Calif. Filed Oct. 9, 1922. Serial No. 593,891. 2 Claims. (Cl. 34—19.)

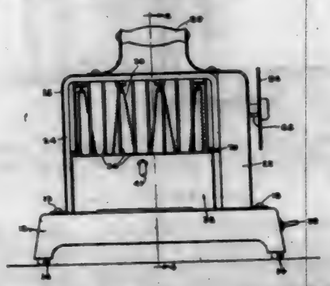
1. In a drying apparatus a house, a drying chamber in said house, a driving shaft extending longitudinally in the house, a plurality of spaced blowers on the shaft for circulating the drying medium through the drying chamber, a blower on the shaft disposed adjacent one end of



the house and a conduit for conveying the medium discharged by the latter blower to the other end of the house.

1,532,949. SAWMILL CARRIAGE. JOSEPH S. REID, Olean, N. Y., assignor to Clark Brothers Company, a Corporation of New York. Filed Apr. 17, 1924. Serial No. 707,195. 5 Claims. (Cl. 143—120.)

1. The combination of a base, a bearing, a feed screw journaled in said bearing, a knee, a feed nut carried by said knee, comprising upper and lower halves bolted together, and internally screw-threaded to receive said feed screw, and means for adjusting the upper and lower halves of said feed nut longitudinally with respect to each other.



1,532,950. SLEIGH-RUNNER ATTACHMENT FOR AUTOMOBILES. BYRON M. RICH, Rome, N. Y. Filed July 1, 1924. Serial No. 723,557. 1 Claim. (Cl. 280—9.)

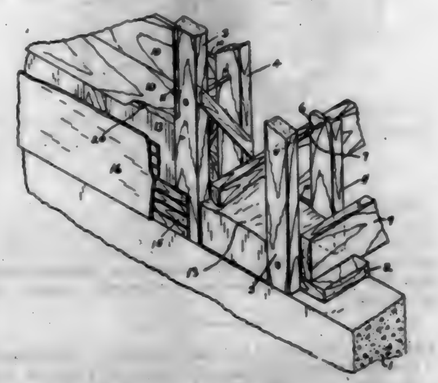
The combination with a support and a sleigh runner, of means for moving said sleigh runner toward and way from said support, said means comprising a pair of links pivoted on a common axis to said support, a pair of levers pivoted to each other intermediate their ends, one pair of adjacent ends of said lever being pivoted to the

free ends of the respective links, one of said links pivoted at its other end to the sleigh runner, the remaining end of the other lever being connected to an operating rod whereby as the operating rod is moved, the sleigh runner may be moved bodily with respect to said support.

1,532,951. BREAD TOASTER. DAYTON A. ROGERS, Minneapolis, Minn. Filed June 4, 1923. Serial No. 643,175. 6 Claims. (Cl. 219—19.)

1. A bread toaster comprising a support, heating means carried by said support, a number of toast-engaging elements supported adjacent said heating means, means for holding bread against said elements, and means for causing said bread-holding means to move away bodily from said heating means when the toasting operation has been continued for a predetermined length of time.

1,532,952. METHOD OF FORMING A PHENOLIC CONDENSATION PRODUCT. EDWIN ROLKER, Baltimore, Md., assignor to The Permatite Company, a Copartnership composed of George Barth, Milton W. Gatch, and Edwin Rolker, all of Baltimore, Md. Filed Mar. 18, 1920. Serial No. 366,940. 4 Claims. (Cl. 260—4.)



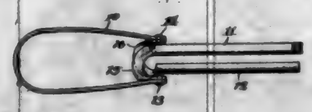
1. A process of forming a phenolic condensation product which consists in mixing a phenolic body and a reactive methylene-containing substance, inducing reaction in the presence of a condensing agent consisting of a basic salt within a skeleton container of aluminum, and withdrawing the container and enclosed salt before the reacting mass hardens.

1,532,953. SCREW DRIVER. HENRY W. ROSS and JAMES O. HICKS, Victoria, Tex. Filed Feb. 6, 1923. Serial No. 617,311. 1 Claim. (Cl. 145—52.)

A tool of the class described consisting of relatively movable crossing levers forming opposed jaws to jointly engage a screw at their work ends, a pivot connecting said levers, a thin flat driver blade having a first and a second portion, said portions being disposed at substantially a right angle to each other, the first mentioned portion lying flatwise between the levers at the crossing and being pivotally secured in place between the levers by said pivot for movement independently of each of the levers, and the second mentioned portion being disposed flatwise between the jaw portions of the levers and at its distal end adapted to enter the kerf of a screw.

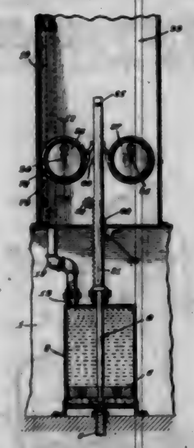
1,532,954. BUILDING WALL. ANDREW RUMPLER, Cudahy, Wis. Filed Oct. 23, 1924. Serial No. 745,331. 5 Claims. (Cl. 72—16.)

1. A building wall comprising a filler block composed of self sustained adherent dry earth and spaced inner and outer walls having connections with each other extending through said filler block, said inner and outer walls being spaced from the filler block at a distance therefrom substantially equal to the difference in the thickness of the filler block when dry and its thickness when sufficiently wet to be tamped.



1,532,955. POWDER-APPLYING BRUSH. HARDY G. SAMMONS, New Orleans, La. Filed Aug. 18, 1924. Serial No. 732,829. 1 Claim. (Cl. 15—138.)

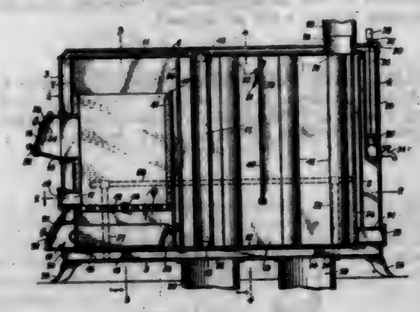
The herein described powder applying brush comprising a hollow body open at one end and closed by a handle at its opposite end, a brush head detachably connected to and closing the open end of the body and having a large central aperture, bristles carried by the said head and disposed about said aperture, a foraminous plate fixed to the head and arranged at the inner end of the



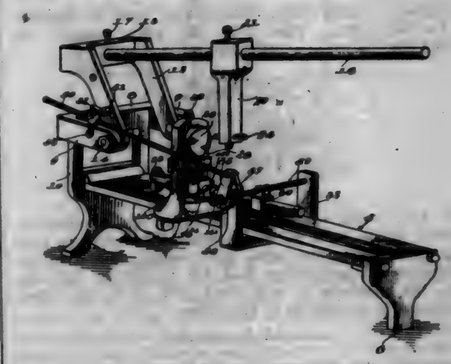
large aperture in the head and flush with the inner side of the head, and an apertured disk pivotally connected to the center of the said plate and overlapping and resting against the inner side of the head.

1,532,956. HAIR CURLER. WILLIAM D. SCHAEFER, Chicago, Ill. Filed July 5, 1923. Serial No. 649,407. 3 Claims. (Cl. 132—37.)

1. A curling iron comprising a loop of resilient wire forming a handle, substantially hook-shaped hair gripping members, pivotally connected to the ends of said loop and adapted to be turned to positions substantially within or without said loop, one of said members being provided with a longitudinal slot and the other member extending through said slot, said members being normally forced together by the spring action of the handle and being adapted to be moved apart by manual compression of said handle.



1,532,957. LIQUID-DISPENSING APPARATUS. ALFRED JOSEPH SHAW, Granby, Quebec, Canada. Filed Feb. 28, 1924. Serial No. 695,848. 12 Claims. (Cl. 221—103.)



1. A liquid dispensing apparatus comprising a housing, a pump disposed within said housing, a motor for actuating said pump, a switch disposed in the motor circuit, a disc rotatably supported by the housing and adapted to be locked thereto, and an operative connection between the disc and the switch for closing the motor circuit.

1,532,958. HEATING APPARATUS. CORYDON W. SEXTON, Charlotte, N. C. Filed Apr. 18, 1922. Serial No. 554,979. 1 Claim. (Cl. 126—99.)

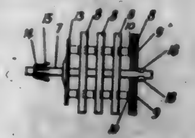
A heater comprising an outer casing, a combustion box within said casing and spaced from the walls thereof forming an enveloping air chamber, an open topped fire pot in the forward part of said combustion box, a plurality of banks of vertical flues arranged rearwardly of said fire pot and communicating at their opposite ends with said enveloping air chamber, a smoke pipe leading from the rear part of said combustion box, a vertical partition arranged intermediate said banks of flues and between said fire pot and smoke pipe for deflecting the heated products of combustion longitudinally of said flues, said partition having a damper controlled draft opening at its upper end, a grating constituting the upper wall of said air chamber and extending above said fire pot and said flues and cold air supply conduits communicating with that part of said enveloping air chamber which lies directly beneath said banks of flues.

1,532,959. TOOL-TRIMMING MACHINE. JOHN WASHINGTON TAYLOR, Gadsden, Ala. Filed Mar. 17, 1923. Serial No. 625,903. 7 Claims. (Cl. 82—12.)

1. A machine of the class described comprising a bed, a vertically movable lever having an attaching member horizontally pivoted to said bed, a tool holder mounted on said lever and adapted for vertical movement in an arcuate path, a cutter carried by said holder, a work supporting chuck mounted on said bed, a horizontal lever for moving said chuck horizontal in an arcuate path, and means operated by the attaching member of said first named lever for moving the horizontal lever transversely of the bed.

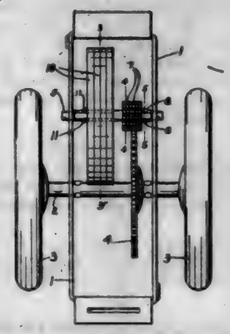
1,532,960. BAYONET MOUNTING FOR GUNS. JOSEPH TOMANEK, Truscott, Tex. Filed May 21, 1924. Serial No. 714,847. 1 Claim. (Cl. 42—86.)

In an automatic bayonet mounting for guns, the combination with a gun barrel, a bayonet slidably mounted thereon, resilient means detachably connected to the bayonet for normally projecting the latter, latch devices for holding the bayonet projected or retracted,



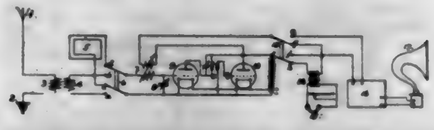
immovable means carried by the barrel to which the bayonet may be attached for holding the latter retracted when not in use, and a cover hinged to the barrel adapted to enclose the bayonet when retracted and to prevent it from being accidentally detached from the immovable means, when so enclosed.

1,532,961. ROD AND STEM PACKING. JOHN L. TRAVERS, Palmyra, N. Y., assignor to Crandall Packing Company, Palmyra, N. Y. Filed Sept. 26, 1924. Serial No. 740,110. 2 Claims. (Cl. 288—1.)



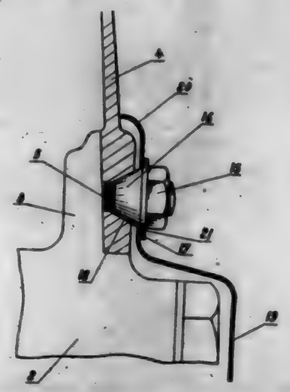
1. A packing ring having a cylindrically formed inner periphery provided with slots communicating with the interior of the packing ring and extending from one side of the ring to the other at an angle to the axis of the ring, and a core of lubricant absorbent material enclosed in said packing ring.

1,532,962. FLYWHEEL FOR TOYS. JOHN C. TURNER, Dayton, Ohio. Filed Nov. 27, 1922. Serial No. 603,454. 4 Claims. (Cl. 74—6.)



1. In a device of the type described, the combination with a spindle, of a fly wheel mounted thereon, and having apertures in one outer part thereof, and a pinion having radial projections that are turned for entrance into the apertures in said outer part of the fly wheel structure to connect it to the latter.

1,532,963. FLYWHEEL AND PINION CONSTRUCTION FOR TOYS. JOHN C. TURNER, Dayton, Ohio. Filed May 3, 1924. Serial No. 710,947. 3 Claims. (Cl. 74—6.)

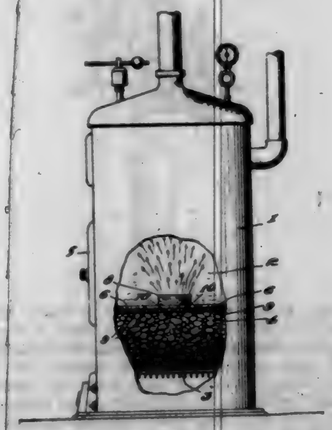


1. In a device of the type described, the combination with a spindle, of a series of toothed-disc stampings having squared central holes, said spindle being formed with a flattened portion upon which said stampings are fitted, face to face, to form a pinion, a gear in engagement with said pinion, and means formed on the spindle to hold said stampings closely together for a firm mesh with said gear.

1,532,964. MEANS FOR RADIOSIGNALING SHIPS DURING A FOG. CORRADO VALGUARNERA, Palermo, Italy. Filed Aug. 9, 1924. Serial No. 731,019. 2 Claims. (Cl. 250—2.)

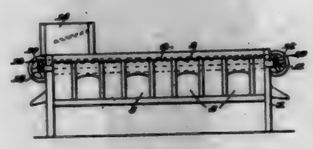
1. A radio-signaling system for ships, which comprises a transmitting station having a limited transmitting range, a determined wave length, an antenna tuned to that of the receiving station, and a special transmitter of automatic signaling having a standard signal; and a receiving station comprising an alarm, a double system of aerials, one for the functioning of the alarm, and the other for determining the ship's position; switch systems for tuning the antenna with the circuits; a telephone with reducing transformer and potentiometer to vary the sensitiveness of the receiving apparatus; and synchronized coacting relay and signal selector for actuating the alarm when predetermined signals are received.

1,532,965. CAP COVER. ANDRÉ VALLOT, Levallois, France. Filed June 18, 1923. Serial No. 646,261. 1 Claim. (Cl. 301—108.)



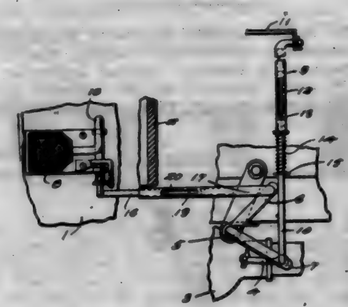
A device for securing cap-covers to the wheels of motor vehicles comprising in combination, a hub, a hub-extension, attaching bolts secured thereto, a wheel body having holes cooperating with said bolts and traversed by the latter, conical recesses formed in the main body of the wheel around the said bolts, wheel-attaching nuts screwed to said bolts and provided with a base fitting into the said recesses, flanged parts formed on said nuts whose diameter is larger than that of the largest part of the said base, and a flange forming an extension of the said cap cover and having therein holes corresponding to the said attaching bolts, the diameter of said holes being larger than the largest part of the said base and smaller than the diameter of the flange of the nut, the distance between the base of the nut and its flange being such that when the said base is caused to bear within its recess the flange of the said nut will press slightly upon the flange of the said cap cover, whereof the exterior edge only bears upon the wheel.

1,532,966. CLOCK CALENDAR. GERALD MASON VAN DYKE, Tientsin, China, assignor of one-half to Hugh K. MacDougall, Tientsin, China. Filed Mar. 25, 1924. Serial No. 701,764. 11 Claims. (Cl. 58—4.)



1. In combination with a clock, a calendar operated by the clock mechanism and mounted to rotate about the face of the clock, for the purpose specified.

1,532,967. COAL-SAVING DEVICE. ELIAKIM M. VAN PELT, Elizabeth, and RALPH H. DIXON, Newark, N. J. Filed Aug. 18, 1924. Serial No. 732,698. 4 Claims. (Cl. 126—148.)

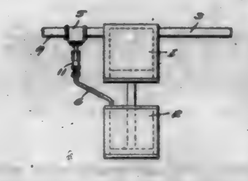


1. A coal-saving device comprising a body-element made of a non-inflammable material, said device being adapted to be placed upon the bed of fuel of a heat-producing unit, supporting ribs extending from the lower face of said body-element, said ribs being also made of a non-inflammable material and being arranged, when the device is placed upon the bed of fuel, to provide gas-collecting spaces, and the said body-element being further provided with means for conveying the unconsumed gases from said collecting spaces for consumption above the said body-element.

1,532,968. FRUIT-SORTING DEVICE. BERNARDUS GERRARDUS VAN STIJN, Lisse, Netherlands. Filed Apr. 12, 1924. Serial No. 706,142. 4 Claims. (Cl. 130—32.)

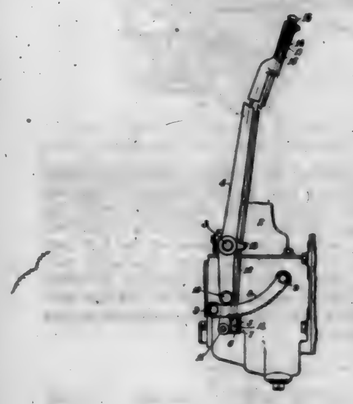
1. A fruit sorting machine comprising a movable table provided with graduated openings, means for imparting a four-motion feed to said table and means for imparting to objects on said table a step-by-step feed of said objects longitudinally of said table to a selective opening therethrough.

1,532,969. ENGINE ACCELERATOR. CLYDE H. VINCENT, Oilton, Okla. Filed May 29, 1924. Serial No. 716,705. 1 Claim. (Cl. 74—39.)



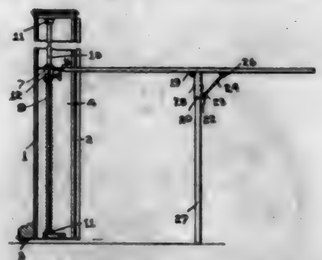
Accelerating means for an internal combustion engine, the same comprising a fork having oppositely disposed arms, one of said arms having connection with the throttle arm of the carburetor, a telescoping connection having connection with one of the arms of the fork and which the hand controls, and the other telescoping connection being coupled to the other arm of the fork and forming connecting means between it and the foot control, and spring means for normally maintaining the fork in a given position.

1,532,970. SWIMMING BELT. EDWARD WALKER, Grantwood, N. J. Filed Apr. 1, 1924. Serial No. 703,466. 3 Claims. (Cl. 9—17.)



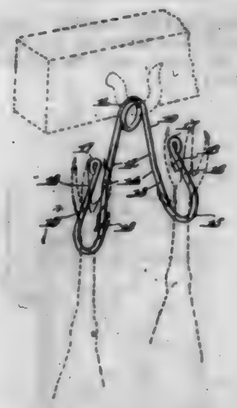
1. A swimming belt, comprising a hollow body portion of general elliptical shape in cross section and a plurality of apertured partitions in said body portion extending transversely thereof to form communicating air compartments, said partitions each having edge portions secured to the side walls and extending to points contiguous to a next adjacent partition to reinforce said walls.

1,532,971. VALVE AND CATCH POCKET. GUY C. WALLIS, Waycross, Ga. Filed June 6, 1924. Serial No. 718,358. 2 Claims. (Cl. 184—55.)



1. In combination with a pair of cylinders, an exhaust pipe connected with one of the cylinders, a pocket connected in the exhaust pipe, a pipe connecting the pocket with the other cylinder, a check valve connected in the last mentioned pipe, the said check valve having by-pass ducts communicating with the passageway therethrough.

1,532,972. BRAKE LEVER. SAMUEL O. WHITE, Muncie, Ind., assignor to Warner Gear Company, Muncie, Ind., a Corporation of Indiana. Original application filed July 18, 1923. Serial No. 652,268. Divided and this application filed May 26, 1924. Serial No. 715,938. 6 Claims. (Cl. 74—89.)

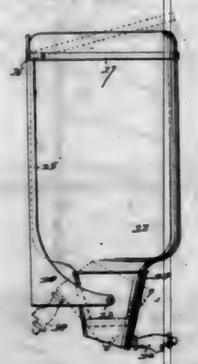


1. The combination with a transmission casing, of an arcuate toothed segment mounted on one side of said casing and spaced apart therefrom, a brake lever pivoted on said casing having a socket at its lower end, a dog vertically movable in said socket and arranged to cooperate with said segment, an operating rod for said dog extending parallel with said lever and having its upper end projecting through an opening in the handle of said lever, a retaining spring tending to urge said rod in a direction to cause the dog to engage the teeth of said segment, said rod having a transversly extending projection at its lower end engaging said dog, and a guide member near the lower end of said lever for said rod to maintain the same against lateral displacement and thereby hold the projection into engagement with the dog.

1,532,973. IRONING BOARD. SOPHIA ADELSON, New York, N. Y. Filed Aug. 27, 1924. Serial No. 734,512. 4 Claims. (Cl. 68—10.)

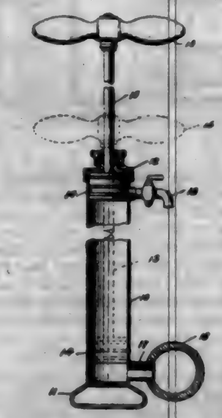
1. An ironing board structure, comprising a cabinet, a bar slidable therein, a shaft on which said bar slides, means for securing the bar relative to the shaft, an ironing board hinged to the bar, and a support hinged to the board near the free end thereof.

1,532,974. HANGER FOR DISPLAYING DRESSED POULTRY. JOSEPH J. ALBEE and CHARLES E. DOUGHERTY, Brooklyn, N. Y. Filed June 25, 1923. Serial No. 647,703. 1 Claim. (Cl. 17—44.)



As a new article of manufacture, a holder for suspended poultry having at its center a bight to rest on a hook or other support and also having legs pendent from said bight and spaced apart, and loops at the lower ends and outer sides of the said legs; the said loops inclined downwardly and forwardly from their respective legs; and arranged with their bights below and spaced from the legs and their outer arms inclined upwardly and inwardly whereby the mouths of the loops are narrower than the bight portions thereof, the said arms terminating in eyes disposed at the outer sides of the mouths of the said loops.

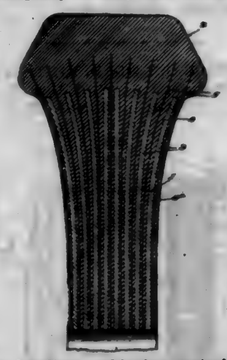
1,532,975. DISPENSING ATTACHMENT FOR BOTTLES. GEORGE F. ANDERSON, Oklahoma City, Okla. Filed Apr. 17, 1922. Serial No. 553,660. 1 Claim. (Cl. 221—95.)



A dispensing attachment for bottles comprising a bracket designed for mounting on a wall or partition, a cap pivotally mounted in the bracket for the reception

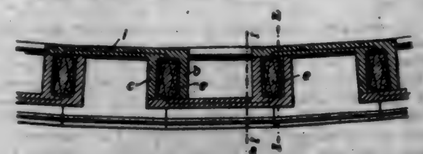
of the neck of the bottle, the cap supporting the weight of the bottle and being provided with a dispensing faucet, and an arm carried by the bracket and extending longi-

tudinally of the attached bottle, said arm being provided with means for slidable engagement with the bottle to preclude swinging movement of the bottle on the pivotal connection of the cap.



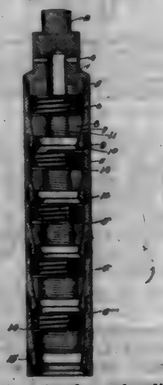
1,532,976. CLEANING APPARATUS FOR WATER MAINS. AUGUST W. ANNERT, Jersey City, N. J. Filed Feb. 1, 1922. Serial No. 533,372. 1 Claim. (Cl. 137—70.)

In combination with means to contain water under pressure, a cylinder disposed at substantially a right angle thereto, a base carried by said cylinder adapted to be engaged by the operator's foot, a laterally off-set connection on said cylinder above said base in communication with said means, a piston operable in said cylinder constituting a seal and normally maintained elevated by the pressure of the water therein, and a manipulating rod extending from the piston and exteriorly thereof adapted for hand reciprocation.



1,532,977. COMPOSITE VEHICLE WHEEL. HARRY N. ATWOOD, Monson, Mass., assignor to Rubwood, Inc., Lawrence, Mass., a Corporation of Massachusetts. Filed Apr. 25, 1924. Serial No. 708,941. 7 Claims. (Cl. 301—63.)

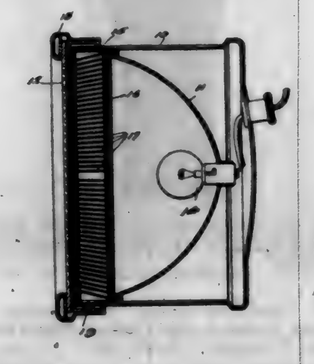
1. A vehicle wheel having a tread of cushioning material and a body made up of plies of veneer bonded together by cushioning material, the tread and body of the wheel being integrally united, and reinforcing plies em-



bedded in the bonding cushioning material between the plies of veneer and having peripheral portions extending into the tread.

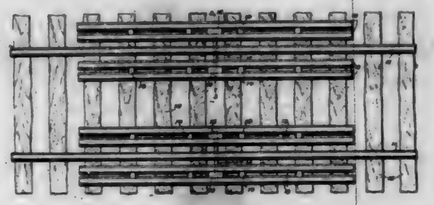
1,532,978. CIRCULAR WALL. LEON BALABAN, Berlin-Friedenau, Germany. Filed Oct. 4, 1924. Serial No. 741,591. 2 Claims. (Cl. 72—90.)

1. An annular wall structure composed of a plurality of superposed layers of blocks, said blocks each having a longitudinal leg and two transverse arms spaced apart one of which arms is located at the end of said leg and both arms being on the same side of said leg, said blocks being laid up in the wall with the longitudinal legs alternately at the inner and outer sides of the wall; the free ends of the blocks closing the space left between the arms, said superposed arms forming continuous vertical channels, reinforcements in said channels and a filling of concrete surrounding said reinforcements.



1,532,979. FISHING TOOL. RUSSELL CLYDE BARBOUR, Corsicana, Tex. Filed Oct. 28, 1924. Serial No. 746,334. 2 Claims. (Cl. 294—102.)

1. In a fishing tool, a head, a plurality of connected tubular sections secured in stages below said head, the inner face of each section being tapered inwardly to

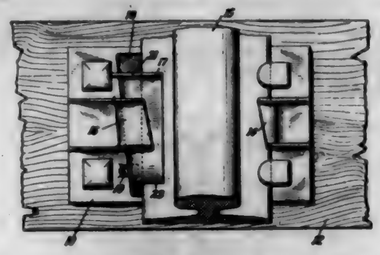


form a seat, sets of jaws tapered to fit each said seat, and a coiled spring above each set of jaws acting to press said jaws resiliently downwardly.

1,532,980. ANTIGLARE HEADLIGHT. FRED AMBRICUS BISHOP, Petersburg, Va. Filed Aug. 15, 1923. Serial No. 657,583. 1 Claim. (Cl. 240—48.4.)

An anti-glare headlight of the character described, comprising an externally threaded circular frame, the casing of a lamp threadedly engaging the frame therein, a plurality of concentrically arranged outwardly converging members arranged within the frame, said members being secured within the frame by strips arranged in the form of radial partitions and focusing the members toward a common center, the central member focusing forwardly and being independent of the other members and forming the hub from which the strips radiate, and means for adjustably holding the circular frame to the casing.

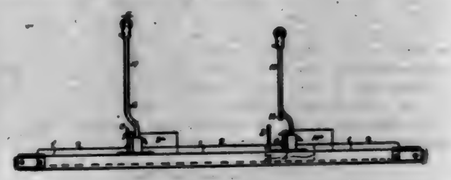
1,532,981. TRACK-SUPPORTING DEVICE. VICTOR ST. CLAIR BLACKETT, Moncton, New Brunswick, Canada. Filed Nov. 24, 1924. Serial No. 752,002. 3 Claims. (Cl. 238—169.)



1. A track supporting device including a pair of girders adapted to be disposed lengthwise at opposite sides of a track rail, each girder including a plurality of rails and means tying the rails into rigid relation to constitute the girder, together with a beam adapted to be disposed transversely beneath a track rail and extending to the girders of the pair, and means supporting said beam from said pair of girders.

1,532,982. REFRIGERATING ARRANGEMENT FOR DRINKS AND FOOD. ALBERT BLOM, Stockholm, Sweden. Filed Nov. 16, 1923. Serial No. 675,229. 3 Claims. (Cl. 62—1.)

1. A bottle cooler comprising a container provided with a spiral rib on its inner wall, said container adapted to receive a bottle the walls of which lie in close contact with said rib, and an ice tray for the container supported above the bottle whereby water from the ice drips upon the bottle and is directed by said rib in a spiral path around the wall thereof.



1,532,983. TIE-PLATE AND RAIL ANCHOR. JOHN A. BODKIN, New York, N. Y. Filed July 15, 1920, Serial No. 396,451. Renewed Sept. 8, 1924. 5 Claims. (Cl. 238—304.)

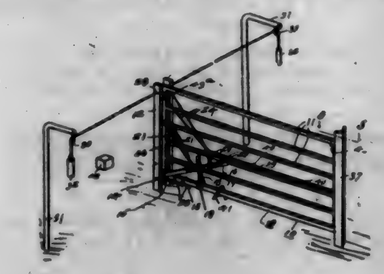
1. A device of the character described comprising a tie plate, lugs extending inwardly from the opposite sides thereof adapted to receive a rail, a tapering member adapted to engage with one of said lugs and provided with a longitudinal recess adapted to engage the upper and lower surfaces of the rail flange and the edge thereof intermediate said surfaces; said tapering member having a relatively thin overhanging portion extending longitudinally from one end thereof, substantially as specified.

1,532,984. DEVICE FOR USE IN PRACTICING THE GAME OF GOLF. CRAIGIE GYLE BORTHWICK, Edinburgh, Scotland. Filed Aug. 29, 1923. Serial No. 660,041. 3 Claims. (Cl. 273—35.)

1. A device for use in practicing the game of golf, consisting of a frame provided with a disc or captive ball, means for supporting two cross members positioned in the rear of the ball and spaced apart and two cross members positioned in advance of the ball and spaced apart, and two depending members similarly positioned but at different levels, so that when a true swing is imparted to the club its head will describe an arc lying between the cross and depending members without contacting with the frame or a part thereon substantially as set forth.

1,532,985. CUE TIP. ALBERT E. BRADLEY, Bridgeport, Conn. Filed Aug. 29, 1924. Serial No. 734,995. 1 Claim. (Cl. 273—70.)

A cue formed with a tenon at the front end, a sleeve having a cylindrical bore, the inner end of the sleeve being seated on the cue at the base of said tenon and the front end of the cue extending beyond said tenon and forming a socket, and a cue tip comprising a leather disk, a metallic disk affixed to said leather disk at the back thereof and a tapered stud central on the metal disk at the back thereof and tightly fitting in the front projecting end of the said sleeve.

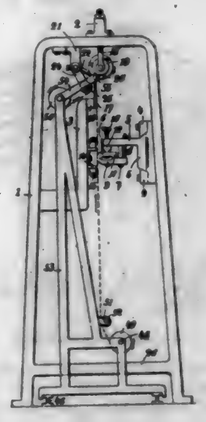


1,532,986. HARROW ATTACHMENT FOR CULTIVATORS. VERNE L. BRANSON, Lexington, Nebr. Filed Mar. 26, 1923. Serial No. 627,800. 2 Claims. (Cl. 97—215.)

1. In a device of the class described, the combination of a shaft, members transversely carried by said shaft so that opposite ends thereof extend from said shaft to provide teeth, said teeth being arranged in pairs curved longitudinally of said shaft toward each other and extending in overlapping relation to each other, certain spaces being provided upon said shaft for the reception of rows of plants therebetween as the harrow moves over land, the teeth being so related to said spaces as to have convex sides thereof facing the same.

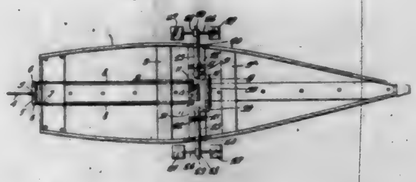
1,532,987. GATE AND OPERATING MECHANISM. STEPHEN O. BUMGARNER, Waverly, Ohio. Filed Apr. 7, 1922. Serial No. 550,809. 3 Claims. (Cl. 39—43.)

1. A gate, having a bracket provided with arms secured to said gate at a corner thereof, pivot members extending laterally from said bracket, gate posts between which the gate moves and in which said members are pivoted, a latch post having a lug, a latch on the gate cooperating with said lug, an arm pivoted to said bracket, a second arm, said second arm being pivoted to said gate, means to secure said pivoted arms in adjusted position, brackets secured to said posts, pulleys on the latter brackets, draw members guided by said pulleys and connected with one of said pivoted arms, draw members extending from the said draw members to said latch, spring connected to said posts and to one of said arms,



and springs connected to said posts and to said gate for tensioning through opening movement of the gate for the purpose specified.

1,532,988. THERMOPRESSURE REGULATOR. WASHINGTON H. CHAPMAN, Detroit, Mich. Filed Apr. 18, 1922. Serial No. 555,214. 10 Claims. (Cl. 236—26.)

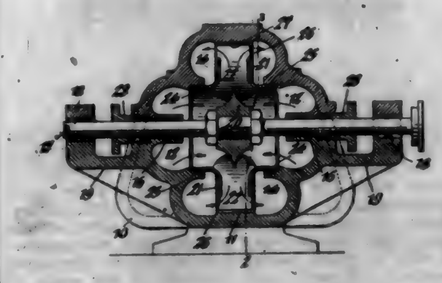


1. A thermo-pressure regulator for controlling the difference in pressure between a live steam line and a return line comprising a chamber open to the steam line, a reservoir adapted to contain water or condensate from the return line open to the chamber, a second chamber, a tube opening into the second chamber and extending downwardly into the reservoir, the tube being open to the reservoir at the lower end, a conduit connecting the said second chamber with the return line, a by-pass connected at one end to the return line and opening at the other end into the reservoir above the open end of the said tube, a closed member in the first chamber containing a volatile fluid, the said member being expansible or contractable upon change of temperature, a control lever pivotally supported relative to the first chamber, means for operating the control lever by expansion or contraction of the expansible member and a pressure control means with which the control lever is connected.

1,532,989. MACHINE FOR CUTTING, SHORTENING, AND SHEARING THE LOOSE THREADS OF MACHINE-MADE LACE AND ALL SIMILAR GOODS. GUSTAVE CORDIER, Calais, France. Filed July 25, 1922. Serial No. 577,403. 2 Claims. (Cl. 26—12.)

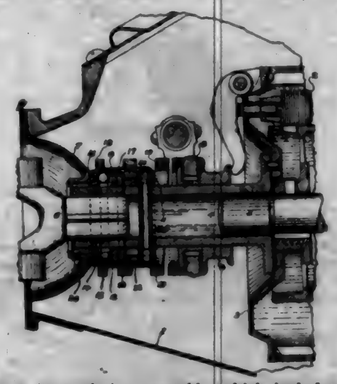
1. In a machine for cutting the loose threads or yarn of a fabric, comprising comb-like blades, sliding the one against the other and means for guiding the fabric near the teeth of said blades, the combination of two toothed blades whose teeth are terminated by plane faces which are perpendicular to the plane of contact of the said blades the one against the other for preventing the teeth from engaging the meshes of the web.

1,532,990. BOAT. GEORGE CHENGERY, South Norwalk, Conn. Filed Sept. 24, 1924. Serial No. 739,673. 3 Claims. (Cl. 115—28.)



3. The combination of a boat hull having gunwales, holders fixed on said gunwales, standards fixed on the hull bottom and spaced inwardly from the gunwales, holders on said standards and arranged in coincidence with the first-named holders, the said standards being spaced a considerable distance apart, sleeves secured in the said holders and spaced apart, shafts journaled in said sleeves and spaced apart, propellers having rods extending diametrically through the outer portions of said shafts and also having blades on the rods, set screws bearing in the outer ends of the shaft and against said rods, a U-shaped handle having a transverse portion and also having end portions extending diametrically through the inner end portions of the shafts, set screws bearing in said shafts and adjustably fixing the handle thereto, and a roller mounted on the transverse portion of the handle.

1,532,991. TENNIS AND BADMINTON RACKET. BERTIE DE MEZA, London, England, assignor to Victor Dye, Limited, London, England. Filed Apr. 9, 1923. Serial No. 630,864. 6 Claims. (Cl. 273—73.)



1. A racket for tennis, badminton and like games, comprising a frame of bent wood, said frame being formed with shoulders and with a handle portion, stringing secured in said frame, and a resilient wedge member occupying the space between said shoulders of said frame.

1,532,992. CENTRIFUGAL PUMP. EDMUND F. DOTY, North Tonawanda, N. Y. Filed Jan. 5, 1924. Serial No. 684,652. 5 Claims. (Cl. 103—104.)

1. A centrifugal pump, comprising a casing having an inlet and a discharge, an impeller chamber in communication with said inlet, an impeller including blades, open at its periphery and rotatably mounted in said chamber, and a pressure chamber arranged at one side of said impeller chamber and communicating with the same and with said discharge, the peripheral edges of the blades being parallel with and extending to the inner wall of the impeller chamber, said impeller having lateral discharge openings intersecting with the periphery thereof and communicating with said pressure chamber and said inner wall of the impeller chamber constituting an impact face for directing the fluid through said discharge openings at substantially right angles to the plane of rotation of the impeller.

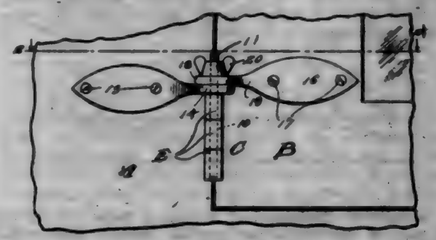
1,532,993. BEARING. CARROLL E. DURHAM, Redford Township, Wayne County, Mich., assignor of one-half to Thomas B. Moore, Detroit, Mich. Filed Mar. 9, 1921. Serial No. 450,822. 8 Claims. (Cl. 64—25.)

1. In a transmission assembly which includes a drive plate assembly sleeve, a ball cap, and a spring casing:—an end thrust bearing extending into the spring casing against said ball cap and adapted to receive end thrust of said sleeve, and an adjustable spacer member forming part of said bearing.

1,532,994. MATCH LIGHTER. JOSEPH FRALING, Bemidji, Minn. Filed Feb. 4, 1924. Serial No. 690,521. 2 Claims. (Cl. 44—48.)

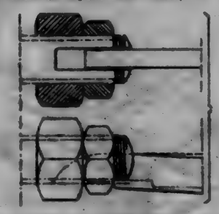
1. A match scratcher comprising a plate-like body having flanges struck outwardly therefrom and provided with free edges, the distance between the free edges of the flanges being such that when a match head is drawn along said edges, the head will engage both of said edges.

1,532,995. LEVEL INDICATOR OF THE LUMINOUS TYPE. ANDRÉ GAGE, St.-Ouen, France. Filed Mar. 6, 1924. Serial No. 697,320. 5 Claims. (Cl. 88—14.)



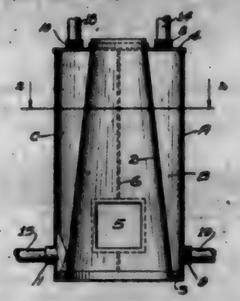
1. A device for facilitating the observation of a level gauge tube, comprising an illuminant at the side of the tube containing the fluid whose level is to be observed, means disposed between the said illuminant and the said tube whereby the beam is compelled to fall upon the tube at a determined incidence, and means disposed at the other side of the tube and affording passage solely to the incident rays which are refracted through the said fluid.

1,532,996. EXTENSIBLE TABLE. NAPOLEON GIARD, St. Michel de Rougemont, Quebec, Canada. Filed Oct. 1, 1923. Serial No. 666,002. 1 Claim. (Cl. 45—9.)



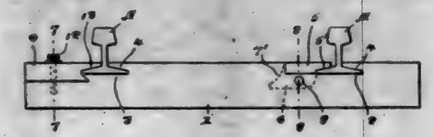
An extensible table comprising a pair of side members, a top slidably supported by said members, rollers supported between said members, a strip carried at one end of said top, a plurality of slots articulated to the remaining end of the top and adapted to pass over said roller, a slide carried by one of said side members and having a pair of grooves therein, a stop carried by said side member and receivable in one of said grooves, a second strip secured to the first named strip and lying parallel to the top, and a stop carried by said last named strip, said stop being receivable in the remaining groove of the slide.

1,532,997. CASEMENT-WINDOW FASTENER. CLYDE H. GOLLADAY, Los Angeles, Calif. Filed Oct. 16, 1923. Serial No. 668,886. 3 Claims. (Cl. 16—139.)



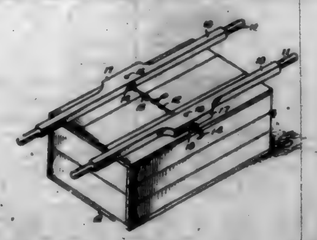
1. A securing means of the class described, in combination with a hinge using a pintle, a stud applicable to the hinge in lieu of the pintle, leaves extending from the stud for connection to a frame and member which moves relatively to it, the stud constituting the axis for one of the leaves, and means to secure said leaves together.

1,532,998. NUT LOCK. JUSTINIEN VICTOR GRAND, Bussigny, France. Filed Apr. 4, 1921. Serial No. 458,276. 1 Claim. (Cl. 151—22.)



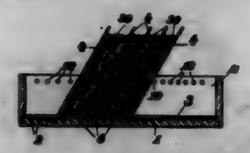
A nut, and a bolt on which the nut is screwed, said bolt having a longitudinal recess in one side, exposing parts of the thread of the nut, and adapted for the reception of a tool wherewith to deform the said exposed parts of the nut thread and thereby lock the nut on the shank said recess presenting a wall parallel with the axis of the bolt, and being open at the outer end, to receive the tool, the said wall forming a guide for the tool.

1,532,999. BOILER. RICHARD GREENHAM, San Francisco, Calif. Filed June 6, 1922. Serial No. 566,346. 2 Claims. (Cl. 122—37.)



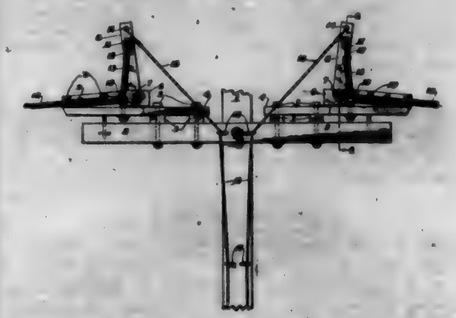
1. In a heating and ciculating system of the character described a boiler comprising an exterior shell, an interior shell concentric therewith and spaced therefrom, said inner shell forming an annular compartment, a pair of radially, oppositely disposed partition members interposed between the exterior and the interior shell and dividing the annular compartment into two separate compartments, separate inlet connections disposed at the lower end of each compartment, and separate discharge connections disposed at the upper end of each compartment.

1,533,000. TIE. JOHN GURNOVITZ, Milwaukee, Wis. Filed Nov. 11, 1924. Serial No. 749,273. 1 Claim. (Cl. 238—331.)



A railroad tie formed of a body of metal and having a pair of rails receiving recesses therein, each recess having an undercut wall for receiving a portion of the base of a rail, locking members detachably connected with the recessed portions of the tie for holding the rails in position, one locking member having a web for engaging a slot in the tie and the other member having a dove-tail groove therein for engaging a dove-tail rib on the tie.

1,533,001. LIFTING DEVICE. CATO HAARBERG, Chicago, Ill. Filed Nov. 24, 1923, Serial No. 676,803. Renewed Feb. 26, 1925. 6 Claims. (Cl. 294—15.)

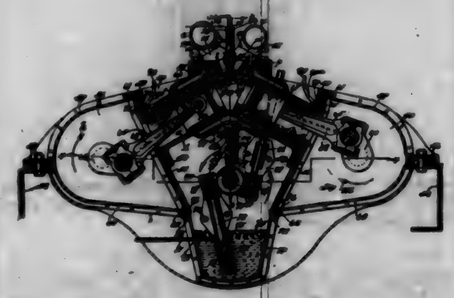


1. A lifting device comprising a pair of elongated lift bars adapted to be disposed above an article to be carried and to be grasped at the ends thereof, a flexible transverse connection between said bars, and transversely disposed grabs on the bars at the approximate center thereof at the outer sides of the bars for engagement with the articles to be carried.

1,533,002. CARD INDEX, LETTER, AND DOCUMENT FILE. ERWIN OTTO HASSERFELD, Berlin, Germany. Filed June 23, 1924. Serial No. 721,910. 5 Claims. (Cl. 129—16.)

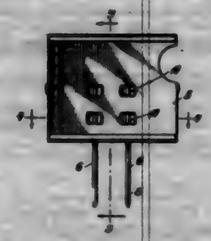
1. In a card index and letter and document file with interposed supporting cards, the combination of a receptacle having transverse grooves in the bottom thereof for preventing movement of the cards with respect to the bottom, and a transverse supporting rod engageable with the upper portion of the receptacle for supporting the cards at the desired inclination.

1,533,003. WHIP-ACTUATING DEVICE. PERRY OSCAR HELLER, Prophetstown, Ill. Filed Mar. 29, 1924. Serial No. 702,915. 1 Claim. (Cl. 280—178.)



A device of the class described comprising a supporting bar adapted to be secured to and in advance of a neck yoke, spaced bearing brackets secured to said bar at an intermediate point thereof, a vertical pivot pin mounted in said brackets, a horizontally disposed bell crank lever pivoted at its angle on said pin between said brackets, one arm of said lever normally extending forwardly and the other extending outwardly with respect to the neck yoke, brackets with hook bolts mounted on the forwardly extending arm, a pair of springs connected at one of their ends to the hook bolts and at their other ends to the supporting bar at points between the vertical pivot and the outer end of the other arm, means for securing a whip to the last-named arm, and a pull cord attached to the front end of the forwardly extending arm in advance of the spring connection for rocking the lever against the spring pressure and causing the whip to be swung forwardly and inwardly.

1,533,004. MULTIPLE-CYLINDER COMBUSTION MOTOR. MARTIN HENRY, Verden, Okla. Filed Feb. 12, 1924. Serial No. 692,843. 5 Claims. (Cl. 123—58.)



5. A multiple cylinder combustion motor including a motor block provided with a plurality of sets of cylinders, the cylinders of each set diverging laterally and downwardly with a combustion chamber between the adjacent ends of the cylinders of each set, intake and exhaust valves for said combustion chambers, means below the motor block and operatively connecting with the intake and exhaust valves for operating the same, a housing below and connected to the motor block for housing said

means, crank cases carried by the opposite sides of the housing and having crank shafts therein operatively connecting with the intake and exhaust valve operating means for operating said valves at every two revolutions of the crank shafts, pistons in the cylinders and operatively connecting with the crank shafts, the crank cases consisting of upper and lower removable crank case plates, the removal of which permits access to the crank shafts and the connecting rods, permitting the pistons to be removed without disturbing the motor block and the

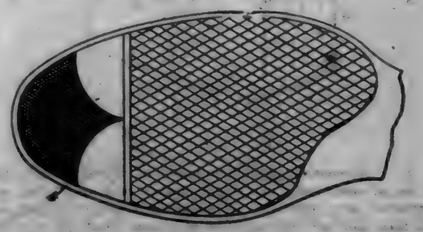
valve operating means, the housing for the intake and exhaust valve operating means including an oil pan at the bottom, the removal of which permits of access to the valve operating means, a web depending from the motor block and located within the housing and carrying the operative connections of the means for actuating the intake and exhaust valves, and a trough or channel carried by the web and adapted to receive lubricant and being located above the cam shaft and the elements of the valve operating means and provided with outlets for feeding lubricant to said elements and the cam shaft.

1,533,005. PRICE-TICKET HOLDER. HERMANN HOPF and LEO HOPF, New York, N. Y. Filed Feb. 27, 1924. Serial No. 695,538. 1 Claim. (Cl. 40—10.)

A device of the character described comprising a card or ticket holder having spaced pairs of aligned loops, a piercing element constituting a support for said holder and attached thereto, said piercing element consisting of a single piece of material and being bent and formed to provide a central portion and pointed prongs and offsets, each prong extending through a pair of said loops, the offsets being in contact with one edge of said holder, and the central portion being in contact with a loop of each pair.

1,533,006. EXPANSION HITCH. WILLIAM P. HUNTER, Plains, Kans. Filed Dec. 12, 1923. Serial No. 680,241. 3 Claims. (Cl. 37—242.)

1. In combination, a draft bar, an equalizer bar fulcrumed to the draft bar at its center, a pair of tongues, a hanger depending from each tongue, a link fulcrumed to each hanger for receiving the draft bar, means for

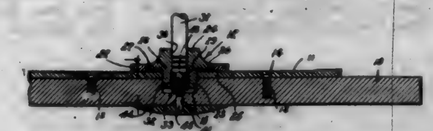


attaching each link to the adjacent tongue, and rods connecting the links and the ends of the equalizer bar.

1,533,007. ANTITHEFT DEVICE. FRED WILLIAM GEORGE KAMMERER, Brooklyn, N. Y. Filed Feb. 25, 1924. Serial No. 695,034. 1 Claim. (Cl. 296—95.)

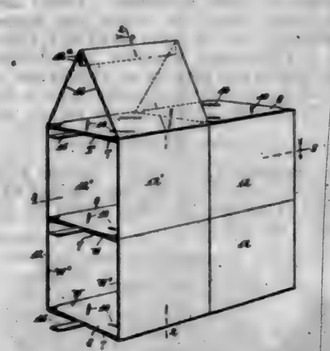
In combination with the wind shield structure of an automobile, a sun shield, a pair of arms, attaching means for securing said arms to said wind shield structure, a blind pivoted to said arms and comprising a pair of hingedly connected foldable sections, a locking device including a forked member for locking said section in a folded position beneath said sun shield or unfolded position, the forked member straddling the sections when in folded position and adapted to straddle one of said sections and the wind shield structure when in unfolded position, substantially as and for the purpose specified.

1,533,008. RUBBER HALF SOLE. CHARLES R. KNERR, Auburn, Ind., assignor to The Regal Rubber Co., Dayton, Ohio. Filed Nov. 17, 1923. Serial No. 675,387. 3 Claims. (Cl. 36—32.)



3. A partially vulcanized rubber half sole comprising a bottom tread section having a vulcanizing agent incorporated in it, and a plurality of layers containing no vulcanizing agent including latex for controlling the migration of sulphur, the sole being vulcanized and the vulcanizing agent of the tread layer extending from the bottom layer beyond into the top layer and terminating short of the upper surface thereof, the layers being united by the vulcanization and the upper surface and adjacent portions of the top layer being unvulcanized to permit a uniform adhesion and firm attachment between all parts of the entire upper surface of the rubber half sole and the leather sole and air to be completely excluded from between the rubber half sole and the leather sole.

1,533,009. TREATMENT OF ALKALI-METAL CHLORIDES. JULIUS KERSTEN, Mannheim, Germany. Filed Mar. 28, 1921. Serial No. 456,192. 3 Claims. (Cl. 23—154.)



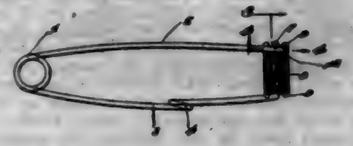
1. A method of decomposing alkali-metal chloride for obtaining hydrogen chloride (hydrochloric acid) with the aid of superheated steam, consisting in introducing steam into a molten mixture of alkali-metal chloride and alkali-metal silicate.

1,533,010. PATTERN. HENRY M. KINSLOW, Santa Ana, Calif. Filed Dec. 7, 1922. Serial No. 605,368. 7 Claims. (Cl. 22—157.)

1. A pattern of the character described including, a plate, a rib on one side of the plate, and a pattern part detachably mounted on said side of the plate so that it overlaps a part of the rib.

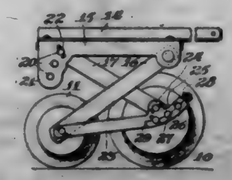
1,533,011. TOY CONSTRUCTION. ROY S. KNAGGS, New York, N. Y. Filed Mar. 19, 1924. Serial No. 700,296. 7 Claims. (Cl. 46—35.)

1. A constructor unit for a toy of the type including a set of selectively engageable units; said unit being constructed of a plurality of sheet members arranged face to face and secured together at points removed from the bounding edges of the sheet members to provide substantially parallel sheet-like gripping jaws marginally of the unit.



1,533,012. DRY-CELL BATTERY. HARRY M. KORETSKY and BORIS H. TEITELBAUM, Brooklyn, N. Y.; said Teitelbaum assignor to said Harry M. Koretsky and Israel Koretsky, New York, N. Y. Filed Dec. 17, 1919. Serial No. 345,643. 4 Claims. (Cl. 136—88.)

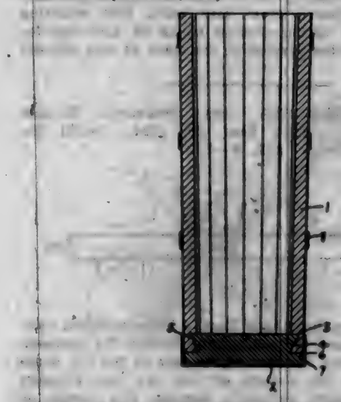
1. In a dry cell battery, the combination of two open ended containers adapted to be telescoped one within the other, one of the containers being of metal and the other of fibrous material, one end portion of one of the members comprising a tapered closure member adapted to be received in an opening of the other container when in telescoped position, and an electrolyte carried normally in one of the containers in spaced relation to the other



container, said electrolyte being held from leakage from the telescoped containers by said closure member after the battery has been telescoped for use.

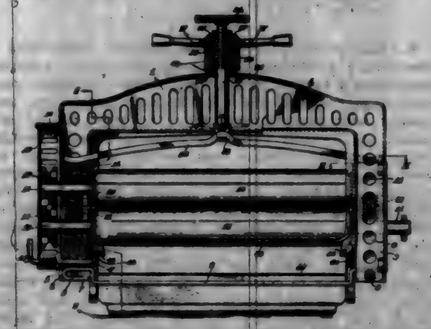
1,533,013. GAS LIGHTER. CHARLES F. LARSEN, Chicago, Ill. Filed Aug. 6, 1924. Serial No. 730,493. 2 Claims. (Cl. 67—6.1.)

1. A gas lighter including parallel spring arms, the outer ends of said arms being disposed at right-angles to the body portions, a cross-bar carried by the outer end of one of said arms, an outstanding finger at the outer end of the cross-bar, a substantially arcuate file plate mounted for lateral adjustment upon the cross-bar, means carried by the outstanding end of one of the arms and means carried by the outstanding arm of the cross-bar for guiding said plate in its movement and a detachable ignition tip carried by the outstanding end of the other arm for normal contact with one surface of the file plate.



1,533,014. SUBSOIL PACKER. VICTOR F. LASSAGNE, Chicago, Ill. Filed Oct. 31, 1923. Serial No. 671,915. 15 Claims. (Cl. 55—21.)

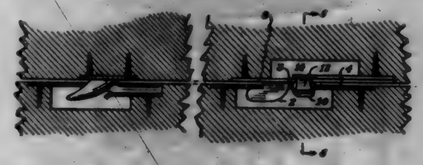
6. An implement comprising the combination of a lower frame, soil working means carried by the lower frame, and an upper frame supported on the lower frame by means permitting rocking movement between the frames and comprising a plurality of movable members each of which is pivoted to both frames.



9. A pulverizer comprising the combination of upper and lower pivotally connected frames, front and rear pulverizing rollers journaled in the lower frame, and means for raising and lowering the bearings of one of said rollers on the lower frame.

1,533,015. WOODEN TUB. FRANK LATTON, Houston, Tex. Filed Aug. 18, 1924. Serial No. 732,645. 8 Claims. (Cl. 217—80.)

1. In a device of the character described, a receptacle comprising upright staves formed with a radial groove at their lower ends, said staves being beveled downwardly below said groove, in combination with a bottom having an upper portion fitting within said groove and bearing against said beveled portion, a radially extending bottom flange thereon extending below the staves flush with the outer surface thereof, and a hoop securing said staves in position against said bottom.

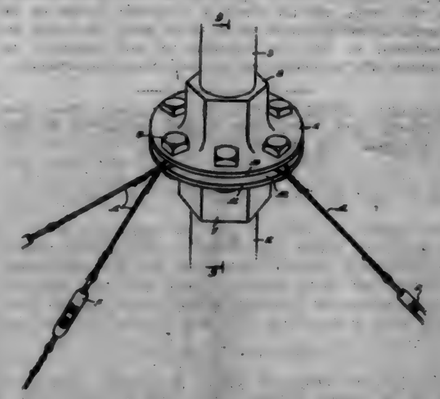


1,533,016. WRINGER. STANLEY LEECH, Detroit, Mich. Filed Apr. 1, 1922. Serial No. 548,674. 1 Claim. (Cl. 68—32.)

A quick tension release device for a clothes wringer of the roll type having a stationary frame and a tension screw for regulating the tension of a roll, said device comprising a tubular post mounted on said frame with said screw extending through said post, pins mounted in the outer wall of said post at the upper end thereof, a shiftable sleeve in screw-threaded engagement with said screw and surrounding said post, enlargements on said sleeve affording recesses in the inner wall of said sleeve and into which recesses said pins extend, and supports in the sleeve recesses and extending longitudinally thereof to co-operate with the wall of said sleeve in forming guide grooves for said pins, said pins resting normally on said supports and adapted to be shifted off of said supports by said sleeve to permit a quick movement of said sleeve.

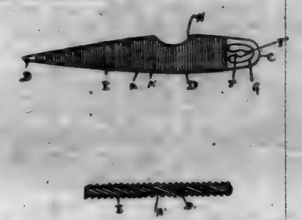
1,533,017. CATCH. DANIEL D. LEDY, Boyertown, Pa. Filed Jan. 14, 1924. Serial No. 686,152. 1 Claim. (Cl. 292—302.)

A device of the class described comprising a plate having a hook formed at one edge thereof and extending transversely to the plate, a spring plate lying in abutment with one side of the first named plate, a cam projecting transversely from one edge of the spring plate and having a rounded edge facing said hook, and a thumb button formed upon said spring plate for moving



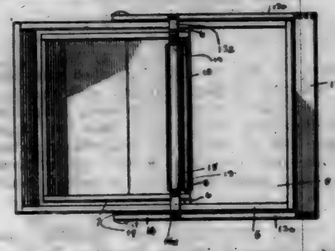
the cam out of locking position relative to said hook, a keeper plate provided with a longitudinal slot adapted to receive said hook and cam, one end of the slot in said keeper plate being reduced in width to substantially the thickness of said hook.

1,533,018. SEPARATOR. GEORGE LIEBERMAN, Galveston, Tex. Filed Sept. 20, 1922. Serial No. 589,268. 7 Claims. (Cl. 17—2.)



1. A device of the character described comprising a rotatable container, a single integral rack therein having series of radially arranged open-ended compartments, rods separating each compartment into two chambers, the bottom walls of each said compartment extending from the inner side thereof to a point spaced from the outer end of the compartment, for the purpose described.

1,533,019. GUY COUPLER FOR MASTS. ALBERT LINK and LESTER W. LINK, Brooklyn, N. Y.; said Lester W. Link assignor to said Albert Link. Filed July 25, 1922. Serial No. 577,456. 1 Claim. (Cl. 189—26.)

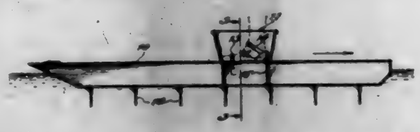


A guy coupler for masts, comprising a body formed with means at the upper and lower parts for receiving mast sections, a pair of parallel circumferentially extending horizontal flanges extending from said body, and a plurality of members extending through said flanges for receiving guy members.

1,533,020. FINGER-NAIL FILE. RAYMOND MATHER, Holyoke, Mass. Filed Apr. 18, 1922. Serial No. 555,476. 2 Claims. (Cl. 132—73.)

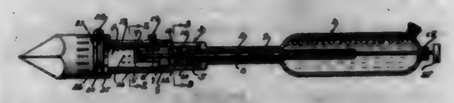
2. A finger nail finishing and cleaning file consisting of a metal body having finger nail filing teeth on at least one side thereof, the teeth being arranged in two groups on opposite sides of a transverse line, the teeth of each group having straight and beveled sides and the beveled sides of one group being disposed in planes angular to the beveled sides of the other group, whereby a file cutting action will be obtained by movement of one group of teeth over a finger nail in one direction and movement of the other group of teeth in the opposite direction, and a cleaning tongue formed on one end of the body and provided with a guard around the same.

1,533,021. MOP WRINGER AND PAIL. RAYMOND MATHER, Holyoke, Mass. Filed Apr. 4, 1923. Serial No. 630,002. 2 Claims. (Cl. 15—262.)



1. A combined mop pail and wringer consisting of a pail having a partition dividing the same into two compartments, levers pivoted on the pail, a roller carried by the levers over the partition, a foot bar connected to the levers, and an auxiliary receptacle in one of the compartments arranged to be tilted when the levers are depressed so that the contents of said auxiliary receptacle will be discharged into the other compartment.

1,533,022. ARTIFICIAL BAIT. THADDEUS MEAD, New Haven, Conn. Filed Mar. 8, 1924. Serial No. 697,802. 2 Claims. (Cl. 43—45.)

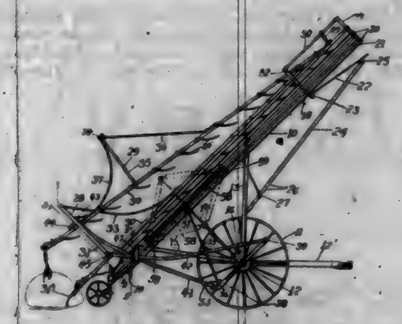


1. A device of the class described comprising a stem having an eye at one end thereof, means at the opposite end to detachably engage the stem and form a second eye, a spinner plate mounted for rotation on said stem, a clip rotatable on said stem, and co-acting means on said clip and spinner plate for holding the body of said spinner plate spaced from said stem, said co-acting means including spring pressed hooks on said clip for reception in notches formed in the sides of said spinner plate.

1,533,023. WATER SKI. OWEN MEREDITH, Morgantown, W. Va. Filed Sept. 20, 1924. Serial No. 738,905. 1 Claim. (Cl. 9—14.)

A water ski comprising a float, a foot receiving compartment arranged thereon, means within the compartment for attaching the foot of the user to the ski, wings depending from the bottom of said ski, and hingedly connected therewith, vertically disposed ribs formed on each wing for the purpose specified, means for preventing said wings from moving forwardly of the ski from a perpendicular position.

1,533,024. SELF-HEATED TOOL. FRED W. MILLER, Seymour, Conn. Filed Apr. 6, 1923. Serial No. 630,286. 5 Claims. (Cl. 158—27.)



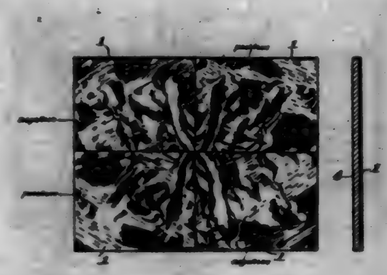
4. In a device of the class described comprising a reservoir, a hollow shank extending therefrom, a burner comprising a tubular body portion having a tubular neck portion at one end the opposite end being open, said tubular neck portion secured to the outer end of said shank, an inwardly extending centrally located member carried by said tubular body portion and formed adjacent the tubular neck portion thereof, said inwardly extending centrally located member having an axial bore forming a combustion orifice, a tubular wick extending from said reservoir, through said hollow shank into said neck portion, a needle valve extending through said reservoir, shank and inwardly extending centrally located member to open and close the combustion orifice, guide means in said tubular neck portion for said needle valve, said tubular body portion provided with spaced apertures in the periphery thereof, means for closing said apertures, a socket member carried by the open end of said tubular body portion, and an implement detachably secured in said socket member, said socket member and implement provided with spaced apertures to provide an exhaust for the gas flames in said tubular body portion.

1,533,025. HAYRAKE LOADER. EDWARD MOWRY, Rock Falls, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Jan. 19, 1921. Serial No. 438,270. 13 Claims. (Cl. 56—382.)

1. In a hay loader, the combination of an elevator frame, carrying wheels therefor, a plurality of reciprocating rake carriers, pitmans pivoted to said rake carriers, and connections mounted to travel concentrically with said wheels and connected to said pitmans, the pitmans engaging fulcrums fixed to said frame, said pitmans being curved substantially throughout their lengths, whereby they ride over the fulcrums for imparting a reciprocating and elevating movement to said carriers.

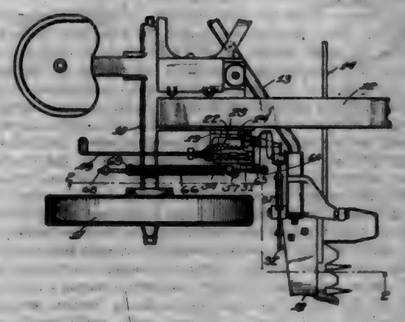
10. In a hay loader, the combination of an elevator frame, carrying wheels therefor, a plurality of reciprocating rake carriers, a plurality of pitmans connected to

said carriers and operatively connected to said carrying wheels, and a plurality of springs directly connecting said frame to said pitmans for balancing said reciprocating rake carriers.



1,533,026. ROLLING MILL. GEORGE J. MURPHY, Buenos Aires, Argentina. Filed May 31, 1924. Serial No. 717,041. 4 Claims. (Cl. 80—24.)

4. A rolling mill including a pair of rolls having contacting spiral ribs and alternating spiral grooves, said rolls having along portions thereof at the grooves, coacting members to produce on the blank rail portions of normal cross section; together with members along the grooves to produce rail portions of reduced height and width at the ends of the normal cross section as well as members to produce on the blank at the said portions of reduced height and width, members to produce zones of less width than the normal but of the full height of the rail portions of normal cross section, and arcuate spiral ribs on one of the rolls, said ribs of increased radius and adapted to bend the base flange at the portion of reduced width, the other roll having depressions registering with the arcuate ribs to accord with the base flange when bent by said arcuate ribs.

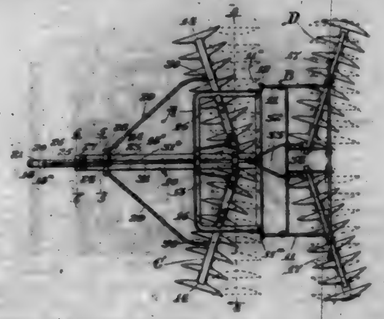


1,533,027. DECORATED OR ORNAMENTAL WOODWORK AND OTHER STRUCTURAL MATERIALS. LEONARD GEORGE NICOLL, London, England. Filed Sept. 6, 1924. Serial No. 736,351. 2 Claims. (Cl. 95—5.)

1. The process of producing decorated structural material which comprises forming a photographic negative of the grain of a naturally occurring material by exposing in a camera a sensitised surface adapted to yield a transparency, forming by projection with the aid of said negative a print on paper coated with a "bromide" emulsion, transferring the exposed bromide emulsion to a sheet of transparent material and using the resulting transparency in forming a contact print in

a light sensitive silver salt emulsion on a temporary support and transferring the print to a surface of the structural material to be decorated.

1,533,028. MOWER. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed June 12, 1920. Serial No. 388,688. 24 Claims. (Cl. 56—285.)



1. A mower including in combination a frame, a cutting mechanism pivotally connected to said frame, a lifting mechanism for said cutting mechanism, a lever for adjusting said lifting mechanism, and manually controlled means for reversing the operating effect of said lever.

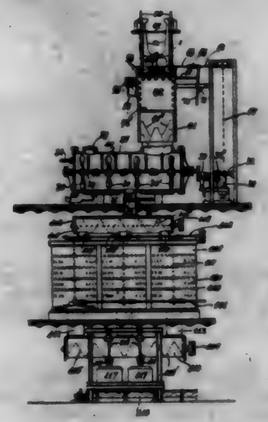
21. In a mowing machine, a frame, a cutting mechanism pivotally connected to said frame, an adjusting mechanism for said cutting mechanism, a laterally deflectable and vertically adjustable lever for adjusting said cutting mechanism, and means for normally raising and for preventing lateral movement of said lever.

1,533,029. TRACTOR DISK HARROW. CHARLES W. ROBINSON and WILLIAM C. DWYER, Auburn, N. Y., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 31, 1922. Serial No. 585,351. 11 Claims. (Cl. 55—88.)

1. In a draft operated angling mechanism for tractor disk harrows, the combination with the draft tongue and gangs, of a draft head slidable back and forth on

the tongue, means for angling the gangs by forward movement of the draft head and straightening the gangs by reverse movement, and a self retaining sildable stop

device on the tongue having a range of movement equivalent to that of the draft head for setting the limit of forward movement of the draft head.



1,533,030. PURIFYING AND FILTERING PROCESS. JOHAN NICOLAAS ADOLF SAUER, Amsterdam, Netherlands, assignor to Naamloose Vennootschap Norit Witsuiker Maatschappij (also called Norit White Sugar Company), Amsterdam, Netherlands, a Corporation of The Netherlands. Filed July 26, 1917. Serial No. 182,879. 1 Claim. (Cl. 127—55.)

An improvement in the process of decolorizing and purifying sugar-containing liquid by treating separate batches of such liquid, with finely divided decolorizing carbon, which comprises the steps of adding to the first of a plurality of batches of said liquid containing coloring matter and impurities, a decolorizing carbon containing not substantially less than 90% of actual carbon, figured on the dry basis, in an amount which is at least a multiple of the amount necessary to effect the desired degree of purification of that batch of liquid, and thereafter separating the said decolorizing carbon from the liquid, adding such carbon in its partly soiled condition without intermediate revivification, to another batch of that same liquid, thereafter separating said decolorizing carbon from such second batch of liquid, and repeating such operations upon further successive batches of that same liquid, with the same decolorizing carbon without intermediate revivification thereof, until sufficient degree of purification of substantially more batches of liquid is secured than corresponding to the ratio of amount of decolorizing carbon used to amount necessary for the treatment of a single batch of liquid, without the necisity of subjecting most of said batches of liquid to more than one treatment with decolorizing carbon and one separation treatment, and whereby the time necessary for any filtration of the liquid is greatly reduced.

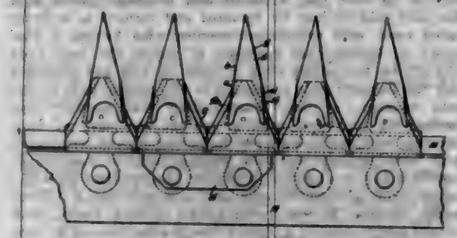
1,533,031. PROCESS OF REGENERATING DECOLORIZING CARBON. JOHAN NICOLAAS ADOLF SAUER, Amsterdam, Netherlands, assignor to Naamloose Vennootschap Norit Witsuiker Maatschappij (also called Norit White Sugar Company), Amsterdam, Netherlands, a Corporation of The Netherlands. Filed July 26, 1917. Serial No. 182,881. 3 Claims. (Cl. 252—8.)

1. A process of regenerating decolorizing vegetable carbon which consists of mixing the substantially spent carbon in the condition in which it has been separated from the material being purified, with an acid of strong character, in amount much more than sufficient to neutralise all alkaline-reacting materials therein, and subjecting the mixture to heat sufficient to cause the acid to remove at least the major part of those impurities therein which caused the loss of activity of such decolorizing carbon, and thoroughly washing the decolorizing carbon with water.

1,533,032. PURIFYING, FILTERING, AND SEPARATING APPARATUS AND PROCESS. JOHAN NICOLAAS ADOLF SAUER, Amsterdam, Netherlands. Filed Mar. 5, 1920. Serial No. 363,366. 31 Claims. (Cl. 210—182.)

1. An apparatus for the purpose set forth, comprising a mixer, a filter in direct communication with said mixer and forming a unitary structure therewith, baffle means located in the path of the liquid between the mixer and the filter to retard the flow, and means for removing deposits from the filter, such deposits being then returned to the mixer.

1,533,033. PROCESS FOR TREATING LIQUIDS. JOHAN NICOLAAS ADOLF SAUER, Amsterdam, Netherlands. Filed Oct. 25, 1922. Serial No. 596,906. 5 Claims. (Cl. 127—48.)



2. In the purification of sugar solutions, the steps of precipitating a substantially insoluble alkaline earth metal salt having strong adsorption properties, in a non-sugary aqueous solution, and thereafter adding such percipitated material, without previously drying the same, to a sugar solution to be purified.

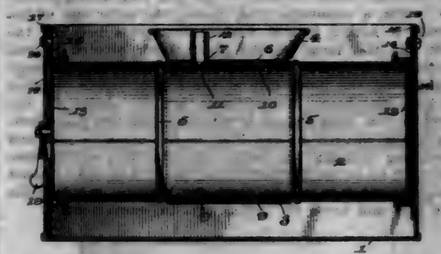
1,533,034. TOY. CHARLES M. SHAILER, Milford, Conn. Filed June 14, 1923. Serial No. 645,372. 1 Claim. (Cl. 46—14.)

A toy comprising a handle, a concavo-convex sounding element provided with a central opening, a hollow head arranged centrally within the concavo-convex member and provided with a threaded shank which passes through the opening and engaged in the handle, the head being of a larger diameter than the shank and contacting with the concavo-convex element, a shaft journaled in the hollow head and projecting beyond the sounding element, and a wind wheel fixed to rotate with the shaft and a striking element carried by the shaft and adapted to engage the sounding element upon rotation of the wheel.

1,533,035. CUTTING MEANS FOR MOWING MACHINES. JOHN W. SHANNOCK, Fort Wayne, Ind. Filed Nov. 2, 1921. Serial No. 512,240. 5 Claims. (Cl. 56—298.)

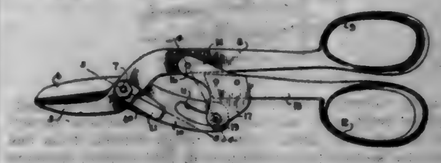
1. In a cutting means for mowers, a series of spaced apart ledger plates, alternate spaces between adjacent ledger plates being equal in width and adjacent spaces between adjacent ledger plates being of different widths, a cutter bar, cutter blades secured to the bar and corresponding in number with the spaces between adjacent ledger plates, each cutter blade being movable across the space between two adjacent ledger plates.

1,533,036. THREADER BLOCK. JOSEPH M. SHANNON and PAUL J. SHANNON, Norwich, Conn. Filed Apr. 15, 1924. Serial No. 706,750. 3 Claims. (Cl. 139—217.)



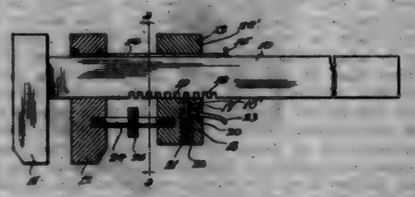
1. A threader block including a plate having means for guiding the thread in a given direction, and a pair of tension plates co-acting therewith, one of said tension plates having a flange acting as a guide, and a plurality of pins extending from the other of the tension plates loosely through the first mentioned plate for holding said tension plates substantially in alignment.

1,533,037. TENSION DEVICE FOR SHUTTLES. PAUL SHANNON, Norwich, Conn. Filed Dec. 18, 1923. Serial No. 681,392. 5 Claims. (Cl. 139—215.)



5. In a tension device for shuttles, a plurality of stationary guides, a movable tensioning member formed of a single length of wire formed at one end with a helical coil and provided with a plurality of loops arranged in staggered relation to one another to form a channel for the thread, a pin upon which the coil is mounted, and an elastic member secured to the shuttle and to the end of the wire adjacent the coil.

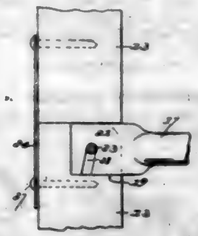
1,533,038. OIL CONTAINER. HENRY M. SHERR, Quincy, Ill. Filed Jan. 21, 1925. Serial No. 3,868. 7 Claims. (Cl. 158—40.)



1. The combination of an outer stationary container or tank, an inner rotary container, and a combined band and funnel, the band fitting and surrounding the inner rotary container, and the funnel serving to prevent the band from turning with the rotary container.

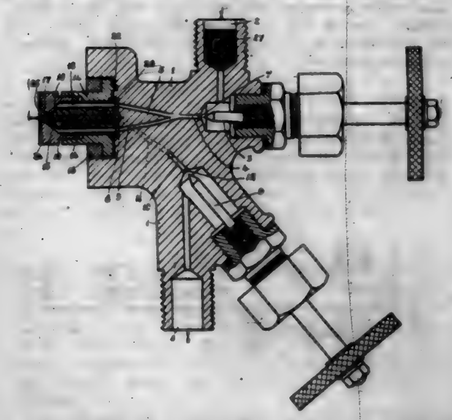
1,533,039. MULTIPOWER SHEARS. ADNER SHIRK, Decatur, Ill. Filed Jan. 15, 1923. Serial No. 612,760. 6 Claims. (Cl. 30—13.)

1. A pair of shears provided with a relatively fixed blade having a shank terminating in an integral handle, a relatively movable blade intermediately pivoted thereto and having a relatively short shank, a second handle having a shank with ears secured to opposite sides thereof and extending inwardly and outwardly therefrom, the inwardly extending portions straddling the first-mentioned shank and connected thereto by a pivot pin, the outwardly extending portions of the ears having a roller journaled between them, said short shank having a curved slot in which said roller rides, said slot extending at a progressively increasing distance from said pivot pin.



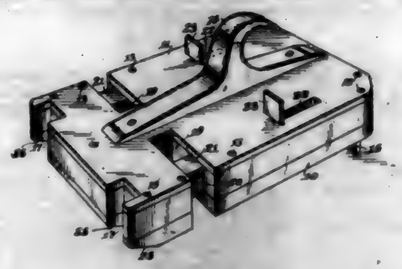
1,533,040. WRENCH. JOHN R. SINGER, Elwood, and JOHN F. BRICE, Bluffton, Ind.; said Singer assignor to said Brice. Filed Aug. 11, 1923. Serial No. 656,767. 1 Claim. (Cl. 81—145.)

A wrench including a shank having a fixed jaw, a movable jaw carried by the shank to cooperate with the fixed jaw; a block adjustable upon the shank, said block having a recess extending at right angles to the shank and a reduced cylindrical bore communicating with the recess, there being a slot formed in the block and ex-



tending from the inner end of the recess through the edge of the block, a pin mounted in the cylindrical bore and adapted to engage the shank and lock the block thereto, an annular flange formed on the pin and fitting within the recess, a removable plug closing the outer end of the recess, a spring housed within the recess between the plug and the flange on the pin, a lever pivoted in and projecting from the slot and having its inner end bearing against the inner face of the flange, means coacting between the block and movable jaw for adjusting the movable jaw with respect to the fixed jaw, and a connecting strap secured to one end of the movable jaw and extending through the block and provided at its free end with an outwardly turned lug adapted to bear against the adjacent face of the block for limiting the movable jaw and said block in their separating movement.

1,533,041. DERRICK. HARRY R. SLATER, Osawatomie, Kans. Filed Aug. 5, 1922. Serial No. 579,920. 6 Claims. (Cl. 20—0.5.)



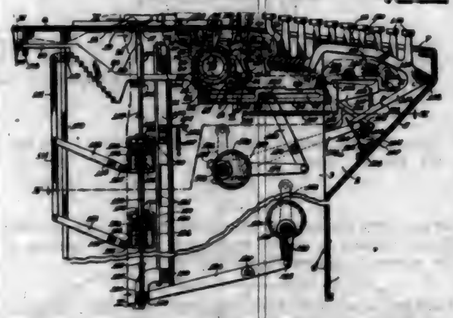
3. In a derrick, a plurality of frame sections in superimposed relation to one another, the said sections including corner posts, girts, each of which extends from one post of a section to another post of said section, elements projecting from the sides of each post engaged by the girts, the said girts of one section being engaged by the superimposed sections for retaining the girts in engagement with the said elements.

1,533,042. BURNER FOR BURNING OIL FUEL. PERCY SLOPER, London, Eng. Filed Sept. 8, 1924. Serial No. 736,565. 6 Claims. (Cl. 158—75.)

2. An oil burner comprising a casting having at its forward end a circular depression of which the base forms a flat seat, said casting having an oil inlet and a plurality of passages extending from said oil-inlet and terminating in said flat seat, said casting also having an inlet for a combustion-supporting gas and a plurality of passages extending from said last-named inlet and terminating in said flat seat at points equi-distant from the outlets of said oil-inlet passages, a cylindrical member of smaller diameter than said circular depression having its rear end flattened and bearing against said flat seat and having its forward end formed as a truncated cone, said cylindrical member also having a plurality of longitudinal passages of which the rear ends align with the outlet ends of said oil and gas passages and the forward ends terminate in the conical part of the said member, a sleeve surrounding said member and having its rear end resting against the base of said circular depression, said sleeve having means associated with said casting and with said cylindrical member to maintain the passages of the latter in alignment with the outlet ends of said oil and gas passages, and a burner nozzle secured to the forward end of said sleeve, said burner nozzle having a conical depression shaped to substantially conform with and receive the forward end of said cylindrical member and also having a discharge passage co-axial with said conical recess.

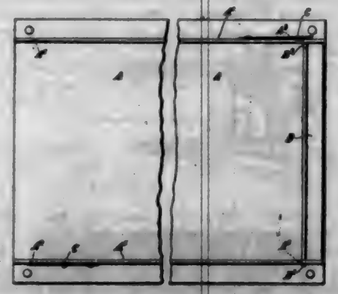
1,533,043. SPIKE SUPPORTER. MATTHEW SMITH, Winokur, Ga. Filed Sept. 2, 1924. Serial No. 735,455. 1 Claim. (Cl. 1—47.)

A device of the class described comprising a body having a vertical guideway extending therethrough at one side thereof and a longitudinal guideway disposed entirely therein and transecting a portion of the vertical guideway, depending tie engaging spurs on said body, and a plunger movable in said longitudinal guideway.



1,533,044. FISHHOOK. SAMUEL W. SMITH, Fullerton, Calif. Filed Mar. 19, 1924. Serial No. 700,268. 3 Claims. (Cl. 43—28.)

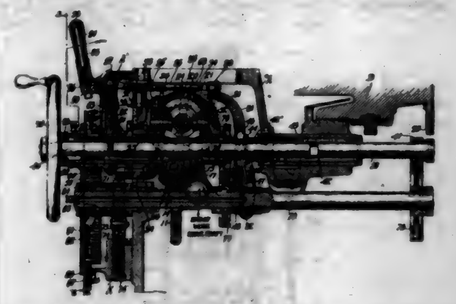
1. A device for the purpose set forth comprising a holder having projected from its upper portion a connecting member for securing the holder to a line, said holder apertured at its top and at its bottom, a spring controlled shiftable clutching element arranged within and coacting with the inner face of the body portion and further projecting through and above the apertured top of the latter, and a hanger rod extending through said element and holder and further of greater length than



the combined length of said connecting member, element and holder, said hanger rod having its lower end provided with means for connecting a fishing appliance therewith, and said hanger rod further detachably connected to the holder by said clutching element, said hanger rod having a pointed upper end.

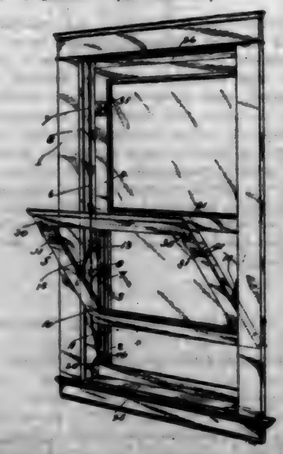
1,533,045. ADDING MACHINE. ELIOT S. STAPLES, Iron Mountain, Mo. Filed Mar. 17, 1921. Serial No. 453,035. 7 Claims. (Cl. 235—58.)

7. The combination of a tabulating mechanism, adding and power transmission mechanisms for adjusting said tabulating mechanism, actuators for the adding mechanism, actuators for the power transmission and selective means for each actuator determining the adjustment of said tabulating mechanism, said selective means including latches for holding said actuators, and keys to limit the action of said actuators.



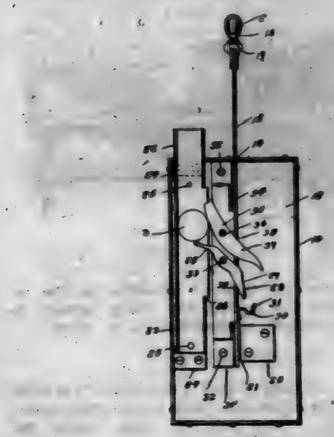
1,533,046. PRINTER'S GALLEY. ALFRED HENRY STOCKALL, Bath, England. Filed July 9, 1923. Serial No. 650,401. 5 Claims. (Cl. 276—40.)

1. In a printer's galley, the combination with the upstanding side walls of a removable end bar engaging the side walls and locking means for said end bar, operable by said end bar to permit the withdrawal and positioning of the bar.



1,533,047. RECIPROCATING GEARING FOR GRINDING-WHEEL CARRIAGES. PAUL STOWER, Waynesboro, Pa., assignor to Landis Tool Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1920. Serial No. 424,890. 31 Claims. (Cl. 74—98.)

31. In combination, a reversing clutch having a reversely movable clutch member, a movable shifter for said member, an independently movable actuator for the shifter means connecting the shifter and the actuator whereby movement of the actuator in different directions relatively to the shifter may cause said clutch member to assume forward, reverse or neutral position, and



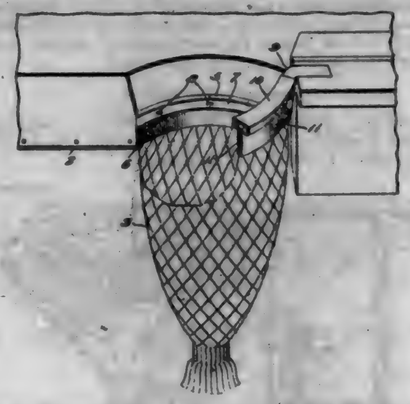
means operative at the limit of movement in the respective directions for holding the clutch member in said respective positions, substantially as set forth.

1,533,048. SLIDING AND SWINGING WINDOW SASHES. MIKE SUSTARSIC and LOUIS FLORJANCIC, Cleveland, Ohio. Filed Jan. 30, 1922. Serial No. 532,661. 4 Claims. (Cl. 20—42.)

4. The combination with a window casing, of upper and lower sashes movable therein, the opposite inner faces of said window casing being provided with horizontally spaced vertical guide grooves, pivot pins carried by said sashes adjacent to their lower ends and movable in said guide grooves, said grooves on each side being connected adjacent to their lower ends by means of inclined slots, and by means of transverse slots, intermediate of their ends, links pivoted at their lower ends to said sashes, pivots in the upper ends of said links, said pivot pins being movable in said vertical grooves, and counterbalance cords connected with said pivots, the pivot pins for the lower end of the lower sash being movable in said inclined grooves into said inner vertical grooves, and the pivots at the upper ends of said links on the lower sash comprising pins movable through said transverse grooves into said vertical inner grooves, the pivots at the upper ends of the links for the upper sash comprising shoes adapted to bridge over said transverse slots, the sides of said casing being also provided with inwardly and downwardly extending grooves, communicating with the lower ends of said inclined and inner vertical grooves, in which said lower pivot pins in said sashes may fall and rotate.

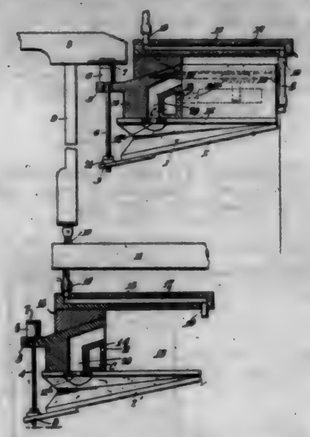
1,533,049. COIN-CONTROLLED OPERATING MECHANISM. WILLIAM W. WATSON, Rogersville, Ala. Filed Apr. 12, 1922. Serial No. 551,838. 4 Claims. (Cl. 194—61.)

1. In a coin-controlled apparatus, in combination with a controlling member normally urged toward its position of operation, a bracket, a detent lever pivoted on the bracket and extending loosely through the controlling member, said lever adapted to receive a coin thereagainst to move said lever out of engaging position with said controlling member when said controlling member moves to its position of operation, means on the controlling member engageable by the detent lever to normally resist effective movement of the controlling member, and means associated with said bracket and said controlling member operable through movement of the controlling member toward said position to move a coin past said detent lever.



1,533,050. CIGAR HOLDER. FRANK WASCHEK, Hamtramck, Mich. Filed July 20, 1922, Serial No. 576,318. Renewed Jan. 22, 1925. 1 Claim. (Cl. 131—51.)

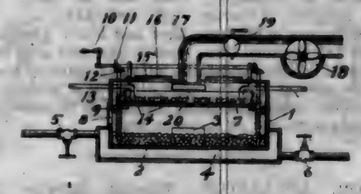
A cigar holder of the type described, comprising a main tubular section and an extensible tubular section slidably secured within one end of the main section, the opposite end of the main section being so formed as to firmly retain one end of a mouth piece therein and means within the main section for engaging the adjacent end of the cigar within the adjacent end of the mouth piece, said means comprising a plate member adapted for engagement with the cigar and having an operating means externally of the holder for retracting the same therein.



1,533,051. BILLIARD-TABLE POCKET. LESLIE NEAL WELLES, Pineville, Ky. Filed Jan. 26, 1924. Serial No. 688,796. 2 Claims. (Cl. 218—12.)

1. In a billiard-table, the combination with the table bed having a curved pocket recess, an outwardly curved rail, a pocket having its outer edge supported by said outwardly curved rail, and two semi-circular metallic

strips arranged around the upper edge of the circular recess adapted to receive and secure the inner portion of the pocket to the curved recess.



1,533,052. ACTION FOR PLAYER PIANOS. CHARLES A. WHEATLEY, Jeffersonville, Ind. Filed Nov. 13, 1920. Serial No. 423,925. 1 Claim. (Cl. 84—53.)

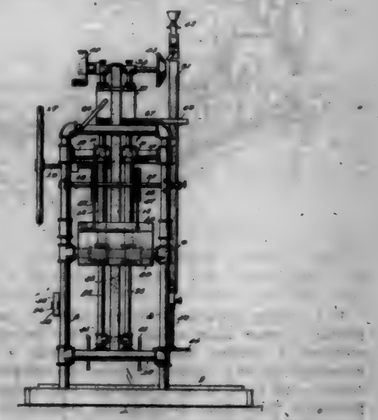
In a pneumatic action for player pianos, a tube rail formed with passages each connected with a tracker bar opening, a front bar formed with passages, a bellows including a stationary leaf secured below said front bar and a movable leaf connected with said first named leaf, the second named passages communicating with the interior of the bellows member, and a series of valve members all similarly disposed against said front bar and between the tube rail and stationary leaf, said valve members being individually removable and replaceable and each being provided with a diaphragm actuated valve.

1,533,053. METHOD AND APPARATUS FOR REMOVING VOLATILE FLUIDS FROM SOLIDS AND SUBSTANTIALLY NONVOLATILE LIQUIDS. ROBERT E. WILSON, Cambridge, Mass., assignor to Baltimore Gas Engineering Corporation, Baltimore, Md., a Corporation of Maryland. Filed July 22, 1922. Serial No. 576,847. 23 Claims. (Cl. 34—1.)

22. In an apparatus for removing volatile fluids from solids and substantially nonvolatile liquids containing same, a closed vessel, means for heating the lower part of said vessel, cooling means disposed in the upper part of said vessel, a tray containing sorbent material means for receiving and supporting said tray below said cooling

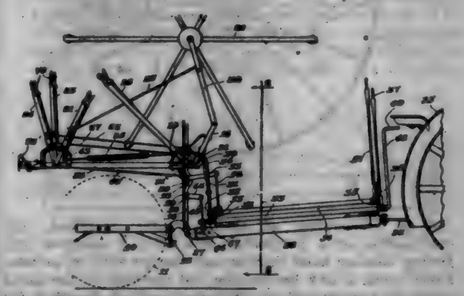
means and means for bringing said tray in close proximity to said cooling means for the purpose of cooling the sorbent material contained in said tray.

1,533,054. UMBRELLA. ABRAHAM WILLIAM WOLFSON, Newark, N. J. Filed Aug. 22, 1924. Serial No. 733,635. 3 Claims. (Cl. 135—28.)



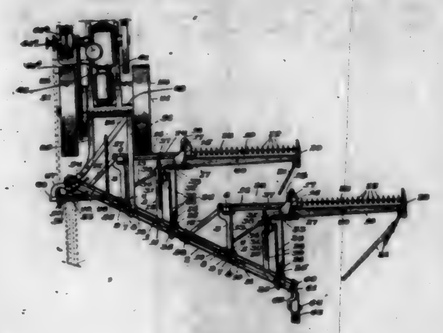
1. In an umbrella, the combination with a rod, a collar on the rod, a cover secured over the collar, a rib fulcrum mounted to move on the rod, ribs connected to the fulcrum and to the cover, a runner on the rod, stays connecting the ribs and the runner, said fulcrums adapted to move into the collar, a pair of rivets or pins projected through the collar and through the rod, and said fulcrum having recesses therein receiving the pins or rivets.

1,533,055. PISTON. GEORGE H. WOODWARD, San Francisco, Calif. Filed May 17, 1922. Serial No. 561,602. 1 Claim. (Cl. 74—108.)



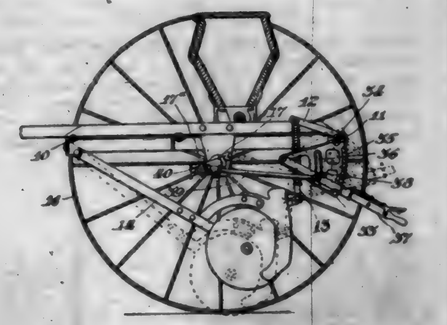
In a piston of the character described, a head and a skirt portion, a pair of wrist pin bosses formed as an integral part of the skirt portion, a pair of interspaced circumferentially disposed ribs formed on the inner face of the skirt and terminating in the wrist pin bosses at points adjacent their upper and lower sides, said ribs being horizontally disposed with relation to the longitudinal axis of the piston, and a pair of vertically disposed ribs, said ribs being cast integral with the piston head, the ring portion of the piston and the wrist pin bosses and extending inwardly into the piston a distance substantially equal to the length of the wrist pin bosses, said vertical ribs and the horizontal ribs forming a five-point support for each wrist pin boss.

1,533,056. ICE-SCORING MACHINE. JOSEPH STEPHENSON YAGER and LYNN STARLING, Greenville, Miss. Filed Aug. 13, 1924. Serial No. 731,834. 8 Claims. (Cl. 125—13.)



1. In an ice scoring machine, a vertically movable carriage, a motor carried by the carriage, cutters mounted on the carriage causing vertical scores and operatively connected with the motor, cutters for causing horizontal scores, and means on the carriage and driven by the motor adapted to be operatively connected with the horizontal cutters when the carriage has been moved to a predetermined vertical position whereby the horizontal cutters are actuated.

1,533,057. CONTROLLING MECHANISM FOR HARVESTERS. BERT R. BENJAMIN, Oak Park, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed July 19, 1918. Serial No. 245,725. 10 Claims. (Cl. 56—22.)

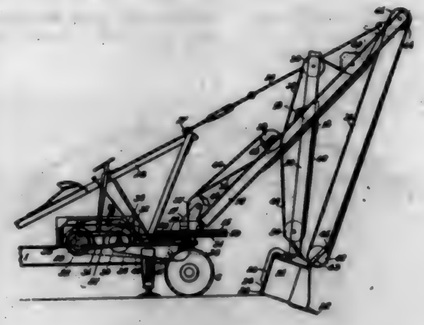


1. In combination, a harvester, adjusting mechanisms carried thereby, a draft member connected to the harvester and adapted for connection to a tractor, and single means supported on said drift member for simultaneously actuating a plurality of said mechanisms.

1,533,058. TRACTOR-OPERATED IMPLEMENT. EDWARD W. BURGESS, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Aug. 6, 1915, Serial No. 44,049. Renewed Nov. 1, 1919. Serial No. 335,105. 39 Claims. (Cl. 56—6.)

1. A cutting apparatus for harvesters or mowers comprising a frame made up of separately detachable frame sections, a cutting mechanism including a finger bar connected to and removable from the remainder of the frame with each of said sections, and means for independently connecting said cutting mechanism to a common source of power.

1,533,059. TRACTION-ACTUATED LIFT MECHANISM. SHERMAN W. CADY, Hamilton, Ontario, Canada, assignor, by mesne assignments, to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed June 19, 1924. Serial No. 720,896. 5 Claims. (Cl. 97—244.)

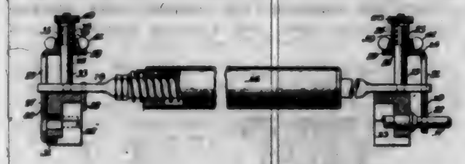


1. In mechanism of the character described, the combination of a horizontal rock-shaft, a radiator projecting member fixed thereon and formed with an arcuate guide track, a link having one end movable on the guide track, means pivoted to the other end of the link for reciprocating it in the direction of its length, the pivot of the link with said means being on the axis of the guide track in one position of said member, and an adjusting lever pivoted on said member for movement in the direction of the guide track and having a loose connection with the link.

1,533,060. METHOD OF TREATING OILS WITH PREPARED CLAYS. IRWIN ARTHUR CLARK, Parco, Wyo., assignor to Producers and Refiners Corporation, a Corporation of Wyoming. Filed Nov. 11, 1924. Serial No. 749,251. 3 Claims. (Cl. 196—147.)

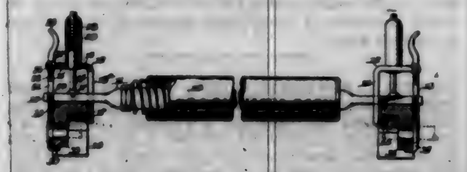
1. A process of treating light and heavy mineral oils, animal and vegetable oils, waxes and fats and similar substances, which consists in mixing a filtering material with the amount of water that will form a mudded mass, without the use of acid of any kind, and intermixing the said mass with the oil to be treated.

1,533,061. EXCAVATOR. RAYMOND DORWARD, Jasonville, Ind., assignor to Insley Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Nov. 24, 1923. Serial No. 676,680. 12 Claims. (Cl. 214—135.)



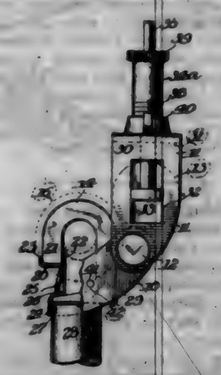
1. In a device of the character described, the combination with a boom, of a dipper handle carrying a dipper and slidably and swingably mounted on said boom, an operating cable for raising and lowering said handle, said cable having a loop therein arranged to pass over a sheave at the rear end of said handle to produce a thrust in one direction on said handle and also engaging the handle at another point to swing the same, and a second operating cable having one end stationarily connected and having a loop therein arranged to pass over a sheave at the forward end of said handle to effect a thrust on said handle in an opposite direction to that of said first mentioned cable.

1,533,062. INK-DISTRIBUTING ROLLER. ARTHUR J. DAANE, Chicago, Ill. Filed Feb. 7, 1921. Serial No. 443,071. 5 Claims. (Cl. 101—338.)



1. In a device of the class described, the combination of a shaft, a roller rotatably mounted upon the shaft, means for moving the roller axially relatively to the shaft, a friction clutch arranged upon the shaft, said clutch being separately connected to one end of said means, resilient means for retaining the clutch elements in contact with each other and in connected relation to said first mentioned means, said shaft being threaded at one end, a threaded member provided upon said end and providing means for moving the first mentioned means relatively to the shaft.

1,533,063. VIBRATOR FOR PRINTING PRESSES. ARTHUR J. DAANE, Chicago, Ill. Filed Oct. 13, 1921. Serial No. 507,487. 25 Claims. (Cl. 101—338.)



1. An ink distributing roller having means for attaching said roller to a printing press, said means including a member which extends inwardly substantially parallel to the axis of the roller for engaging the under face of that portion which is disposed between the inking rollers of a member to which the inking rollers are secured.

1,533,064. VIBRATOR FOR PRINTING PRESSES. ARTHUR J. DAANE, Chicago, Ill. Filed Oct. 13, 1921. Serial No. 507,488. 24 Claims. (Cl. 101—338.)

1. In a device of the class described the combination of an ink distributing roller and means for permitting said roller to be releasably mounted with respect to a printing press, said means being movable longitudinally with respect to the roller while in associated relation with said roller to effect an attachment of the roller and press.

1,533,065. VIBRATOR FOR PRINTING PRESSES. ARTHUR J. DAANE, Chicago, Ill. Filed Oct. 13, 1921. Serial No. 507,489. 18 Claims. (Cl. 101—338.)

1. In an ink distributing roller for printing presses the combination of a member for removably attaching said roller to the hooked end of a printing roller frame by being moved transversely to the axis of the roller and passed through the mouth of the opening of the hook, said member having means for engaging said hook, said means providing the means for releasably holding said member against separation from the hook when arranged in cooperative relation to the hook.

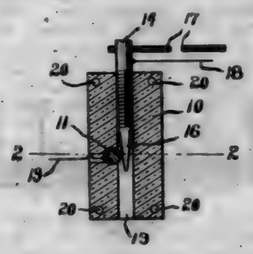
1,533,066. HINGE LAST. WALTER A. KRENTLER, Detroit, Mich. Filed June 21, 1922. Serial No. 568,463. 3 Claims. (Cl. 12—136.)

1. A two-part last, having a heel part and a forepart formed and connected for relative movement, a plurality of link members uniting said parts, and a central pivot uniting the link members and said last parts, in combination with a spring element holding said last parts united under a tension sufficient to compensate for looseness and wear.

1,533,067. SPRUE PLATE FOR INGOT MOLDS. HARRY MCNELLY, Claymont, Del. Filed Mar. 26, 1924. Serial No. 702,071. 2 Claims. (Cl. 22—141.)

1. The combination of a sprue plate for casting ingots, having a deep well; a sprue located above the well; and ingot molds, the plate having passages connecting the molds with the upper portion of the well, the well being so proportioned that the ebullitions of the metal, due to the pouring and to the heat, are confined to the center of the well, the metal at the edge of the well flowing quietly into the passages leading to the molds without bubbling.

1,533,068. DISPLAY PLATE FOR AUTOMOBILE BUMPERS. WILLIAM F. MARTIN, Baldwinsville, N. Y., assignor to Penn Spring Works Inc., Baldwinsville, N. Y., a Corporation of New York. Filed Mar. 20, 1924. Serial No. 700,616. 5 Claims. (Cl. 293—55.)



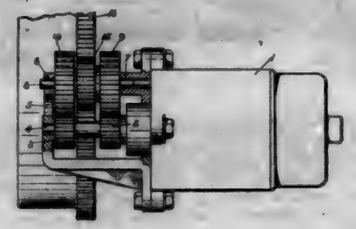
1. The combination with spaced bumper bars for automobiles, of a main plate engaging the bars above and below the space and provided with a sight opening registering with said space, a display plate mounted in the first named plate across the sight opening, and means for clamping the first named plate to the bars and the display plate to the first named plate.

1,533,069. TIE-PLATE FOR AUTOMOBILE BUMPERS. WILLIAM F. MARTIN, Baldwinsville, N. Y., assignor to Penn Spring Works Inc., Baldwinsville, N. Y., a Corporation of New York. Filed Mar. 20, 1924. Serial No. 700,617. 2 Claims. (Cl. 293—55.)

1. An automobile bumper comprising lower, upper and intermediate bars in spaced relation, and a tie plate section having beveled faces engaging between and against the adjacent edges of said bars.

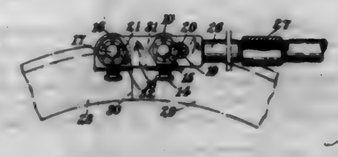
1,533,070. DETECTOR. THOMAS E. ARUNDEL, Omaha, Nebr., assignor of one-fourth to Guy D. Shipherd and one-fourth to William H. Metcalfe, both of Omaha, Nebr. Filed May 26, 1924. Serial No. 715,959. 3 Claims. (Cl. 250—30.)

1. A detector comprising an insulating block, a cylindrical electrode secured in said block, said block having an opening therethrough disposed at an angle to the axis of said cylindrical electrode, a second electrode threaded in said aperture and having a tapering point adapted to traverse one side of said cylindrical electrode, and means for axially shifting said second electrode to vary the relation between the tapering point of the second electrode and the cylindrical surface of the first electrode.



1,533,071. TRACK ALIGNING AND SPIKING DEVICE. CHARLES A. PIERSON, Sharon, Pa. Filed Oct. 18, 1923. Serial No. 669,419. 3 Claims. (Cl. 254—44.)

1. A device for assisting in moving a track and spiking rails and ties together, which includes a plate, the plate having at one end a cut-away trough.



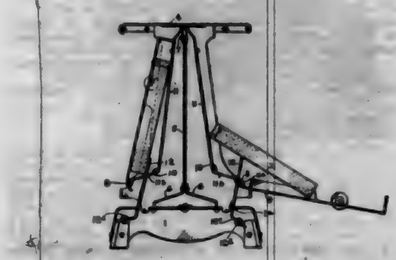
1,533,072. ELECTRIC STARTER. CARL P. BROCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Oct. 22, 1920. Serial No. 418,805. 4 Claims. (Cl. 74—7.)

1. In a starter drive for an engine having a shaft and a gear connected therewith, and a starting motor having a stub shaft driven by the motor, a plurality of spaced gears on said shaft, a second auxiliary shaft associated with said starting motor having a plurality of similarly spaced gears thereon, an arc-shaped guide for said last mentioned shaft concentric with said first mentioned stub shaft, and a pinion carried by said

second mentioned shaft intermediate said gears thereof and adapted to mesh with the gear connected with the engine, said spaced gears on said two shafts meshing, the mechanism arranged to cause said pinion to engage said gear on the engine upon the starting of the motor by bodily movement of said second mentioned shaft in said arc-shaped guide.

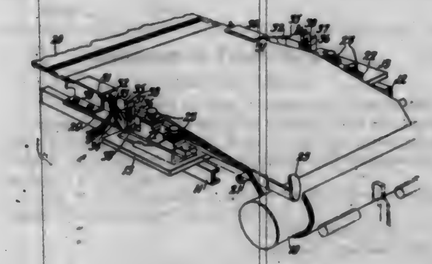
1,533,073. RIM-CONTRACTING DEVICE. WALTER HENRY WELCH, Bristol, England. Filed June 20, 1923. Serial No. 646,633. 4 Claims. (Cl. 157—1.)

1. In a rim-tool, the combination of a pair of gripping devices adapted to be secured on one edge of a rim and to extend away laterally therefrom, a pin extending laterally from each of said gripping devices, a link having rotative engagement with one of said pins, and having a slot formed therein, a sleeve having rotative engagement with the second of said pins, and having sliding engagement with said slot, a compressing spring operative along the length of the link on said sleeve and normally maintaining it at one end of said slot and means for swinging said link angularly about said pins, substantially as described.



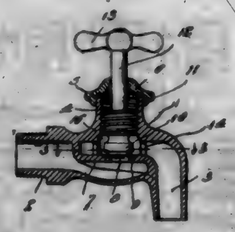
1,533,074. FLOOR AND PROCESS OF LAYING FLOOR. ANSEL C. DEMMING, Johnson City, N. Y.; Workers Trust Company, administrator of estate of Ansel C. Demming, deceased, assignor to Endicott Johnson Corporation, Endicott, N. Y., a Corporation of New York. Filed Oct. 4, 1920. Serial No. 414,461. 6 Claims. (Cl. 20—7.)

2. A floor formed of strips of fibrous material standing in abutting relation edge up and comprising transverse connecting strips with which said first mentioned



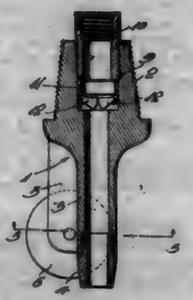
strips are interlocked, said floor being formed of blocks of the aforesaid construction with the joints broken and with some of the connecting strips extending into the adjacent blocks whereby the blocks are interlocked.

1,533,075. TOASTER. ALBERT J. LINDEMANN, Milwaukee, Wis., assignor to A. J. Lindemann & Haverson Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 18, 1923. Serial No. 669,242. 6 Claims. (Cl. 53—5.)



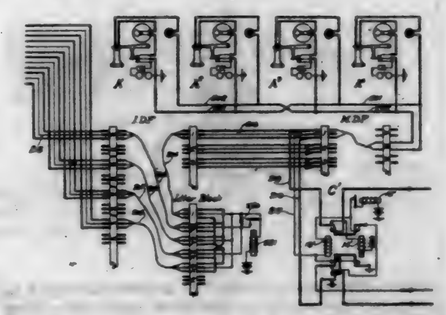
5. A turning device adapted to be mounted between the heating element and the door of a toaster or the like, comprising a member mounted to swing between said heating element and door and means independent of the door for its operation for causing it to swing outwardly.

1,533,076. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 26, 1921. Serial No. 448,047. 22 Claims. (Cl. 197—126.)



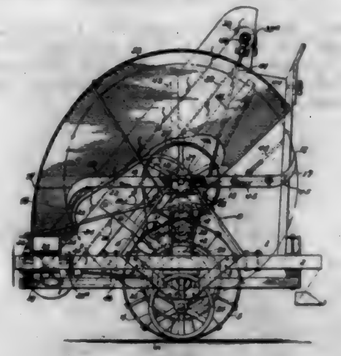
1. In a typewriting machine, in combination, a platen, means co-operating therewith to feed a fan-fold web, a carbon-carrier for use in withdrawing carbon-sheets from a typed portion of the fan-fold web, and smooth-trimming means exterior to the web and connected to the carbon-carrier and rendered effective by a relative shifting movement of said carbon-carrier, and trimming off a portion of the folded side edges on each side of a section of said fan-fold web, prior to typing on said section, disconnecting the superposed plies of said web to an extent corresponding to the range of movement of said carbon-carrier and forming smooth edges upon the disconnected sections of the plies, and leaving the remainder of the web uncut, preparatory to further typing operations thereon.

1,533,077. FAUCET. GEORGE S. BENNETT and LOUIS L. BENNETT, Massena, N. Y. Filed May 26, 1922. Serial No. 563,800. 1 Claim. (Cl. 251—155.)



The combination in a faucet of a casing having a receiving end portion and a discharge spout and an upstanding interiorly and exteriorly threaded housing and also having an apertured diaphragm with a valve seat thereon and a wall isolating the upper side of the said diaphragm from the receiving end portion, and an apertured annular wall arranged about the valve seat and extending between the diaphragm and the top of the casing and spaced within from the valve head and the valve seat and spaced without from the body portion of the casing, whereby two concentric annular chambers are formed in communication with the receiving end of the discharge spout, a valve head opposed to the valve seat and having a stem with a lower threaded portion engaging the interiorly threaded portion of the housing and an upper reduced portion terminating in a handle, and a gland threaded on the housing receiving the said reduced portion of the stem and adapted to retain packing about the stem.

1,533,078. HYDRAULIC ROTARY CORE-TAKING DEVICE. LEE J. BLACK, Beaumont, Tex. Filed Dec. 8, 1923. Serial No. 678,204. 2 Claims. (Cl. 255—71.)



1. In a device of the class described comprising a body having a longitudinal bore extending therethrough, the upper end of which is increased in diameter and screw-threaded, ribs on opposite sides of the body extending tangentially therefrom in opposite directions, rotary disk-cutters carried by said ribs, the lower portion of said body being reduced in diameter and being equipped with a renewable extension disposed beyond the peripheries of said cutters, a valve housing fitted into the enlarged upper portion of said bore, and a pair of flap-valves pivoted in the housing.

1,533,079. AUTOMATIC TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 6, 1920, Serial No. 356,803. Renewed July 16, 1924. 24 Claims. (Cl. 179—17.)

1. In a telephone system, a calling line, a called party line, an automatic connector switch, a plurality of branches of the called line accessible to said switch, each branch comprising two line conductors and a third conductor, means whereby a subscriber on the calling line can operate said switch to connect with any one of said branches, ringing current generators of different frequency, a circuit including said third conductor and excluding any line or talking conductor involved in the connection, and mechanism in said connector selectively controlled over said circuit to select the proper generator to selectively signal a desired station on the called line.

1,533,080. CORN HARVESTER. DAVID G. SCLANDERS, Weenen, and MERVYL S. SPARKS, Klip River, Natal, South Africa. Filed Jan. 20, 1920. Serial No. 352,705. 10 Claims. (Cl. 56—116.)

8. In a corn harvester, the combination with frame-work, of a revoluble shaft mounted thereon, a plurality of blades carried by and rotatable with said shaft, a plurality of collars between said blades and rotatable with the shaft, a plurality of guide bars spaced apart and permitting passage of the blades between them, said guide bars being secured at their rear lower ends to the frame-work and having loops at their forward upper ends, said loops mounted freely on the collars on said shaft, and means for rotating said shaft.

Patents Nos. 1,533,081 to 1,534,016.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 333—No. 2. TUESDAY, APRIL 14, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Amendment to Trade-Mark Rules.

(ORDER No. 2,903.)

U. S. PATENT OFFICE, *Washington, Apr. 4, 1925.*

Acting under the provisions of section 26 of the act approved February 20, 1905, Rule 69 of the rules of the Patent Office governing the registration of trade-marks is amended as follows:

Lines 5 and 6 cancel "signed by the Commissioner, under the seal of the Patent Office."

KARL FENNING,
Assistant Commissioner.

Interference Notice.

U. S. PATENT OFFICE, *Washington, Mar. 23, 1925.*

John M. Flottman, his assigns or legal representatives, take notice:

An interference having been declared by this Office between an application for patent filed by John M. Flottman, 160 Eddy Street, San Francisco, Calif., and applications for patents filed by Frank H. Burns, 57 Elm Street, Hoosick Falls, N. Y.; Joseph H. Cole, Penacook, Merrimack County, N. H.; Ralph A. Krause, 4936 North 12th Street, Philadelphia, Pa.; Thomas Rhodus, 835 Junior Terrace, Chicago, Ill.; Joseph A. Rostron, 16 Palmer Street, Cambridge, Mass., and William Charles Ude, 259 Thomas Street, West Haven, Conn., and a notice of such declaration sent by registered mail to said John M. Flottman at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Flottman, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Disclaimer.

1,515,007.—*Abraham S. Behrman*, Chicago, Ill. BARB-EXCHANGE MATERIALS AND PROCESS OF MAKING SAME. Patent dated November 11, 1924. Disclaimer filed March 28, 1925, by the assignee, *International Filter Company.*

Hereby enters this disclaimer—

"To claims 11, 12, 13, 14, and 15."

ADJUDICATED PATENTS.

(C. C. A. Oreg.) The Shope patent, No. 985,709, for method of forming waterproof-faced cement block, *Held* not infringed. *Ward v. Shope Brick Co.*, 3 F. (2d) 244.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,308,964, F. A. Stevens, Ophthalmic mounting, decided March 2, 1925, claim 1.

Pat. 1,333,949, C. J. Travers, Base for chairs, etc., decided March 2, 1925, claim 8.

Pat. 1,377,765, J. W. Æ. Elling, Revolving suction strainer, decided March 26, 1925, claims 1, 2, 3, 4, and 6.

Pat. 1,405,175, G. A. Yanochowski, Telephone system, decided March 6, 1925, claims 1 and 5.

Pat. 1,423,766, Hechenbleikner and Oliver, Method of treating sludge acids, decided March 3, 1925, claims 1, 2, 3, 4, 10, and 12.

Pat. 1,423,767, Hechenbleikner and Oliver, Method of treating sludge acids, decided March 3, 1925, claim 1.

Pat. 1,481,209, A. A. Kauffman, Bridge tooth and lock in backing, decided March 2, 1925, claims 2 and 3.

Pat. 1,500,214, J. E. L. Ogden, Liquid pump and elevator, decided February 21, 1925, claim 1.

Pat. 1,517,022, T. S. Shibe, Baseball, decided March 28, 1925, claims 1, 2, and 3.

Condition of Applications Under Examination at Close of Business April 3, 1925.

(Total number of applications awaiting action, excluding Trade-Mark Division, 49,794; Trade-Mark Division, 3,307. Oldest new case, Oct. 3, 1924; oldest amended, Oct. 3, 1924. The dates given are 1924 except where † indicates 1925.)

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

Ex parte Buehler.

Decided March 18, 1925.

Forfeiture and Renewal of Application within Six Months After Notice of Allowance.

An applicant may file an application for renewal at any time within the six months following the notice of allowance if, with the consent of the assignee, if the application be assigned, he waives the benefit of the remainder of the six months.

On petition.

Mr. Rudolph Wm. Lotz for applicant.

Robertson, *Commissioner:*

A petition to renew this application has been filed less than six months after the date of the notice of allowance. There has also been filed a waiver of "the further or unexpired portion of the period of six months from date of allowance," and a request that the application "be taken as forfeited from the date of the petition for renewal."

Section 4885, Revised Statutes, provides that, if the final fee be not paid within six months from the date of the notice of allowance, "the patent shall be withheld"; and section 4897, Revised Statutes, provides that any person who has an interest in an invention for which a patent was ordered to issue upon the payment of the final fee, but on which the fee was not paid within six months from the date of the notice of allowance, shall have the right to make an application for a patent for such invention or discovery the same as in the case of an original application.

These provisions were obviously made for the benefit of the applicant, and as the statute does not forbid the acceptance of a renewal within the six months, no reason is seen why an applicant should not be allowed to waive this benefit if he so desires, and to allow the application to become forfeited and be renewed at any time within six months. It may be noted that the same result would be accomplished if the applicant should file a new application for the same invention, and therefore abandon the second application. The Government fee would be the same in both cases; but the applicant would be put to the expense of preparing new papers and there would be a duplication of the Patent Office records. No necessity is seen for requiring such additional expense and duplication of records. Furthermore, the acceptance of a petition for renewal prior to the expiration of the six months will expedite the issuance of the patent and is therefore to the interest of the public.

If there has been an assignment it is thought that, in order to avoid any possible question of the attorney's authority, the petition and waiver should be ratified by the assignee.

The conclusion reached above is contrary to that reached in the decisions in *ex parte Manny*, 44 O. G. 700; 1888 C. D. 106; *ex parte Nicholson*, 52 O. G. 310; 1890 C. D. 112; *ex parte Schultz*, 111 O. G. 2494; 1904 C. D. 366; and those decisions are hereby overruled.

It is directed that the petition for renewal be accepted and the case forwarded for examination.

Ritzler *v.* Francis H. Leggett & Co.

Decided October 13, 1911.

1. Trade-Mark—Interference—Appeal—Brief.

Where on appeal from an adverse decision of the Examiner of Interferences appellant filed its brief only four days before the hearing, it could not be considered, but was stricken from the files.

2. Same—Title to Mark—Continuation of Business with Use of Mark of Defunct Corporation.

Where R. was in business from 1903 to 1921, continuously using the mark in issue, but from 1906 to 1908 the business was conducted by a corporation which went into the hands of a receiver and had its charter canceled in 1914, *Held* that since it clearly appeared that R. conducted the business himself from 1914 to 1921 that was sufficient to establish title in him prior to the 1918 title of appellant, although there was no documentary evidence of a transfer of the title from the corporation to R.

Appeal from Examiner of Interferences.

Mr. Arthur E. Wallace for Ritzler.

Mr. Samuel D. Jones and *Messrs. Mason, Fenwick & Lawrence* for Francis H. Leggett & Co.

Fenning, *Assistant Commissioner:*

This is an appeal from the decision of the Examiner of Interferences holding that applicant is entitled to the registration of his mark.

[1] Appellant filed its brief only four days before the hearing and it can not therefore be considered, but is stricken from the file.

Appellee filed a brief, but did not argue the case.

[2] The sole issue involved is the question of appellee's title to the mark. Appellant has a registered trade-mark, and since no testimony was taken it is confined to its record date of 1918. The evidence indicates that Ritzler has been in business since 1903, continuously using the mark in issue. From 1906 to about 1908 the business was conducted by a corporation which went into the hands of a receiver and had its charter formally canceled in 1914. There seems to be no documentary evidence of a transfer of the title from the corporation to Ritzler, but it clearly appears that Ritzler has conducted the business himself since 1914, and that is sufficient to establish title in him prior to the 1918 title of appellant.

The decision of the Examiner of Interferences is affirmed. Charles E. Ritzler is entitled to the registration for which he has made application.

On rehearing December 5, 1921.

This is a petition for rehearing filed by Leggett & Company, to which no response has been made by Ritzler.

It is urged that my decision of October 13, 1921, was in error in finding title to the trade-mark in issue in Ritzler. The facts in the case are sufficiently set out in that decision; but it is urged that the right to register the mark rests only in the receiver and that—

the circumstances were in reality such that Mr. Ritzler either appropriated valuable assets in contempt of court or conducted the business for the benefit of all creditors as the employee of the receiver.

I am unable to reach this conclusion from the evidence in the case. In answer to question 23 Mr. Ritzler said:

The company went into the hands of a receiver in 1911 and I purchased.

In response to cross-question 37 he explains that he had an understanding with the court that he was to "acquire the use of the business, by the disposition of the obligations."

Another witness employed as a salesman selling the goods on which the mark is used describes himself as an employee of Mr. Ritzler—not of the receiver.

The company surrendered its charter in 1914. I am unable to believe that a receiver may continue as a going business for seven years the affairs of a corporation which is out of existence by the surrender of its charter. No cases in this respect have been cited to me, and the textbooks and digests seem to indicate that the function of a receiver when a corporation is dissolved by the surrender of its charter is merely to wind up the business and not to continue the business as a going concern. The evidence seems to indicate that the proper procedure was followed in the present case and that Mr. Ritzler conducted the business and is its owner, at least since the dissolution of the corporation in 1914, if not since 1911, when he says he purchased. The reference to the receiver in the record, in so far as he still exists, indicates that he is merely "serving nominally"; from which it may be assumed that instead of being a receiver conducting the business he is merely prepared to liquidate some of the assets.

The petition for rehearing is denied.

U. S. Circuit Court of Appeals—Third Circuit.

PYRENE MFG. CO. *v.* BOYCE ET AL.

Decided July 11, 1923; rehearing denied October 4, 1923.

[292 Fed. Rep. 480.]

1. "INVENTION" DEFINED.

"Invention" is a concept or thing evolved from the mind and is not a revelation of something which existed and was unknown, but the creation of something which did not exist before, and possessing elements of novelty and utility in kind and measure different from and greater than what the art might expect from skilled workers.

2. INVENTION—NEW AND UNEXPECTED RESULT—FAVORABLE RECEPTION BY THE PUBLIC.

Where by placing the bulb of a thermometer in the air space within the inlet of a radiator for an internal-combustion engine quick signals were obtained that would not be given if the bulb were placed in the water in the radiator and where the device was at first ridiculed and then adopted by manufacturers and accepted by the public to an enormous extent, *Held* that invention was involved.

3. EVIDENCE OF PRIOR USE MUST BE CLEAR AND SATISFACTORY.

Evidence of prior use, which will negative novelty under Revised Statutes Section 4886 (Comp. St. sec. 9430), must be clear and satisfactory, and every reasonable doubt should be resolved against the one raising the question.

4. PRIOR USE—ABANDONED EXPERIMENTS.

Where alleged prior users of the invention did not intend, and did not observe in their devices, the things intended and accomplished by the device of the patent in suit, *Held* that they did not have B.'s inventive conception and, failing to find it, they abandoned their devices before they had passed the stage of experimentation.

APPEAL from the District Court of the United States for the District of New Jersey; Joseph L. Bodine, judge.

Suit by Harrison H. Boyce and another against the Pyrene Manufacturing Company. From a decree for plaintiffs (290 Fed. 998) defendant appeals. Affirmed.

Mr. Francis B. Bracken (*Mr. Frederic P. Warfield* and *Mr. L. A. Watson* of counsel) for the appellant.

Mr. Charles Neave, Mr. Edmund Quincy Moses, and *Mr. Joseph H. Milans* for the appellees.

Before BUFFINGTON, WOOLLEY, and DAVIS, Circuit Judges.

WOOLLEY, *Cir. J.:*

The respondent appeals from a decree of the district court holding valid and infringed Letters Patent No. 1,000,776, issued March 17, 1914, to H. H. Boyce for an indicating system and apparatus for internal-combustion engines. All claims are in suit. Infringement is denied and the validity of the patent is challenged mainly on grounds of anticipation, prior use, and lack of invention.

The patent apparatus is the small thermometric device positioned in the top opening of the radiator of a motor car, familiar to automobilists. Claim 2, a typical claim, reads as follows:

In a system for indicating abnormal conditions in an internal combustion engine provided with a liquid circulation cooling system for the cylinders of the engine, said cooling system including a radiator having an air space at the top thereof, the combination with the radiator of an indicating device having an indicating part outside the radiator and having a temperature responsive element controlling the operation of said indicating part and exposed to the temperature in said air space above the level of the liquid in the radiator and means for maintaining the temperature responsive element in place in the radiator during the normal operation of the engine.

The respondent says that this claim, stripped of its technical wording, discloses nothing more than a thermometer stuck through the radiator cap of an automobile. On first view this would seem to be true. It further urges that the only function of the thermometer, so positioned, is the ordinary one of showing the temperature inside. This would seem to be obvious. The respondent therefore maintains that in placing a thermometer in a cooling system to determine the heat of the engine nothing of invention is involved. This, too, was our first impression. But on closer examination of the patent it appears that a purpose is intended and, by reason of the particular location of the device, a result is obtained different from and definitely more useful than the mere registration of heat.

[1] On the major issue of validity we shall first inquire whether the conception for which the patent was granted involves invention. Because of the lack of a definite rule, questions of this kind are often perplexing. It is a trite saying that invention defies definition. Yet, through long use, the word has acquired certain characteristics which at least give direction to its meaning. Invention is a concept; a thing evolved from the mind. It is not a revelation of something which exists and was unknown, but is the creation of something which did not exist before, possessing the elements of novelty and utility in kind and measure different from and greater than what the art might expect from its skilled workers.

The inventive conception of the patentee is substantially as follows:

First, the invention relates to a system for indicating the condition of internal-combustion engines of the type wherein the cylinders are cooled by a fluid medium (water or alcohol) circulating around them. While the invention is generally applicable to stationary explosive engines, it is especially adaptable to automobile engines whose cylinders are cooled by a liquid delivered and thermally stabilized by a suitable medium such as a radiator placed some distance from the engine. Although the invention is not limited to the latter use, we shall for convenience speak of it as an automobile accessory.

Next, the invention is based on the known construction of internal-combustion engines and on known conditions arising from them, and particularly on changes in temperature of the engine and cooling system. A combustion engine generates much heat. When possible, overheating should be avoided. This condition may be due to a variety of things as, for instance, operating with the throttle wide open and the spark retarded, insufficient lubrication, frozen or clogged pipes, insufficient water, loose fan belt, defect in pump whereby the circulation of the cooling medium is arrested. The invention of the patent does not correct any of these evils. Its purpose is to disclose them, and to disclose them to the operator of the machine in time for him to correct them before injury results. The patentee, therefore, has aptly named his invention an "indicating system and apparatus."

Finally, the inventive conception of the patent is embodied in the familiar little device, circular in shape, boxlike in character, the front and rear made of glass, the front open and the rear closed (except for an open circle at the top), inclosing what the patentee terms a "temperature responsive element" (which for our purpose is a thermometer of magnifying glass and colored alcohol visible through the open face) extending down through a threaded and perforated prong. The device is commercially known as "Boyce Moto Meter." Lying in one's hand it looks like a thermometer of unusual design and suggests nothing of invention. When in use, however, the device is substituted for the inlet cap at the top of the radiator and is screwed upon the inlet opening. Its protuberant part or prong, enveloping the bulb of the thermometer, extends into the air space or pocket above the level of the liquid in the radiator where the bulb is exposed to and its action regulated by the temperature of the air within.

Postponing for later discussion the question of prior use, we shall here dispose of any question of anticipation by prior patents by announcing our conclusion, in harmony with that of the Circuit Court of Appeals for the Second Circuit in *Boyce v. Stewart-Warner Speedometer Corporation,* 220 Fed. 118, 136 C. C. A. 72, that all references having to do with temperature indicators whose parts are immersed in the circulating fluid or attached to the machinery itself are so different in construction and mode of operation from that of the patent that they play no part in the case. We are also in accord with the Circuit Court of Appeals for the Second Circuit that, before the invention in suit, there was no thermal indicating device shown by the evidence which was positioned in a like air space below the opening of the radiator and which depended upon the temperature to which it was there exposed as the source of the information which it carried above and disclosed. We have paused to lay stress on the position of the lower extremity of the thermometer in the air space above the level of the liquid in the radiator because, if there is invention in the system and apparatus of the patent, it must be found in the selection of the air space of the radiator inlet as the place for the novel behavior of the thermometer.

On first view this place would seem to be of little importance. Yet it developed that it has distinctive characteristics of which the patentee took advantage and of which, apparently, no one else had thought. They are these:

It has been found from experience that internal-combustion engines work best at a temperature of about 180 or 190 degrees. It is also known that, from their very nature, they are inclined to overheat. To meet these conditions of heat requirement and heat production, cooling systems were provided in which, ordinarily, water was employed as the cooling fluid. But here was a problem, of keeping the water cool enough to prevent overheating yet warm enough not to arrest the proper action of the engine. This problem was solved by a circulation cooling system in which a radiator is the controlling element. When the radiator receives the heated water it is cooled to a proper

temperature by radiation, it is then returned to the cylinder jackets to perform its cooling function, it is heated again, and again returned to the radiator, and so on indefinitely. Thus it happens that in the cooling system the water is of different temperatures according to where it is and what it is doing. It also happens that up to a certain point there is a difference in the temperature of the water and the temperature of the air in the space or pocket at the inlet. The air space heats up slowly and there is a lag in temperature. The temperature of the water may be as high as 205 and the temperature of the air space may be, and usually is, 20 or 30 degrees lower. But should the temperature of the water rise to 212 and the water boil, steam will be emitted and immediately the temperature of the air space will rise from its previous low degree to that of steam. The effect on the thermometer bulb in the air space will be instantaneous, resulting in a sudden, an almost startling, jump from a low point on the indicating dial to a high point, thus warning the operator by a quick signal of danger that something is wrong with the engine. From this it will be seen that the purpose of the invention is not to register the temperature of the water as is ordinarily done by a thermometer but to indicate engine trouble by the sudden action of the thermometer. Indeed there is nothing on the device which gives the temperature in degrees. Stated otherwise, the purpose of the device is not to inform the automobile driver how hot the water in the cooling system is, for this would mean nothing to the ordinary driver; its purpose is to inform him that something has happened inside the engine hood so that he may stop and find it before it is too late.

The center of the invention, therefore, is the selection of the air space or pocket within the inlet of the radiator by which alone the requisite sudden action is given to the thermometer. This is quite obvious because, if, as in other arts, the bulb of the thermometer were placed in the water, the rise of the thermometer would be as gradual as the rise in the temperature of the water and no quick signal of impending danger would be given the operator. So also if the bulb of the thermometer were placed in the water, the thermometer would fail to give a correct reading upon the falling of the water level within the radiator. For example, if the water level should, because of leakage, fall until it is below the bulb, the bulb would then be exposed to air above the water level, which, as before stated, is normally cooler than the water, so that a drop in temperature would be indicated by the instrument instead of the rise in temperature which would actually take place in the water. Probably the most important advantage of locating the bulb with its thermal responsive element in the air space of the radiator inlet instead of submerging it in the cooling liquid is that it will indicate a condition of danger upon the stoppage of the circulation of the liquid, while the submerged bulb will frequently fail to give such indication. This seeming paradox will be understood when it is considered that the submerged bulb registers the temperature of the water in the radiator, which, upon stoppage of the circulation, gets cooler and cooler in that part of the system and does not respond to the engine temperature. Accordingly the instrument submerged in the water of the radiator will show a fall in temperature even though the water may be steaming in the cylinder jackets. But if the heat-responsive element of the indicator be mounted in the air space above the water level, the steam, as soon as it is formed in the cylinder jackets, will find its way into the air space whether the water is circulated or not, and, therefore, will immediately cause the rapid rise of the indicating fluid and give the desired danger signal.

[2] We are satisfied that the claims of the patent are not limited merely to a "temperature responsive element," or, in other words to a thermometer, placed indifferently in a cooling system, but that they embody the novel idea of a thermometer positioned in a new place, where, by reason of the charteristics of the place, the thermometer, even if functioning in an old way, is caused to do a new thing. In this functioning of the thermometer, where speed in the rise of temperature and its consequent danger signal are the things sought and obtained, utility is obvious. To this conclusion we have been led by the device itself, without the aid of its commercial history. (This history is interesting, however, for it shows that when the device appeared in the art it was regarded as so thoroughly useless that it provoked mirth among automobile engineers. But later it was accepted by the public to the extent of 8,500,000 instruments of a retail sales value of over $20,000,000, and was adopted by manufacturers for regular equipment on 170 makes of automobiles and trucks.) Therefore we are of opinion that the patent involves invention and that the patentee is entitled to the reward of a patent—unless, as the respondent maintains, he was not the first to conceive the invention and therefore was not the original inventor in the sense of the patent law. This brings us to the issue of prior use.

Novelty is negatived by prior knowledge and use of the thing patented. R. S. sec. 4886 (Comp. St. sec. 9430). Of such use the respondent cites four instances. One was the Fairbanks-Morse use. A stipulation as to the character of this use puts it out of the case.

Another was by Avery who for several weeks (or months) used several thermometers in various places on the radiator of his car, one in the cap of the filler spout.

The third was the Moore use. Moore, a chauffeur, having difficulty with his engine overheating, bored a hole through the radiator cap and inserted a brewer's thermometer. The use was short lived for Moore's employer objected to its appearance and caused it to be removed.

The fourth and most important was the Purdy use. Purdy was a designer of internal-combustion engines for automobiles. Beginning about 1905 he was in charge of the experimental department of an automobile manufacturer. He carried on a great number of experiments in connection with every phase of automobile designing in the course of which he employed many and various instruments. He put thermometers at different places on the engine and on the cooling system in order to find the points of overheating and to design the structure so as to overcome the trouble. In the course of his experiments he placed a thermometer in the radiator cap. With this thermometer in place, as well as with thermometers elsewhere, he operated the engine in the factory for long periods and in the car for long distances. Clearly these were engine tests and the thermometers were used experimentally in different places to determine the engine's weak points in the matter of heating. His testimony was, in substance, that all these tests were experimental and were made to get proper ideas for the manufacture of engine parts and radiators in the ultimate construction of automobiles; that during a test the thermometer in the radiator spout was always in place and after a test it would be removed; and that his thought was to make the construction of the car good enough to avoid the necessity of having a thermometer upon it when it went out to the user and that if he had not done this he would have considered the engine a failure.

Winther, who arranged the cap thermometer for Purdy, testified that he had never given any real thought to the value of the Purdy device, although, in fact, when the device of the patent came out he thought "there is an idea I probably could have made use of" and recalled having dismissed the Purdy use from his mind as unimportant.

[3] It is well settled that evidence of prior use must be clear and satisfactory and in its consideration every reasonable doubt should be resolved against the one raising the question. *Eibel Process Co.* v. *Minnesota & Ontario Paper Co.*, 261 U. S. 45; 43 Sup. Ct. 322; 67 L. Ed. —; 310 O. G. 3; *Barbed Wire Patent Case*, 143 U. S. 275, 284; 12 Sup. Ct. 450; 36 L. Ed. 161; 58 O. G. 1555; *Coffin* v. *Ogden*, 85 U. S. (18 Wall.) 120, 124; 21 L. Ed. 821.

The prior public uses of the invention of the patent on which the respondent relies appeal to us as merely incidental and casual uses. While very close to the invention of the patent in means and location, they were far different from the uses contemplated by the inventive concept of the patentee. Indeed it seems to us they were practiced without any conception of the inventive idea which later Boyce evolved. While the instruments used on these occasions may have performed in the manner of the patent, such performance (if it occurred) seems not to have impressed itself upon those using the instruments. In considering the several alleged prior uses set up by the respondent, we do not find that, within the authority of *Gayler* v. *Wilder*, 10 How. 477; 13 L. Ed. 504, they were—

> so far understood and practiced or persisted in as to become an established fact, accessible to the public and contributing definitely to the sum of human knowledge.

[4] Though close to the invention of the patent, it clearly appears that the several users did not intend, and did not observe in their devices, the things intended and accomplished by the device of the patent in suit. *Eibel Process Co.* v. *Minnesota & Ontario Paper Co.*, supra; *Tilghman* v. *Proctor*, 102 U. S. 707, 711; 26 L. Ed. 279; 19 O. G. 859. In other words, they did not have Boyce's inventive conception and, failing to have it, they abandoned their devices before they had passed the stage of experimentation.

Therefore we are of opinion that the novelty of the invention of the patent has not been negatived by prior use and that, accordingly, the patent is valid. We are also of opinion that as the "temperature responsive element" of the patent claims are not limited to alcohol but extend to such expansive metals as are employed by the defendant in its device, the patent is infringed.

The judgment below is affirmed.

PATENT SUITS.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

833,634, J. S. Robeson, Process of treating waste sulphite liquor and compound obtained therefrom; 1,069,029, same, Process of treating roads, etc., order affirming decree of lower court (notice dated Dec. 17, 1924), C. C. A. (3d Cir.), Doc. 3143, *Robeson Process Co.* v. *J. S. Robeson et al.*

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 14, 1925.

[VOL. 333. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 137,333. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) SERVICE MOTOR TRUCK CO., Wabash, Ind. Filed Sept. 18, 1920.

THE PYRAMID OF SERVICE

Particular description of goods.—Motor Trucks.
Claims use since Aug. 21, 1920.

Ser. No. 138,523. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) SERVICE MOTOR TRUCK CO., Wabash, Ind. Filed Oct. 19, 1920.

RED PYRAMID

Particular description of goods.—Motor Trucks.
Claims use since Sept. 15, 1920.

Ser. No. 172,937. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) THE FIRESTONE TIRE & RUBBER COMPANY, Akron, Ohio. Filed Dec. 5, 1922.

Particular description of goods.—Rubber Tires, Pneumatic and Solid; Inner Tubes (Rubber-Impregnated Tire Building and Rebuilding Fabrics); Tire Accessories, Namely, Hook-On Boots, Lace-On Boots, Flaps, and Tire-Repair Air Bags, Fabric and Rubber Repair Patches, Tube Patches in Sheet and Patch Form, and Reliners; and Tire-Repair Gum Materials in Sheet Form—Namely, Tread Gums, Cushion Gums, Tube Gums, Camel-Back-Tread Gums, and Combination Gums.
Claims use since June 27, 1922.

Ser. No. 175,011. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) THE FIRESTONE TIRE & RUBBER COMPANY, Akron, Ohio. Filed Jan. 24, 1923.

MAXI-CUSHION

Applicant disclaims exclusive right to the use of the word "Cushion" as applied to tires apart from the mark shown.
Particular description of goods.—Resilient Vehicle Tires of Rubber or Rubber Composition or Rubber and Fabric.
Claims use since Oct. 29, 1922.

Ser. No. 177,528. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) CHARLES A. THURMOND, Perry, Ga. Filed Mar. 15, 1923.

The words "Thurmond Gray Melon" and the pictorial representation of a melon are hereby disclaimed apart from the other features of the mark.

Particular description of goods.—Watermelon Seeds.

Claims use since July 24, 1922.

Ser. No. 180569. (CLASS 39. CLOTHING.) WERNER EXPORT COMPANY INC., New York, N. Y. Filed May 12, 1923.

Particular description of goods.—Dress Shirts, Negligee Shirts, and Work Shirts, Knitted and Textile Fabric Underwear for Men Only, Hosiery, Sweaters, Palm Beach Suits, Raincoats, Mohair Suits; Shoes of Leather, Canvas, and Buckskin; Neckwear in the Nature of Neckties and Scarfs.

Claims use since Oct. 1, 1922.

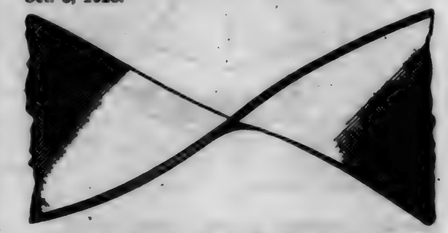
Ser. No. 181,876. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) AM-PLUS STORAGE BATTERY COMPANY, Chicago, Ill. Filed June 12, 1923.

Applicant disclaims the terms "Hard Yet Porous, Rugged Plates" and the pictorial representation of a battery plate apart from the other features of the mark shown in the drawing.

Particular description of goods.—Storage Batteries and Storage-Battery Plates.

Claims use since Sept. 1, 1921.

Ser. No. 182,900. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) ANDRÉ CITROËN, Paris, France. Filed July 7, 1923.



The mark consists of an elongated hexagon within which is traced an ellipse crossed with a double herringbone under which is written on two lines the letter "A" and the word "Citroen."

Particular description of goods.—Pleasure Automobiles, Motor Trucks, and Structural Parts Thereof.

Claims use since Feb. 1, 1919.

Ser. No. 186,973. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) PEERLESS BELTING COMPANY, Gardenville, N. Y. Filed Oct. 5, 1923.

Trade-mark consists in the application to the edges of the belting of a coat of brown paint, the color of the coat contrasting with the color of the faces of the belting. In the drawing the shading is employed to indicate the application of a brown paint to the edges of the belting, both faces of which are black.

Particular description of goods.—Cotton Belting.

Claims use since March, 1923.

Ser. No. 187,631. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) JULIUS J. LEVIN, Kansas City, Kans. Filed Oct. 29, 1923.

The drawing is lined for the purpose of shading. The exclusive use of the words "Manhattan" and "Handkerchiefs" apart from the mark as shown is disclaimed.

Particular description of goods.—Handkerchiefs.

Claims use since Sept. 15, 1923.

Ser. No. 187,773. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOHN SEXTON AND COMPANY, Chicago, Ill. Filed Oct. 31, 1923.

LA SALLE

Particular description of goods.—Rice, Prepared Mustard, and Tomato Catchup.

Claims use since about 1915.

Ser. No. 189,052. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HEALTH SANITORIUM LABORATORY, LIMITED, Montreal, Canada. Filed Nov. 30, 1923.

DOCTOR LEWIS

SPECIAL PREPARATIONS

The name of individual whose portrait appears in drawing is that of D. D. Lewis, M. D. No claim is made to the words "Special Preparations" and "Trade Mark" apart from the mark as shown.

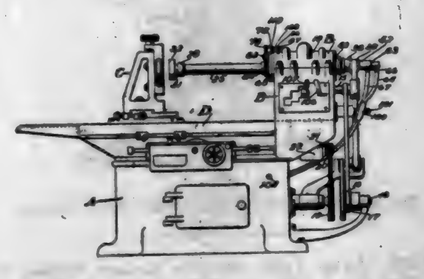
REISSUES



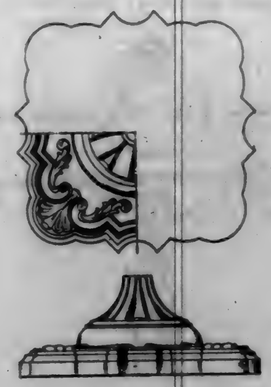
APRIL 14, 1925.

16,042. SEALING CAP AND PROCESS FOR THE MANUFACTURE THEREOF. ADOLF DULITZ, Hirschberg, Germany, assignor to "Flaka" Flaschen-Kappen-Gesellschaft m. b. H., Berlin-Charlottenburg, Germany, a Corporation of Germany. Filed Mar. 5, 1925. Serial No. 13,378. Original No. 1,520,054, dated Dec. 23, 1924, Serial No. 711,247, filed May 5, 1924. 5 Claims. (Cl. 18—58.)

1. A process for obtaining a sealing cover consisting in mixing with acetyl cellulose a water-soluble softening agent, forming therefrom a pellicle on a former and treating the pellicle while on the former with water, for the purpose of causing an exchange of the softening agent for water to take place and of causing only a slight swelling of the pellicle.

16,045. INTERNAL-GRINDING MACHINE. HARRY F. JOSEPH, Davenport, Iowa, assignor, by mesne assignments, to Micro Machine Company, Bettendorf, Iowa, a Corporation of Iowa. Filed Sept. 7, 1923. Serial No. 661,534. Original No. 1,396,123, dated Nov. 8, 1921, Serial No. 401,888, filed Aug. 7, 1920. 14 Claims. (Cl. 51—267.)

9. In a machine for grinding internal-cylindrical recesses, a rotatable drum and means for driving it, a spindle journaled in said drum eccentric to the axis thereof whereby the rotation of the drum will impart a bodily rotation to the spindle, means for axially rotating said spindle at a relatively high speed while bodily rotating, a grinding-wheel carried by said spindle, means



for continuously forcing liquid along said spindle and delivering it at the grinding-wheel-end thereof, and means for delivering the liquid by centrifugal force at a relatively great velocity against the cylindrical face of the work.

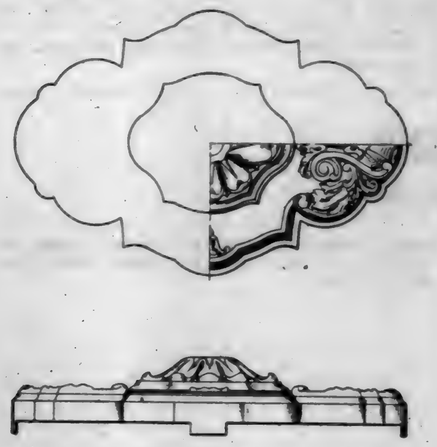
DESIGNS

APRIL 14, 1925.

67,003. LAMP BASE. WILLIAM ABRAMS, Chicago, Ill. Filed Jan. 2, 1925. Serial No. 11,859. Term of patent 3½ years.

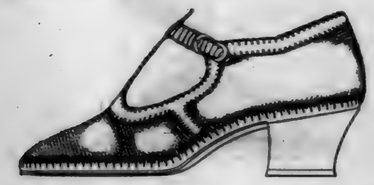
The ornamental design for a lamp base as shown.

67,004. LAMP BASE. WILLIAM ABRAMS, Chicago, Ill. Filed Jan. 2, 1925. Serial No. 11,860. Term of patent 3½ years.



The ornamental design for a lamp base as shown.

67,005. LAMP BASE. WILLIAM ABRAMS, Chicago, Ill. Filed Jan. 2, 1925. Serial No. 11,861. Term of patent 3½ years.



The ornamental design for a lamp base as shown.

67,006. LAMP BASE. WILLIAM ABRAMS, Chicago, Ill. Filed Jan. 2, 1925. Serial No. 11,862. Term of patent 3½ years.

The ornamental design for a lamp base as shown.

67,007. SHOE. ANDREW BARNA, New York, N. Y. Filed May 14, 1924. Serial No. 9,586. Term of patent 3½ years.

The ornamental design for a shoe as shown and described.

67,008. SPOON OR SIMILAR ARTICLE. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Feb. 3, 1925. Serial No. 12,252. Term of patent 7 years.

The ornamental design for a spoon or similar article, as shown.

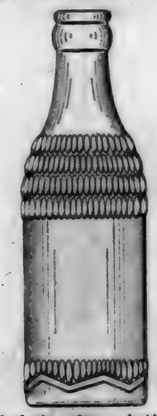
The ornamental design for a watchcase appendage, substantially as shown.

67,013. PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Aug. 22, 1924. Serial No. 10,531. Term of patent 7 years.

The ornamental design for a plate for lighting fixtures, as shown.

67,014. LIGHTING FIXTURE. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 8, 1925. Serial No. 11,966. Term of patent 7 years.

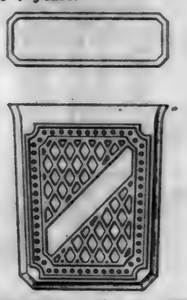


The ornamental design for a lighting fixture as shown.

67,015. BOTTLE. JEROME P. CURRAN, Toledo, Ohio. Filed Jan. 27, 1925. Serial No. 12,157. Term of patent 14 years.

The ornamental design for a bottle, substantially as shown.

67,016. BOTTLE. JEROME P. CURRAN, Toledo, Ohio. Filed Jan. 27, 1925. Serial No. 12,158. Term of patent 14 years.

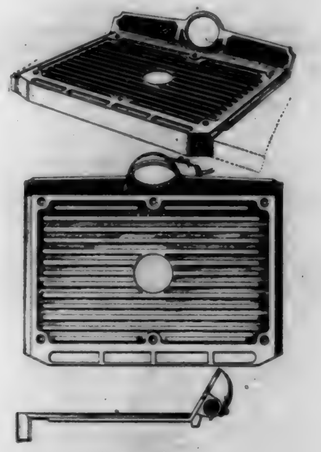


The ornamental design for a bottle, substantially as shown.

67,017. DRESS. TAUBE DAVIS, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 16, 1925. Serial No. 12,393. Term of patent 3½ years.

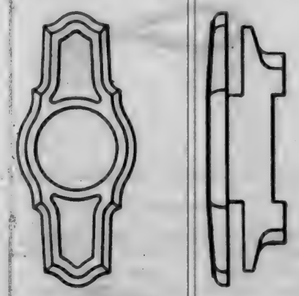
The ornamental design for a dress, substantially as shown.

67,018. EDIBLE CONTAINER. JAMES DENARO, Cambridge, Mass. Filed Nov. 5, 1924. Serial No. 11,294. Term of patent 7 years.



The ornamental design for an edible container as shown.

67,019. TABLE SCARF. JOSEPH DERK, Philadelphia, Pa. Filed Dec. 10, 1924. Serial No. 11,650. Term of patent 3½ years.



The ornamental design for a table scarf, as shown.

67,020. AUTOMOBILE STEP PLATE. CLAYTON A. DUNHAM, Glencoe, Ill., assignor to Dunhameter Corporation, Chicago, Ill. Filed Dec. 17, 1924. Serial No. 11,723. Term of patent 3½ years.

The ornamental design for an automobile step plate as shown.

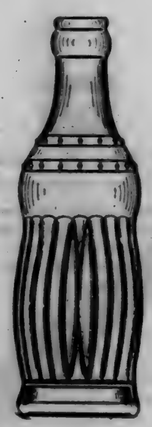
67,021. CLAMP FOR AN AUTOMOBILE BUMPER. WAYNE E. DUNSTON, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Feb. 2, 1925. Serial No. 12,242. Term of patent 14 years.

The ornamental design for a clamp for an automobile bumper, as shown.

67,022. LIGHTING FIXTURE. CHARLES GEZELSCHAP, Jr., Milwaukee, Wis., assignor to Grassler & Gezelschap, a Copartnership composed of Edmund Grassler and Charles Gezelschap, Milwaukee, Wis. Filed Feb. 18, 1925. Serial No. 12,409. Term of patent 3½ years.

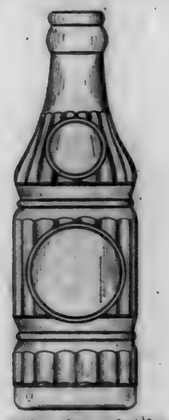
The ornamental design for a lighting fixture, as shown.

67,023. BOTTLE. PAUL A. GINTER, Toledo, Ohio. Filed Jan. 27, 1925. Serial No. 12,160. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown.

67,024. BOTTLE. PAUL A. GINTER, Toledo, Ohio. Filed Jan. 27, 1925. Serial No. 12,161. Term of patent 14 years.

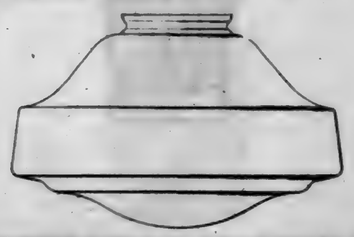


The ornamental design for a bottle, substantially as shown.

67,025. BOTTLE. PAUL A. GINTER, Toledo, Ohio. Filed Jan. 27, 1925. Serial No. 12,162. Term of patent 14 years.

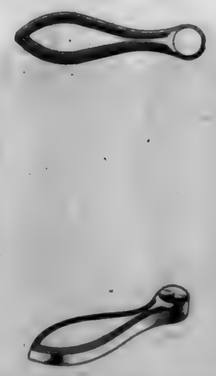
The ornamental design for a bottle, substantially as shown.

67,026. BOTTLE. PAUL A. GINTER, Toledo, Ohio. Filed Jan. 27, 1925. Serial No. 12,163. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown.

67,027. SIGNAL LAMP. CARL J. GIOMETTI, Corning, N. Y. Filed Dec. 26, 1923. Serial No. 8,150. Term of patent 7 years.



The ornamental design for a signal lamp as shown.

67,028. LIGHTING GLOBE. FLORENCE L. GRANT, Chicago, Ill., assignor, by mesne assignments, to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed Nov. 28, 1923. Serial No. 7,866. Term of patent 14 years.

The ornamental design for a lighting globe substantially as shown.

67,029. REGULATOR HANDLE. FREDERICK E. GREENE, New Haven, Conn., assignor to The English & Mersick Co., New Haven, Conn., a Corporation. Filed Oct. 8, 1924. Serial No. 10,996. Term of patent 3½ years.

The ornamental design for a regulator handle as shown.

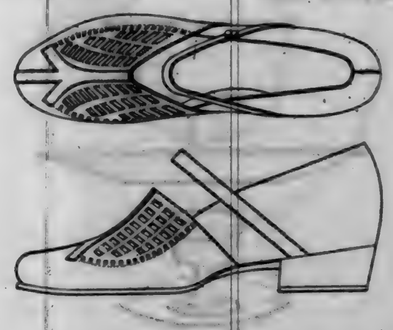
67,030. BENCH. LEO G. HAASE, Pasadena, Calif. Filed Apr. 24, 1924. Serial No. 9,378. Term of patent 14 years.

The ornamental design for a bench, as shown.

67,031. DOLL OR SIMILAR ARTICLE. SAMUEL HASKELL, Brooklyn, N. Y., assignor to Samuel Robert, New York, N. Y. Filed June 6, 1924. Serial No. 9,812. Term of patent 7 years.

The ornamental design for a doll or similar article as shown.

67,032. POCKET COIN. WILLIAM A. HARTLINE, Midland, Mich. Filed Sept. 8, 1924. Serial No. 10,695. Term of patent 7 years.

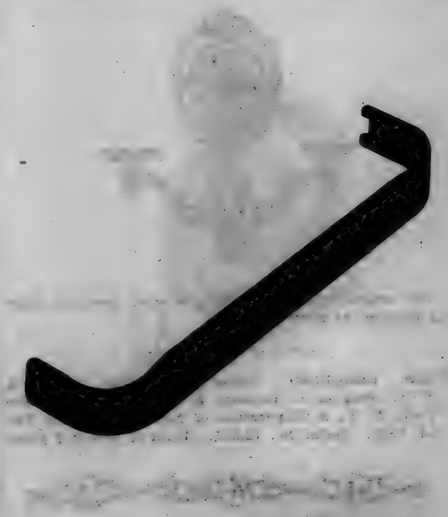


The ornamental design for a pocket coin as shown.

67,033. RADIATOR CAP. ROBERT H. HUMMERT, Dayton, Ohio, assignor to The S. H. Thomson Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 4, 1925. Serial No. 12,261. Term of patent 7 years.

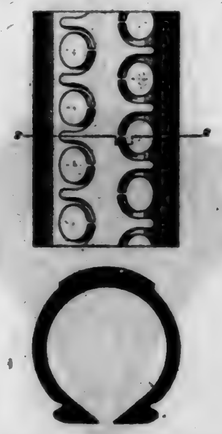
The ornamental design for a radiator cap, as shown.

67,034. SLIPPER. HARRY M. HUSK, Newburyport, Mass. Filed Dec. 17, 1924. Serial No. 11,722. Term of patent 3½ years.



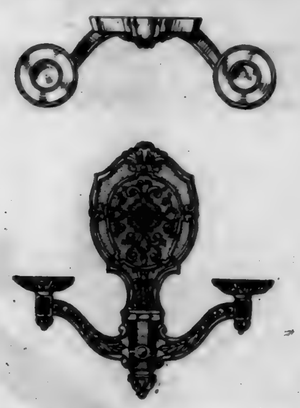
The ornamental design for a slipper, as shown.

67,035. LACE. CHARLES F. IKLE, New York, N. Y., assignor to Ikle Frères & Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 27, 1924. Serial No. 11,818. Term of patent 3½ years.



The ornamental design for lace as shown.

67,036. CURTAIN ROD. WILLIAM C. KENNEY, Cranston, R. I., assignor to Kenney Manufacturing Company, a Corporation of Rhode Island. Filed Nov. 28, 1924. Serial No. 11,513. Term of patent 14 years.



The ornamental design for a curtain rod, as shown.

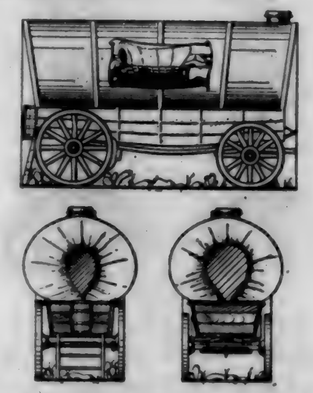
67,037. TIRE. KARL B. KILBORN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 21, 1921. Serial No. 524,026. Term of patent 14 years.

The ornamental design for a tire as shown.

67,038. BRACKET BACK FOR LIGHTING FIXTURES. CHARLES ALBERT KUSTER, Elmhurst, N. Y., assignor to Tonoh-Metal Producing Company, a Copartnership composed of Rudolph Kleinman, Jules Bloom, and Isidor Bloom, all of New York, N. Y. Filed Jan. 26, 1925. Serial No. 12,141. Term of patent 3½ years.

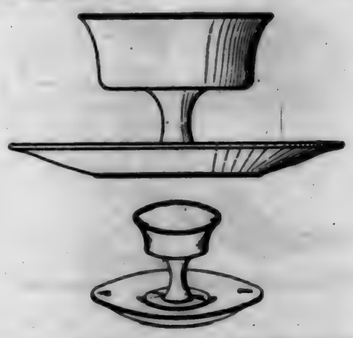
The ornamental design for a bracket back for lighting fixtures, as shown.

67,039. BRACELET. HENRY L. LAMBERT, New York, N. Y., assignor to Lambert Bros. Jewelers, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 14, 1925. Serial No. 12,381. Term of patent 7 years.



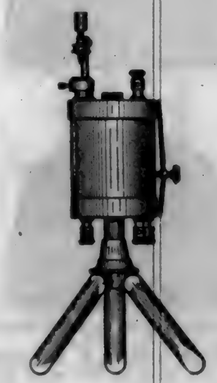
The ornamental design for a bracelet, as shown.

67,040. WATCH BRACELET. SIGMUND L. LEDERER, Providence, R. I. Filed Jan. 13, 1925. Serial No. 12,043. Term of patent 7 years.



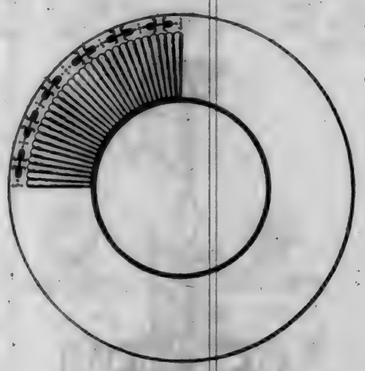
The ornamental design for a watch bracelet, as shown.

67,041. SIRUP CAN. HERBERT C. LONG, San Francisco, Calif. Filed June 9, 1924. Serial No. 9,838. Term of patent 14 years.



The ornamental design for a sirup can, as shown.

67,042. COMBINATION SERVING DISH. WILLIAM H. MAGEE and EDGAR MOTT BOTTOME, Moundsville, W. Va. Filed Jan. 13, 1925. Serial No. 12,032. Term of patent 3½ years.

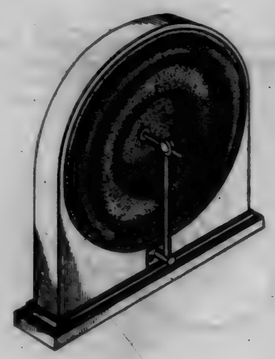


The ornamental design for a combination serving dish, as shown.

67,043. RECEIVING SET FOR WIRELESS MESSAGES. EDWARD MOORE, Nutley, N. J., assignor to Metro Electrical Co. Inc., Newark, N. J. Filed Oct. 8, 1923. Serial No. 7,424. Term of patent 7 years.

The ornamental design for a receiving set for wireless messages as shown.

67,044. PLATE OR SIMILAR ARTICLE. EARL W. NEWTON, Chicago, Ill. Filed May 31, 1923. Serial No. 6,364. Term of patent 7 years.

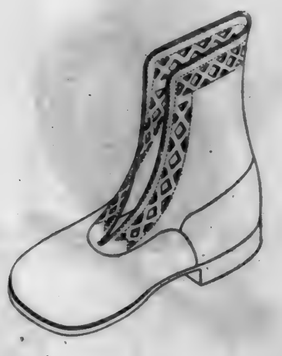


The ornamental design for a plate or similar article, as shown.

67,045. RADIATOR-CAP ORNAMENT. JOHN R. OSBERG, Buffalo, N. Y. Filed Jan. 2, 1925. Serial No. 11,850. Term of patent 7 years.

The ornamental design for a radiator cap ornament, as shown.

67,046. SOUND AMPLIFIER. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall. Filed June 19, 1924. Serial No. 9,909. Term of patent 14 years.



The ornamental design for a sound amplifier as shown.

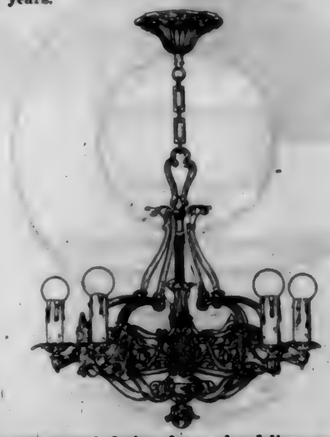
67,047. SOUND AMPLIFIER. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall. Filed June 19. 1924. Serial No. 9,910. Term of patent 14 years.

The ornamental design for a sound amplifier as shown.

67,048. SHOE. ABRAHAM POSNER, Brooklyn, N. Y. Filed June 28, 1924. Serial No. 9,998. Term of patent 3½ years.

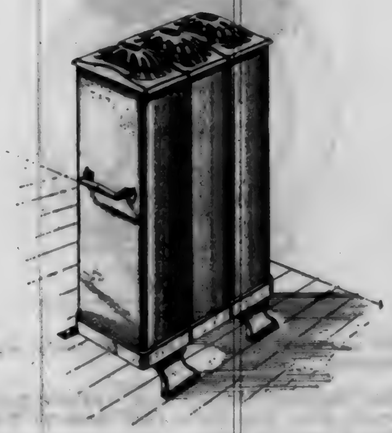
The ornamental design for a shoe, as shown.

67,049. CAP. DAVID ROTHENBERG, Brooklyn, N. Y. Filed Feb. 20, 1925. Serial No. 12,435. Term of patent 14 years.



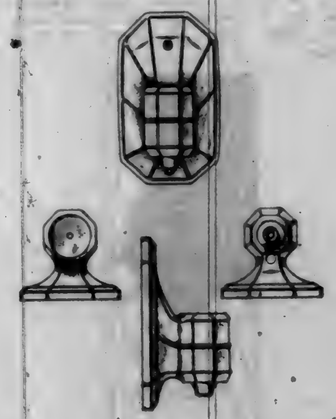
The ornamental design for a cap, as shown.

67,050. LIGHTING FIXTURE BRACKET. ISIDOR ROSENBLATT, New York, N. Y. Filed Feb. 12, 1925 Serial No. 12,355. Term of patent 3½ years.



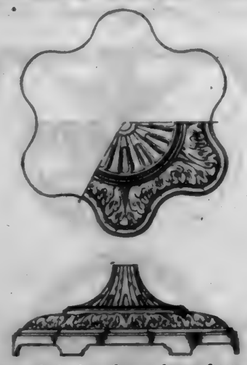
The ornamental design for a lighting fixture bracket, or an article of similar nature, as shown.

67,051. CHANDELIER OR ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, New York, N. Y. Filed Feb. 18, 1925. Serial No. 12,414. Term of patent 3½ years.



The ornamental design for a chandelier, or article of similar nature as shown.

67,052. ELECTRIC-HEATER CASING. JOSEPH SCHECHFELD, Alameda, Calif., assignor to The Magnavox Company, San Francisco, Calif., a Corporation of Arizona. Filed Feb. 18, 1925. Serial No. 12,415. Term of patent 14 years.

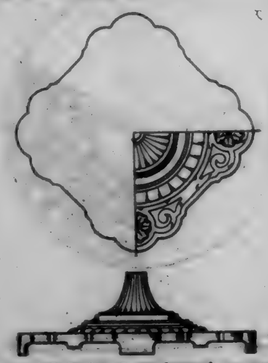


The ornamental design for an electric heater casing, as shown.

67,053. LIGHTING FIXTURE. ROY W. SCHWEIKER, Lansdale, Pa., assignor to Franklin Pottery, Lansdale, Pa., a Corporation of Delaware. Filed Feb. 3, 1925. Serial No. 12,246. Term of patent 14 years.

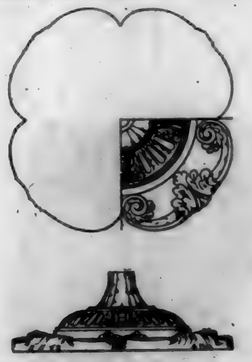
The ornamental design for a lighting fixture, as shown.

67,054. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 3, 1925. Serial No. 11,879. Term of patent 3½ years.



The ornamental design for a lamp base as shown.

67,055. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 3, 1925. Serial No. 11,880. Term of patent 3½ years.



The ornamental design for a lamp base as shown.

67,056. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 3, 1925. Serial No. 11,881. Term of patent 3½ years.

The ornamental design for a lamp base as shown.

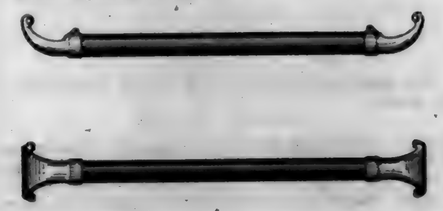
67,057. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 3, 1925. Serial No. 11,882. Term of patent 3½ years.

The ornamental design for a lamp base as shown.

67,058. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 3, 1925. Serial No. 11,883. Term of patent 3½ years.

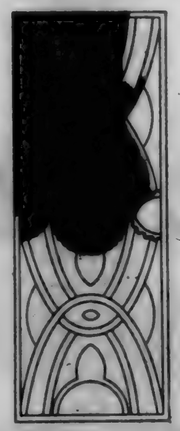
The ornamental design for a lamp base as shown.

67,059. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Jan. 3, 1925. Serial No. 11,884. Term of patent 3½ years.



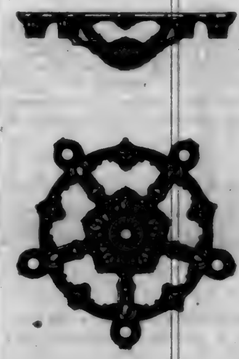
The ornamental design for a lamp base as shown.

67,060. PLATE OR SIMILAR ARTICLE. FREDERICK WILLIAM STARK, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Oct. 2, 1924. Serial No. 10,944. Term of patent 7 years.



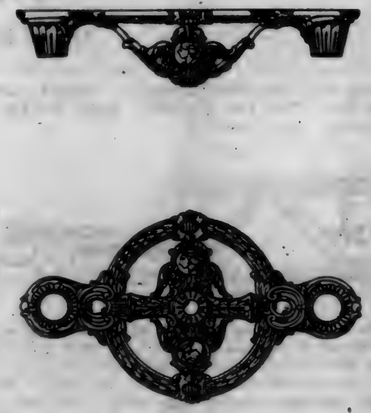
The ornamental design for a plate or similar article, substantially as shown.

67,061. BUMPER IMPACT BAR. HUSTON TAYLOR, Detroit, Mich. Filed Jan. 6, 1925. Serial No. 11,939. Term of patent 14 years.



The ornamental design for a bumper impact bar, substantially as shown.

67,062. LACE. EDWIN D. TRAGUE, Brooklyn, N. Y., assignor to North American Lace Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 14, 1925. Serial No. 12,879. Term of patent 3½ years.

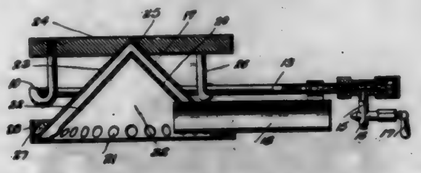


The ornamental design for lace, substantially as shown.

67,063. FIVE-LIGHT BODY HOLDER FOR A CHANDELIER. JACOB SCHAFFER, New York, N. Y., assignor to Star Chandelier Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 6, 1924. Serial No. 11,608. Term of patent 3½ years.

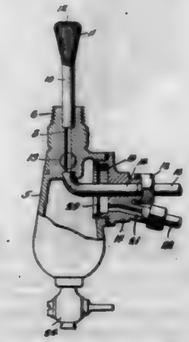
The ornamental design for a five light body holder for a chandelier as shown.

67,064. TWO-LIGHT BODY HOLDER FOR A CHANDELIER. JACOB SCHAFFER, New York, N. Y., assignor to Star Chandelier Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 6, 1924. Serial No. 11,609. Term of patent 3½ years.



The ornamental design for a two light body holder for a chandelier as shown.

PATENTS



GRANTED APRIL 14, 1925.

1,533,081. OIL BURNER. AUBREY A. ADCOCK, Kansas City, Mo. Filed Dec. 13, 1923. Serial No. 680,382. 3 Claims. (Cl. 158—65.)

1. An oil burner comprising a base pan, a double walled cone secured to the base pan, the inner wall of the cone having perforations near the base and the outer cone having perforations from the base to the apex, a mixing chamber extending through both walls of the cone, and means for discharging a hydrocarbon into the mixing chamber.

1,533,082. GASOLINE BUI-B. ELMER A. ALIG, St. Joseph, Mo. Filed Dec. 4, 1924. Serial No. 753,806. 1 Claim. (Cl. 158—46.5.)

In a device of the character described, a hollow body portion having a solid upper extremity formed with parallel bores, the upper portion of the solid portion being threaded to permit the body portion to be positioned in an opening in the bottom of a tank, a feed pipe extending into the hollow body portion and having one end thereof communicating with one of the bores, the opposite bore establishing communication between the tank and hollow body portion, a pipe extending into the body portion to carry off fluid therefrom, and a pipe extending into the first mentioned bore and terminating at a point in spaced relation with the upper end of the body portion.

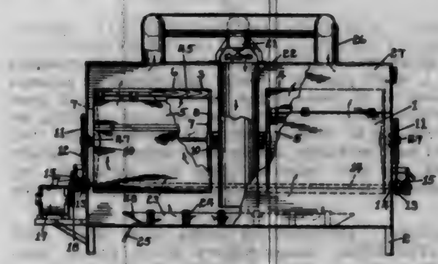
1,533,083. METHOD AND APPARATUS FOR SALVAGING ARTILLERY AMMUNITION. GUSTAVE ALLISON, Perth Amboy, N. J., assignor to Columbia Salvage Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1924. Serial No. 754,591. 7 Claims. (Cl. 86—1.)

7. An apparatus for salvaging explosive charges contained in small fabric bags, comprising a hopper to receive said bags, a rotary cutter to cut open the bags, means to continuously deliver the bags from the hopper to the cutter, a screen adapted to separate the opened bags from the powder, means to continuously deliver the opened bags and powder from the cutter to said screen,

a second screen adapted to remove the lint from the separated powder, a conveyor connecting said two screens, means to fill the finally screened powder into sacks and weigh it, and a conveyor connecting said second screen with the said sack filling means.

1,533,084. WINDOW-REGULATOR INSTALLATION. THOMAS P. ARCHER and ERNEST E. HEINTZ, Detroit, Mich., assignors to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 18, 1924. Serial No. 720,739. 6 Claims. (Cl. 20—52.2.)

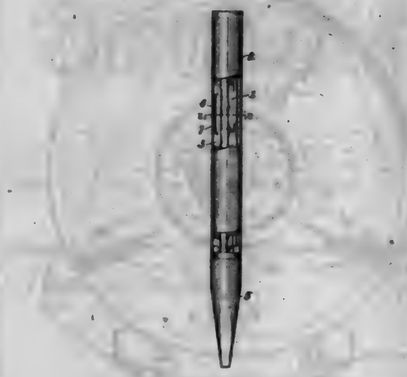
1. In a window regulator installation, the combination of a window guide provided with means which can be removed to permit the window to tip, a window lift including a lifting lever, a sliding sash guided in the guide and provided with a track along which the lever is slidable, the said lever and track being connected together so that they are locked against disassembly when the window is in a vertical position but permits disassembly at all points where the window can be freely tilted.



1,533,085. ADJUSTABLE PLASTIC-TAMPING MACHINE. JAMES L. ARNETT, Mannington, W. Va. Filed Mar. 23, 1923. Serial No. 627,196. 7 Claims. (Cl. 94—48.)

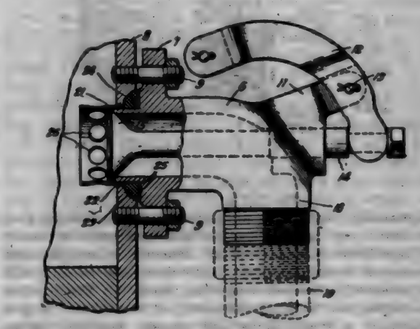
1. In a machine of the class described, the combination of a wheeled frame, said frame including vertically disposed side frames, laterally extensible transverse shaft sections, laterally extensible brace members, a roller comprising any desired number of roller sections affixed

to each other end to end, means for simultaneously rotating the roller and driving one of the wheels of the machine forward, and edging tools carried by and vertically adjustable on the side frames.



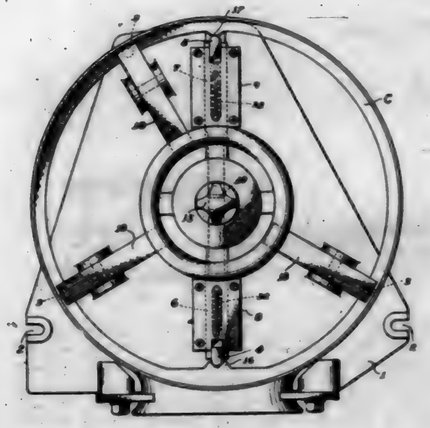
1,533,086. LAUNDRY DRIER. BERT C. BAKER, Prairie Depot, Ohio, assignor of one-third to Harry Williams, one-sixth to Willis C. Kinsley, and one-sixth to William E. Orthwein, all of Toledo, Ohio. Filed July 24, 1924. Serial No. 727,863. 4 Claims. (Cl. 34—5.)

1. In a laundry drying machine, a drum, a case for containing and rotatably supporting the drum, a blower for causing air to circulate through the drum, a deflecting plate for deflecting the air towards the drum to cause the air to circulate through all parts of the drum, electrical heat elements located on the deflecting plate for heating the air as it is being deflected by the deflecting plate.



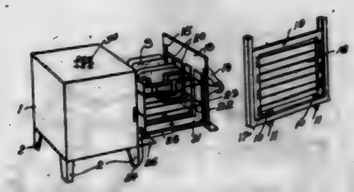
1,533,087. MAGAZINE PENCIL. GERALD L. BASSETT, Toledo, Ohio, assignor to The Conklin Pen Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 26, 1923. Serial No. 627,555. 2 Claims. (Cl. 120—9.)

1. In a pencil of the class described, a longitudinally fluted tube, a barrel mounted over the tube, said tube having a notch in the outer edge of one of its flutes, and a bowed spring member mounted in the notch and having its ends notched to straddle portions of the flute, the convexed side of the spring being disposed outward and



coacting with the barrel wall to firmly connect the barrel and tube to resist relative rotary and longitudinal movements thereof.

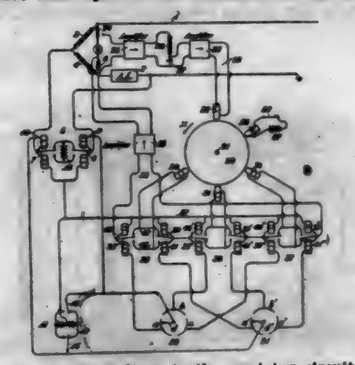
1,533,088. PROTECTIVE CAGE FOR BLOW-OFF COCKS. ERNEST BECKER, Green Bay, Wis., assignor of one-half to Lyndon F. Wilson, Chicago, Ill. Filed July 9, 1923. Serial No. 650,241. 6 Claims. (Cl. 251—156.)



1. The combination with a boiler shell, of a blow-off cock provided adjacent its inner end with an attaching flange, a cylindrical perforated cage provided with a flange adapted to be disposed between said cock flange and said boiler shell, and means for drawing said cock flange toward said shell to clamp said cage flange in position therebetween, the cylindrical body of said cage projecting through the shell into the interior of the boiler.

1,533,089. WORKHOLDING DEVICE. HARRY S. BERGEN, Toledo, Ohio. Filed Sept. 26, 1921. Serial No. 503,198. 11 Claims. (Cl. 90—59.)

1. In a device of the class described, in combination, a universally mounted member, a plurality of clamping members engagable therewith, and means for moving said universally mounted member whereby equalised force is simultaneously exerted upon each of said clamping members.

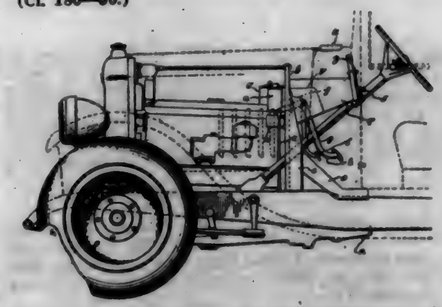


1,533,090. ELECTRIC HEATER. ERNEST W. BLACK, Spokane, Wash. Filed Feb. 15, 1924. Serial No. 693,024. 1 Claim. (Cl. 219—19.)

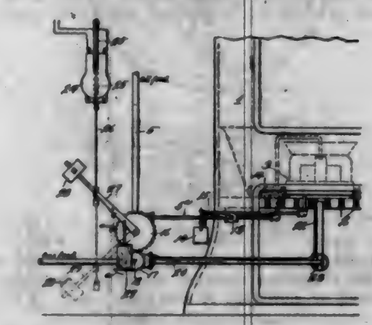
The combination with an enclosing cabinet having an open front and spaced parallel U-shaped holders therein and detachable electric heating elements in said holders, of carriers located between adjoining holders and slidable relatively thereto, co-acting means on the carriers and holders for limiting movement of the former, a grid comprising a front plate and spaced toasting frames carried thereby adapted to pass between the heating elements, said toasting frames slidably supported in the carriers and means on the frames and carriers for limiting the movement of the former.

1,533,091. DUPLEX SIGNALING SYSTEM. OTTO B. BLACKWELL, Garden City, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 14, 1919. Serial No. 337,961. 12 Claims. (Cl. 178—63.)

1. The method of avoiding the effects of unbalance on the receiving circuit of a duplex transmitting system which consists in creating a voltage having an amplitude and wave form equal to the unbalance voltage and applying the created voltage to the receiving circuit in opposition to the unbalance voltage.

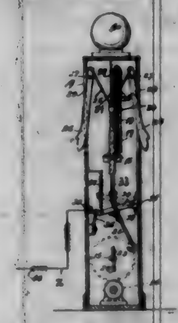


1,533,092. FISHHOOK. GEORGE D. B. BONBRIGHT, Rochester, N. Y. Filed Mar. 16, 1922. Serial No. 544,267. 1 Claim. (Cl. 43—27.)



As an article of manufacture a fish hook consisting of a single piece of material and comprising a shank having at its lower end a barbed hook and its upper portion split in two parts, one having an attaching eye at the end in alinement with the shank and the other part bent outwardly and extended substantially parallel with the first mentioned part and having its end sharpened to constitute a barbless bait impaling prong.

1,533,093. AUTOMOBILE DASH AND BODY CONSTRUCTION. JAMES SCRIPPS BOOTH, Detroit, Mich. Filed Mar. 24, 1924. Serial No. 701,566. 6 Claims. (Cl. 180—90.)

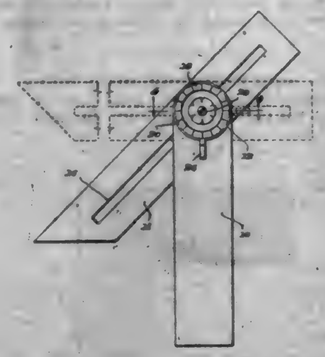


2. In automobile construction, the combination of a chassis frame, a dash supported upon the chassis frame, a tool box supported on the dash behind the same, a hood and cowl supported above the dash and having the division line between the two substantially behind the dash whereby access to the tool box is given through the hood opening, an instrument board supported to the rear of the dash, and a plate connecting the dash and instrument board and forming a tool chamber.

1,533,094. VALVE-CONTROLLED OIL BURNER. RANDOLPH J. BUEHLER, South Bend, Ind. Filed Apr. 5, 1924. Serial No. 704,529. 7 Claims. (Cl. 158—28.)

1. The combination with an oil burner, a preheating burner, an oil supply pipe for said oil burner, a gas supply pipe for said preheating burner, a valve carried by the oil supply pipe, a valve carried by the gas supply pipe, of controlling means for said valves whereby a flow of gas to the preheating burner will be supplied before a flow of oil is supplied to the oil burner, and means whereby when a maximum supply of oil is supplied to the oil burner the supply of gas to the preheating burner will be stopped.

1,533,095. AUTOMATIC SIGNALING DEVICE. JOSEPH BULEWICH, Palmer, and JOHN NOSAREWSKI, Chicopee, Mass. Filed Sept. 27, 1921. Serial No. 508,531. 4 Claims. (Cl. 177—339.)

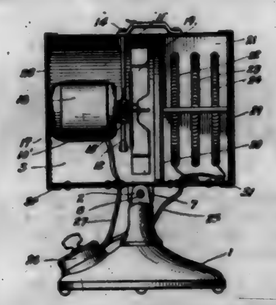


1. In a vehicle signal, a support, a signal, means mounting the signal on the support providing for movement from non-signalling position to signaling position, means for operating the signal from one position to the other including a continuously rotating member, disengageable means for connecting the rotating member with the signal, means for normally holding said means out of connection with the rotatable member, means for releasing the holding means, and means for restoring said holding means to normal position on movement of said operating means to non-signaling position.

1,533,096. RESISTANCE UNIT. FREDERIC H. SCULLIN, Yonkers, N. Y., assignor to Ward Leonard Electric Company, a Corporation of New York. Filed Aug. 24, 1922. Serial No. 583,955. 22 Claims. (Cl. 219—63.)

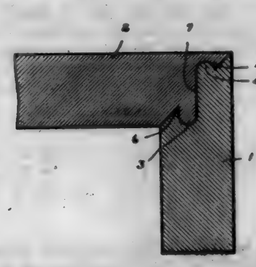
1. A resistance unit comprising a tubular support, a conductor wound thereon, and a terminal of sheet metal encircling said support and having its ends twisted together to secure the terminal in position.

1,533,097. BEVEL SQUARE. CHRISTIAN BYHRE, Halleck, Calif. Filed May 20, 1924. Serial No. 714,722. 1 Claim. (Cl. 33—102.)



A combined square and bevel including a body portion of U-shaped formation, and a movable blade arranged between the parallel sides of the body portion and having a longitudinal slot, a graduated disk arranged on one side of the body portion, a pin projecting therefrom and passed through said body portion and the slot of the blade, said pin being elongated in cross section, a second graduated disk arranged at the opposite side of the body portion and supported by said pin, whereby both of said disks and blade are moved pivotally as a unit, means carried by the body portion and co-operating with the first mentioned disk for holding the blade fixed with relation to the body portion in predetermined positions, said body portion being thickened adjacent one end and having a substantially V-shaped recess, a lever pivoted on said pin and interposed between the thickened portion of the body member and the second mentioned disk, said lever being V-shaped in cross section and normally arranged in said recess, resilient means for normally holding the lever in said recess and functioning to hold the blade fixed with the body portion in different positions between said predetermined positions, when said lever is removed from the recess and arranged to traverse the latter.

1,533,098. ELECTRIC HEATER. SAMUEL M. CARMEAN and JAMES H. CARMEAN, Kansas City, Mo. Filed Apr. 11, 1924. Serial No. 705,773. 1 Claim. (Cl. 219—42.)

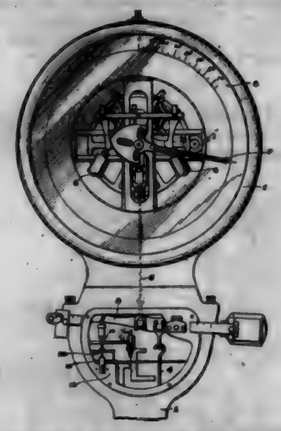


An electric heater consisting of a base having a lug, a casing formed of sheet metal and having struck out portions lying on opposite sides of the lug, means for fastening the lug and struck out portions together so

that the casing will be supported upon the base, a spider within the casing, the outer ends of the arms of which are fastened thereto, a motor secured to the hub

of the spider, a fan on the motor shaft, a stop ring in front of the fan carried by the casing, a heating element within the casing bearing against the stop ring and screens on the respective ends of the casing.

1,533,099. SQUARE-CORNER GLUE JOINT. ROBERT E. CARROLL, Duluth, Minn. Filed July 14, 1924. Serial No. 725,842. 1 Claim. (Cl. 20—92.)



A miter joint comprising two minor straight flat surfaces one at either extremity of the miter, and a larger straight flat surface diagonally disposed in respect to the first mentioned surfaces, and semi-circularly shaped surfaces intermediate of the flat straight surfaces, said joint being separable only in a direction parallel to one of the members and at right angles to the other member.

1,533,100. WATERPROOFED FIBROUS MATERIAL. ALBERT L. CLAFF, Danvers, Mass., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 25, 1920. Serial No. 419,407. 11 Claims. (Cl. 92—21.)

9. The herein described process, which comprises mixing fibrous material, an aqueous bituminous emulsion, and an alkaline leather solution, then adding a metal salt capable of reacting with such solution to precipitate a gelatinous metal hydrate, whereby said emulsion is broken down and the particles of bitumen are deposited on the fibers, and finally sheeting said fibrous mass.

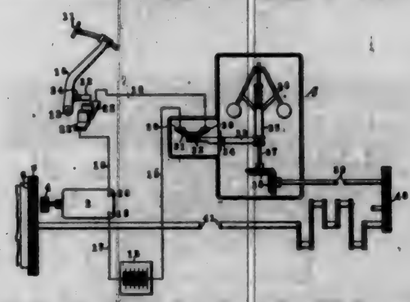
1,533,101. DASHPOT MOUNTING. SAMUEL G. CRANE, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Nov. 21, 1919. Serial No. 339,689. 4 Claims. (Cl. 265—62.)

1. In a machine of the class described, in combination, a frame, a movable element, a resilient member supported on said frame, a dash pot carried by said resilient member, a plunger connected to said movable

element and reciprocally received in said dash pot, and means for controlling auxiliary mechanism arranged to be operated by movement of said dash pot.

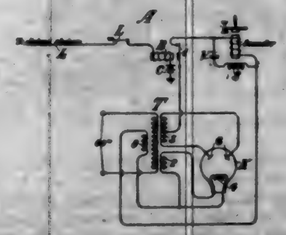
1,533,102. BOOKBINDING. ROBERT J. CROSS, Mayfield, Calif. Filed Dec. 13, 1921. Serial No. 522,195. 8 Claims. (Cl. 129—1.)

1. In a note-book of the kind described, a tablet member, a binder member hingedly connected to an edge of the tablet member, means for binding leaves to said binder member, said tablet member having a recess in one side thereof adjacent said binder member and into which said binder member is received when the leaves of the book are opened.



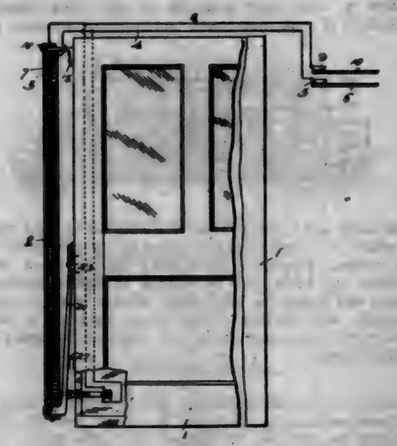
1,533,103. PUMP. EDWARD A. CULBERTSON, Wichita, Kans. Filed Aug. 27, 1923. Serial No. 659,512. 1 Claim. (Cl. 286—27.)

The combination in a pump of a hollow plunger, a sectional plunger barrel composed of a series of connected sleeves, a plurality of series of packing rings disposed between the plunger and one of the barrel



sleeves, an inner sleeve or spacer interposed between each series of packing rings, one of the barrel sleeves provided with an outwardly opening annular groove and having a series of radial openings leading from said groove to the outer surface of the plunger barrel, and a series of radial openings in the barrel sleeve adjacent to the sleeve carrying the annular groove and in combination therewith.

1,533,104. ENGINE-STARTING SYSTEM. CHARLES HALL DAVIS, Jr., Petersburg, Va. Filed July 27, 1923. Serial No. 654,150. 2 Claims. (Cl. 290—38.)



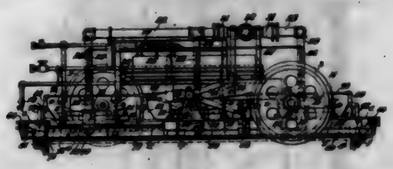
1. A starting system comprising an internal combustion engine, a member to be driven by the engine, a clutch interposed between the engine and said member, a clutch actuating lever, a starting motor, a source of electric energy, a circuit including the motor and said source of energy, a break in said circuit, a contact actuated by said clutch lever and positioned to close the circuit break when the clutch lever is moved beyond the clutch releasing position, means acting automatically upon energizing of the starting motor by the closing of the circuit to mechanically connect the starting motor with a rotatable part of the engine and crank the engine, another break in the motor circuit, and automatic switch mechanism including a contact which closes said last-named circuit break when the engine is at rest, said switch mechanism being actuated by the engine and arranged to break the motor circuit at all engine speeds substantially greater than cranking speed.

1,533,105. ELECTRIC SIGNALING. HENRY C. T. EGGERS, Minneapolis, Minn., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 5, 1920. Serial No. 349,518. 6 Claims. (Cl. 178—68.)

1. In combination, a telegraph sounder, a source of alternating current of a certain frequency, a device for rectifying the same, an output circuit therefor including said sounder, and means bridged across said sounder for rendering the same non-responsive to alternating current, said means being resonant to a frequency double that of said source.

1,533,106. DOOR-SHOE CONSTRUCTION. PARIS E. FORMAN, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Dec. 9, 1922. Serial No. 606,009. 6 Claims. (Cl. 268—8.)

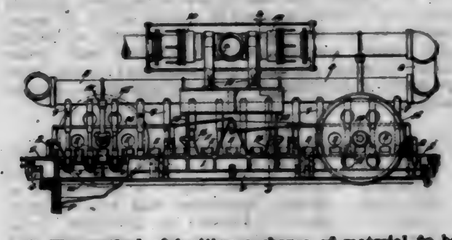
1. In a safety shoe contact device for power operated doors, the combination with an electric circuit, of means carried by the front edge of said door for controlling said circuit, and means for controlling said circuit upon movement of said first mentioned means independently of the control thereof by said first mentioned means.



1,533,107. BURNER CARBURETOR COMBINATION. JOHN GOON, Garden City, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Original application filed Nov. 6, 1919, Serial No. 336,027. Patent No. 1,377,969, dated May 10, 1921. Divided and this application filed Apr. 30, 1921. Serial No. 465,784. 10 Claims. (Cl. 123—122.)

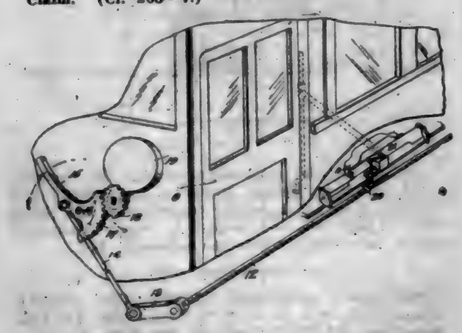
1. In an internal combustion engine, the combination of an intake passage including a carburetor and a Venturi tube, and a burner connected to the throat portion of said tube and adapted to supply combustion products for admixture with the carburetor fuel.

1,533,108. SINTERING APPARATUS. JOHN E. GREENAWALT, New York, N. Y. Filed Mar. 21, 1923. Serial No. 626,667. 6 Claims. (Cl. 266—21.)



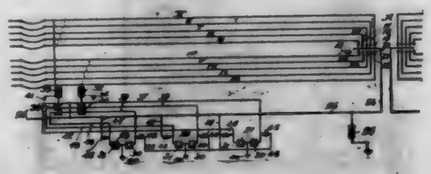
6. In combination with a vessel holding a charge to be treated, a hood adapted to be placed over the charge in spaced relation with the vessel, said hood comprising

a rectangular frame and a roof supported thereby, guide members secured to the side and end frame members in spaced relation therewith, a rectangular sealing frame disposed around the hood frame and confined between the respective members of said frame and the guides, a rock shaft mounted on the hood frame, a plurality of link and lever connections between said



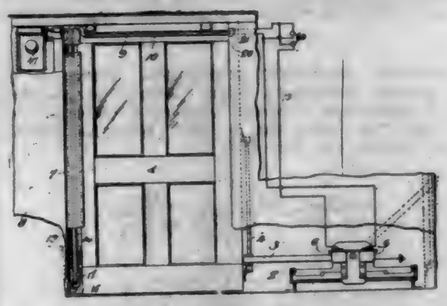
rock shaft and sealing frame for suspending said frame in place, a counter-balance mounted on the shaft for the sealing frame, a lever fixed on the rock shaft whereby the same may be rotated to raise the sealing frame, and means for holding the sealing frame in raised position, said sealing frame being adapted to move downwardly in contact with the vessel on releasing the holding means.

1,533,109. SINTERING APPARATUS. JOHN E. GREENAWALT, New York, N. Y. Filed Mar. 21, 1923. Serial No. 626,668. 7 Claims. (Cl. 266—21.)



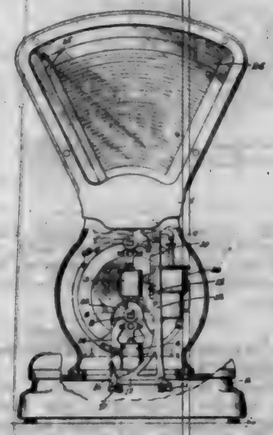
1. The method of igniting a charge of material to be sintered which consists in projecting a plurality of flame jets diagonally toward the charge and simultaneously therewith subjecting the charge to the action of an exhauster whereby the flame from the jets will be drawn against the surface of said charge.

1,533,110. MECHANICALLY-OPERATED MULTIPLE UNIT DOOR-CONTROL SYSTEM FOR CARS. FRANK HEDLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed July 25, 1919. Serial No. 313,405. 1 Claim. (Cl. 268—7.)



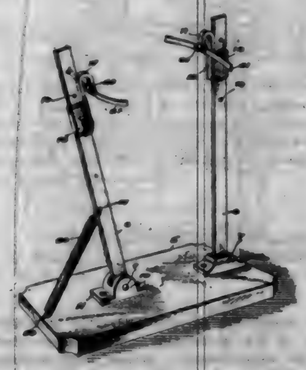
In a mechanically operated multiple unit car door control system, and in combination with the cars of a train, and a plurality of sliding doors for each car, of a rock shaft extending longitudinally the length of each car, means adjacent the doors for sliding said doors to and fro, crank arms on said shaft in operative connection with said door sliding means, a rocker arm fastened to the end of said rocker shaft, said arm pivotally carrying an operating lever, and a governor for said lever for smoothly operating said lever and rocker shaft.

1,533,111. COMBINED MULTIPLE-UNIT CAR-DOOR CONTROL SIGNALING AND ANNOUNCING SYSTEM. FRANK HEDLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed July 25, 1919. Serial No. 313,406. 5 Claims. (Cl. 105—341.)



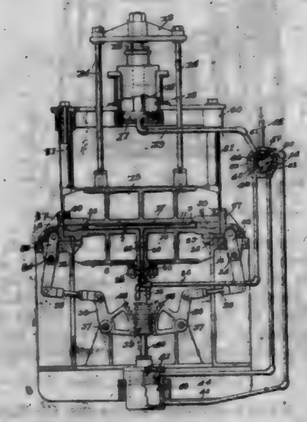
1. In an electrically controlled multiple unit car door control system, and in combination with the cars of a train and electrically controlled devices for controlling the opening and closing movements of the doors of each car of said train, a circuit for each of said devices, means located at one point in the train for selectively controlling the circuit of all of said devices, additional circuits and means for causing said devices to function independently of the main circuit.

1,533,112. CONTROL MECHANISM FOR MOTOR-ACTUATED DOORS. FRANK HEDLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed Sept. 30, 1919. Serial No. 327,578. 4 Claims. (Cl. 268—6.)



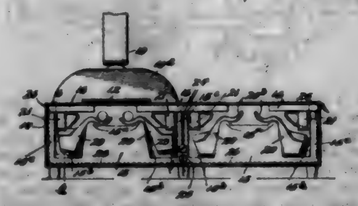
1. In a car door control apparatus, and in combination with a car door and a motor for operating it, an electric circuit for controlling the door opening movement of the motor, a pair of flexible contact members normally insulated from each other and arranged to control said circuit, said contact members connected at one end to the upper part of the door at its front edge, and a lever pivotally mounted on the front edge of the door near its bottom edge to which the other ends of said contact members are connected.

1,533,113. DOUBLE-PENDULUM SCALE. HALVOR O. HAM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 26, 1919. Serial No. 347,430. 11 Claims. (Cl. 265—36.)



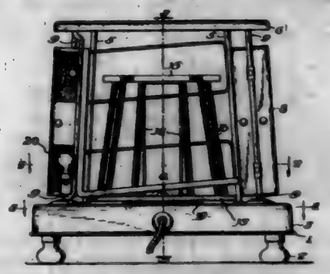
1. In a weighing scale, in combination, a lever, a pair of oppositely-swinging pendulums arranged one over the other, and operative connections from said lever to said pendulums.

1,533,114. BAG HOLDER. JOHN O. HERMAN and EUGENE H. HERMAN, Dillsburg, Pa. Filed June 9, 1924. Serial No. 718,896. 1 Claim. (Cl. 53—38.)



A bag support comprising a base, a pair of standards mounted on the base, one of the standards being pivoted, a pair of sleeves adjustable on the standards and having vertical extensions, the terminal portions of which are formed with return bends defining branches, longitudinally curved smooth bag engaging members connected intermediate their ends to said branches the terminal portions of said branches being enlarged to define shoulders adapted for engagement with the bag when the bag flatly engaged with the outer surfaces of said longitudinally curved members, and spring means to urge the pivoted standard outwardly.

1,533,115. LEATHER PRESS. EDWIN F. HULSEBUS, Milwaukee, Wis., assignor to Pfister & Vogel Leather Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 24, 1921. Serial No. 503,055. 9 Claims. (Cl. 149—23.)

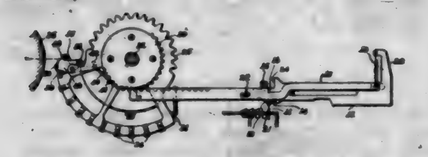


1. In a leather press, the combination of a pair of separable press members cooperating to form a cavity, means for clamping said press members together, an elastic pressing bag disposed in said cavity to act upon the leather therein, and a compressible packing lining the sides of the cavity to prevent extrusion of the bag through the joint between the press members when the bag is expanded by fluid pressure.

1,533,116. ELECTRIC IRON AND STAND. VICTOR G. JENSEN, Chicago, Ill., assignor to C. H. & D. Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 8, 1923. Serial No. 673,569. 14 Claims. (Cl. 219—23.)

1. In combination with a sad iron or the like having a contact plug thereon, a heating stand therefor, a stationary contact in said stand, a movable switch member pivotally supported intermediate its ends on said stand, said member having at one end a portion adapted to contact with said plug and receive the weight of the iron when placed on the stand, whereby said member is moved about its pivotal support, said member having at its other end a part adapted to engage said stationary contact when the member is moved by the weight of the iron, the last named end of said member being weighted to cause the same to drop by gravity out of engagement with said stationary contact when the iron is removed from the stand.

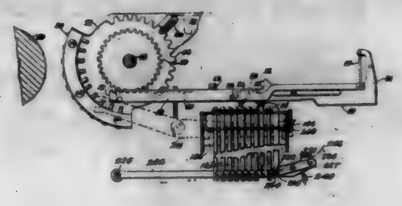
1,533,117. TOASTER. BERTRAND B. KAHN, Hamilton, Ohio, assignor to The Estate Stove Company, Hamilton, Ohio, a Corporation of Ohio. Filed June 7, 1923. Serial No. 643,987. 6 Claims. (Cl. 219—19.)



1. In a toaster, the combination of a body having means to supply heat for toasting, a plurality of shafts journaled in the body, slice-holders secured to the several shafts and adapted on rotation thereof to present opposite sides of slices to the heating means, cranks of equal length extending in the same direction from the several shafts, and a member linking the cranks together.

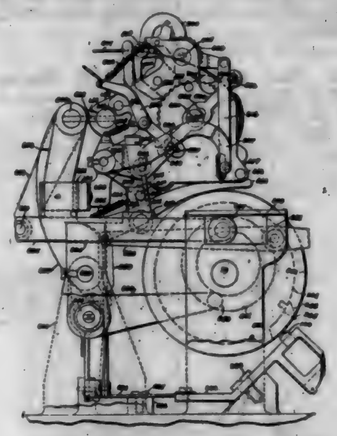
1,533,118. METAL BEARING. JAMES G. KELLY, ALBERT L. PRINGLE, and HOLMES HALL, Sedalia, Mo.; said Pringle assignor to said Kelly and Hall. Filed Aug. 20, 1920. Serial No. 404,864. 3 Claims. (Cl. 75—1.)

1. A metal bearing composed of aluminum, tin, and lead, with the aluminum constituting approximately one-sixth (⅙) of the whole, and the remainder consisting of lead and tin, each being present in substantial amounts but the tin in a predominating quantity.



1,533,119. CIPHER CUT-OUT MECHANISM. WILLIAM W. LASKER, Brooklyn, N. Y., assignor, by mesne assignments, to Powers Accounting Machine Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 24, 1917. Serial No. 208,566. 29 Claims. (Cl. 235—58.)

1. In a machine of the character described, the combination of a plurality of numeral type carriers; and a zero type carrying support carried entirely on each carrier and adapted to be modified to assume a normal or abnormal condition, and being, when in said abnormal condition, free from any influence by the carrier of the next higher order, and adapted, when in said normal condition, to be moved to printing position by a carrier of the next higher order.



1,533,120. MEANS FOR LOCKING AND ALIGNING TYPE SEGMENTS. WILLIAM W. LASKER, Brooklyn, N. Y., assignor, by mesne assignments, to Powers Accounting Machine Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Mar. 28, 1917, Serial No. 158,142. Divided and this application filed Apr. 3, 1918. Serial No. 226,496. 14 Claims. (Cl. 235—58.)

1. In an apparatus of the character described, the combination of type carriers provided with teeth; a plurality of rows of vertically movable stop pins each provided with a shoulder; pivoted shutters adapted to engage under the shoulder of any raised stop; a sliding plate adapted when actuated to move said shutters out of engagement with said shoulders and provided with a lower cam face; means controlled by said pins for

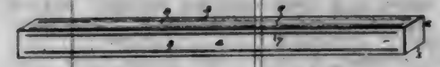
positioning the carriers; a reciprocatory locking bar adapted to be disposed between said teeth; a release arm engaging said cam face; and means for simultaneously and positively reciprocating the locking bar and the release lever.

1,533,121. NONPRINT MECHANISM OF PRINTING TABULATORS. WILLIAM W. LASKER, Brooklyn, N. Y., assignor, by mesne assignments, to Powers Accounting Machine Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Mar. 28, 1917, Serial No. 158,142. Divided and this application filed Apr. 3, 1918. Serial No. 226,500. 20 Claims. (Cl. 235—58.)

1. In an apparatus of the character described, the combination of an accounting machine provided with type and an accumulator; means for operating the accumulator to take totals or to accumulate; a carriage for pressing paper against the type; means operating said carriage; means for rendering the carriage operating means operative or inoperative; and means for controlling the carriage operating means and the accumulator operating means for causing the carriage to operate when the accumulator takes totals.

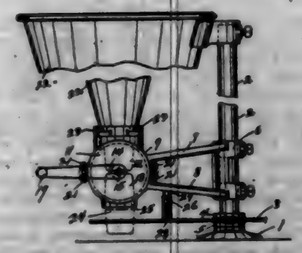
1,533,122. EDUCATIONAL GAME. CHARLES LADNER, Chicago, Ill. Filed Mar. 6, 1922. Serial No. 541,529. 4 Claims. (Cl. 35—0.)

1. An educational game device comprising a plurality of sectional cards of pictorial design the several separable sections of which are characterized by letters affixed thereto, the sections of one card being inter-



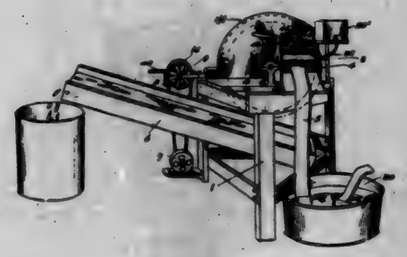
changeable with the corresponding sections respectively of another card to produce different pictorial designs and also different words.

1,533,123. TONGUE-CLEANING DEVICE. OSCAR L. LEWIS, St. Louis, Mo. Filed Sept. 19, 1921. Serial No. 501,787. 1 Claim. (Cl. 128—304.)



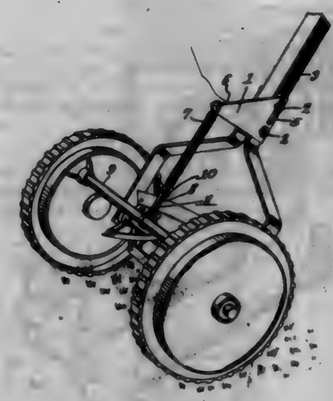
In a device of the class described, the combination with a concave scraping blade having substantially all of its scraping edge in a single plane, and a handle carrying said blade and so related thereto that when the device is in operative position the handle projects downwardly and forwardly and is located laterally of any vertical plane extending in the direction of travel of the blade and passing through the blade.

1,533,124. CUTTING STICK. JOSEPH H. LINDSAY, Wilmington, Del. Filed Sept. 17, 1921. Serial No. 501,492. 1 Claim. (Cl. 164—58.)



A cutting stick having a plurality of knife-contacting surfaces of vulcanite fiber or its equivalent adapted to be reversed and shifted to present new lines of knife-contact and to resist the crushing action of the knife when engaging said surface on a line closely adjacent a former line of cut.

1,533,125. ICE-CREAM-FILLING MACHINE. HENRY J. MCNICHOLAS, Youngstown, Ohio. Filed Sept. 28, 1923. Serial No. 665,471. 1 Claim. (Cl. 221—106.)

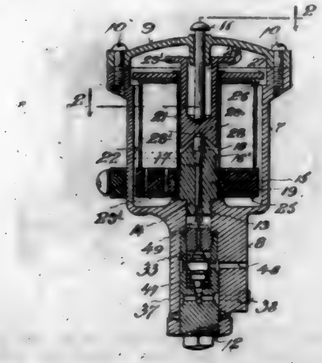


In a dispensing device, a casing, a dispensing element therein having oppositely disposed material receiving pockets, there being a direct venting opening in the dispensing element between the pockets.

1,533,126. RUBBER-TUBE-CUTTING MACHINE. CHARLES B. MARTIN, Canton, Ohio. Filed July 15, 1924. Serial No. 726,164. 6 Claims. (Cl. 164—68.)

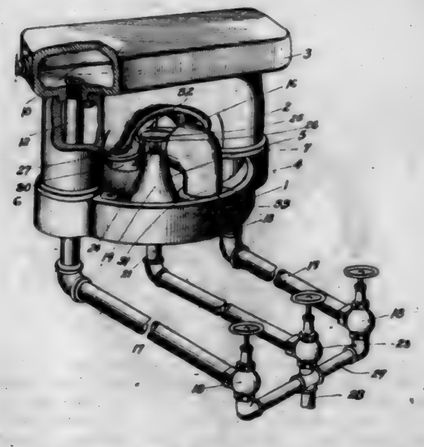
1. In a rubber tube cutting machine of the character described, a movable cutter blade cooperating with a stationary blade, means for feeding a rubber tube endwise therebetween for cutting off rubber bands, and means for clamping the tube adjacent the point of cutting adapted to tip the portion of the tube to be cut.

1,533,127. ATTACHMENT FOR A LAWN MOWER. HENRY MARBACH, Platteville, Wis. Filed June 28, 1922. Serial No. 571,401. 3 Claims. (Cl. 56—254.)



1. An attachment for a lawn mower having a cross rod and a handle, said attachment consisting of a strap for engaging the said cross rod, a spring attached to said trap, a bracket plate connected to said handle, said plate having a plurality of openings, one of said openings being in the form of a slot to permit of its being attached to various sizes of lawn mowers.

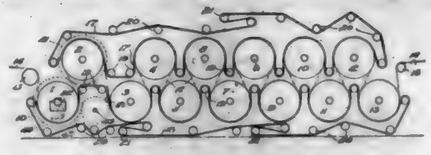
1,533,128. MAGNET VALVE. GEORGE W. MEYERS, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Nov. 30, 1920. Serial No. 427,431. 8 Claims. (Cl. 137—139.)



8. A unit control valve for controlling fluid pressure in an operating mechanism, comprising a one piece adjustable valve base provided with fluid pressure me-

dium ports intermediate the ends thereof, an adjustable valve plug in one end of said base, and a valve seat in said plug, a fixed valve seat near the other end of

said base, and a double seating pressure control piston operating to close one port upon opening of the other and vice versa.



1,533,129. OIL BURNER. EDWIN L. MILLER, Kansas City, Mo. Filed Sept. 10, 1923. Serial No. 661,797. 9 Claims. (Cl. 158—53.)

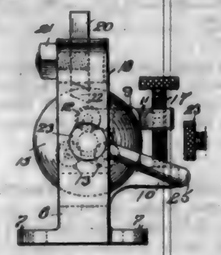
9. In a burner of the class described, a base plate having a flange rising therefrom to form an oil reservoir, a cone-shaped boss in said reservoir with a conduit opening through the apex thereof, a spreader cap mounted on said apex and spaced therefrom, a generator mounted above said cap, a heat diffusing member located between said spreader cap and generator, and a pipe for supplying oil to said generator.

1,533,130. PAPER-MACHINE DRIER. WILLIAM H. MILLSPAUGH, Sandusky, Ohio, assignor to The Paper and Textile Machinery Co., Sandusky, Ohio, a Corporation of Ohio. Filed Dec. 7, 1922. Serial No. 605,879. 22 Claims. (Cl. 34—48.)

17. An apparatus of the class described comprising a series of drying cylinders in contact with which the paper sheet is successively passed, including a power-connected driving cylinder and a plurality of ungeared anti-frictionally journalled cylinders driven from said

driving cylinder without connections therewith other than through the means employed for passing the sheet in contact with the cylinders.

1,533,131. COMBINED FLOWER AND VANITY BAG. PAUL FREDERICH WILLIAM MULLER, Hoboken, N. J. Filed Feb. 5, 1924. Serial No. 690,801. 4 Claims. (Cl. 41—12.)



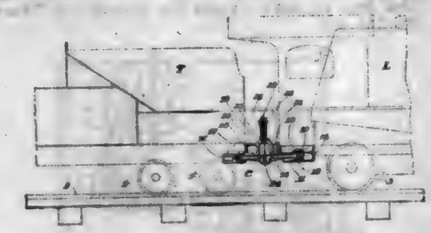
1. A vanity case simulating a flower comprising imitation flower petals secured to the case at their lower ends and loosely surrounding the upper end of said case to form a blossom having an upper, open mouth, means for closing said mouth over said case, a removable stem for allowing the use of said blossom as an ornament, a removable lid for said case, and a means for lifting said lid from said case.

1,533,132. GARDEN TOOL. WILLIAM JOHN NEDHART, South Bend, Ind. Filed July 14, 1924. Serial No. 725,905. 1 Claim. (Cl. 55—148.)

A tool of the character described comprising an elongated body formed of a bar having an end portion thereof twisted to lie in a plane extending at right angles to the plane of the major portion of the bar, said end portion being sharpened at its extremity to provide a cutting edge, said bar being bent laterally at its other end, a grip member carried by said laterally turned end portion, a second bar pivotally attached intermediate its length to the first bar at a slight distance above the upper end of said first-named end portion of the first bar, said second-named bar having an end portion thereof to provide a jaw for co-operating with the first-named end portion of the first bar, an operating handle pivotally attached at one end to the second end of the first-named bar, said first-named bar being offset laterally intermediate its length for the reception of said operating handle, a cover bar secured to said first-named bar in position to retain said operating handle between itself and said offset portion of the first-named bar and to permit movement of said operating handle in a vertical plane, said cover bar having an extension secured to the first-named bar and provided with a laterally turned portion constituting a foot piece.

1,533,133. VALVE-FACING DEVICE. WILLIAM VICTOR NICKAU, Rahway, N. J. Filed Oct. 31, 1921. Serial No. 511,712. 6 Claims. (Cl. 82—1.)

1. In a valve facing device, a frame having thereon forked extensions, a lever arm pivotally mounted in said extensions, a valve holder mounted within said frame and including a plurality of rollers between which the stem of the valve is held for axial rotation, one of said rollers being mounted on said lever arm, and means for adjusting said arm in combination with a facing tool mounted in the frame, and means to axially rotate the valve stem and valve within said roller support.



1,533,134. POURING SPOUT. PETER S. O'REILLY, Brooklyn, N. Y., assignor to National Seal Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Oct. 8, 1924. Serial No. 742,348. 5 Claims. (Cl. 221—23.)

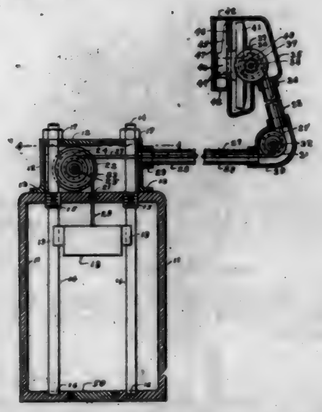
3. A pouring-spout to engage can nozzles comprising a body with a pouring lip at one end thereof and a pair of spring clamping jaws and a connecting upstanding circular shoulder flange at the other end adapted to partially surround said nozzle in a surface-to-surface contact and lock said spout thereto, said lip and jaws and shoulder flange lying substantially in the same plane.

1,533,135. COUPLER FOR LOCOMOTIVES AND TENDERS. LONNIE E. OSBORNE and NATHAN M. LOWER, Bellevue, Pa., assignors to Franklin Railway Supply Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 28, 1924. Serial No. 702,529. 8 Claims. (Cl. 105—75.)

1. The combination of a locomotive and its tender, a draw bar connected at its opposite ends to said locomotive and tender, and means on said tender exerting an upward pull on the end of the draw bar connected

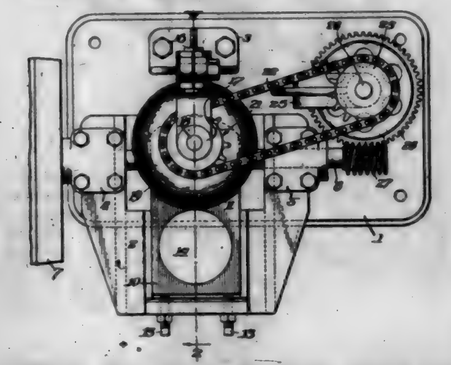
to the locomotive whereby to lift the last named end for transferring a portion of the weight of the locomotive upon the truck of the tender.

1,533,136. HOLDER. FRANK M. PHELPS, Usk, Wash. Filed May 12, 1924. Serial No. 712,621. 3 Claims. (Cl. 248—39.)



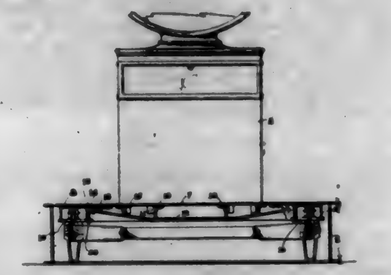
1. The combination with a suction cup having a head and annular bearing groove, of a resilient ring swiveled in the groove, a foldable link hinged to the ring, and an adjustable supporting yoke pivotally connected with said link.

1,533,137. HYDRAULIC GATE. LOUIS J. POSPISIL, Spokane, Wash. Filed May 12, 1921. Serial No. 468,898. 18 Claims. (Cl. 61—25.)



1. A hydraulic gate comprising a plurality of articulated sections in normally spaced relation to each other, and packing means disposed exteriorly of said sections and closing the spaces between said sections irrespective of the folding or un-folding or other relation of said sections with respect to each other.

1,533,138. LIQUID-LEVEL INDICATOR. WILLIAM SOKOLOF and SAMUEL PRESTON, Brooklyn, N. Y. Filed Dec. 12, 1921. Serial No. 521,830. 2 Claims. (Cl. 73—82.)

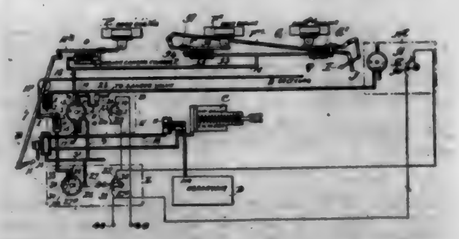


1. In a mechanism for indicating at the front of an automobile the volume of gasoline in a tank situated at the rear of an automobile a float, a flexible means for suspending the float within the tank, a primary drum for winding said means thereon and, a main spring for actuating said drum situated above the float, an index at the front of the automobile, a secondary drum operatively connected to the index and situated at the front of the automobile, a flexible means for transmitting the motion from the primary drum to the secondary drum during the rising of the float and an auxiliary spring connected to the secondary drum to act in opposition to the main spring and to take up the slack of the transmitting means when the same is unwound during the falling of the float.

1,533,139. MACHINE FOR TRIMMING RUBBER HEELS. EDWARD D. PUTT and WILLIAM C. STEVENS, Akron, Ohio, assignors, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 23, 1919, Serial No. 524,293. Renewed Dec. 22, 1921. 17 Claims. (Cl. 164—61.)

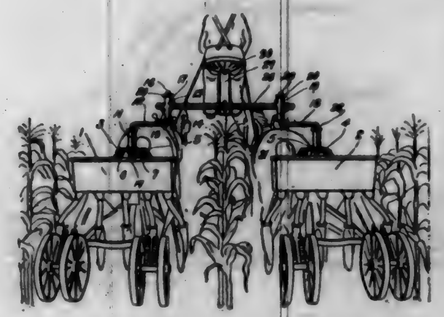
10. In a machine for trimming rubber heels or similar articles, a knife, a rotatably mounted shield over the knife, a work support in front of said shield and means located on said work support to facilitate shifting of the article to present its entire outer surface to the shield.

1,533,140. PLATFORM CONSTRUCTION. ORWELL C. REEVES, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed July 22, 1920. Serial No. 398,142. 6 Claims. (Cl. 265—71.)



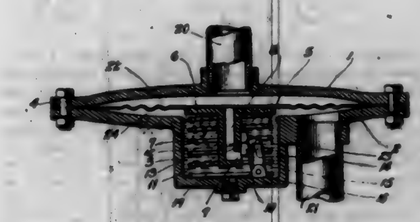
1. A scale platform comprising, in combination, a plate having downwardly-opening channel members secured to and extending along the lower face thereof, and link-supported cross bars bridging the openings in said channel bar.

1,533,141. FLOOR AND CEILING PLATE. EDWARD L. RIDLER, St. Paul, Minn. Filed Mar. 14, 1922. Serial No. 543,809. 2 Claims. (Cl. 126—317.)



1. A plate divided segmentally and including a sleeve and a dished flange thereon, said sleeve being grooved circumferentially and cupped at one end thereof by said flange, the segments of the plate being designed to be assembled around a pipe, and a flexible retaining member adapted to be coupled at its ends around the sleeve and within said groove for yieldingly, slidably gripping the plate segments in assembled relation upon said pipe.

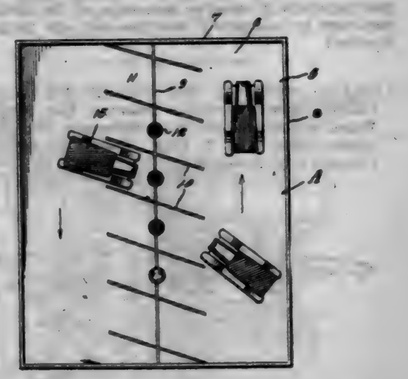
1,533,142. SAFETY CONTROL MECHANISM FOR CARS. HAROLD ROWNTREE, Pass Christian, Miss., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed July 9, 1921. Serial No. 483,410. 16 Claims. (Cl. 303—6.)



1. In a car operating system, the combination with normal car operation devices, of emergency means for controlling said normal car operation devices, and means controlled by a car attendant for rendering said emergency controlling means inoperative.

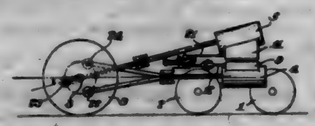
1,533,143. RIDING ATTACHMENT FOR GRAIN DRILLS. CHARLES F. RYBA, Beardsley, Kans. Filed Mar. 27, 1924. Serial No. 702,271. 1 Claim. (Cl. 111—59.)

In combination with a pair of grain drills, a bracket on each of the grain drills provided with a socket, perch arms, each having an end located in one of said sockets, sleeves movably mounted on the opposite ends of said arms, a perch bar fixed to said sleeves and connecting the grain drills in spaced relation, and a driver's seat fixed on said perch bar, one of the perch arms having non-rotatable connection with its socket, the other arms and said sleeves being rotatably mounted.



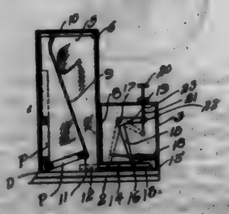
1,533,144. NONRETURN VALVE. RALPH E. SCHUBTS, Kansas City, Mo. Original application filed Dec. 20, 1918, Serial No. 267,614. Divided and this application filed Sept. 21, 1923. Serial No. 664,014. 9 Claims. (Cl. 50—23.)

1. A non-return valve comprising a casing, a diaphragm dividing the casing into an inlet chamber and an outlet chamber, a slide valve mechanism for communicating the two chambers upon preponderating pressure in the inlet chamber and closing off communication upon the preponderating pressure in the outlet chamber.



1,533,145. PUZZLE. WILLIAM B. SMITH, Fond du Lac, Wis. Filed June 27, 1924. Serial No. 722,769. 2 Claims. (Cl. 273—115.)

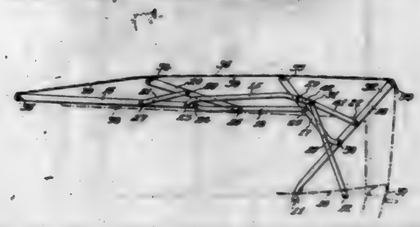
1. A game comprising a base including a bottom wall having its upper face formed to represent an automobile parking area on a city street divided into individual parking spaces, a plurality of toy vehicles having ground



wheels arranged to travel over the bottom wall, and end and side walls carried by the bottom wall for limiting the movement of the toy vehicles on said bottom wall.

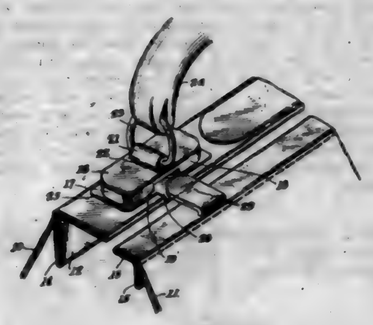
1,533,146. LOCOMOTIVE WITH THREE CYLINDERS. JOHANN STUMPF, Berlin, Germany. Filed Apr. 17, 1916. Serial No. 91,792. 1 Claim. (Cl. 121—116.)

In a locomotive, the combination of three cylinders, two of which are mounted, one on each side of the locomotive, in a common plane, said side cylinders having cranks placed at substantially 120° apart, a middle cylinder mounted higher than the side cylinders, having its axis at an angle of inclination to said common plane and having its crank dislocated from its normal 120° position at approximately the same angle, said cylinders provided with suitable distribution valves, and each side-cylinder-valve with a suitable valve gear, and means for communicating to the middle cylinder valve a resultant of movements of substantially the same kind and amount, derived from the side cylinder valve gear actuations, in order to secure proper relative distribution to said three cylinders.



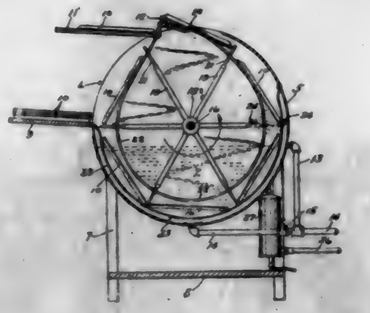
1,533,147. DISPENSING MACHINE. SVERRE R. SVENDSGAARD, Tekoa, Wash. Filed June 14, 1923. Serial No. 645,248. 1 Claim. (Cl. 211—7.)

In a dispensing cabinet the combination with a partition terminating below the top of the cabinet, of a packet hanger comprising a plate having a bottom supporting



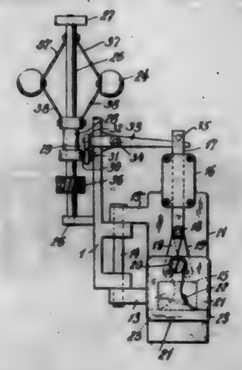
flange, and a suspending hook at the upper end of said plate projecting at right angles to the flange for pivotal support on the partition, said hook being offset from the plate to insure a swinging movement of the plate when the latter is unsupported from the rear, for the purpose described.

1,533,148. FOLDING TOP FRAME FOR AUTOMOBILES. EDWIN SHEPPARD TOMKINS, Hay, New South Wales, and ALEXANDER MAIR, Melbourne, Victoria, Australia. Filed Aug. 2, 1924. Serial No. 729,856. 8 Claims. (Cl. 296—116.)



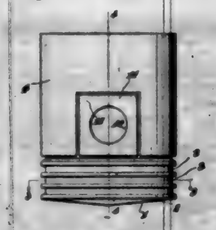
1. In a folding car top frame of the character described, the combination with main stanchions pivotally anchored to the body of the car, hanger stanchions pivotally carried by the main stanchions, and stretcher members pivotally carried by the hanger stanchions, of cantilevers fulcrumed on the hanger stanchions, their forward arms pivotally supporting the stretcher members, and their rearward arms link connected to the body of the car.

1,533,149. BAG-FRAME REGISTERING AND HANDLE CONNECTION. HUGO TUECKMANTEL, Newark, N. J., assignor to The T. & L. Co. Inc., Newark, N. J., a Corporation of New Jersey. Filed Apr. 5, 1923. Serial No. 629,990. 4 Claims. (Cl. 190—57.)



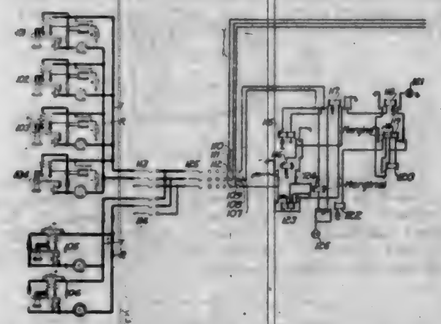
2. A bag handle connection comprising a recessed casing having a raised transverse ridge open at its ends, a handle carried ring pivotally mounted in said ridge, a base plate extending marginally beyond said casing, prongs integral with the ends of said casing passing through said base plate and bag frame on which it is mounted, said prongs upon being bent acting to prevent separation, an extension on said plate bent re-entrantly to enfold the edge of the bag frame and a means on one of the frame members of said bag adapted to frictionally engage the recess in said casing for holding the frame members of said bag in register.

1,533,150. MACHINE FOR WASHING SERVING TRAYS. CARL J. ULRICH, Lake Crystal, and WYMAN A. MILLER, Minneapolis, Minn. Filed June 13, 1921. Serial No. 477,103. 4 Claims. (Cl. 141—9.)



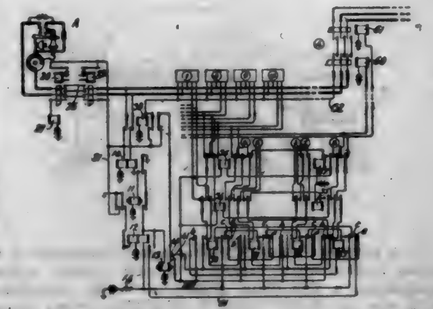
1. The combination with a water-containing receptacle, of inner and outer laterally spaced pairs of tray guides in the receptacle, and a reel working at one side of the guides and having means working between the inner pair of guides, said means being arranged to move successive trays on the outer pair of guides through the water and thereabove, said inner and outer guides being arranged to cause the trays to move under the action of gravity from the outer pair of guides onto the inner pair of guides into draining position.

1,533,151. RADIALLY-OPENING FIRE SHUTTER. FRANK H. VICK, New York, N. Y., assignor to Nicholas Power Company, Inc., New York, N. Y., a Corporation of Delaware. Filed May 25, 1921. Serial No. 472,465. 4 Claims. (Cl. 88—19.4.)



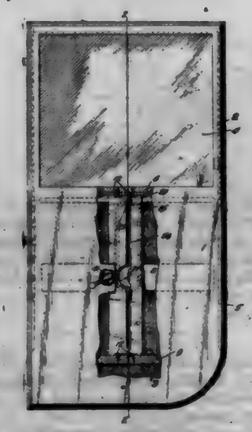
1. In a picture projector having a projecting light and a film-driving mechanism, a safety shutter comprising a pair of shutter blades pivoted above the projection aperture and adapted to normally hang under the influence of gravity alone in depending position and in such relation as to completely cover said aperture, a centrifugally actuated governor operated by the film-moving mechanism, said governor having a slidable portion assuming various petitions depending upon the speed of operation and means for swinging said shutter blades in opposite directions to uncover said aperture by reason of the movement of said slidable member.

1,533,152. PISTON. ALBERT H. WADELL, Newark, N. J. Filed Mar. 7, 1921. Serial No. 450,235. 8 Claims. (Cl. 74—108.)



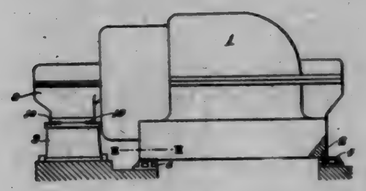
1. A piston of the class described including a head comprising an end portion and wall portion, an expansible skirt portion, rib members integrally connecting the skirt portion with the end portion of the head and a steel band disposed between the ribs and the wall portion of the head.

1,533,153. TELEPHONE-EXCHANGE SYSTEM. SAMUEL B. WILLIAMS, Jr., Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 17, 1920. Serial No. 404,079. 1 Claim. (Cl. 179—17.)



In a telephone system, a party line, a plurality of substations connected thereto, an impulse transmitter for each said substation, means comprising automatic switches responsive to impulses transmitted by said substation impulse transmitters for extending said line, a ring-back device accessible to said switches, said ring-back device comprising signaling means, relays responsive to impulses transmitted by said substation transmitters for selectively controlling said signaling means to signal the calling and the called parties on said party line, an interrupter comprising a pair of relays successively energized in all possible combinations for alternately connecting said signaling means during one period to signal the called party and during another period to signal the calling party, a relay responsive to a line condition created by the act of the calling party in replacing his receiver on its hook for causing said interrupter to operate, a relay responsive to a line condition created by the act of the called or the calling party in subsequently removing his receiver from its hook for cutting off said signaling means, a relay responsive to said last-named relay for thereupon locking said interrupter out of service until said ring-back device is released, and releasing means responsive to a line condition created by the act of both the calling and called parties in replacing their receivers on their hooks for restoring said ring-back device to normal and for releasing said automatic switches.

1,533,154. CIRCUIT-CONTROLLING APPARATUS. SAMUEL B. WILLIAMS, Jr., Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 16, 1920. Serial No. 431,603. 4 Claims. (Cl. 179—18.)



1. In a telephone system, an impulse sender, a selector comprising a series of counting relays, a number of selectable lines, means for successively energizing the counting relays a plurality of times, and a plurality of transfer relays cooperating with said counting relays for selecting the line corresponding to the number of impulses transmitted by said sender.

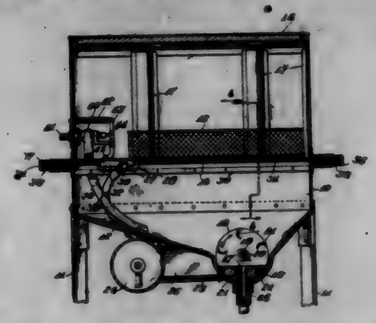
1,533,155. WINDOW-OPERATING MECHANISM. ANTHONY ZITTERBART, Buffalo, N. Y., assignor to Matthias Strodel, Buffalo, N. Y. Filed Feb. 6, 1922. Serial No. 534,434. 5 Claims. (Cl. 268—4.)

1. In a window operating device, the combination with a window attached member, of means for imparting movement thereto including a gear wheel, a pair of parallel racks connected to said window attached member operated by said gear wheel and arranged to successively engage said gear wheel, so as to be moved endwise and be reversed by said gear wheel and means for locking said racks in any position to which they may be moved.

1,533,156. STEAM TURBINE. KARL BAUMANN, Urmston, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 10, 1922. Serial No. 542,785. 5 Claims. (Cl. 253—39.)

1. A structure for maintaining correct alignment of a steam turbine when expansion of the casing occurs comprising, a sole plate having a dowel connection with one end of the casing in a central vertical plane thereof, guides carried by the sole-plate or foundation at the other end of the turbine and adapted to engage with suitable surfaces formed on the turbine casing or frame equidistant from the central vertical plane on each side thereof and equally inclined thereto, the inclination of each of said surfaces being in the direction of the resultant of the laterally and longitudinally acting expansive forces.

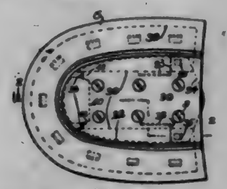
1,533,157. MODULATING METHOD AND APPARATUS. WILLIAM E. BEATTY, Bayside, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1919. Serial No. 344,039. 9 Claims. (Cl. 179—171.)



1. The method of variably controlling a current in accordance with signal waves which comprises causing said current to pass as an electron discharge from a cathode normally electronically inactive and simultaneously maintaining the electron emissivity of said cathode substantially proportional to the amplitude of said signal wave.

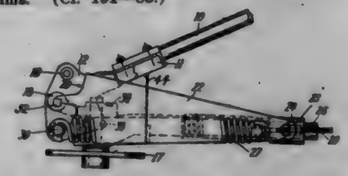
1,533,158. HYDROCARBON EMULSION AND PROCESS OF MAKING SAME. CHARLES B. BELKNAP, Detroit, Mich. Filed Oct. 6, 1920. Serial No. 415,161. 6 Claims. (Cl. 44—9.)

1. A liquid combustible fuel, comprising an emulsion of hydrocarbon oil, water and an emulsifying agent, said emulsifying agent containing an oxidizing substance.



1,533,159. WASHING MACHINE. GEORGE S. BLAKESLEE, Oak Park, Ill.; George B. Blakeslee executor of said George S. Blakeslee, deceased. Filed Nov. 7, 1919. Serial No. 336,512. 15 Claims. (Cl. 141—9.)

5. A washing machine comprising means for supporting the articles to be washed, traveling means for throwing water upon such articles, a valve for controlling the supply of water to said water throwing means, said valve being normally open when said water

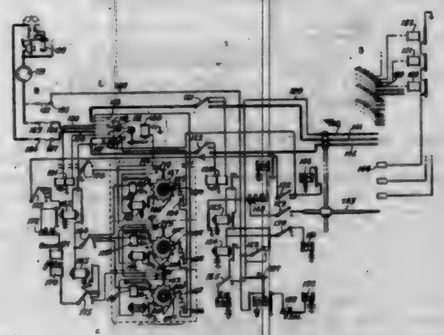


throwing means is traveling, and means actuated by the movement of said water throwing means to its inoperative position for closing said valve.

1,533,160. TWO-PART HEEL. LEON BUCKNER, New York, N. Y. Filed Sept. 17, 1921. Serial No. 501,415. 7 Claims. (Cl. 36—36.)

1. A two part heel comprising an inner heel portion attached to the shoe; a U-shaped outer heel portion of resilient material, plates carried respectively by the inner and outer heel portions, and latching means carried by said plates for latching them together for holding the two heel portions in place.

1,533,161. AUTOMATIC RESETTING TROLLEY CARRIER FOR ELECTRIC STREET CARS. ROBERT JOHN BURN, Croydon, near Sydney, New South Wales, Australia. Filed Apr. 1, 1924. Serial No. 703,357. 9 Claims. (Cl. 191—88.)

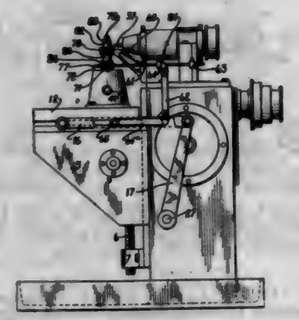


1. A trolley arm mounting comprising a horizontally rotatable carriage, a shoulder member carrying the arm and mounted on a horizontal pivot in the forward end of said carriage, striker lugs extending laterally from the shoulder member above and below said pivot respectively, a slider movable along the rear end of the carriage, a tension spring connecting said slider with the lower part of the arm shoulder, a strut member connected at one end to said slider and at the other end engageable by a check toe with an abutment situate in axial relation to the shoulder pivot, and cam faces on the fore end of the strut above and below said check toe, said cam faces in operative relation to the striker lugs on the shoulder member.

1,533,162. WRITING DEVICE. ALEXANDER CRESSE, Chicago, Ill. Filed July 28, 1923. Serial No. 653,239. Renewed Dec. 1, 1924. 7 Claims. (Cl. 120—42.)

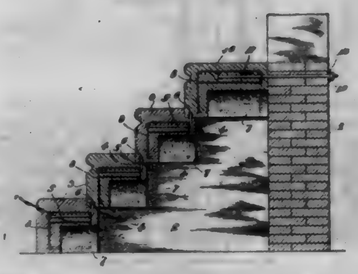
1. In a combined pencil and pen, the combination of a barrel, a double-walled ink sack therein providing an annular ink chamber closed at one end and open at its other end, pen-and-pencil head mechanism at the front end of said barrel, means in said mechanism for holding a pen, said head mechanism being provided with an ink channel from said chamber to the pen, a tube for pencil mechanism extending through the central space provided by said sack, means for collapsing said sack for charging the same with ink, said tube extending into said head mechanism, and pencil mechanism mounted in said tube for longitudinal movement therein, said pencil mechanism including means for advancing lead therein.

1,533,163. TELEPHONE-EXCHANGE SYSTEM. HENRY P. CLAUSEN, Mamaroneck, and CHARLES L. GOODRUM, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 24, 1920. Serial No. 405,771. 10 Claims. (Cl. 179—18.)



1. In a telephone exchange system, an automatic switch having trunk terminals arranged in groups, an impulse sender for operating said switch to select a desired group, and means responsive to the busy condition of all the trunks of the selected group for storing impulses.

1,533,164. COMPOSITION FOR WHITE SHOE DRESSING. ANDREW G. COLLIAS, Detroit, Mich. Filed Dec. 29, 1923. Serial No. 683,371. 3 Claims. (Cl. 134—9.)

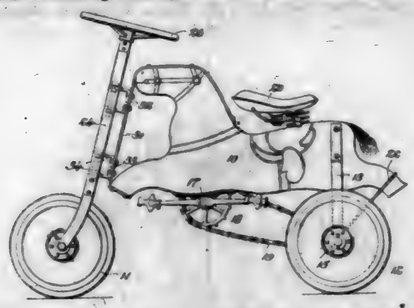


2. A composition of matter adapted as a white dressing and polish for shoes comprising oil of bitter almond from one to three drams; oil of citronella from one to three drams; stearic acid from one fourth to one ounce; light zinc oxide from twelve to twenty ounces; magnesium carbonate from twelve to twenty ounces; talcum twenty to forty ounces; carbon tetrachloride from one to three pints; beeswax from one to three ounces; gasoline from three to five quarts, all thoroughly mixed together in a liquid form.

1,533,165. METHOD OF INDEXING GEARS. MILTON O. CROSS, Detroit, Mich. Original application filed Apr. 5, 1918, Serial No. 226,829. Divided and this application filed July 17, 1922. Serial No. 575,452. 6 Claims. (Cl. 29—159.)

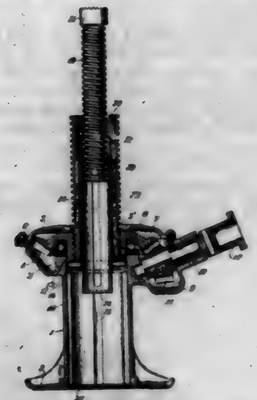
1. The method of indexing a gear having formed teeth consisting in first turning the gear to approximately index the same, releasing the gear to turn in either direction, and then causing engagement of the gear teeth with a part having teeth complemental thereto whereby the gear is fixedly indexed by formed teeth.

1,533,166. CONCRETE STEP. HARRY A. DALY, Philadelphia, Pa. Filed June 14, 1923. Serial No. 645,247. 4 Claims. (Cl. 72—96.)



1. A stoop including concrete steps, the meeting corner of one step being provided with holes, the meeting corner of the other step being provided with a shoulder for receiving the corner of the first step, and vertical bars projecting from the shoulders and adapted to take into the holes of the first step.

1,533,167. TOY VEHICLE. WILLIAM F. DATHAN, Glencoe, Ill. Filed June 4, 1924. Serial No. 717,836. 8 Claims. (Cl. 208—42.)

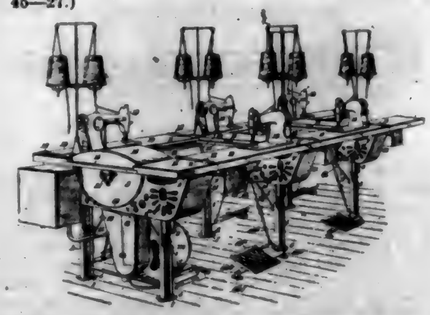


1. In a toy vehicle, a body portion, arms secured at their upper ends to said body portion and extending downwardly from the latter, a wheel shaft carried by

said arms, propelling mechanism for said vehicle including a sprocket on said shaft, a sprocket on the body, a chain connecting said sprockets, and a combined chain

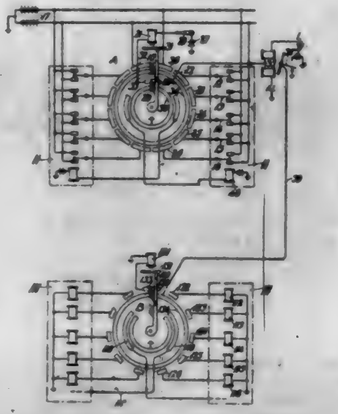
tightener and body brace consisting of a rod adjustably secured at its ends to said arms and extending diagonally upward and over a portion of said body.

1,533,168. LIFTING JACK. IRWIN E. DEARSLEY, Racine Wis., assignor to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Aug. 14, 1924. Serial No. 732,041. 7 Claims. (Cl. 254—102.)



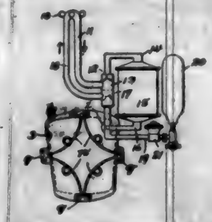
1. A lifting jack comprising a hollow standard, a rotatable driving member mounted in the upper portion of the standard, a pair of nested screws mounted in the standard and driving member, and separate connections between the standard and each screw, whereby when the driving member is continuously rotated the screws will be individually and successively elevated.

1,533,169. FLOWER-WEARING DEVICE. ROBERT D. DONOHUE, New York, N. Y. Filed Dec. 13, 1923. Serial No. 680,333. 2 Claims. (Cl. 24—6.)



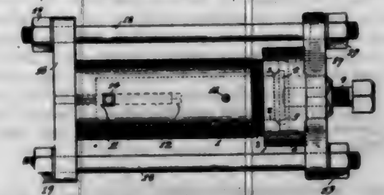
1. A flower wearing device having the combination of a body portion for backing the flower stems, a series of openings at each side of said body portion, and a wire disposed against the rear of said portion and passing, through said openings for fastening the stems to said portion.

1,533,170. POWER TABLE. OLIVER L. DOSCH, Elizabeth, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed June 6, 1917. Serial No. 173,083. 15 Claims. (Cl. 45—27.)



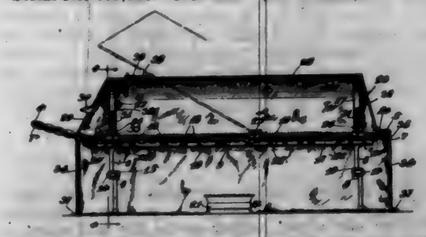
15. A power table comprising a plurality of table top supporting framework units each including a pair of legs, spacers carried by said legs and parallel side-wall members connected together by said spacers to form laterally closed housings, a power-shaft passing through said housings, and manually controlled power-transmitters mounted in said housings and connected to be driven by said shaft.

1,533,171. TELEGRAPH SYSTEM. ANDREW D. DOWD, Hoboken, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 8, 1919. Serial No. 329,195. 6 Claims. (Cl. 178—53.)



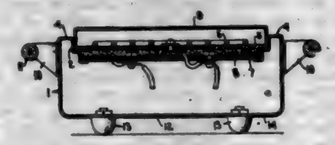
1. A printing telegraph system comprising a transmitting rotary distributor, a plurality of groups of conductive segments on said distributor, a plurality of groups of circuit controllers, one controller individual to each segment, means for impressing a signaling impulse upon each of said segments upon the operation of said circuit controllers, a receiving rotary distributor having a plurality of groups of segments, printing telegraph apparatus comprising a plurality of groups of selecting elements, means individual to each of said groups of segments on said receiving distributor and responsive to the selecting impulses transmitted through the operation of said circuit controllers as distributed by said receiving distributor, and distributor controlling means associated with each of said distributors for periodically stopping and starting them, the distributor controlling means individual to the receiving distributor being controlled by impulses received from said transmitting distributor, the distributor controlling means individual to said transmitting distributor being controlled independently of said receiving distributor.

1,533,172. BREATHING BAG FOR SELF-CONTAINED BREATHING APPARATUS. ALEXANDER BERNHARD DRÄGER, Lubeck, Germany. Filed Apr. 13, 1922. Serial No. 552,070. 6 Claims. (Cl. 128—191.)



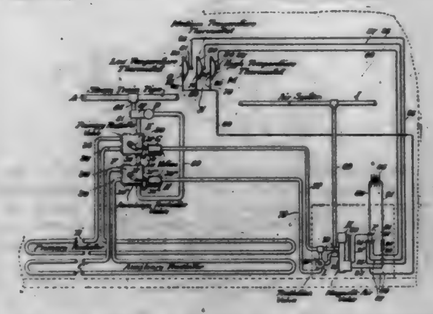
1. The combination of a breathing bag for self-contained breathing apparatus and means located exteriorly of the bag for automatically deflating the latter to expel its contents.

1,533,173. DISTILLATION APPARATUS. GUSTAV EGLOFF and HARRY P. BENNER, Independence, Kans., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Nov. 10, 1920. Serial No. 423,019. 1 Claim. (Cl. 220—3.)



A closure for an open ended tubular distilling retort having a ground closure receiving seat at one end, comprising an elongated circular plug provided with a ground surface adapted to seal the open end of the retort, a circular casing capable of surrounding said plug provided with peripheral flanges threadedly engaging the outer wall of said retort, an adjustable head screw carried by said closure cap and engaging said plug at substantially its center for clamping the plug in pressure tight engagement with the retort, an end flange at one end of the retort, a second end flange recessed to engage with said closure cap, and adjustable screw threaded stay bolts for uniting said flanges and for holding them in operative position.

1,533,174. HOT-AIR AND VAPOR BATH DEVICE. JOHN ERDOSY, Philadelphia, Pa. Filed Dec. 10, 1923. Serial No. 679,845. 5 Claims. (Cl. 4—163.)



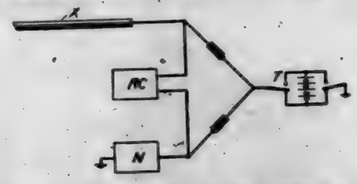
1. A bath device including a supporting frame; a bed supported by the frame; a baffle, supported by the frame, disposed under the bed; spacers between the bed and the baffle; a cover, supported by the frame, enclosing the upper part of the bed, and a casing, supported by the frame, enclosing the lower part of the bed.

1,533,175. ELECTRIC HEATING DEVICE. FRANK A. FAHRENWALD, Cleveland Heights, Ohio. Filed Apr. 6, 1922. Serial No. 550,150. 15 Claims. (Cl. 219—37.)

1. In an electric device, in combination, an electric resistance unit, an external shell disposed about said unit, supporting devices of small thermal conductivity supporting said unit from said shell, and convection provisions whereby the air currents generated by the unit may carry away all stray heat generated or conveyed inside the shell.

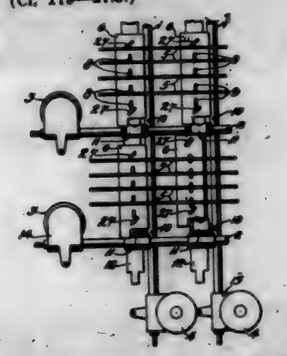
1,533,176. CAR-HEATING SYSTEM. HARRY G. GRIESINGER, Detroit, Mich., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Original application filed Sept. 9, 1918, Serial No. 253,323. Divided and this application filed May 1, 1922. Serial No. 557,534. 21 Claims. (Cl. 237—6.)

20. In a railway car heating system, the combination of a radiator comprising a primary unit, thermostatic means responsive to temperature changes in the car atmosphere for controlling the admission of heating medium to said unit, an auxiliary radiating unit subject to said thermostatic control, and means whereby the heating medium may be admitted to or shut off from the auxiliary radiating unit without affecting the thermostatic control of the primary unit.



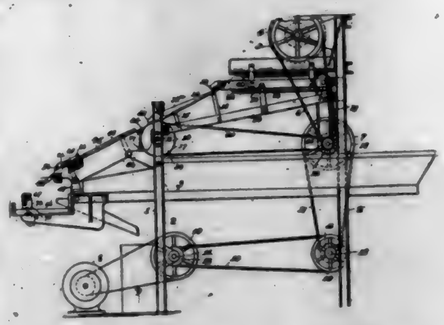
1,533,177. MULTIPLE VALVE. FRANK GENDRON, Detroit, Mich. Filed Feb. 18, 1924. Serial No. 693,541. 1 Claim. (Cl. 251—106.)

A mechanical regulating valve adapted for operation with several connecting intake pipes, comprising a valve casing having a conical valve chamber therein and having two or more intake pipes opening into the sides of said valve chamber and at right angles to the axis of said chamber, said intake openings being of the full size of the connecting intake pipes, and so spaced as to



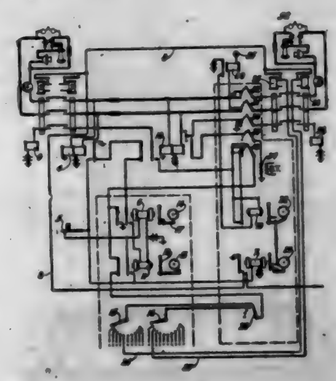
leave intervening valve wall sections between the pipe openings at least equal to the width of the pipe openings, a tapered valve plug fitting into and engaging the said conical valve casing chamber, an inner plug chamber within said valve plug and open at the bottom of said plug, means for continuing said plug valve chamber beyond the casing, two slotted valve ports through the walls of the valve plug opening into the inner plug chamber, said slotted ports being arranged parallel to the axis of said plug and having a width of opening less than half of the width of the intake pipe openings, said ports so positioned in the valve plug walls that two adjacent edges of the slotted valve ports are at the edges of the inlet pipe openings, and having the full valve ports open in the inlet opening, such as will allow for the varying or closing of either valve port without varying or closing the other port therein, and which on further rotation of the valve plug within the casing will close both ports, a valve cap atttached to said valve casing, a coil spring operating between said valve cap and the end of the valve plug for holding said valve plug firmly within the said valve chamber and a valve handle for rotating said plug valve therein.

1,533,178. ARTIFICIAL ELECTRIC LINE. JOHN J. GILBERT, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 19, 1922. Serial No. 562,064. 10 Claims. (Cl. 178—63.)



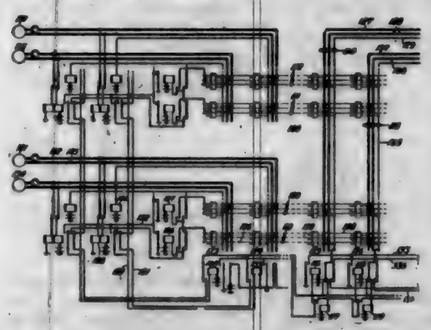
1. An electrical signaling network comprising a plurality of similar sections, each said section comprising a shunt reactive element and a resistive circuit inductively associated with the section, the effective resistance of said resistive circuits being in series relation in said network.

1,533,179. WIRE SWITCH. HAROLD W. GOFF, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 11, 1922. Serial No. 560,068. 9 Claims. (Cl. 179—27.5.)



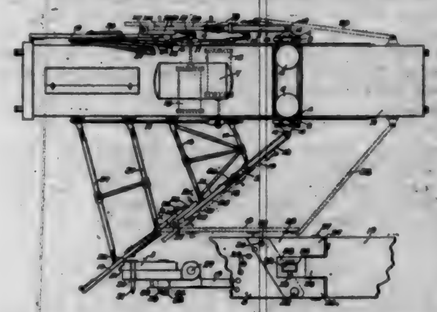
1. In a switching mechanism, a set of passive contacts, a plurality of sets of active contacts, a member common to said active contact sets for preparing them for selective operation, a plurality of members each associated with a corresponding one of said sets of active contacts for actuating the same, the means for individually moving said last-mentioned members longitudinally and laterally, effecting a wiping engagement between said passive contacts and one of said sets of active contacts.

1,533,180. MACHINE FOR COUNTING, ARRANGING, AND PACKAGING HAIRPINS OR LIKE ARTICLES. SOLOMON H. GOLDBERG, Chicago, Ill. Filed Feb. 10, 1919, Serial No. 276,000. Renewed Aug. 18, 1924. 8 Claims. (Cl. 163—8.)



1. In a machine for handling hairpins or like articles, the combination with a rotatable receiver having apertures therein adapted to receive a plurality of such articles, separate the same, and deposit them singly on a feed mechanism, of an inclined corrugated plate for automatically dividing such articles and grouping the same, means for assembling and packaging each group of articles.

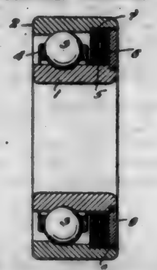
1,533,181. TELEPHONE SYSTEM. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1920. Serial No. 408,973. 6 Claims. (Cl. 179—18.)



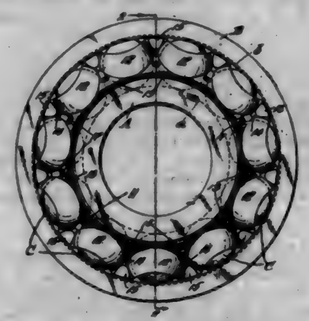
3. In a telephone system, a direction switch for marking the path of a call, comprising a wiper, propelling means for said wiper, holding means for said wiper, a circuit for said holding means controlled by said propelling means, and a circuit for said propelling means controlled directly by said holding means.

1,533,182. TELEPHONE-EXCHANGE SYSTEM. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 26, 1922. Serial No. 577,504. 35 Claims. (Cl. 179—18.)

1. The combination in a unitary switching structure of outgoing lines arranged in groups, incoming lines each arranged for connection with any one of said outgoing lines, operating members, one for each of said groups, each member serving to cause the establishment of coexisting connections between said incoming lines and the outgoing lines of the corresponding group, means operated according to numerical designations for selectively actuating the operating member corresponding to a desired group, and means for choosing an available outgoing line in a group.



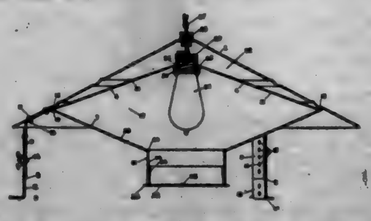
1,533,183. RAILROAD WAY CONSTRUCTION AND MAINTENANCE CAR. ALEXANDER L. GREENABAUM, Chicago, Ill., assignor to O. E. Jordan Company, East Chicago, Ind., a Corporation of Indiana. Filed Aug. 7, 1922. Serial No. 580,161. 6 Claims. (Cl. 37—105.)



1. The improvements herein described comprising a car in combination with a side wing, an outer wing and means joining the outer and side wings, said means including a hinge structure secured to the rear side of the side wing, said outer wing being thereby disposed rearwardly of the forward face of the side wing, vertically and horizontally disposed pivots, and coacting means on said wings for locking the outer wing in a fixed position with respect to the side wing.

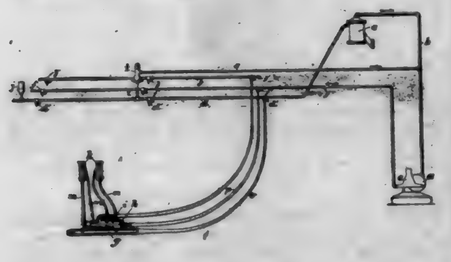
1,533,184. BEARING. FREDERICK W. GURNEY, Jamestown, N. Y., assignor, by mesne assignments, to Marlin-Rockwell Corporation, Jamestown, N. Y., a Corporation of New York. Filed May 28, 1921. Serial No. 471,787. 9 Claims. (Cl. 64—36.)

1. In a bearing, the combination with inner and outer bearing rings, of a sealing member for one end of said bearing which is fixed to said inner bearing ring and extends outwardly therefrom, and a member which is fixed to said outer bearing ring and extends inwardly therefrom at the inner side of said sealing member, said members having opposing, relatively movable, substantially parallel, rigid faces separated by a narrow space which extends in a direction outwardly away from the axis of the bearing and leads at its outer portion to the exterior of the bearing, whereby said parts tend to cause any dirt in said space to work outwardly therefrom.



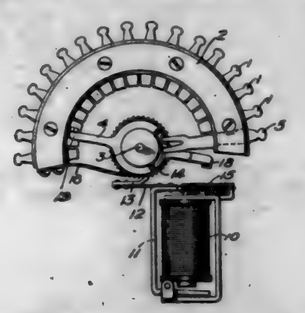
1,533,185. BALL-BEARING SEPARATOR. FREDERICK W. GURNEY, Jamestown, N. Y., assignor, by mesne assignments, to Marlin-Rockwell Corporation, Jamestown, N. Y., a Corporation of New York. Filed Oct. 29, 1921. Serial No. 511,482. 5 Claims. (Cl. 64—59.)

1. A ball separator for ball bearings comprising opposite metal rings formed with opposed portions forming ball confining pockets, and intervening webs connecting said pocket portions, and means consisting of interengaging integral parts of said rings for securing the rings together at their outer edge portions with their webs contacting faces to face, the inner edge portions of the rings being spaced apart and disconnected.



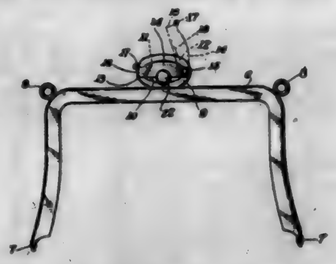
1,533,186. BROODER. HARVEY H. HALL, Elyria, Ohio. Filed Jan. 18, 1923. Serial No. 528,901. 2 Claims. (Cl. 119—33.)

1. In a brooder, in combination with an upper dome, a pair of superposed oppositely disposed dished discs mounted under the said dome, the upper of said discs



being an upright dome, a heating chamber being thereby provided between the discs, and means for supporting the said dome and discs on a floor, but out of contact thereof, the upper dome being more sharply arched than the said upper disc, said upper disc being secured at its periphery to the said upper dome to provide a dead air heat insulating space between the said upper dome and upper disc.

1,533,187. MILKING MACHINE. CYRUS HOWARD HARDOON, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed May 29, 1924. Serial No. 716,548. 7 Claims. (Cl. 31—68.)

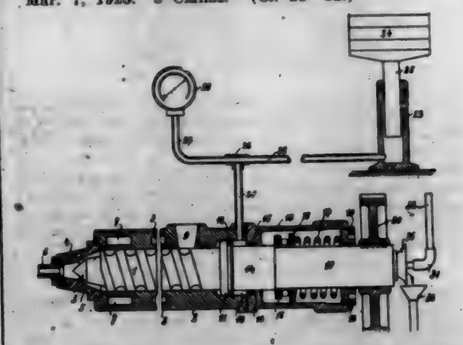


1. In a milking machine, in combination, a source of suction, a milk pipe line and a special vacuum pipe line connected with the source of suction, a milking unit comprising double chamber teat cups whose inner chambers are connectible with the milk pipe line and a pulsator valve adapted to connect the outer teat cup chambers alternately with pressure fluid and with said special vacuum pipe line, and means interposed between the outer teat cup chambers and the special vacuum pipe line to reduce the effective vacuum in the teat cups below that in the special vacuum pipe line and substantially proportionately to the reduction of the vacuum in the milk pipe line below that at the source of suction.

1,533,188. AUTOMATIC SWITCHING DEVICE. AUGUSTUS D. HARGAN, Bayonne, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 8, 1921. Serial No. 506,315. 2 Claims. (Cl. 200—14.)

1. A stepping switch comprising a bank of passive contacts, a plurality of cooperating brushes, a corresponding plurality of feeder brushes secured in said bank for making continuous contact with said brushes throughout their travel, each said feeder brush being wider than said contacts at the point where it emerges from the said bank, whereby said brushes mount said feeder brushes at a different point in their travel than where they mount said contacts.

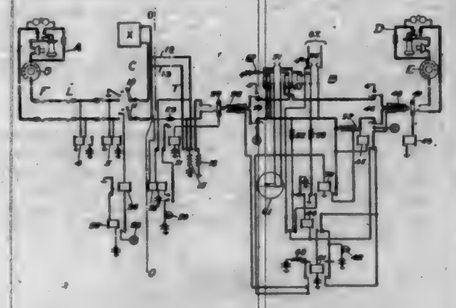
1,533,189. BAG FASTENER. WILLIAM C. HERRING, Newark, N. J., assignor to The J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed June 13, 1922. Serial No. 567,943. 4 Claims. (Cl. 292—89.)



1. A fastener for hinged frame members comprising a rigid enterable element on one of said members, a yielding entering element on the mating member, said elements being adapted for interlocking engagement and a forked latch pivoted at the end to straddle said enterable element and adapted to retain the entering element therein.

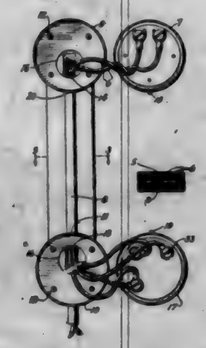
1,533,190. EAR CLIP FOR EYEGLASSES. JOHN JIRASEK, Detroit, Mich. Filed Sept. 10, 1923. Serial No. 663,543. 3 Claims. (Cl. 88—52.)

1. An ear clip for eye glasses adapted to be attached to the ends of the retaining bows of the glasses, comprising a short ear stem, means for attaching same to the bow of the glasses, hooked means on the end of the stem for engaging the front fold in the top section of the ear of the wearer, and means for retaining said hook within the fold of the ear.



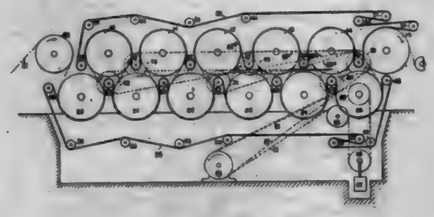
1,533,191. PRESS FOR PLASTIC MATERIALS. WILHELM KAISER and RUDOLPH GAEDELS, Hamburg, Germany, assignors to Adolf Bühr, Hamburg, Germany. Filed Apr. 27, 1923. Serial No. 634,946. Renewed Mar. 7, 1925. 3 Claims. (Cl. 18—12.)

1. A press for extruding plastic material, comprising a casing, and a feed screw rotatable therein characterized by the fact that the front end of the screw in conjunction with the feed screw casing is constructed to form



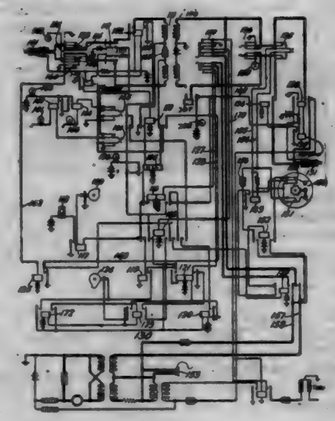
a valve mechanism, and that the feed screw forces the plastic mass out under the combined pressure of a pressure fluid and an adjustable pressure spring.

1,533,192. TELEPHONE-EXCHANGE SYSTEM. CHARLES W. ECKELS, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 6, 1919. Serial No. 343,003. 8 Claims. (Cl. 179—27.)



1. In a telephone exchange system, a manual switchboard, a trunk line including a pair of normally discontinuous talking conductors terminating thereat, an alternating current bridge normally connected to said talking conductors, a subscriber's line terminating at said switchboard, a link circuit for connecting said trunk line to said subscriber's line, a relay in said trunk circuit adapted upon energization to interrupt said alternating current bridge and establish the continuity of said talking conductors, means under the control of the operator for energising said relay, and means under the control of the subscriber for deenergising said relay.

1,533,193. TELEPHONE HAND SET. LE ROY W. KELSAY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 30, 1922. Serial No. 610,032. 6 Claims. (Cl. 179—103.)

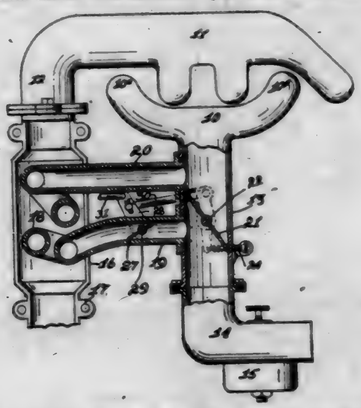


1. A telephone hand set comprising a receiver, a transmitter, a receptacle for said receiver, a receptacle for said transmitter, a handle of insulating material having a groove in the face thereof communicating with said receptacles, and a cover for said groove held in place by said receptacles

1,533,194. PAPER-MACHINE DRIVING MECHANISM. GEORGE D. KILBERRY, East Downington, Pa. Filed May 24, 1923. Serial No. 641,076. 5 Claims. (Cl. 34—48.)

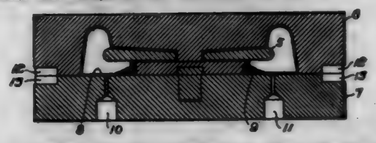
2. In combination, a plurality of dryer rolls, a felt roll intermediate each pair of dryer rolls, rope drive means for driving certain of said felt rolls, each drive being communicated to said dryer rolls by the felt engaging the felt rolls and dryer rolls.

1,533,195. TESTING SYSTEM. ERIC R. LUNDIUS, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 6, 1923. Serial No. 678,933. 8 Claims. (Cl. 179—175.)



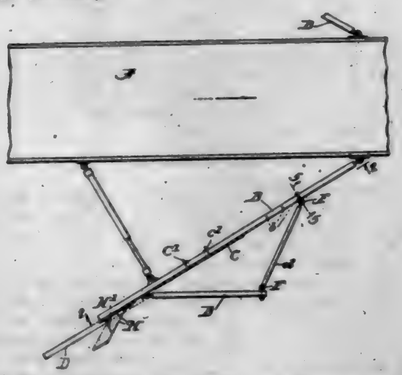
1. In a telephone exchange system, a cord circuit, a test set comprising a plurality of test circuits, a progressively operable switch for successively associating said cord circuit with said test circuits, and means for operating said switch to associate said cord circuit with any one of said test circuits.

1,533,196. CARBURETING DEVICE. HAROLD E. MCCRAY, Waterloo, Iowa, assignor to Waterloo Gasoline Engine Company, Waterloo, Iowa. Filed Sept. 6, 1921. Serial No. 499,002. 6 Claims. (Cl. 123—122.)



1. An apparatus for supplying fuel to the cylinder of an internal combustion engine, comprising a fuel supply passage having direct communication with the cylinder, an exhaust passage leading from said cylinder, a by-pass connected at its ends with said fuel supply passage at separated points, and intermediately passing through said exhaust passage, a main valve in said fuel supply passage between the points of connection therewith of said by-pass, for controlling the flow of gas through said supply passage, a valve in said by-pass for regulat-

ing the flow of gas therethrough, and means connected with said valves and operable to open or close said main



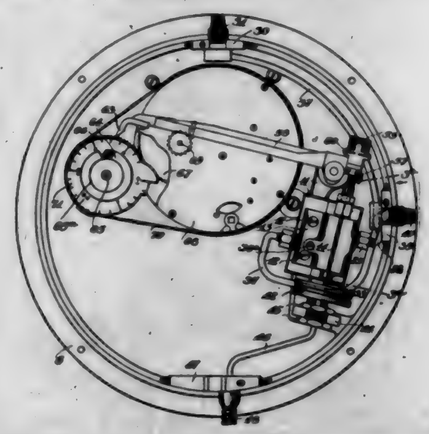
valve and to regulate the flow of gas through said by-pass while the flow of gas directly to the cylinder through said fuel supply passage is cut off.

1,533,197. MANUFACTURE OF SPONGE RUBBER ARTICLES. FRANK S. MALM, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 28, 1923. Serial No. 621,751. 10 Claims. (Cl. 18—53.)

1. A process for the manufacture of a spongy rubber material, comprising mixing together rubber, a vulcanising agent, a gas producing substance, a volatile rubber solvent, an accelerator and then vulcanizing said composition.

1,533,198. RAILWAY DITCHER. ORVILLE C. MANN, Oak Park, Ill.; Emma I. Mann, executrix of said Orville C. Mann, deceased, assignor to O. F. Jordan Company, East Chicago, Ind., a Corporation of Indiana. Filed Oct. 15, 1921. Serial No. 507,971. 6 Claims. (Cl. 37—105.)

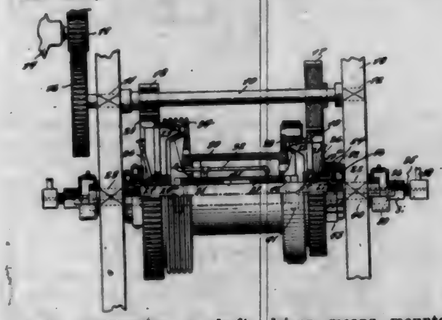
1. In combination with a car, a spreader wing operatively connected to one side of the car and normally extending rearwardly and laterally therefrom, a ditcher blade rigidly secured to the front face thereof at a point spaced from the outer end of said wing, a retaining wing pivoted to the front side of the spreader wing at a point proximate to the outer end of the ditcher blade, and detachable means for securing said retaining wing at a position extending forwardly from said spreader wing outside the path of the ditcher plate and substantially parallel with the side of the car.



4. In combination with a car, a spreader wing pivotally connected thereto and normally extending rearwardly and laterally therefrom, a relatively short propeller plate hinged to the front side thereof near its outer end upon a pivotal axis inclined from the vertical so that said plate may be swung toward and away from the front face of the spreader wing, and means for securing it when extending upwardly outwardly and forwardly from said spreader wing.

1,533,199. AMMUNITION. HELMUTH PAUL MARTIN and OWEN DAVID LUCAS, Westminster, London, England, assignors to M. L. Experimental Limited, Westminster, England. Original application filed Sept. 3, 1920, Serial No. 408,056. Divided and this application filed Oct. 14, 1922. Serial No. 594,454. 7 Claims. (Cl. 102—19.)

6. For use in a cartridge, an electrically ignited primer comprising in combination a metal cap, a contact passing through the base of said cap, means for insulating said contact from the base, these means including a non-conducting washer arranged in contact with the inner surface of the base, a wire one part of which is electrically connected to said contact, and a device fitting in an annular recess in the base of said cap and holding another part of said wire in contact with said base, the portion of the wire between said parts being insulated from the base by said washer.



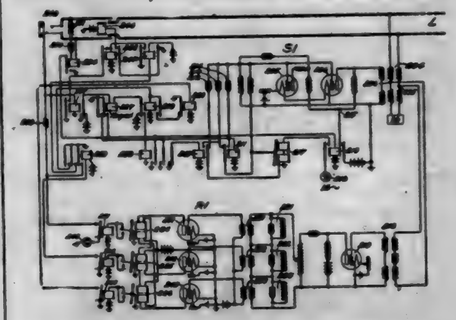
1,533,200. TIME-CONTROLLED REGULATING DEVICE. EDWARD S. MARSH, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed July 12, 1920. Serial No. 395,618. 10 Claims. (Cl. 236—46.)

1. In a regulating device, the combination with a fluid supply line and a valve controlling said line, of fluid pressure means for operating said line valve, governing means for said fluid pressure means comprising

inner and outer housings, each provided with inlet and outlet ports communicating with the corresponding ports of the other of said housings, said inner housing being movable in the outer housing and provided with a secondary valve set, a secondary valve in said inner housing cooperating with said seat to control communication between said inlet and outlet ports, connections from said fluid pressure means leading to the ports of said outer housing, pressure operated means responsive to conditions within a fluid container for moving one of said secondary valve parts, and time mechanism for moving the other of said secondary valve parts.

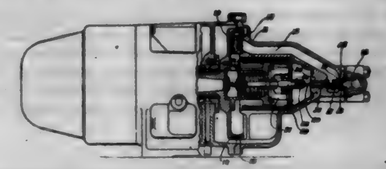
1,533,201. TWO-SPEED HOISTING MECHANISM. THOMAS SPENCER MILLER, South Orange, N. J. Filed July 7, 1922. Serial No. 573,497. 3 Claims. (Cl. 254—187.)

1. In combination, a shaft, driven means mounted thereon and longitudinally movable thereof, a driving member loosely mounted on said shaft for driving said driven means, means for moving said driven means longitudinally of the shaft into engagement with said driving member, said driving member having a portion provided with two annular bearing surfaces at right angles to the axis of the shaft, and a member secured to the shaft but adjustable longitudinally thereof and provided with annular bearing surfaces engaging those of the driving member, the pair of bearing surfaces of one of said members facing each other and engaging therebetween the bearing surfaces of the other member, whereby movement of said driving member in either direction is prevented, and means for adjustably spacing the pair of bearing surfaces which face each other.



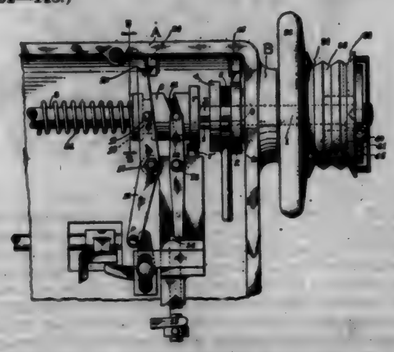
1,533,202. CENTRIFUGAL CASTING MACHINE. WILLIAM H. MILLSPAUGH, Sandusky, Ohio, assignor to Sandusky Foundry & Machine Co., Sandusky, Ohio, a Corporation of Ohio. Filed Jan. 27, 1923. Serial No. 615,222. 5 Claims. (Cl. 22—65.)

1. A centrifugal casting machine comprising a cylinder, a trough rotatably mounted therein and having a discharge opening therein, curved longitudinally from end to end.



1,533,203. TELEPHONE-EXCHANGE SYSTEM. PAUL B. MURPHY, Nyack, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 5, 1921. Serial No. 458,712. 8 Claims. (Cl. 179—50.)

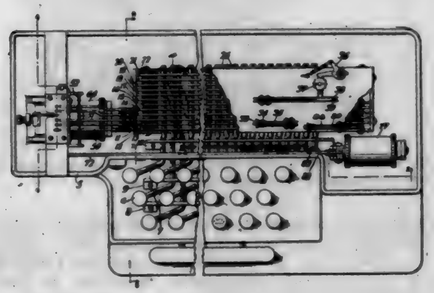
3. The method of signaling a called subscriber's station and of supervising the connection thereto over a transmission medium extending between two distant central telephone offices by the transmission and the



selective receiving of predetermined combinations of current impulses of different frequencies.

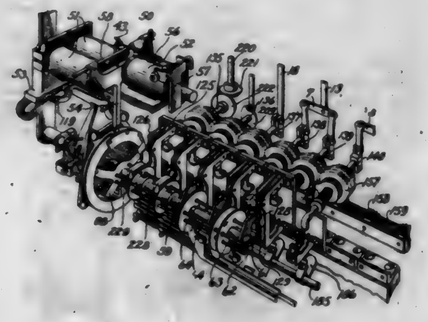
1,533,204. GOVERNOR-OPERATED VALVE MECHANISM. HUGH W. NEWBERO, Chester, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 29, 1921. Serial No. 496,569. 5 Claims. (Cl. 137—140.)

1. In a prime mover, the combination of a ball valve for controlling the admission of motive fluid to the prime mover, said valve being moved in an opening direction by motive fluid pressure, speed-responsive means, a push rod for moving the valve in a closing direction, and a ball contact connection between the speed-responsive means and the push rod.



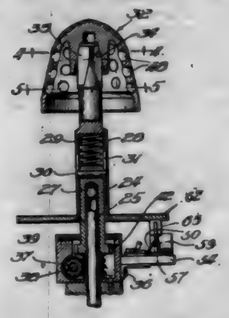
1,533,205. CLUTCH MECHANISM. DONALD NOBLE, Bridgeport, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Nov. 6, 1919. Serial No. 335,983. 8 Claims. (Cl. 192—143.)

1. In combination, driving and driven shafts, a clutch connection between said shafts, automatic means under the control of the operator for throwing said clutch



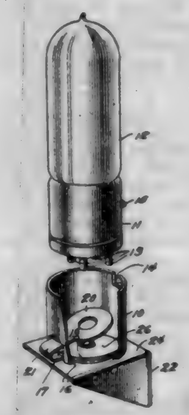
either into or out of action at will, and automatic means, independent of said first mentioned means and including a timing element on said driving shaft and connections for timing the throwing on of the clutch.

1,533,206. PRINTING TELEGRAPHY. HARRY PFANNENSTIEHL, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 21, 1920. Serial No. 397,902. 15 Claims. (Cl. 178—17.)



1. In a transmitter, the combination of a keyboard mechanism, character keys, operating levers therefor, a plurality of selecting bars arranged transversely of said operating levers, and means comprising mechanism connected with certain ones of said bars effective for preventing the simultaneous depression of two of said character keys.

1,533,207. PRINTING TELEGRAPHY. HARRY PFANNENSTIEHL, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 31, 1923. Serial No. 616,020. 19 Claims. (Cl. 178—27.)

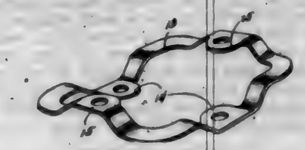


1. In a printing telegraph receiver, a traveling type carriage having a type carrying means movable therewith, means for selectively operating said type carrying means comprising a plurality of rotatable selecting members arranged to occupy either of two positions, means for retaining said members in their actuated position on subsequent selections until the character of the previous selection is changed, means responsive to selecting units for permitting the members to be positioned in predetermined combinations with respect to said retaining means, and means controlled by said selecting members for selectively operating said type carrying means.

1,533,208. FRUIT-JUICE EXTRACTOR. ARTHUR TODD-PURSELL, Chicago, Ill., assignor to Arnold Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed July 21, 1923. Serial No. 653,083. 24 Claims. (Cl. 146—3.)

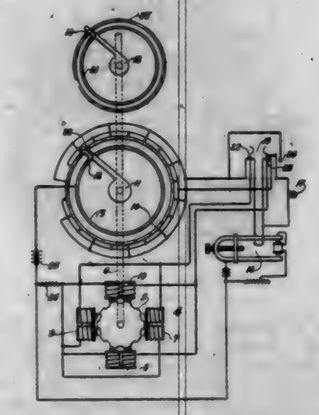
20. In a fruit juice extractor, a resiliently supported juice extracting bit, an electrically operated motor for driving said bit, a circuit for said motor, a switch controlling said circuit, and means associated with said bit for operating said switch upon displacement of said bit.

1,533,209. VACUUM-TUBE HOLDER. JOHN W. RADU, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1920. Serial No. 426,404. 11 Claims. (Cl. 248—20.)



1. A holder for vacuum tubes comprising a cylindrical shell having a slot at one end, an inwardly projecting flange on said shell adjacent said slot, a member arranged in said shell, a resilient shank having a return bend extending from said member through said slot, and means for holding said member against said flange.

1,533,210. VACUUM-TUBE MOUNTING. JOHN W. RADU, New York, N. Y., assignor to Westinghouse Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 21, 1920. Serial No. 432,171. 4 Claims. (Cl. 248—30.)



1. In a vacuum tube mounting, means for holding a vacuum tube and an endless resilient metallic ribbon, said

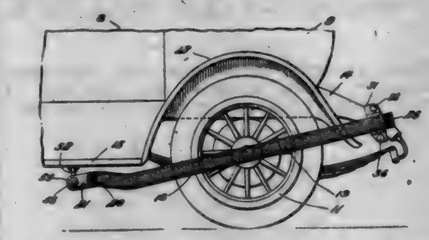
ribbon having projections extending alternately in opposite directions, said holding means being supported on

one pair of projections and another pair of said projections being adapted to rest on a support.

1,533,211. STARTING DEVICE. PAUL M. RAINEY, Glen Ridge, N. J., and GEORGE A. LOCKE, Maspeth, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 9, 1920. Serial No. 409,182. 5 Claims. (Cl. 172—229.)

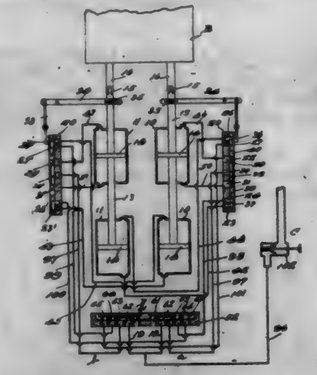
1. The combination with a La Cour motor, having an armature and a plurality of magnets, a source of current, auxiliary means for connecting said source of current with said magnets for producing a torque sufficient to automatically start said motor, means for controlling the energization of said magnets at a uniform rate, and means controlled jointly by said motor and said last recited means for automatically indicating when a condition of synchronism exists between said motor and said last recited means.

1,533,212. GAS BURNER. JAMES H. REINHARDT, East Orange, N. J. Filed Apr. 23, 1921, Serial No. 463,772. Renewed Oct. 3, 1923. 2 Claims. (Cl. 158—105.)



1. A gas burner comprising spaced members having fuel channels therebetween and fuel exit holes communicating with said channels, one of said members having an enlargement provided with a valve opening and passages providing communication between said opening and said channels, a valve in said opening having a bore and ports communicating therewith to deliver gas to said passages, and screws operative in said enlargement to independently control said passages.

1,533,213. CASTING SULPHUR. JAMES W. SCHWAB, Gulf, Tex., assignor to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed Nov. 2, 1923. Serial No. 672,445. 3 Claims. (Cl. 18—58.)



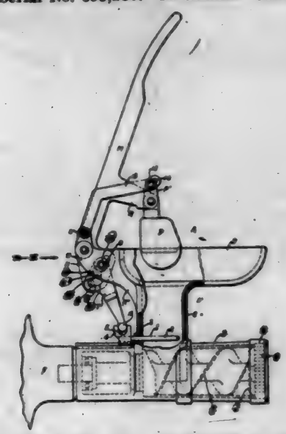
1. The improvement in casting sulphur which comprises subjecting molten sulphur to a preliminary treatment with an alkaline substance for modifying the properties of the sulphur so as to eliminate in large part its tendency to cling to the surface of a mold, and thereafter casting in molds the sulphur thus treated.

1,533,214. GUARD FOR AUTOMOBILES. SHEFFIELD SMITH, North Providence, R. I. Filed Dec. 19, 1924. Serial No. 756,928. 8 Claims. (Cl. 293—55.)

1. In combination with the chassis, wheel, and fender, of an automobile, a side guard comprising in one integral resilient structure an intermediate portion extending outside the wheel and fender, an inwardly directed forward portion detachably engaging the chassis at a point forward of the wheel and fender, and an inwardly directed arched portion pivotally secured to the chassis in the rear of the wheel and fender.

1,533,215. GEAR SHIFT. ELTON W. SPALDING, Durango, Colo. Filed Sept. 17, 1923, Serial No. 663,246. Renewed Nov. 26, 1924. 3 Claims. (Cl. 74—58.)

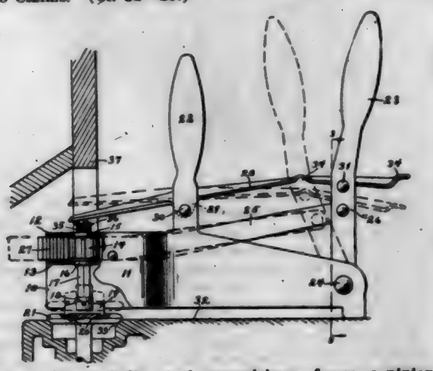
1. In a motor operated vehicle, a transmission gear shift mechanism adapted to be actuated by the suction created by the motor, said mechanism including spaced pairs of cylinders, connected pistons arranged to operate in each pair of cylinders, means whereby a suction is created in one end of each cylinder of the pair used, and the air admitted or exhausted from the other end of said cylinder to shift the gears, automatically operable valves for controlling the communication between the intake manifold and the respective pairs of cylinders, whereby one pair operate at a time, and means under the control of the clutch pedal for rendering the mechanism inoperative when the pedal is in its normal position.



1,533,216. PROCESS OF MAKING FRICTION FACINGS AND PRODUCT. FREDERICK C. STANLEY, Bridgeport, Conn., assignor to Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 24, 1919, Serial No. 325,913. Renewed Oct. 28, 1921. Serial No. 511,103. 8 Claims. (Cl. 91—70.)

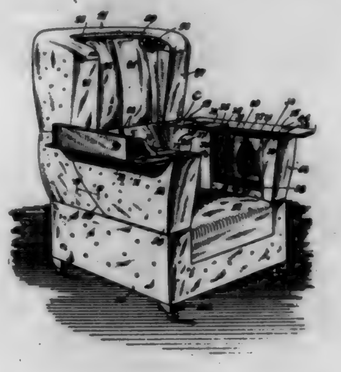
1. A process of making a friction facing, of mixing asbestos pulp with an oxidizing agent and with comminuted graphite, forming sheets therefrom, cutting friction facings from the sheets, saturating the facings with a binder oil and baking the friction facings.

3. A friction facing, the wearing surface of which consists essentially of unwoven asbestos fibre, a baked binder and graphite.



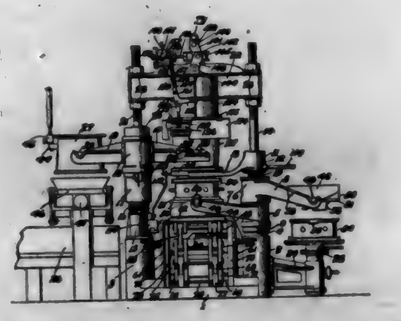
4. The process of making friction facings, consisting in incorporating with fibrous material a comminuted graphite, saturating the same in a binder and then baking the facing.

1,533,217. SAFETY DEVICE FOR FOOD CHOPPERS. JOSEPH C. STEINER, St. Louis, Mo. Filed Mar. 14, 1924. Serial No. 699,237. 18 Claims. (Cl. 146—182.)



1. A safety device for a food-grinding machine having grinding mechanism, comprising a slidable guard adapted to be moved to a position adjacent to said grinding mechanism to prevent the hands of the operator from coming into contact with said grinding mechanism.

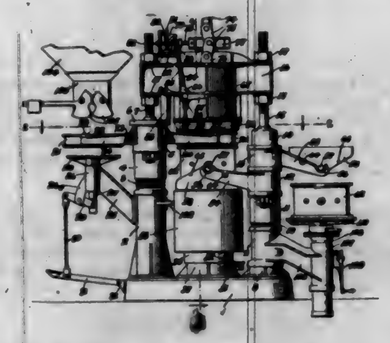
1,533,218. VALVE GRINDER. EDWARD L. STINN, Neola, Iowa. Filed Feb. 2, 1924. Serial No. 690,177. 3 Claims. (Cl. 51—29.)



1. A valve grinding tool, comprising a frame, a pinion arranged for rotary oscillation in said frame, a shaft arranged for oscillation with and sliding movement relative to said pinion, a valve-engaging member carried by the inner end of said shaft, a lever fulcrumed in said frame, a rack bar arranged for reciprocation in said frame and having a rack in mesh with said pinion, said rack bar being pivotally connected to said lever, a rocking bar pivotally mounted in said frame and having one end engaging and adapted to exert pressure on the outer edge of said lever, said rocking bar extending across said lever and engaged thereby to hold it in contact with said shaft.

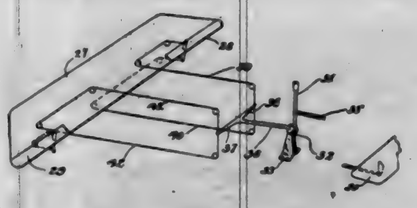
1,533,219. COMBINATION FURNITURE. PHILIP SUGERMAN, New York, N. Y. Filed Aug. 17, 1922. Serial No. 582,400. 6 Claims. (Cl. 155—124.)

1. A combination arm chair and typewriter desk, including a compartment within one of the arms of the chair, said arm including a cover slide for closing said compartment, a hinge rod within said compartment for normally supporting a typewriter with the base thereof substantially in a vertical plane, whereby after displacing said slidable cover said typewriter may be raised about the hinge rod as an axis, and said cover upon return to substantially closed position will constitute a support for said typewriter in horizontal or operative position.



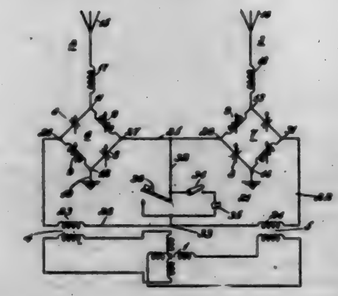
1,533,220. MOLDING APPARATUS. DONALD J. CAMPBELL, Muskegon Heights, Mich. Filed Oct. 16, 1922. Serial No. 594,803. 22 Claims. (Cl. 22—25.)

1. In combination, a vertical support, a pattern and flask carrying member mounted to swing in a horizontal plane about said support, a table on to which said



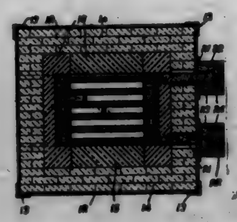
member with pattern and flask thereon is carried for filling the flask with sand, a second vertical support, a sand hopper mounted to swing in a horizontal plane about the second support to come over the flask, an air reservoir mounted directly over the table and under which the hopper comes, means for elevating the table to clamp the air reservoir, hopper and flask together, and means for momentarily releasing the air from the air reservoir to the hopper to drive the sand therefrom into the flask, substantially as described.

1,533,221. SAND-MOLDING APPARATUS. DONALD J. CAMPBELL, Muskegon Heights, Mich. Filed Feb. 26, 1923. Serial No. 621,283. 9 Claims. (Cl. 22—36.)



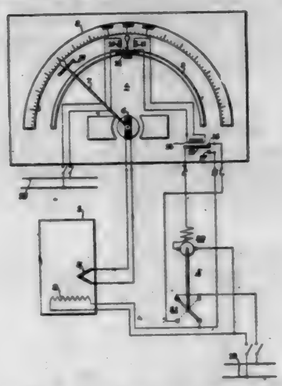
1. In an apparatus of the class described, a support, a movably mounted table on the support, an air reservoir located a distance over the table, a flask carrying member mounted for movement to and away from the table and adapted to carry a flask and pattern therein, a plurality of relatively shallow sand hoppers movably mounted to be moved in succession between the flask and the air reservoir, means normally closing the air reservoir at its lower end, and means for momentarily opening said reservoir at its lower end to project the sand from any hopper into the flask, a plurality of charges of sand from the hoppers being required to fill the flask.

1,533,222. CONTROL MECHANISM. DENNIS F. CASHMAN, Dayton, Ohio. Filed Aug. 7, 1923. Serial No. 656,204. 1 Claim. (Cl. 244—29.)



In an aircraft having a horizontal rudder, a main sustaining surface and a plurality of movable wing flaps therefor, a control device for controlling the wing flaps and horizontal rudder, comprising a stick control lever, a support for said lever, permitting rocking of said lever about a plurality of axes extending longitudinally and transversely of said aircraft, a rearward projection on said lever attached to said horizontal rudder, a longitudinally extending projection extending from said lever substantially coincident with said longitudinally extending axis, a lateral projection extending from the end of said longitudinally extending projection, a plurality of connections attached to said wing flaps, said connections being attached directly to said lateral projections so that said wing flaps may move in reverse directions relatively when the lever is rocked about the longitudinal axis and so that the wing flaps are moved together in the same direction while the horizontal rudder is moved simultaneously in a direction opposite to the movement of the wing flaps, when said lever is moved about said lateral axis.

1,533,223. SYSTEM OF CONTROL. LEWIS WARRINGTON CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 30, 1921. Serial No. 481,534. 17 Claims. (Cl. 250—17.)

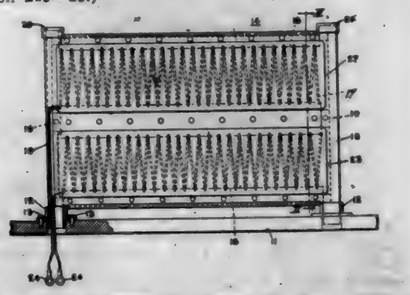


3. In a wireless transmission system, the combination with a plurality of adjacently disposed antenna systems, each system including a phase-splitting device, and means associated with said phase-splitting devices whereby the phase relation of currents in said antenna systems may be selectively controlled.

1,533,224. ELECTRIC RESISTANCE FURNACE. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 10, 1922. Serial No. 542,609. 5 Claims. (Cl. 204—64.)

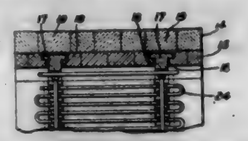
2. In an electric-resistance furnace, in combination, a plurality of refractory walls surrounding a furnace chamber, a plurality of elongated refractory resistor members located in spaced-apart parallel relation, and a plurality of refractory conducting blocks, each extending laterally of said resistor members and operatively supporting the ends of two adjacent resistor members and maintained in close operative engagement therewith by a superposed portion of said furnace structure.

1,533,225. TEMPERATURE REGULATOR. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 10, 1922. Serial No. 567,445. 16 Claims. (Cl. 204—64.)



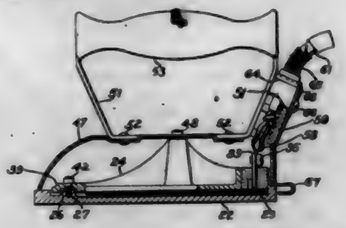
5. A temperature indicating and controlling device comprising a movable indicating member, two coils magnetically related and means controlled by the indicating member for controlling the degree of such magnetic relation.

1,533,226. STREET-CAR HEATER. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 4, 1922. Serial No. 592,293. 3 Claims. (Cl. 219—19.)



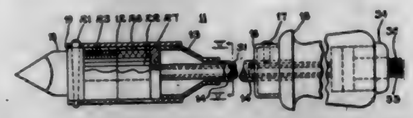
1. In an electric heater, in combination, a metal frame having a relatively large surface area and a plurality of chambers therein, each chamber having one open end, a plurality of removable heating elements in said chambers, and a terminal box adjacent the open ends of said chambers.

1,533,227. STREET-CAR HEATER. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 6, 1922. Serial No. 592,745. 5 Claims. (Cl. 219—19.)



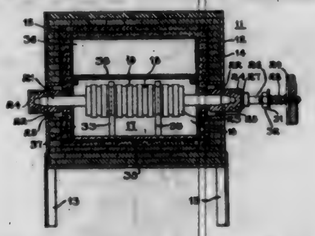
1. In an electrical air heater, in combination, a plurality of thin, flat electric-insulating supporting members, a resistor wound on said supporting members, a pair of relatively thin metal cover plates each having a plurality of depressions therein and located in abutting face-to-face relation, means for holding said supporting members between said metal plates and for holding said metal plates in said abutting, face-to-face relation, and embodying means on each of said plates for interlocking the same.

1,533,228. ELECTRIC FURNACE RESISTOR SUPPORT. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 24, 1922. Serial No. 596,551. 6 Claims. (Cl. 204—64.)



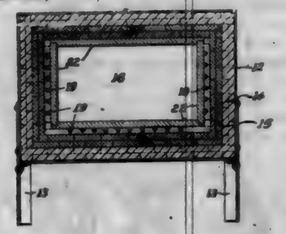
1. A resistor-supporting means comprising a refractory electric-insulating member, of substantially T-shape in cross-section and having a plurality of spaced-apart slots in the outer edge thereof, and a refractory key member having a longitudinally extending dovetail connection with said member of T-shape.

1,533,229. ELECTRIC FLATIRON. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 24, 1922. Serial No. 596,552. 6 Claims. (Cl. 219—25.)



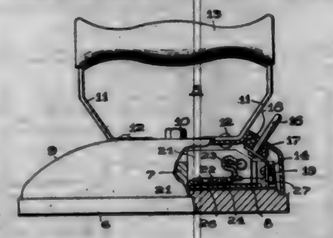
1. In an electric flat iron, in combination, a base plate, a heating element thereon, a refractory insulating block on said heating element having a plurality of openings extending therethrough, a plurality of terminal members for said heating element extending through said openings, and a top plate for clamping said heating element against said base plate and for holding said insulating block in its proper operative position.

1,533,230. ELECTRIC SOLDERING IRON. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 3, 1922. Serial No. 598,748. 6 Claims. (Cl. 219—26.)



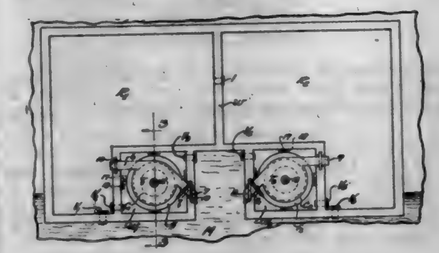
1. In a soldering iron, in combination, a tubular casing, a tubular refractory resistor-supporting member in said casing having a plurality of longitudinally extending undercut grooves in its inner surface, a resistor member in said grooves, a soldering bit fitting closely within said casing at one end thereof, and having a longitudinally extending integral heat-receiving portion located in said refractory member and a taper pin extending through said casing and said soldering bit.

1,533,231. ELECTRIC-FURNACE RESISTOR. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 2, 1922. Serial No. 604,507. 3 Claims. (Cl. 204—64.)



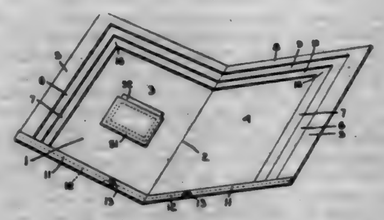
2. In an electric furnace, in combination, a resistor comprising a plurality of refractory electrical-conducting bars, alternately of rectangular and of I-beam section, interfitting and supporting each other, and a plurality of spaced thin refractory plates operatively engaging certain of said bars to support said resistor.

1,533,232. ELECTRIC FURNACE. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 2, 1922. Serial No. 604,508. 7 Claims. (Cl. 204—64.)



1. In an electric furnace, in combination, a plurality of refractory walls enclosing a furnace chamber and having a plurality of spaced recesses therein, cleats in said recesses having a surface extending into said chamber provided with a plurality of laterally extending grooves therein and a resistor member extending through said grooves and between said cleats.

1,533,233. AUTOMATIC CUT-OUT FOR ELECTRIC IRONS. LESLIE N. CRICHTON, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 23, 1921. Serial No. 502,631. 4 Claims. (Cl. 219—25.)

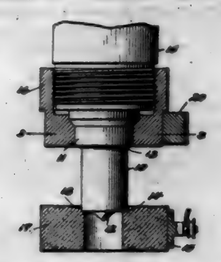


1. In an electrically heated portable device, the combination with a heating element, of a circuit controller comprising a column of a volatilizable conducting fluid connected in series-circuit and heat-receiving relation to said heating element for interrupting the circuit therethrough when said fluid column is volatilized by the heat of said heating element and for permitting the reestablishing of the circuit therethrough by tilting the device through an angle of substantially 90°.

1,533,234. TIDEWATER POWER PLANT. DOMENICO DAMIANO, Boston, Mass., assignor to Damiano Tide and Stream Water Power Company, Boston, Mass., a Voluntary Organization. Filed Nov. 9, 1922. Serial No. 599,865. 2 Claims. (Cl. 61—20.)

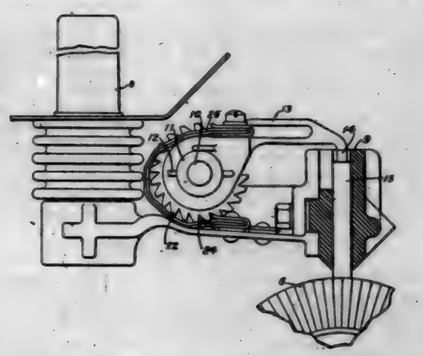
1. A tide water power plant comprising a plurality of reservoirs, a well associated with each of said reservoirs, means controlling communications between each well and its companion reservoir, a float controlled motor in each well, means for actuating one of said motors during the rise of the tide, means for actuating one of said motors during the fall of the tide, and means for actuating said first mentioned motor subsequent to the actuations of said second mentioned motor during the fall of the tide, both of said reservoirs being filled and emptied by water flowing through said turbines during the actuation thereof.

1,533,235. MUSIC HOLDER. ELI DAVIDSON, Chelsea, Mass. Filed Feb. 10, 1921, Serial No. 444,009. Renewed Dec. 5, 1924. 3 Claims. (Cl. 129—20.)



2. A holder for sheet music comprising a body member and a plurality of holding flaps on the side and top edges, situated at different distances from the edge whereby the holder will accommodate sheet music of different sizes, and a hinge flap at the bottom edge under which the covers of the sheet music may be received.

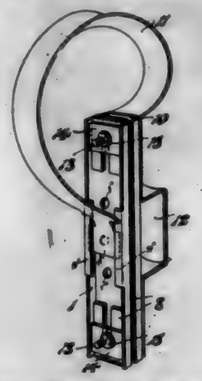
1,533,236. PROCESS OF LOCALLY HEAT-TREATING HARDENED-STEEL ARTICLES. THOMAS C. DAWSON, Bethlehem, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Dec. 9, 1921. Serial No. 521,198. 9 Claims. (Cl. 148—10.)



1. A process of drawing the temper from a part of a hardened steel article which consists in bringing such part of the article and an electrode into contact, causing

relative movement between the article and electrode while continuously in contact, passing a current through

the electrode and article while the same are moved relative to each other, whereby said part of the article is heated to the desired temperature, and cooling the article.

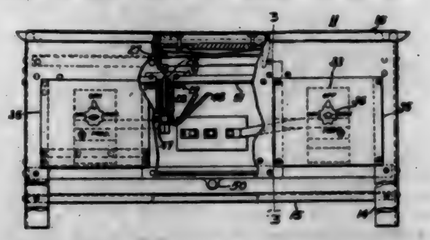


1,533,237. BRUSH HOLDER. JOHN V. DOBSON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 19, 1924. Serial No. 726,911. 3 Claims. (Cl. 171—324.)

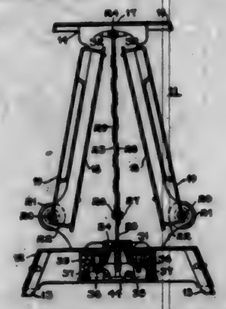
1. A brush holder for electrical machines comprising a brush-holder frame having a brush box and a removably mounted shaft, a laterally extending pressure finger extending over the brush box and adapted to engage the top of the brush, said pressure finger having an enlarged hub portion journaled on said shaft, said hub portion having an annular recess open at one end, a helical spring mounted in said recess and having its inner end detachably secured therein, a ratchet wheel freely mounted on said shaft adjacent the open end of said annular recess, means for detachably securing the other end of said spring to said ratchet wheel, and a pawl carried by the brush-holder frame for engaging said ratchet wheel.

1,533,238. MEANS FOR CLEARING GLASS WINDSCREENS AND THE LIKE. GEORGE HAROLD EATON, Sheffield, England, assignor of one-half to Herbert Terry & Sons, Limited, Redditch, Worcestershire, England. Filed Apr. 1, 1924. Serial No. 706,443. 1 Claim. (Cl. 15—252.)

In a device for clearing the windscreens of vehicles, the combination of a straight holder of substantially U cross-section, a plurality of longitudinal cleaning strips arranged in and extending across the channel of said holder, superimposed in substantially flat formation to constitute an outer wiper and having their opposite ends infolded over the ends of the holder and lying between the forwardly upstanding parallel limbs of the holder, clamping means mounted at opposite ends of the holder and operative between said forwardly upstanding limbs to clamp said infolded ends of the strips to the holder, a back support of channel formation having its channel presented to said outer wiper, an inner wiper arranged in the channel of said back support to engage with the inner surface of the windscreen, a handle on the back of said back support, and a flexible spring arranged to straddle the windscreen and having one end attached to the upper end of the back support and the other end attached to the said holder at a point intermediate the ends thereof to press the outer wiper against the windscreen and cause it to move uniformly with the inner wiper.

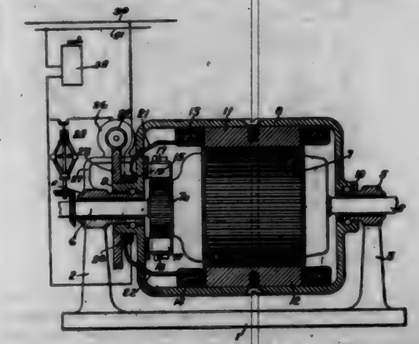


1,533,239. ORNAMENTAL ARC WELDING. OTTO H. ESCHHOLZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 8, 1920. Serial No. 408,911. 4 Claims. (Cl. 219—8.)



1. A method of depositing metal which comprises establishing an arc between a fusible metal electrode and a metal base having a sufficiently high thermal conductivity and capacity to prevent surface fusion of said base.

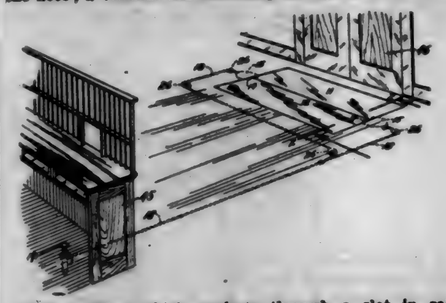
1,533,240. HOT TABLE. FRANK F. FORSHEE, Mansfield, Ohio, assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Oct. 2, 1922. Serial No. 591,763. 5 Claims. (Cl. 219—19.)



1. In an electrically-heated hot table, in combination, a supporting frame, a plurality of heating elements located in side-by-side relation in and supported by said frame, depending contact terminals on each of said heating elements, a plurality of electric-circuit terminals for operatively engaging said contact terminals supported by said frame, and a cooking surface removably located on and supported by said frame.

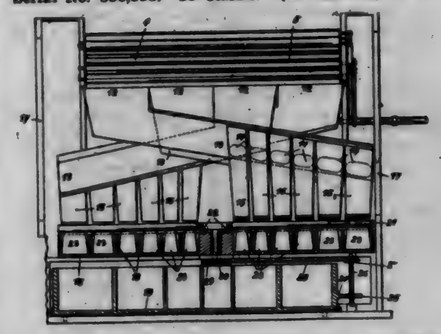
1,533,241. TOASTER-HEATING UNIT. FRANK F. FORSHEE, Flint, Mich., assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Oct. 4, 1922. Serial No. 592,244. 8 Claims. (Cl. 219—19.)

1. In an electrically heated toaster, in combination, a base plate, a top plate having a longitudinally extending opening therethrough, a frame for connecting said base and said top plate, a resilient electric circuit terminal operatively supported by said base plate, and a heating element insertible into and removable from its proper operative position relatively to said terminal through said opening in said top plate.



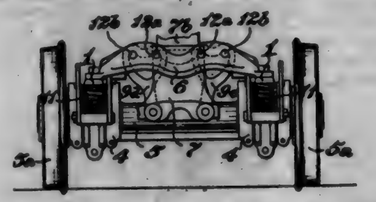
1,533,242. METHOD AND APPARATUS FOR PREVENTING ARMATURE-COIL HEATING. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 8, 1919. Serial No. 316,089. 11 Claims. (Cl. 172—36.)

1. In a dynamo-electric machine, a normally rotatable torque-producing member, a normally stationary member, and means actuated in accordance with the starting conditions of said machine for moving the normally stationary member.



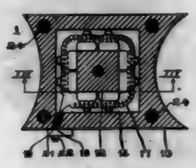
1,533,243. BANDIT TRAP. ELIA GALTERIO, Denver, Colo. Filed Mar. 17, 1924. Serial No. 699,774. 3 Claims. (Cl. 49—50.)

1. In a trap, comprising a pair of hinged trap-doors and slidable, spring-returned, latch bolts for releasing said doors, means for operating said latch bolts comprising a tube arranged to be placed in and extend below the floor; a vertical rod extending through said tube and



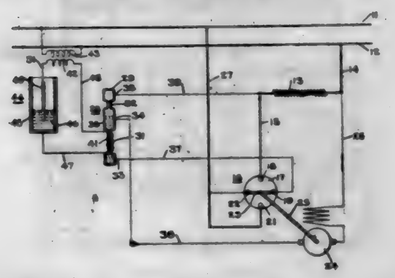
carrying a lug which projects through a slot in said tube; a spring compressed between said lug and the bottom of said tube and a connection between said lug and said latch bolts.

1,533,244. COIN-ASSORTING APPARATUS. ARMAND GODEFROID, Berlin, Germany. Filed Jan. 14, 1924. Serial No. 686,198. 13 Claims. (Cl. 133—8.)



2. In a coin assorting apparatus, the combination, with a plurality of coin assorting devices each adapted to assort different coins supplied thereto, said assorting devices being so disposed as to cross each other, of means common to all of said assorting devices for supplying coins thereto.

1,533,245. TRUCK FOR RAILROAD ROLLING STOCK. ROBERT F. HALL, Schenectady, N. Y. Filed Mar. 10, 1924. Serial No. 698,172. 6 Claims. (Cl. 105—189.)

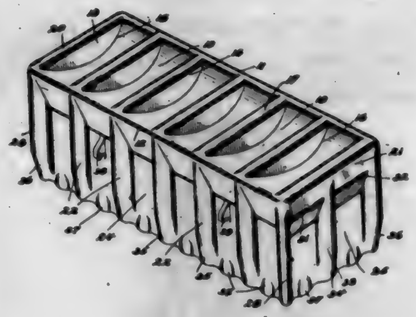


2. In a railroad truck, the combination of a frame; a bolster, adapted to traverse laterally relatively thereto; and swing hanger links, supporting said bolster, and provided with two upper bearings and one lower bearing, the upper bearings being disposed at unequal distances from the lower bearing, in a line which is inclined relatively to a vertical line through the lower bearing which is intermediate the upper bearings when the link is in its middle position.

1,533,246. COMMUTATOR SOLDERING IRON. HOWARD A. HANDS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1922. Serial No. 588,559. 5 Claims. (Cl. 219—26.)

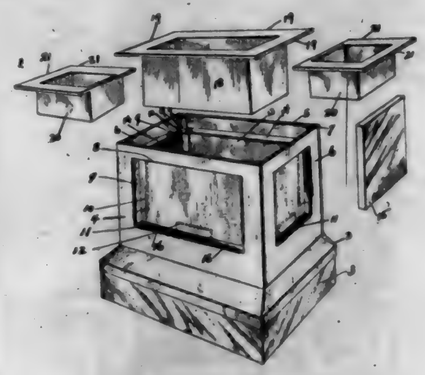
1. A soldering iron comprising a central metal core, a metal casing spaced from and surrounding said central core and having a convex soldering face on its outer surface, a plurality of relatively narrow, elongated, grooved refractory resistor-supporting members located adjacent to said central core, and a resistor member located in said resistor-supporting members.

1,533,247. ELECTRIC HEATING SYSTEM. HOWARD A. HANDS, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 14, 1922. Serial No. 600,849. 11 Claims. (Cl. 219—20.)



1. In a temperature-control system, in combination, a heating element, a motor-operated switch for controlling the energization of said heating element, a fluid circuit-interrupter for controlling the operation of said motor, and a closed-circuit variable-resistance means for controlling said fluid circuit-controller.

1,533,248. PRISMATIC TELESCOPE. EWALD HARWIX, Berlin-Steglitz, Germany. Filed July 22, 1921. Serial No. 486,850. 2 Claims. (Cl. 88—33.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

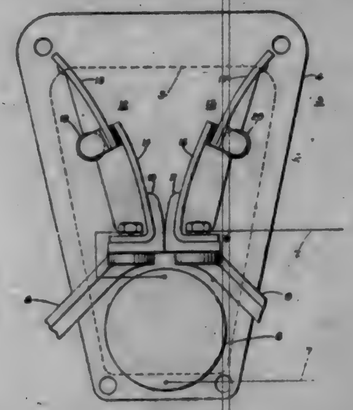


1. In a prismatic telescope two complementary integral, self-sustaining units each consisting of a sustaining body and a sustained prism, the prism being embedded in the body, the assembled units being set opposite one another and each unit being disposed wholly on the remote side of the plane in which the exposed prism surface extends.

1,533,249. ANNEALING BOX. HOWARD H. HUMMEL, Bethlehem, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed July 27, 1921. Serial No. 487,916. 23 Claims. (Cl. 263—49.)

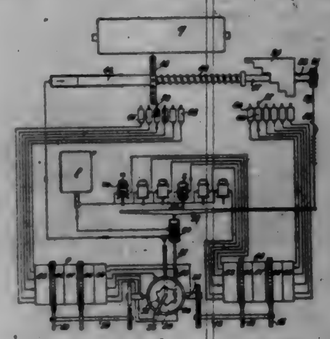
1. An annealing box of integral cast metal rectangular in form, having a series of corrugations in its sides and ends with outer transversely curved margins extending downward from and in substantially the same vertical plane as the outer straight margins of the corrugations forming the edges of the top, the portions of the walls between adjacent corrugations extending inwardly of the box at an angle from top edge and from the outer margins of the corrugations.

1,533,250. MONUMENT. CYRUS W. HUTCHINS, Kearney, Nebr. Filed Mar. 13, 1923. Serial No. 624,813. 2 Claims. (Cl. 189—21.2.)



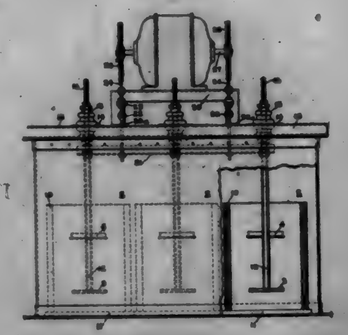
1. A monument having a body portion comprising a plurality of metal plates secured together and each constructed with an open-top pocket, slabs supported in the pockets, and an ornamental cover extending over the tops of the pockets and constituting a removable top for the monument.

1,533,251. ELECTRIC SWITCH. HOWARD H. JOHNSTON, Forest Hills Borough, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 5, 1922. Serial No. 566,005. 5 Claims. (Cl. 200—147.)



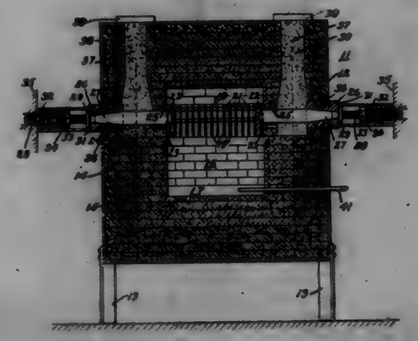
1. The combination with a pair of relatively movable electrical conductors, of a pair of arc horns, each of

which is composed of two sections that are insulated from each other, of blowout means adjacent to the



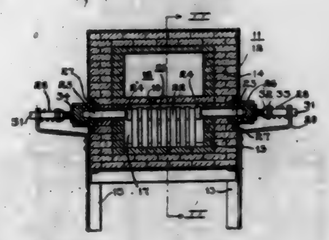
point of formation of arcs across the horns and auxiliary magnetic blowout coils in series with the upper sections of the said horns.

1,533,252. CODING AND DECODING MACHINE. HUGO ALEXANDER KOCH, The Hague, Netherlands, assignor to Naamloose Vennootschap Ingenieursbureau "Securitas," Amsterdam, Netherlands, a Company of The Netherlands. Filed Sept. 18, 1920. Serial No. 411,229. 11 Claims. (Cl. 35—18.)



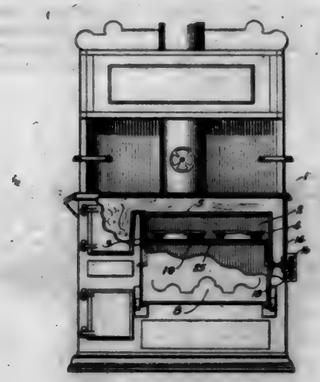
1. A coding and decoding machine comprising in combination a transmitter and a receiver, an energy transmission path between the transmitter and the receiver, fixed discs on one side taking up the energy paths from the transmitter, and having transfer places for the energy at the other side arranged in a circle, rotatable discs adjacent to the fixed discs having transfer places for the energy on both sides, arranged in a circle of the same radius as with the fixed disc, the transfer places on one side being in contact with the transfer places of the fixed disc, irregular inter-connections for the energy, connecting the transfer places of the two sides of the rotatable discs in the interior of the same, a fixed disc at the other side of the rotatable discs, having transfer places in contact with the transfer places of the last rotatable disc and leading the energy to the receiver, and means for rotating the rotatable discs successively.

1,533,253. SLIP REGULATOR. HARRY A. LEWIS, Norristown, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 28, 1922. Serial No. 584,643. 87 Claims. (Cl. 219—57.)



1. A liquid rheostat embodying a movable electrode and a co-operating stationary electrode comprising a working member located opposite said movable electrode and a plurality of supporting members disposed on opposite sides of the movable electrode.

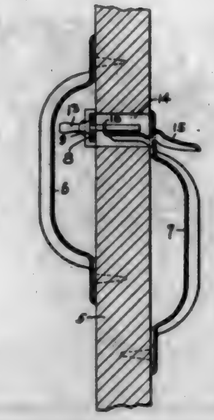
1,533,254. ELECTRIC-FURNACE RESISTOR. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 25, 1922. Serial No. 531,528. 2 Claims. (Cl. 204—64.)



1. An electric furnace comprising a plurality of relatively thin, flat, carbonaceous plates, and a plurality of relatively short carbonaceous members, of skeleton form in lateral cross-section, located in spaced relation between the flat faces of said plates, and means for producing a sooty vapor in said furnace, said plates embodying means for reducing the deposit of soot on said members of skeleton form.

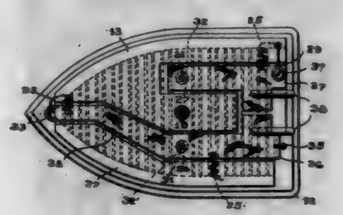
1,533,255. ELECTRIC FURNACE. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 1, 1922. Serial No. 598,318. 6 Claims. (Cl. 204—64.)

2. An electric furnace resistor comprising a plurality of relatively thin, flat, refractory plates, a plurality of current-conducting spacing members of relatively small area alternating with said flat plates and located adjacent the top portion thereof.



1,533,256. ADJUSTABLE SHELF FOR OVENS. PHILIP MCCAUL, Tacoma, Wash. Filed Apr. 19, 1924. Serial No. 707,629. 5 Claims. (Cl. 126—337.)

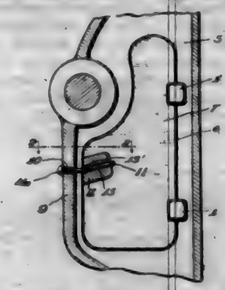
1. In an oven, a pair of crank shafts mounted in parallel relation within the oven, a shelf supported horizontally on the throws of the said crank shafts, gear wheels fixed to the ends of the shafts, an adjusting shaft operable from outside the oven, worm gears fixed to the latter shaft in mesh with the first named gears and means for rotating the adjusting shaft.



1,533,257. DOOR LATCH. ROBERT L. MCKINNEY, Pittsburgh, Pa. Filed June 21, 1924. Serial No. 721,536. 4 Claims. (Cl. 292—236.)

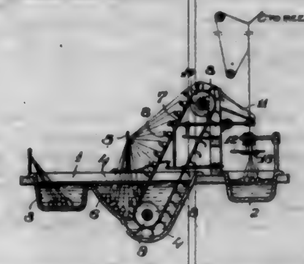
1. Door latching mechanism comprising a thumb-lever pivotally supported adjacent to the front of the door and extending rearwardly, a latch pivotally supported at the rear side of the door, and a pin carried by the latch and extending forwardly of the door, the said pin and

thumb-lever having telescopic engagement and being of such length that their adjacent ends do not protrude at the sides of the door.



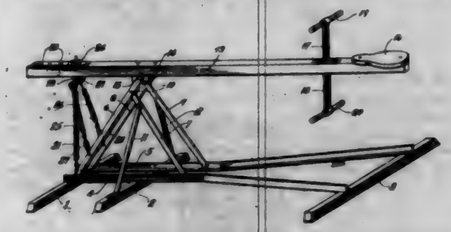
1,533,258. ELECTRIC IRON. ALLIS M. MACFARLAND, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 23, 1922. Serial No. 545,979. 2 Claims. (Cl. 219—25.)

1. In an electric iron, in combination, a sole plate, a cover member therefor, a radiant-type heating element comprising a refractory heat-insulating resistor-support, a resistor, and a pair of terminal members removably secured to said refractory support, said terminal members projecting outwardly through an aperture in said cover member, a handle, handle supporting straps having one end secured to said cover member and a guard for said projecting terminal members integral with one of said handle straps.



1,533,259. CLOSURE FASTENER. JOSEPH MALICKI, Chicago, Ill., assignor to Walter B. Templeton, Chicago, Ill. Filed May 3, 1923. Serial No. 636,348. 3 Claims. (Cl. 74—8.)

1. The combination with a member formed with an opening and a hole therein adjacent to the margin of said opening, of a closure fitted to said opening and itself formed with a hole registering with the hole in said member and disposed at an angle to the latter, and a

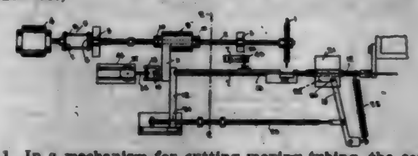


straight fastening pin driven through said holes and thereby bent into self-locking engagement with the latter.

1,533,260. AUTOMATIC FILAMENT SUPPLIER. RYOICHI NAITO and HIDETARO NIWA, Kobe, Japan, assignors to Kanegafuchi Boseki Kabushiki Kwaisha, Tokyo-fu, Japan. Filed Apr. 18, 1923. Serial No. 632,998. 3 Claims. (Cl. 19—3.)

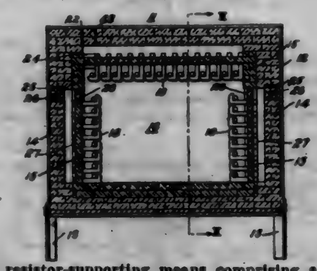
1. In combination, means for elevating cocoons one by one, a filament supplier, a pivoted lever, means on said lever for engaging the strand produced by the filament supplier and actuated according to the degree of friction exerted thereon by said strand, means for driving the cocoon elevating means, electro-magnetically controlled means for clutching the driving means with the elevating means, an electric circuit including the electro-magnetically controlled means, and a circuit controller interposed in said circuit and actuated by said lever.

1,533,261. TEETER-TOTTER. LEON G. PATTISON and THOMAS G. PATTISON, Everett, Wash. Filed Feb. 26, 1923. Serial No. 621,426. 1 Claim. (Cl. 272—55.)



A teeter totter device comprising a series of transverse base beams, a pair of longitudinal beams secured upon the base beams, a frame work mounted upon the longitudinal beams and a pivot pin supported by said frame, a teeter beam supported from between its ends upon said pivot pin, a seat mounted at one end of the beam and springs connected with the other end of the beam; said beam having a plurality of holes vertically therethrough in spaced relation longitudinally of the beam at the end opposite the seat, a bolt adapted to be extended through any of said openings, a plate fixed to the lower end of the bolt, an adjusting nut threaded onto the upper end of the bolt, a spring secured at one end to the lower end of the bolt and at its opposite end to the frame directly below the beam and a pair of springs secured at their upper ends to the plate at opposite sides of the bolt and extending downwardly in diverging relation and secured at their lower ends to the frame.

1,533,262. PROCESS OF MAKING IRON AND STEEL DIRECT. SAMUEL PEACOCK, Wheeling, W. Va. Filed Dec. 6, 1922. Serial No. 605,286. 4 Claims. (Cl. 75—14.)

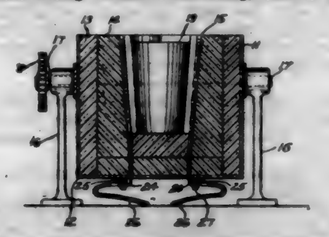


1. The process of making steel direct from the ore, which consists in charging a blast furnace with the usual steel making materials containing a sufficient quantity of lime and an alkali metal chloride to make a free running slag at 2400° F.; smelting the charge thus produced in the usual manner at temperatures below 2700° F. to pass off the sulphur present in a gaseous form; and recovering the metal and slag produced.

1,533,263. TUBE-SEVERING APPARATUS. WILLIAM S. PRITCHARD, Detroit, Mich., assignor, by mesne assignments, to Motor Products Corporation (1923), Detroit, Mich., a Corporation of New York. Filed Aug. 28, 1922. Serial No. 584,682. 11 Claims. (Cl. 29—69.)

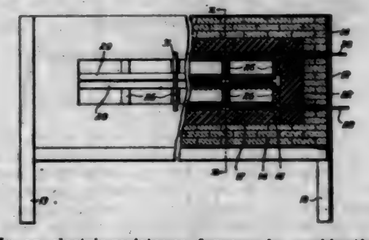
1. In a mechanism for cutting moving tubing, the combination with a device for severing the tubing, of means for relatively moving the tubing and severing device toward each other to bring the severing device into engagement with the tubing and also for moving said severing device in the same direction and at the same speed as the tubing is advancing, and means for returning said severing device to its original position, said means opposing a resistance to the forward movement of said severing device which progressively decreases as said severing device is advanced.

1,533,264. ELECTRIC-FURNACE RESISTOR. THOMAS A. REID, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 17, 1921. Serial No. 522,996. 8 Claims. (Cl. 204—64.)



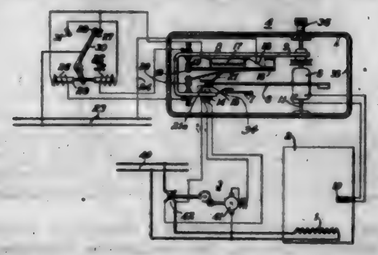
7. A resistor-supporting means comprising a plurality of contiguous refractory members, each having one end of L-shape for engaging and supporting a resistor member and means for loosely supporting said refractory members.

1,533,265. ELECTRIC CRUCIBLE FURNACE. THOMAS A. REID, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 7, 1922. Serial No. 527,644. 4 Claims. (Cl. 204—64.)



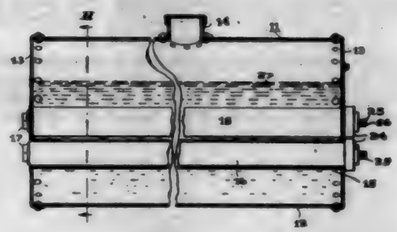
2. In an electric furnace, in combination, a refractory casing, a plurality of relatively thin refractory plates,

of arcuate form in lateral cross-section, each plate having a plurality of relatively small spaced, alined, integral projections on the outer surface thereof and the said plates fitting within said casing, and a resistor



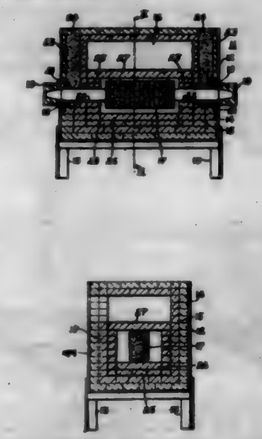
member located between said plates and said casing and operatively engaging said plates at their outer surface only, the said portions thereof being maintained in proper operative position relatively to each other by the alined projections.

1,533,266. DOUBLE-CHAMBER ANNEALING FURNACE. THOMAS A. REID, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 6, 1922. Serial No. 534,447. 2 Claims. (Cl. 204—64.)



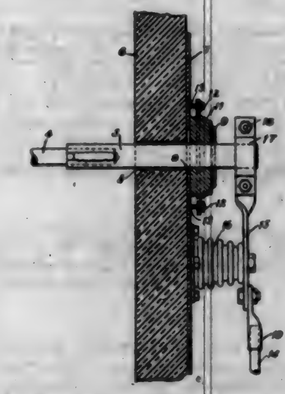
1. In an electric-resistance furnace, in combination, a refractory casing enclosing a plurality of superposed chambers, a plurality of relatively thin refractory plates constituting the bottom wall of the lower chamber, a plurality of relatively thin refractory plates constituting the top wall of said chamber and the bottom wall of said upper chamber, a plurality of relatively thin refractory plates constituting the top wall of said upper chamber, all of said plates having a plurality of relatively small, spaced, alined, integral projections thereon and a resistor member operatively engaging one surface of each of said refractory plates.

1,533,267. TEMPERATURE INDICATOR AND CONTROLLER. THOMAS A. REID, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 555,514. 28 Claims. (Cl. 204—64.)



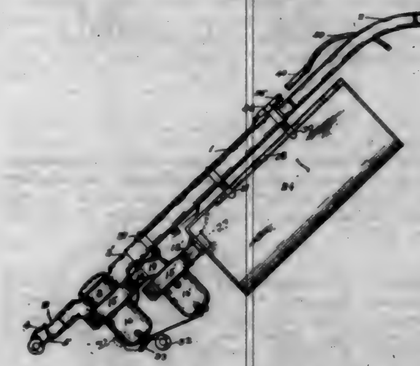
1. In a temperature-controlling system for an electrically-heated device, the combination with a heat-developing device, a source of energy therefor and means for controlling the admission of energy to the heat developing device, of a controlling means for the energy-controlling means comprising a member movable in response to the temperature of the heated device, contact members disposed in predetermined relation with respect to the path thereof to be engaged by the movable member at predetermined temperatures corresponding to the positions of the contact members, and thermoresponsive means for periodically causing the movable member to engage one of the contact members while said movable member is within the range of the path included by the contact members.

1,533,268. ELECTRIC STEAM BOILER. THOMAS A. REID, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 2, 1922. Serial No. 585,889. 4 Claims. (Cl. 219—38.)



1. In a heating unit for an electrically-heated boiler, in combination, a metal tube, a preformed relatively heavy resistor member in said tube, a plurality of spaced refractory members in said tube for holding integral and parallel-extending portions of said resistor member in proper operative positions therein, and a filling of granular electric-insulating and heat-conducting material in said tube.

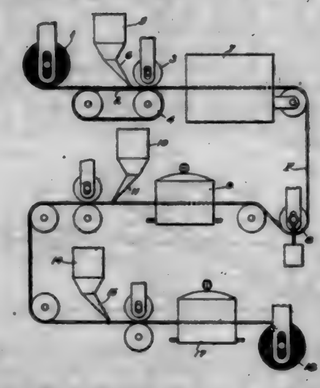
1,533,269. ELECTRIC FURNACE. THOMAS A. REID, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 1, 1922. Serial No. 598,296. 6 Claims. (Cl. 204—64.)



4. The method of protecting an oxidizable resistor member in a furnace chamber which comprises surrounding said chamber by a relatively thin layer of an initially granular material and heating said granular material to change the same to a substantially vitreous air-tight envelope.

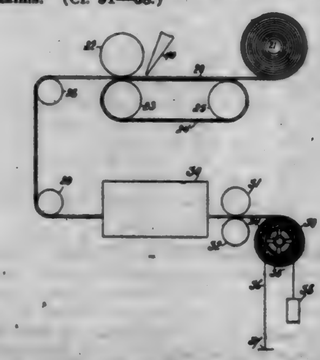
1,533,270. FURNACE TERMINAL. THOMAS A. REID, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 7, 1922. Serial No. 599,518. 4 Claims. (Cl. 204—64.)

1. A furnace terminal comprising a terminal bar adapted to extend through an opening in a furnace wall, a refractory gasket surrounding the bar and a gasket clamp for pressing the gasket into contact with the wall surrounding the said opening and the terminal bar.



1,533,271. AIRWAY-CLEANING APPARATUS. DANIEL BENSON REPLOGLE, Berkeley, Calif. Filed Feb. 26, 1919. Serial No. 279,467. 9 Claims. (Cl. 15—16.)

7. In an air-way system adapted for cleaning and the like, wherein motor driven centrifugal fans are used for driving air thru the system, a plurality of attachment devices for the air driving means, and a plurality of equipped centrifugal fan air driving units adapted to be serially and operatively attached to either of the attachment devices aforesaid.

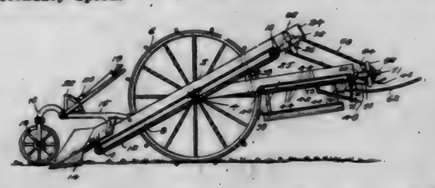


1,533,272. ADHESIVE MEDICAL TAPE AND PROCESS FOR MAKING THE SAME. ROLAND B. RESPESS, New York, N. Y., assignor, by mesne assignments, to Respro Inc., Cranston, R. I., a Corporation of Rhode Island. Filed Feb. 15, 1921. Serial No. 445,111. 4 Claims. (Cl. 91—68.)

1. The process of making adhesive surgical tape which comprises saturating an unwoven fibrous sheet with an adhesive binding agent, drying the sheet, coating one side of the dried sheet with a medicated liquid adhesive, and coating the opposite side of the sheet with a water-proofing substance.

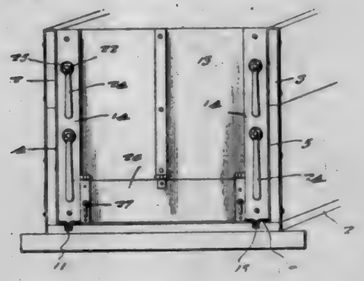
2. An adhesive medicated tape comprising unwoven fibrous sheet material saturated with a binding adhesive agent and coated on one side with a medicated adhesive and upon the other side with a waterproofing substance.

1,533,273. PROCESS FOR MAKING A LEATHER SUBSTITUTE. ROLAND B. RESPESS, New York, N. Y., assignor, by mesne assignments, to Respro Inc., Cranston, R. I., a Corporation of Rhode Island. Filed Feb. 21, 1921, Serial No. 446,976. Renewed Feb. 5, 1925. 3 Claims. (Cl. 91—68.)



1. The herein described process of making a leather substitute consisting in forming an untwisted fiber sheet, saturating the sheet with an adhesive binding agent composed preferably of glue and rubber by passing the sheet between pressure rolls to force the binding agent into the sheet and to interlock and mat the fibers, drying the sheet and subjecting it to pressure under tension.

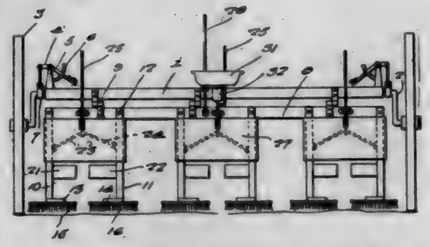
1,533,274. QUACK-GRASS MACHINE. THOMAS C. REYNOLDS, Verdi, Minn. Filed Dec. 12, 1922. Serial No. 606,425. 2 Claims. (Cl. 55—137.)



1. A machine of the class described comprising a frame having traction wheels, a conveyor frame tiltably mounted on said frame, a sheet steel endless primary conveyor apron on said frame, rollers journaled in said frame for supporting said apron, a vertically adjustable plow at the receiving end of said primary apron, a rotary disintegrator at the delivery end of said primary apron, gears carried at each end of said disintegrator, a sprocket chain connected with one of said gears and with said

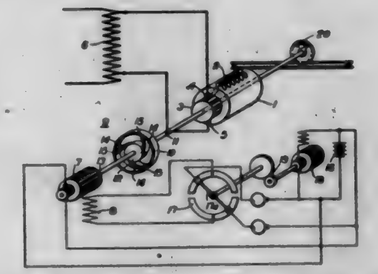
traction wheels, a second conveyor frame supported from said machine frame below said first conveyor frame, a secondary conveyor in said second frame and comprising a series of transverse spaced metal bars, a concave having flexible steel fingers at the delivery end of said secondary apron, a rotary disintegrator cooperating with said concave, driving gearing connecting said last named disintegrator and the other of said gears on said first named disintegrator, driving gearing between said last named disintegrator and said secondary apron and a material separating carrier at the delivery end of said secondary apron.

2. In a machine of the class described, the combination with a frame, a conveyor therein, means for operating said conveyor, a concave including a plurality of spaced longitudinally extending tines, means for pivotally supporting said concave at the delivery end of said frame below the conveyor, a depending arm carried at the end of said concave, spring means between said arm and said frame to normally retain said concave in a yielding predetermined position, and a beater rotatably carried on said frame cooperating with said concave.



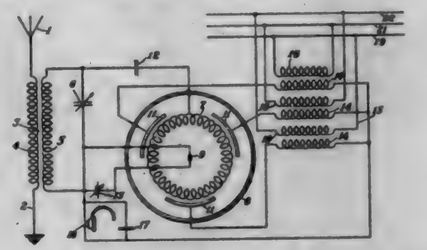
1,533,275. END GATE. ARTHUR ROBERTS, Bogue, Kans. Filed Jan. 3, 1925. Serial No. 342. 2 Claims. (Cl. 296—52.)

1. In combination with a wagon body, a pair of opposed angle iron members secured on the inner sides of the wagon body adjacent the rear end thereof, an end gate adapted to be detachably and hingedly supported at its lower end to the bottom of the wagon body, means for securing the end gate in a vertical position, said means comprising bolts extending transversely through the end gate and through registering elongated openings provided in the angle iron members, heads on the inner ends of the bolts adapted for engagement with the inner faces of the angle iron members, and handles on the outer ends of said bolts for rotating the same to bring the heads into alignment with the openings whereby the gate is adapted for swinging or vertical sliding movement.



1,533,276. BOLL-WEEVIL MACHINE. JOSE M. SANCHEZ, Zapata, Tex. Filed Aug. 19, 1924. Serial No. 732,956. 4 Claims. (Cl. 43—138.)

1. A boll weevil machine comprising an axle, traction wheels on the respective ends thereof, a longitudinal beam hingedly supported on said axle, means for swinging the beam and holding it in adjusted positions, a plant engaging unit including a pair of spaced arms pivotally supported at their upper ends on the longitudinal beam, means for swinging the arm for holding

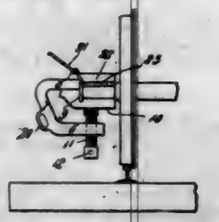


them in adjusted positions in relation to each other, and engaging brushes extending forwardly on the upper portions of the arms of the units, insect receiving pans supported on the arms and disposed below the brushes.

1,533,277. MEANS FOR PREVENTING ARMATURE-COIL HEATING. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 15, 1919. Serial No. 317,692. 11 Claims. (Cl. 172—276.)

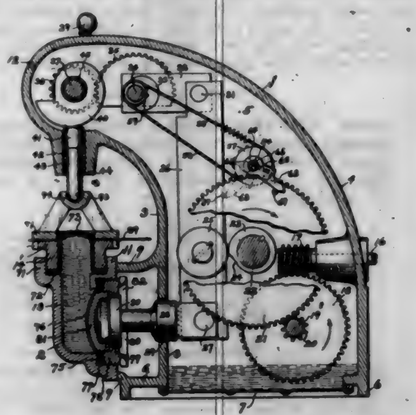
2. In combination with a dynamo-electric machine embodying a commutated armature winding, an auxiliary motor detachably connected thereto, and means for periodically reversing the direction of rotation of said auxiliary motor.

1,533,278. PLATE-CIRCUIT EXCITATION. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 20, 1920. Serial No. 425,338. 11 Claims. (Cl. 250—27.)



2. The combination with a vacuum-tube device having an electron-emitting cathode, of means for producing a rotating electrostatic field substantially constant in ampliture at the surface of said cathode.

1,533,279. ELECTRICAL CONNECTION FOR RAILWAY RAILS. JEREMIAH D. GRUNDON, Guthrie, Okla. Filed Oct. 31, 1922. Serial No. 598,113. 2 Claims. (Cl. 173—262.)

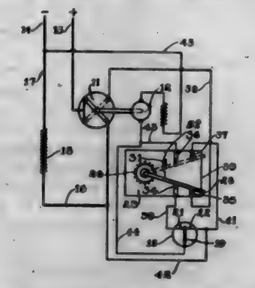


2. A fish plate having upon its inner face a longitudinal groove, a recess and deeper recesses, and a bonding wire received in said recess and having free loops between its ends received in said deeper recesses and angled ends adapted to be received in openings in the web of a rail.

1,533,280. JOURNAL-BOX JACK. GEORGE TALLION, Malone, N. Y. Filed July 14, 1923. Serial No. 651,448. 2 Claims. (Cl. 254—34.)

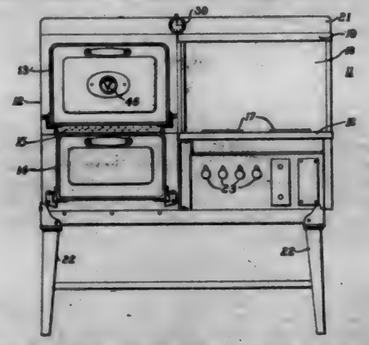
1. A journal box jack comprising a C-shaped member having upper and lower arms disposed in spaced parallelism, said upper arm being provided at its free end with means for engaging an axle collar, said lower arm being of a length greater than the upper arm and extending inwardly beyond the collar engaging means to dispose its end beneath the approximate center of a journal box, and a lifting device carried by the inner end portion of said lower arm.

1,533,281. TESTING MACHINE. HERBERT E. TAUTZ, Milwaukee, Wis., assignor to Elisha Jesse Cady, River Forest, Ill. Filed June 13, 1923. Serial No. 645,170. 26 Claims. (Cl. 265—14.)



1. In a machine for testing fabrics, a casing having a movable stock-clamp and a reciprocable piston, a second casing having a liquid chamber provided with a platform and a diaphragm in the line of movement of the clamp and a diaphragm in the line of reciprocation of the piston, the diaphragms sealing the chamber, and means to detachably mount the second casing on the other casing.

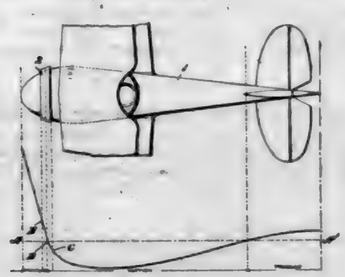
8. In a machine for testing fabrics, a casing forming a compression chamber having a shouldered opening, a diaphragm closing said opening consisting of an elongated tubular body having a head at one end and an annular rim at its other end, and a platform having a hollow stem surrounding the body of the diaphragm and clamping its rim on the shoulder of the chamber.



20. In a machine for testing fabrics, a casing forming a compression chamber containing liquid and having a diaphragm, a piston to impart pressure on the liquid, shaft, means operated by the shaft to actuate the piston, an electric motor to drive the shaft, a switch for the motor circuit, a spring-retracted trip-lever to open the switch, and a pin actuated by the shaft to move said lever when the shaft completes its rotation to open the switch.

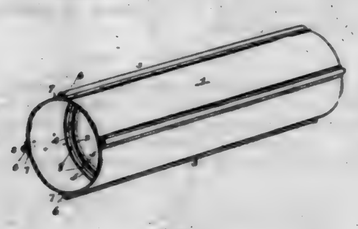
1,533,282. PROTECTIVE SYSTEM FOR HEATING DEVICES. FRANK THORNTON, Jr., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 16, 1922. Serial No. 568,707. 10 Claims. (Cl. 219—20.)

1. In an electric-heating system, in combination, an electric-heating element, electric means for controlling the energization of said element to maintain a substantially constant temperature, and a thermally operable temperature-limiting device for disabling said electric controlling means upon the occurrence of predetermined temperature conditions.



1,533,283. AUTOMATIC THERMAL CONTROL SYSTEM. FRANK THORNTON, Jr., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1922. Serial No. 606,646. 2 Claims. (Cl. 219—35.)

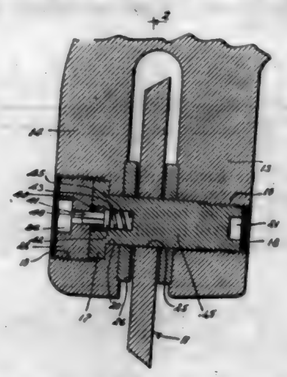
1. In a heating system for electrically heated appliances in combination, a heating element, a snap switch for controlling the energization of said heating element,



an electric motor for actuating said snap switch, a time controlled electric circuit for energizing said motor to actuate said switch to a position to permit energization of said heating element, and a separate temperature controlled electric circuit for energizing said motor to actuate said switch to a position to de-energize said heating element.

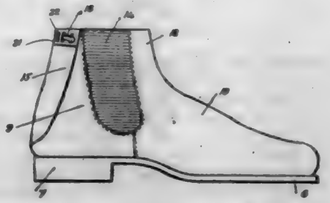
1,533,284. ANNULAR RADIATOR MOUNTING FOR AIRPLANES. ALFRED V. VERVILLE, Dayton, Ohio. Filed Feb. 17, 1921. Serial No. 445,712. 9 Claims. (Cl. 244—31.)

1. In combination with an airplane fuselage of streamline formation, a radiator transversely encircling and projecting beyond the fuselage and having its air inlet and outlet sides arranged respectively in advance and in rear of the line of normal atmospheric pressure on the nose portion of the fuselage.



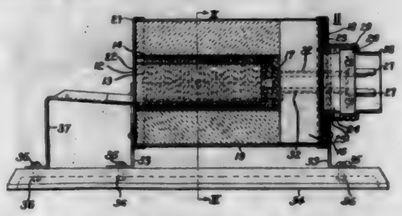
1,533,285. AIRCRAFT FUSELAGE. ALFRED V. VERVILLE, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,308. 5 Claims. (Cl. 244—30.)

3. An aircraft body structure comprising a shell of streamline formation, flanged metal hoops stationed at intervals in said shell in contact with the inner face thereof, and flanged metal ribs extending longitudinally of and in contact with the outer surface of said shell, the flanges of said hoops and ribs being secured to each other by fasteners.



1,533,286. WELL-DRILLING BIT. HARRY P. WICKERSHAM, Walnut Park, Calif. Filed June 9, 1924. Serial No. 718,849. 10 Claims. (Cl. 255—71.)

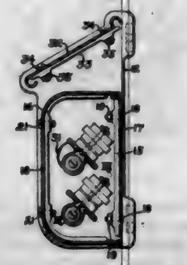
1. In a bit having two spaced parts with openings at opposite points, a cutting member, and a pin for mounting the cutting member between said parts, the pin being arranged to extend between the parts and having one end screw threaded into the opening in one part, a



head on the other end of the pin completely carried in the opening in the other part, and a plug screw threaded into said last mentioned opening over the head of the pin.

1,533,287. SHOE. JAMES E. WILLIAMS, Spring City, Pa. Filed Feb. 20, 1924. Serial No. 694,085. 1 Claim. (Cl. 36—51.)

In a shoe, an upper, a quarter formed of two parts extending to the shoe heel and united by a seam adjacent to the heel, one portion of the quarter being provided with a flap which overlaps the other portion, side portions of elastic material secured between the upper and the two portions of the quarter, a reinforcing strip secured to the top edge of the said flap, said strip and flap being provided with slots, and a fastening device secured to the under portion of the quarter and adapted to engage with the said slots and contract the ankle portion of the shoe upon the ankle of the wearer.

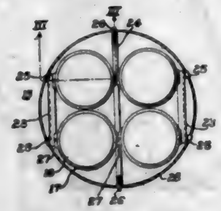


1,533,288. ELECTRIC MUFFLE FURNACE. JAMES C. WOODSON, Mansfield, Ohio, assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Oct. 2, 1922. Serial No. 591,781. 3 Claims. (Cl. 204—64.)

1. In an electric-resistance furnace, in combination, a base, a tubular casing, end caps for said casing, each having a central circular opening therethrough, means for supporting said casing above said base secured to said

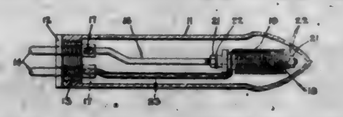
end caps, a heat-insulating lining within said casing, a tubular muffle, a stop member projecting into said muffle at one end thereof, a disc of heat-insulating material in said casing adjacent to said stop member and to one of said end caps, a terminal member operatively supported by the end cap located adjacent to said disc of heat-insulating material, and located in axial alinement with said tubular muffle, and a work-supporting member at the other end of said casing.

1,533,289. STREET-CAR HEATER. JAMES C. WOODSON, Mansfield, Ohio, assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Oct. 4, 1922. Serial No. 592,267. 2 Claims. (Cl. 219—19.)



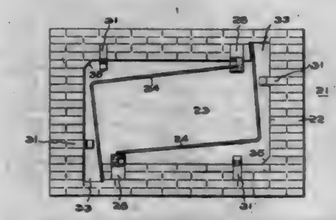
1. In an electric street-car heater, in combination, a pair of end castings, an elongated perforated three-sided cover member secured to said end castings at the edges of one of said sides, a reflector secured to said end castings at the open side of said cover member, heating elements supported by said end castings within said cover member, and a combined guard and foot-rest secured to said end castings above said cover member.

1,533,290. ELECTRIC CANDY-WARMING TABLE. JAMES C. WOODSON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Corporation, a Corporation of Pennsylvania. Filed Dec. 2, 1922. Serial No. 604,497. 6 Claims. (Cl. 219—19.)



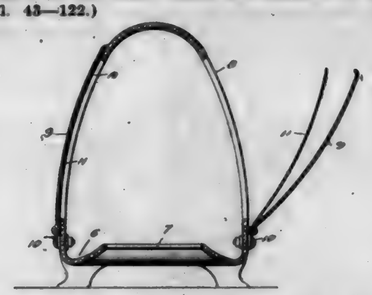
1. In an electrical heating device, in combination, a sheet-metal plate having upturned edge flanges, a layer of heat-insulating material on said plate, a layer of flexible electrical-insulating material on said heat-insulating material, a resistor member located on and secured to said layer of electrical-insulating material, a layer of electrical-insulating material over said resistor and a superposed sheet-metal plate having downturned edge flanges operatively engaging the upturned edge flanges of said first sheet-metal plate.

1,533,291. STERILIZED HEATER. JAMES C. WOODSON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 2, 1922. Serial No. 604,498. 4 Claims. (Cl. 219—38.)



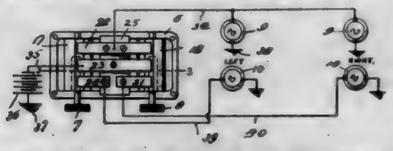
1. In an electrically heated device, the combination with a fluid container having a depending flange portion, of a plurality of parallel-extending, spaced bars having their ends secured to said flange portion, a plurality of metal supporting members secured on and supported by said spaced bars, refractory bricks supported in said metal supporting members and resistor members in said refractory bricks supported thereby closely adjacent to the bottom of said container.

1,533,292. ELECTRICALLY-HEATED DEVICE. JAMES C. WOODSON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 2, 1922. Serial No. 604,499. 2 Claims. (Cl. 219—67.)



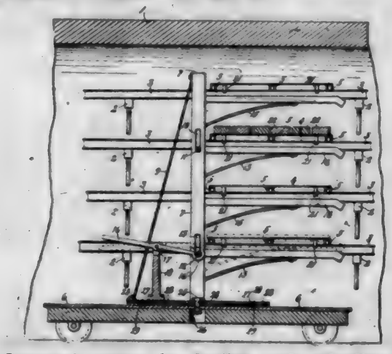
1. In an electrically heating device, the combination with a tubular refractory casing closed at one end and having internal screw threads at its open end, of a refractory closure member having external screw threads and fitting into the open end of said casing, and a plurality of spaced contact terminals mounted in said closure member and projecting therefrom and adapted to be operatively engaged by a contact plug.

1,533,293. ELECTRIC HEATING UNIT. JAMES C. WOODSON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 13, 1924. Serial No. 698,871. 15 Claims. (Cl. 204—64.)



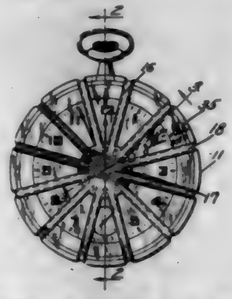
1. In an electric furnace, in combination, a resistor member comprising a plurality of return-bent integral portions, located in two angularly intersecting planes only.

1,533,294. FLYTRAP. EDITH ZINNER, Miles City, Mont. Filed Nov. 18, 1924. Serial No. 750,610. 1 Claim. (Cl. 43—122.)



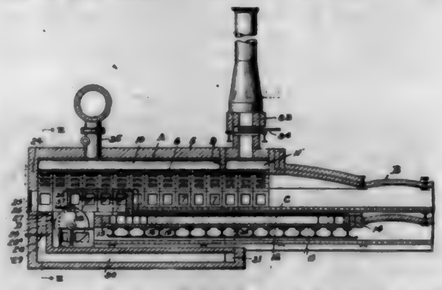
In a fly trap of the character described, a receptacle formed with an inlet opening in its bottom wall, and discharge openings in its side walls, strips of fly paper adapted to be disposed over the openings in the side walls, and combined closing doors and fly paper strip holders hingedly secured to the receptacle adjacent said side wall openings.

1,533,295. ELECTRIC SWITCH. WILLIAM ADAMS, Akron, Ohio. Filed Sept. 17, 1923. Serial No. 663,102. 1 Claim. (Cl. 200—5.)



An electrical switch comprising an elongated casing, a pair of longitudinally spaced rollers journaled in said casing, separate operating handles for the rollers, said rollers being provided on their surface with circumferentially spaced shoulders and being also provided on their surfaces between the shoulders with movable contact strips, a cross piece in the casing beween the rollers, a plurality of spring metal contacts connected to said cross piece and projecting beyond it into the path of the roller, the free ends of said spring metal contacts being successively engageable with the shoulders and movable contacts carried by said rollers.

1,533,296. MEANS FOR LOADING AND UNLOADING KILNS OR STOVES. MARIANO ALEMANY, Central Hershey, Cuba. Filed Apr. 8, 1924. Serial No. 705,144. 1 Claim. (Cl. 254—8.)

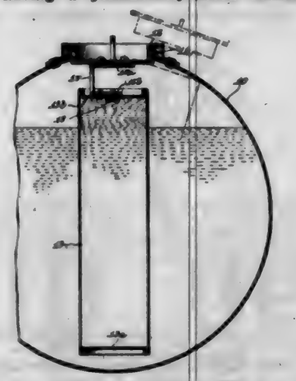


Improved means for loading and unloading kilns which comprises a car provided with two standards of channelled section inside of which are slidable vertical beams connected by cross bars and from which project longitudinally pairs of load carrying horizontal arms the arms being arranged at a vertical distance from one another which is the same as that which separates the longitudinal beams of the kiln, and means to raise and lower said vertical beams and said pairs of horizontal arms.

1,533,297. MEMORANDUM. JOSEPH ALLER, Los Angeles, Calif. Filed Nov. 5, 1923. Serial No. 672,876. 4 Claims. (Cl. 58—57.)

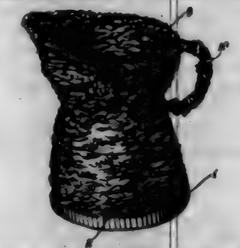
2. In cobination: a time piece; a frame disposed in front of the dial of said time piece; and transparent mark receiving members removably held by said frame.

1,533,298. ANNEALING FURNACE AND LEER. WALTER O. AMSLER, Pittsburgh, Pa. Filed June 3, 1921. Serial No. 474,691. 9 Claims. (Cl. 49—47.)



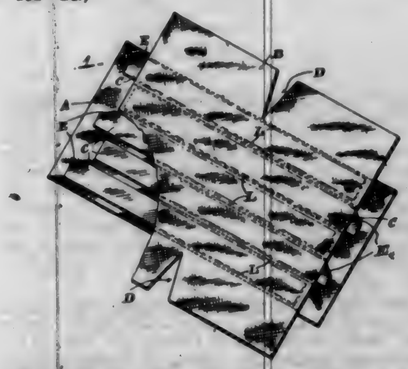
3. A heating chamber for leers comprising an outer wall, an inner wall, which inner wall encloses a muffle chamber, means for circulating heated gases between the inner and outer walls, means for introducing articles at the side of the muffle chamber, and means for circulating the heated gases around the muffle chamber to the rear of the point where the articles are introduced into the muffle chamber.

4. A heating chamber for leers comprising an outer wall, an inner wall enclosing a muffle chamber, an endless conveyor in the chamber, supporting wheels for the conveyor extending into the muffle chamber, vertical side flues for circulating heated gases between the outer and inner walls, and passages connecting those of the side flues adjacent the wheels whereby the portion of the muffle chamber into which the wheels extend may be heated by circulating gases thereabout.



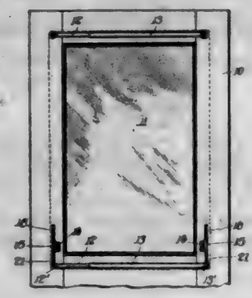
1,533,299. FUEL-RESERVE TANK. JOHN G. ARMKNECHT, Detroit, Mich. Original application filed Jan. 30, 1922, Serial No. 532,613. Divided and this application filed July 19, 1923. Serial No. 652,555. 2 Claims. (Cl. 158—46.5.)

1. A fuel reserve formation for motor vehicle service and comprising a closure member for the filling opening of the fuel supply tank, and a fuel container secured to and depending from and movable with the closure, said container having dimensions and a configuration to permit free passage through the filling opening, said container having a permanently-closed bottom and a



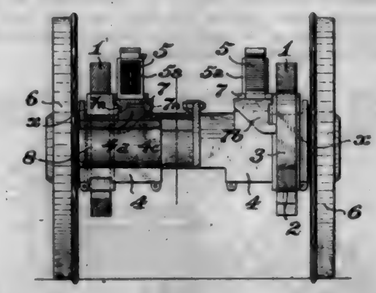
permanent top, said top carrying filling and venting openings and with a baffle formation underlying such openings.

1,533,300. METHOD OF MAKING DECORATIVE ARTICLES. RALPH BAKER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 12, 1920. Serial No. 423,647. 6 Claims. (Cl. 219—8.)



1. A method of forming metal deposits into receptacles which comprises establishing an arc between a fusible electrode and a metal base, and manipulating said electrode to produce superposed deposits to form the walls of a receptacle.

1,533,301. INNER BOOT FOR AUTOMOBILE TIRES. LEON G. BELOUD, San Francisco, Calif. Filed Aug. 25, 1923. Serial No. 659,401. 4 Claims. (Cl. 152—24.)

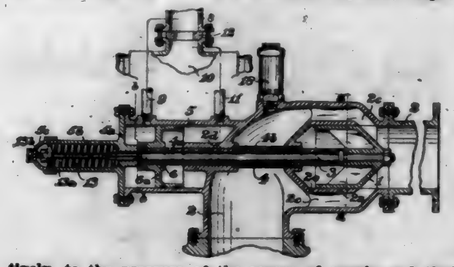


3. A blow-out boot for pneumatic tires comprising layers of fabric, fastened together in such a manner as to leave pockets, each one of which is intended to contain a metallic strip, means to secure each metallic strip at one end only, in order to allow play when flexed all substantially set forth.

1,533,302. CURTAIN SUPPORT. JAMES H. BOYD, Chicago, Ill. Filed Dec. 1, 1922. Serial No. 604,188. 3 Claims. (Cl. 156—22.)

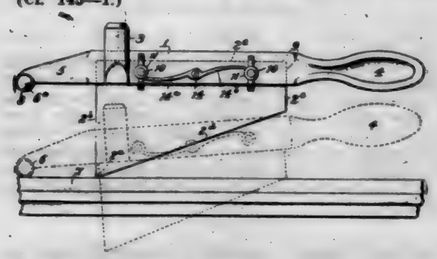
1. In a curtain holder of the type described, the combination of a pair of guides adapted for attachment to a panel frame, a pair of vertically slidable bars mounted in said guides, said bars having outwardly offset lower end portions carrying rod-supporting devices, a curtain rod formed with rearwardly turned end portions separately engaged with said rod-supporting devices, and yieldable means for locking said bars in adjusted position in said guides.

1,533,303. LATERAL-MOTION APPLIANCE FOR LOCOMOTIVE DRIVING BOXES. JAMES G. BLUNT, Schenectady, N. Y. Filed Sept. 25, 1924. Serial No. 739,794. 4 Claims. (Cl. 105—80.)



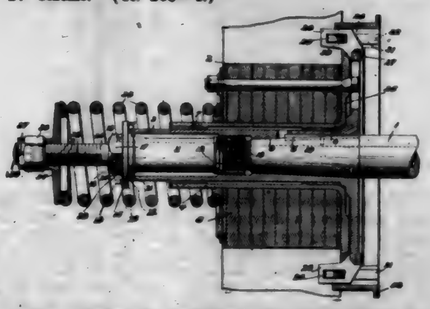
1. In a locomotive engine, the combination of side frame members; a driving box, fitted therein, with the capacity of relative transverse movement; springs, located on the inner sides of the frame members, and bearing thereon; spring seats, journalled on the driving box and supporting said springs; and lever arms, fixed to the spring seats and bearing on the frame members.

1,533,304. SPEED-CONTROL APPLIANCE FOR FLUID-PRESSURE ENGINES. ALFRED W. BRUCE, New York, N. Y. Filed Apr. 25, 1923. Serial No. 634,481. 5 Claims. (Cl. 137—153.)



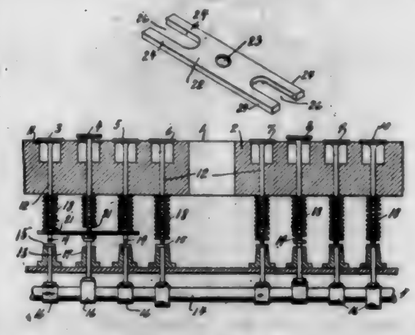
4. In a speed control appliance for locomotive engines of the Mallet type, the combination, with a cylinder exhaust pipe, of a choke valve in said pipe, means to

normally hold said valve inoperative, a differential piston directly connected to said valve, connections whereby the opposite faces of said piston are subjected, respec-



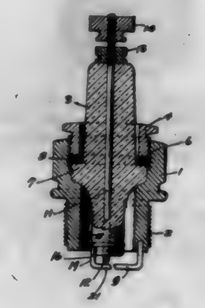
tively, to the pressure of the source of supply and that in the valve chest, and a reducing ring in the conduit between the source of supply and the valve chest.

1,533,305. TOOL FOR CUTTING TONGUED BOARDING. CHARLES HERBERT BURTON, Washington, D. C. Filed Apr. 8, 1924. Serial No. 705,115. 6 Claims. (Cl. 145—1.)



1. A tool comprising a main body portion, a blade on the body portion disposed longitudinally and projecting downwardly from the under side thereof, said blade having a cutting edge portion extending at an inclination to said body portion, the blade being adapted to gradually enter and cut the work, an anvil part on the body portion at the upper side thereof, and a handle extension at one end of said body portion.

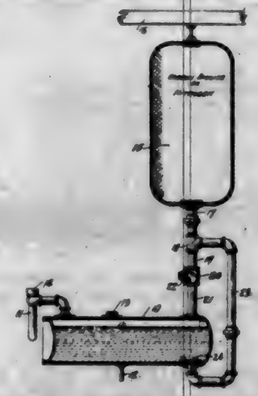
1,533,306. THRUST METER. FRANK W. CALDWELL, Dayton, Ohio. Filed Jan. 20, 1922. Serial No. 530,723. 17 Claims. (Cl. 265—4.)



1. In a device for measuring the thrust force of a screw propeller carried by a driving shaft, bearing means mounting the propeller for longitudinal play on the shaft, means for driving the propeller positively from the shaft irrespective of such play, a spring interposed between shaft and propeller to resist longitudinal play of the latter, means by which the tension of the spring may be varied, and means for indicating the degree of play of the propeller.

1,533,307. VALVE LIFTER. SELDEN SCRANTON DAVIS, South Pasadena, Calif. Filed Mar. 29, 1923. Serial No. 628,600. 6 Claims. (Cl. 29—86.3.)

1. In combination, a plurality of valves disposed in operative proximity having stems extending therefrom, spring means bearing on the stems for seating the valves, individual elements adapted to successively raise the valves by compressing the springs, and means adapted to be supported by one of said elements made to hold the springs of adjacent valves in a compressed condition so as to render the same inoperative.

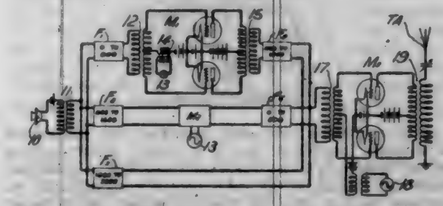


1,533,308. SPARK PLUG. SELDEN S. DAVIS, South Pasadena, Calif. Filed May 7, 1923. Serial No. 637,378. 1 Claim. (Cl. 123—169.)

A spark plug comprising an insulating core, a metallic shell carrying the core, a main electrode projecting from the lower end of the core, a second electrode projecting inwardly from the lower end of the shell to a point below and at one side of the main electrode, a metallic loop embracing the core, and a projection on the loop and extending across the lower end of the main electrode to provide a gap between the two and having its free end spaced from the second electrode to form a gap therebetween.

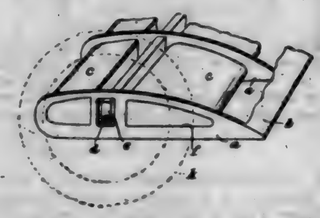
1,533,309. SAFETY DEVICE FOR GASOLINE TANKS. WILLIAM E. DURBOROW, Columbia, Pa. Filed Oct. 5, 1922. Serial No. 592,550. 4 Claims. (Cl. 220—74.)

1. The combination with a tank for containing liquid fuel and having an outlet, of means for keeping that portion of the tank not filled with fuel filled with non-combustible gas comprising a gas container located outside of the tank and having a capacity at least equal to the capacity of the tank and formed of flexible material



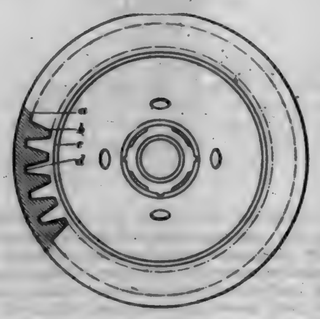
whereby it will be submitted to the pressure of atmospheric air, and a pipe leading from the container into the upper portion of said tank.

1,533,310. INTERLOCK DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 13, 1922. Serial No. 587,903. 12 Claims. (Cl. 173—332.)



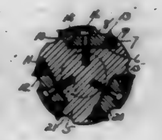
1. The combination with a switch device for controlling electric train line circuits and a cut-out cock for controlling communication through a fluid pressure train pipe, of an interlock device including an interlocking element movable with said switch device and an interlocking element movable with said cut-out cock for preventing movement of the switch device in one position of the cut-out cock.

1,533,311. SECRET SIGNALING. HARVEY FLETCHER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 18, 1923. Serial No. 681,846. 11 Claims. (Cl. 179—1.)



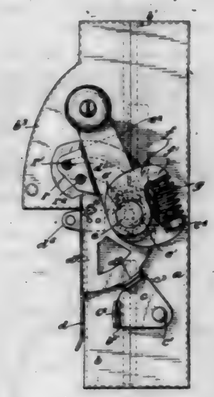
1. The method of secretly transmitting speech waves comprising dividing the waves into sub-bands of frequencies, the sub-bands differing among themselves as to the breadth of included frequencies, interchanging certain of said sub-bands with others while keeping the total range of the resultant wave within the same frequency limits as the speech waves, and transmitting said resultant waves to a distance.

1,533,312. LOCATION OF BENZINE TANKS IN AEROPLANES. ANTHONY HERMAN GERARD FOKKER, Amsterdam, Netherlands. Filed July 8, 1921. Serial No. 483,816. 5 Claims. (Cl. 241—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In an aeroplane carriage, the combination, side bars shaped to afford the least possible resistance to the air, a fuel tank fitted in and supported by said bars, and an envelope covering the bars and the tank, substantially as and for the purposes set forth.

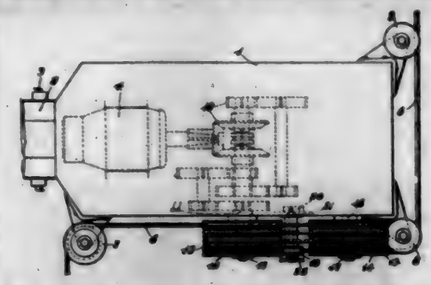
1,533,313. CENTRIFUGAL SEPARATOR BOWL TO FACILITATE THE REMOVAL OF SLIME THEREFROM. ERIK AUGUST FORSBERG, Stockholm, Sweden, assignor, by mesne assignments, to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed July 19, 1922. Serial No. 576,123. 3 Claims. (Cl. 233—27.)



1. A centrifugal bowl especially adapted to effect the carrying away by outflowing liquid of slime deposited on the peripheral wall of the separating chamber, which comprises a bowl having a cylindrical inner wall provided with a multiplicity of channels whose longitudinal direction of extension is toward the bowl outlet, said channels opening along their length toward the interior of the bowl and having imperforate bottoms and side walls and adapted to receive the separated slime, said channels having a depth greater than the width of their bottoms and concentrating the peripherally outflowing liquid in narrow spaced apart streams and thus so increasing the velocity of flow of the peripherally outflowing liquid as to facilitate the sludging out of the slime.

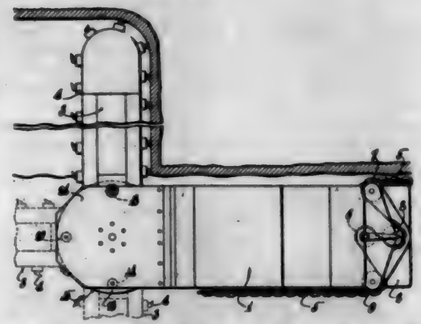
1,533,314. REAMER. DANIEL S. FOX, Ivoryton, Conn. Filed Aug. 4, 1921. Serial No. 489,718. 9 Claims. (Cl. 77—75.5.)

1. A reamer comprising a body having a groove with a flat bottom and a sloping wall on one side at an angle to the bottom, a clamp having an edge oppositely tapered to said wall to form a recess for a triangular cutting tool, and means for securing the clamp in place.



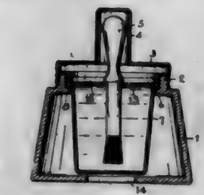
1,533,315. INCLOSED SAFETY SWITCH. POUL HARTMANN, Brooklyn, N. Y., assignor, by mesne assignments, to Economy Fuse & Manufacturing Company, Chicago, Ill., a Corporation of New York. Filed May 10, 1921. Serial No. 468,283. 12 Claims. (Cl. 200—50.)

4. In combination with a line switch and fuses, a box in which they are supported, said box having a removable cover, said cover being provided with an opening therein to give access to said fuses, a door hinged on the cover and closing said opening, holding means for said cover and means mounted upon said cover and cooperating with said switch and said holding means to prevent removal of said cover while said door is closed, the opening of said door while said switch is closed and the closing of said switch when said door is open.



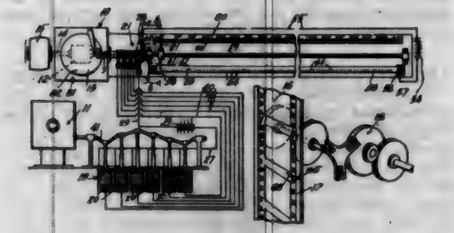
1,533,316. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 13, 1921. Serial No. 477,043. 30 Claims. (Cl. 262—30.)

1. The combination with a mining machine having a frame slidable on its bottom over a mine bottom during cutting, of flexible machine feeding and guiding mechanism therefor including a continuous flexible feeding member extending in opposite directions from points at the opposite ends of said machine, and a plurality of winding drums between said points rotatable on par-



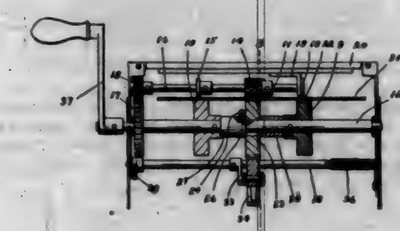
allel axes and around which the intermediate portion of said member is wound in loops each of which passes around all of said drums.

1,533,317. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 22, 1921, Serial No. 509,695. Renewed July 21, 1924. 19 Claims. (Cl. 262—30.)



1. In a mining machine, mining mechanism including a mining machine casing slidable on its bottom on a mine bottom, a head carried on said casing and having superimposed surfaces forming a horizontal cuttings chamber at its top, and a cutter chain carrying cutter bar pivotally mounted in said chamber and disposed in a plane parallel to said bottom.

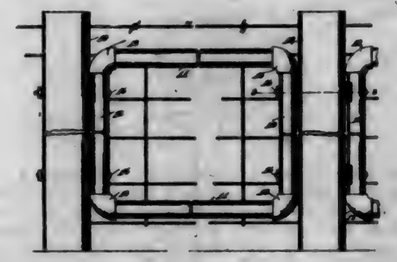
1,533,318. PASTE RECEPTACLE. PAUL J. IHLING, Kalamazoo, Mich. Filed Jan. 17, 1925. Serial No. 3,014. 5 Claims. (Cl. 91—67.1.)



5. In a device of the class described, the combination of a holder receptacle having a central finger opening at the bottom, a cover for said receptacle, a container removably arranged in said holder receptacle, a removable sealing disk for said container, and a brush having a closure disk attached thereto adapted to constitute a closure for said container after said sealing disk has been removed.

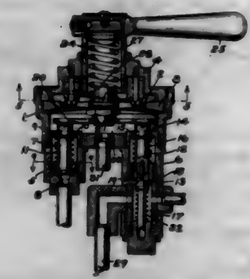
1,533,319. AUTOMATIC ADJUSTING MECHANISM FOR SYNCHRONOUS APPARATUS. ORLANDO E. KELLUM, Los Angeles, Calif. Filed Nov. 20, 1920. Serial No. 426,108. 6 Claims. (Cl. 172—293.)

1. In combination two mechanisms, means for connecting the mechanisms to operate in synchronism comprising a commutator mechanism, and means for actuating the commutator mechanism during operation of said two mechanisms to change the relative operating positions of said two mechanisms, said last mentioned means comprising, an electric circuit, a solenoid mechanism in the circuit and having operative connection with the commutator mechanism, and means controlled by virtue of movement of one of the mechanisms to control energization of the solenoid circuit.



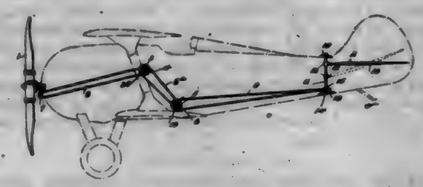
1,533,320. AUTOGRAPHIC REGISTER. HARRY H. KONDERMAN, Newport, Ky., assignor to The Globe Register Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 3, 1922. Serial No. 579,374. 11 Claims. (Cl. 282—21.)

1. In a device of the class described the combination of three shafts having their axes in substantial parallelism, rollers mounted on two of the shafts adapted to cooperate in moving perforated sheets of paper between the shafts carrying said rollers, said rollers being adapted to register with slots in pieces of paper, whereby to render the rollers inoperative upon the sheets of paper, another pair of rollers carried by said shafts, one of said rollers being capable of eccentric movement in relation to the shaft carrying same, and being adapted to move with said shaft, and means carried by the third shaft adapted to bring the last mentioned pair of rollers into cooperative relationship upon sheets of paper, whereby to move the slots in the sheets of paper beyond the first mentioned rollers.



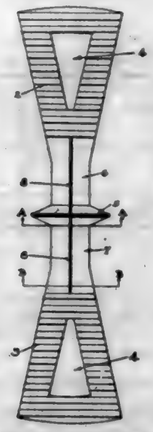
1,533,321. FENCE BRACE. ERNEST N. LANOTT, Sioux City, Iowa. Filed Sept. 27, 1923. Serial No. 665,153. 1 Claim. (Cl. 256—35.)

A fence including posts each of which has opposite flat faces, plano-concave members disposed with their flat faces against the flat faces of the posts and their concave faces directed away from the posts, rectangular frames disposed between adjacent pairs of posts and having vertical tubular end members seated within the



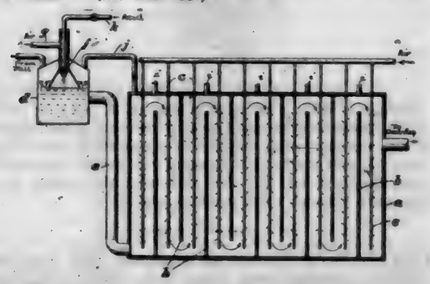
concave faces of the plano-concave members, and securing means disposed through the posts, the plano-concave members, and the said vertical end members of the rectangular frames.

1,533,322. BRAKE-VALVE DEVICE. LLOYD V. LEWIS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 17, 1923. Serial No. 675,249. 10 Claims. (Cl. 303—54.)



1. In a fluid pressure controlling valve device, the combination with a movable abutment, an exhaust valve, and a separate fluid supply valve movable independently of the exhaust valve, of means operated by said abutment for first seating the exhaust valve while the supply valve is seated and for then unseating the supply valve while the exhaust valve remains seated.

1,533,323. SYNCHRONIZED CONTROL FOR REVERSIBLE PROPELLERS AND VARIABLE-INCIDENCE STABILIZERS. ERNEST G. MCCAULEY, Dayton, Ohio. Filed Apr. 10, 1922. Serial No. 551,198. 12 Claims. (Cl. 244—25.)

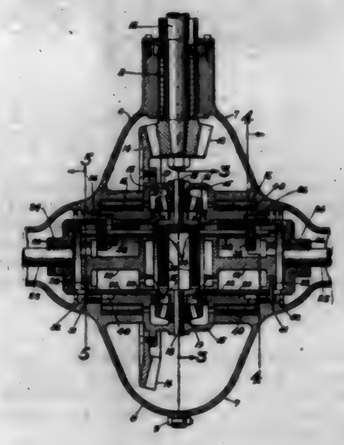


1. In an aircraft having a tractor reversible propeller and an adjustable stabilizer, means operable at the will of the pilot for simultaneously reversing said propeller and adjusting said stabilizer.

1,533,324. WALL TIE. JOHN J. MACK, Salem, Mass. Filed Dec. 28, 1922. Serial No. 609,476. 2 Claims. (Cl. 72—108.)

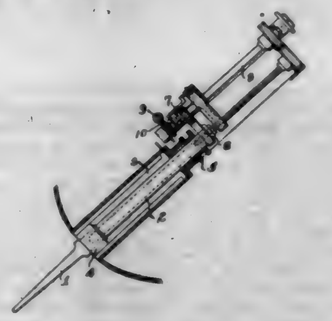
1. A cast iron wall tie having flat opposite end portions constructed to be anchored, respectively, in the inner and outer sections of a wall, the upper and lower surfaces of said end portions being corrugated, said end portions being tapered in width toward each other, and an intermediate section integral with said end portions and comprising a centrally disposed drip collar and shanks connecting said collar with said end portions, said shanks being tapered both vertically and longitudinally.

1,533,325. PROCESS OF REFINING MINERAL OIL. HAROLD T. MAITLAND, Sharon Hill, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Dec. 4, 1920. Serial No. 428,197. 2 Claims. (Cl. 196—45.)



1. The process of continuously refining hydrocarbon oil by subjecting stock that is devoid of substantial quantities of oxidised or polymerised products and that is substantially free of water to the action of sulfuric acid without settlement, establishing a continuously flowing stream of mixed oil and acid and during said flow agitating the mixed oil and acid with air, and at the end of said stream and without allowing substantial settlement and before substantial discoloration of the oil, continuously separating the oil and acid sludge by centrifugal force and separately continuously out-flowing the oil and acid sludge.

1,533,326. METHOD FOR REMOVING VARNISH AND PAINT. EUGENE A. MARSHALL, Richmond, and WILLIAM J. BURKE, San Rafael, Calif. Filed Aug. 15, 1921. Serial No. 492,469. 1 Claim. (Cl. 87—5.)



The method of removing varnish and paint from surfaces which consists in first forming a hot liquid mixture containing caustic alkaline solution and Portland cement in sufficient volume to provide a relatively thick liquid, applying the mixture while hot to the coated surface to be treated and permitting the same to remain thereon to cool to enable the cement to set and form a thin film coating, and then by the application of hot water removing the thin film coating and softened paint and varnish.

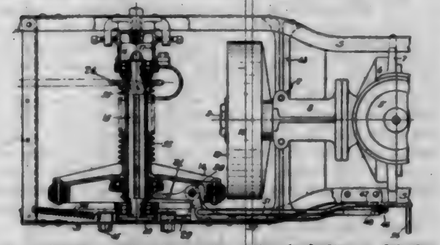
1,533,327. AUTOMATIC SELF-LOCKING DIFFERENTIAL GEARING. JOHN FR. MORRISSEY, Antigo, Wis. Filed May 21, 1923. Serial No. 640,437. 13 Claims. (Cl. 74—100.)

1. A differential gearing comprising members mounted for relative rotation, a spiral gear mechanism, and means co-operable therewith upon a predetermined racing of either member positively to drive the other member.

1,533,328. STEADYING DEVICE OF THE ROLLING OF SHIPS. SHINTARO MOTORA, Nagasaki, Japan, assignor to Mitsu Bishi Zosen Kabushiki Kaisha, Tokyo, Japan. Filed Apr. 19, 1922. Serial No. 555,641. 2 Claims. (Cl. 114—126.)

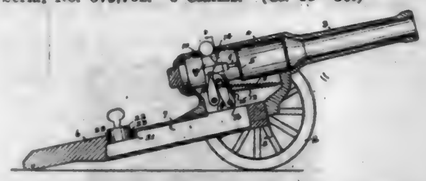
1. A steadying device for preventing or minimising the rolling of ships, including a rotatable fin adapted to extend into the water from the hull of the ship, a controlling engine for turning said fin, controlling means for said controlling engine, a gyrostat operated means for effecting operation of the controlling means, stops for said controlling means, and means including a less sensitive gyrostat for moving said stops out of the position in which they engage said controlling means.

1,533,329. VANITY CASE. CHARLES EDWARD MURNAN, Brookline, Mass., assignor to Meliolo Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 22, 1924. Serial No. 733,539. 3 Claims. (Cl. 132—83.)



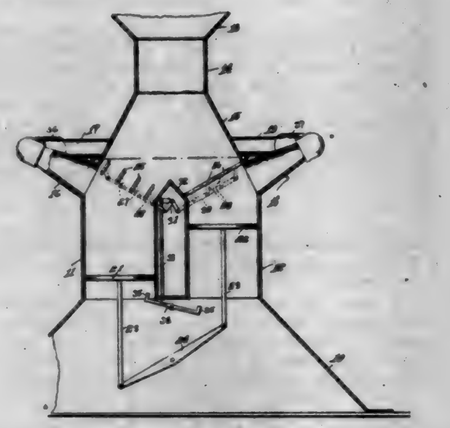
1. A vanity case comprising a powder receptacle including a bottom member having an annular outwardly projecting flange, and a top member having an annular inwardly projecting flange in close frictional contact with the bottom member flange and contacting with the bottom member to maintain the two members spaced apart, the central portion of the top member being offset inwardly from the marginal portion, provided with a central aperture, and connected with the marginal portion by an annular neck forming the margin of a puff receptacle, the bottom of which is formed by said offset portion, a puff inserted in said receptacle, the arrangement being such that the puff covers said aperture and is adapted to be depressed therein, to take up powder in the powder receptacle; and a cover having a marginal flange hinged to the flange of the bottom member, and adapted to confine the puff in contact with the top member of the powder receptacle, the said aperture imparting flexibility to the offset portion of the top member.

1,533,330. UNBREAKABLE COMB. WILLIAM E. MUSE, Sawtelle, Calif. Filed Oct. 18, 1923. Serial No. 669,377. 4 Claims. (Cl. 132—17.)



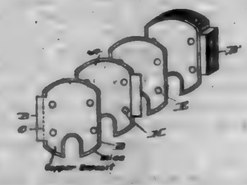
1. A hair comb formed of a breakable material, a wire embedded in and extending along the back of the comb, and wires embedded in and extending along the teeth of the comb.

1,533,331. MOTOR-CYCLE-OPERATING MECHANISM. CARL A. NERACHER, Syracuse, N. Y., assignor, by mesne assignments, to Ner-A-Car Corporation, a Corporation of New York. Filed Mar. 26, 1920, Serial No. 368,963. Renewed July 14, 1924. 12 Claims. (Cl. 74—76.)



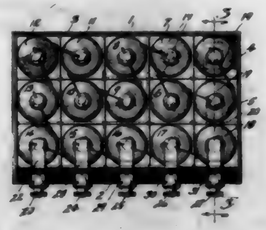
1. A friction drive for motorcycles including a friction face, a friction wheel for engaging said face, means tending to move said wheel radially toward the periphery of the friction face, a bell crank lever for shifting said wheel radially toward the center of said face which bell crank lever is retractable from said wheel, holding means for holding said wheel in its shifted position and means operable by the foot of the motorcycle operator for releasing said holding means and permitting said friction wheel on retraction of the bell crank lever to move toward the periphery of said face.

1,533,332. SAFETY COIN RECEPTACLE. WALTER C. NORRIS, Port Arthur, Tex. Filed Dec. 10, 1923. Serial No. 679,761. 6 Claims. (Cl. 46—36.)



1. A device of the character described including a coin receptacle having a coin receiving slot, a vibratory member, a hammer normally aligned with said slot and blocking the same, means for retracting said hammer, out of alignment with said slot, and then releasing the same, and means operating to strike said hammer against said vibratory member when the hammer is released.

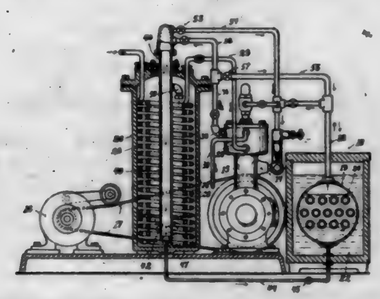
1,533,333. WATER PUMP. CHARLES F. OTTO, Nemo, S. Dak. Filed May 28, 1924. Serial No. 716,887. 5 Claims. (Cl. 103—170.)



1. A pump including cylinders, pistons reciprocable in the cylinders, a reservoir mounted in position to discharge directly into the cylinders, valves between the reservoir and the cylinders, one of the valves being normally open and the other closed, and means actuated by the pistons for alternately opening the closed valve and closing the open valve.

1,533,334. CONDENSER. HERBERT OWEN RUSSELL and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,400. 6 Claims. (Cl. 250—41.)

1. An electrical condenser comprising a series of mica sheets, each of said sheets having a coating of material subject to the action of electrolysis such as lead oxide on one face thereof, an electrically deposited plate of copper on said coating.

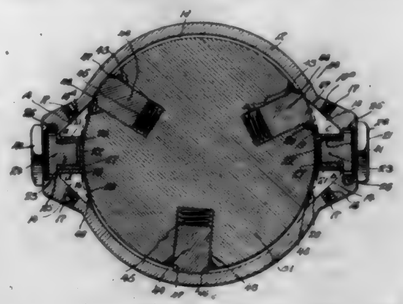


1,533,335. DRY-CELL-BATTERY UNIT. JAMES E. PEAVEY, Cincinnati, Ohio. Filed Nov. 10, 1923. Serial No. 673,925. 5 Claims. (Cl. 136—29.)

2. In a unit battery, a container, a sealing wall closure, a sub-container of cellular formation inside of said container for compactly grouping and separating a plurality of dry cells, said sub-container slotted at the bottom of one compartment, a service terminal in end wall closure, a conductor extending from the bottom of said compartment through slot between container and sub-container to said service terminal, and a plurality of dry cells.

5. A battery unit comprising a main container and a drawer-like sub-container placed and secured within the main container, the sub-container comprising a series of cell receiving vertical pockets spaced in relation to the cells providing an air chamber at their terminal ends, means unitarily securing the cells to the opposite end of the sub-container, means in the sub-container connecting the pocketed cells in series, and connecting means on the main container to provide service terminals for the unit.

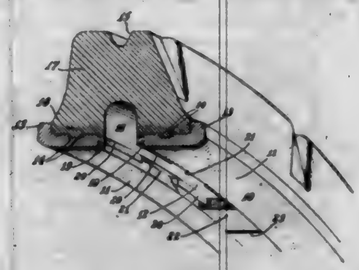
1,533,336. REFRIGERATING APPARATUS. HENRY D. POWNALL, Canton, Ohio. Filed Oct. 18, 1924. Serial No. 744,501. 4 Claims. (Cl. 62—115.)



4. A refrigerating apparatus comprising a refrigerator member, a compressor, a condenser chamber into which heated gaseous refrigerant is discharged to be condensed and in which liquefied refrigerant is stored, a cooling coil through which condensing water is adapted to be circulated and into which heat from the heated refrigerant in the coindenser is exchanged, a conduit leading through said condenser chamber from the upper end thereof to near the bottom thereof and provided near its lower end with restricted exit ports to discharge heated gaseous refrigerant from the compressor in a finely divided state into said condenser chamber below the surface of the liquefied refrigerant therein, and provided inside of said condenser chamber and near the upper end thereof with a valve controlled port through which gaseous refrigerant from above the surface of the liquefied refrigerant therein may be conducted from the condenser chamber to the compressor, and valve controlled conduits through which gaseous refrigerant may be conducted selectively through said compressor from said refrigerator member to said condenser or from said condenser member to said refrigerator member.

1,533,337. PORTABLE STAGE. EVA THOMSON PURDY and CHAUNCEY ALLEN CORNELL, Detroit, Mich. Filed Dec. 14, 1921. Serial No. 522,450. 4 Claims. (Cl. 272—28.)

1. In a portable stage, the combination with a knock-down frame, of a knock-down cyclorama comprising a series of longitudinally curved plates, and vertical plates secured to said curved plates tangent to the curves, the curved plates being detachably secured to the top of said frame.

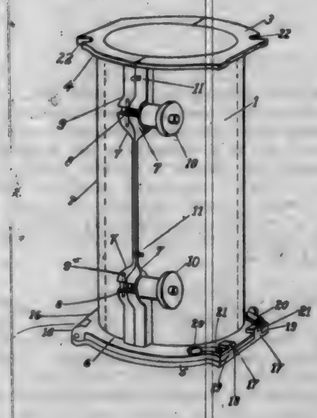


1,533,338. FLUID-OPERATED ROTARY DRIVING OR DRIVEN ELEMENT. GEORGE J. RAYNOR, Detroit, Mich. Filed May 25, 1921. Serial No. 472,462. 8 Claims. (Cl. 192—58.)

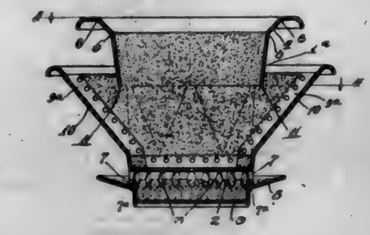
1. A mechanism of the character described including a rotor casing formed with a chamber in its wall, a rotor disposed within the casing having resiliently projected, radial blades, a member disposed in said chamber and movable toward or from the periphery of the rotor, the member being interiorly screw-threaded, the wall of said casing having an outwardly opening recess registering with said chamber, a pinion having a screw-threaded shank engaging the member and the pinion being disposed in the recess in the wall of the chamber, a plug adapted for the application of a wrench and disposed to close the outer end of said recess, a rack extending through the wall of the casing and meshing with the pinion, the rack being longitudinally shiftable, and manually operable means exterior to the rotor for shifting said rack.

1,533,339. CUSHION-TIRE STRUCTURE. ARTHUR A. ROBB, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 6, 1922. Serial No. 599,232. 4 Claims. (Cl. 152—1.)

2. A cushion tire structure comprising a pair of annular, spaced-apart base members, an arched rubber tire body having its legs respectively vulcanized to said base members, and a transversely split spacing ring mounted between said base members, and substantially flush therewith at the inner periphery, said base members and ring being formed with portions interlocking them as to both circumferential and lateral relative movement.



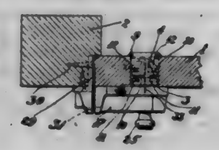
1,533,340. ATTACHING DEVICE FOR YARN-TUBE FRAMES. WILLIAM W. ROBERTSON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 24, 1923. Serial No. 676,828. 12 Claims. (Cl. 139—11.)



7. In a loom, tube frame transporting chains, a yarn tube frame, and devices for detachably securing said frame to said chains, each device comprising co-operating parts and a part of each securing device being permanently mounted on a transporting chain.

1,533,341. TEST MOLD. FRED RODLER, Cincinnati, Ohio. Filed Oct. 20, 1924. Serial No. 744,615. 4 Claims. (Cl. 25—121.)

1. A test mold comprising a base, a pair of side sections, means for hinging one of the sections to the base, means for detachably clamping the edges of the sections together to form a tubular structure, and means for clamping the other section to the base, for the purpose described.

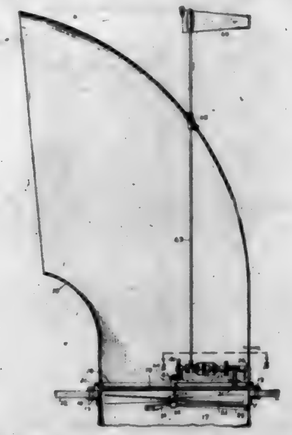


1,533,342. FLOWERPOT. AUGUST P. SCHEIN, Chicago, Ill. Filed May 25, 1923. Serial No. 641,336. 2 Claims. (Cl. 47—38.)

1. A flower pot, comprising a frusto conical body portion having a perforated bottom and depending legs, and an integral perforated channel member shaped to fit the sides and bottom of said body portion and removably inserted therein, said member forming in conjunction with the body portion walls a continuous conduit.

2. A flower pot, comprising a frusto conical circular central chamber, and a plurality of separate circumferentially spaced auxiliary chambers having symmetrically curved walls, said walls merging into the wall of the central chamber, and said chamber communicating with said central chamber, the upper edges of said auxiliary chambers being in the same plane but in a plane below that of the upper edge of said central chamber.

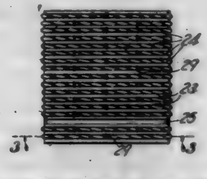
1,533,343. LOCK. SAMUEL SEGAL, New York, N. Y., assignor to Segal Metal Products Company, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Aug. 10, 1921, Serial No. 491,100. Divided and this application filed May 10, 1922. Serial No. 559,712. 13 Claims. (Cl. 70—16.)



1. In a lock, a key plug, and an operating spindle adapted to be detachably connected to said key plug by a spring action.

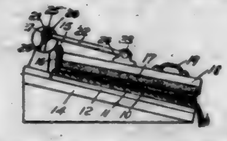
13. In a lock, a lock casing containing the locking mechanism and provided with position-determining means, and a keeper provided with means adapted to register with said position-determining means whereby the proper relative position of said keeper as respects said casing may be determined.

1,533,344. SHIP-VENTILATOR COWL. WILLIAM H. SINGLETON, Canton, Ohio. Filed Oct. 15, 1924. Serial No. 743,752. 8 Claims. (Cl. 98—3.)



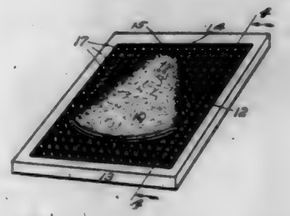
1. In apparatus of the class described, the combination of a cowl, a windmill arranged in said cowl and

operated by the air passing through the latter, mechanism for rotating said cowl, means for operatively



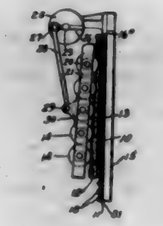
connecting said mechanism with said windmill, a device for controlling said means, and a vane located exteriorly of said cowl for controlling said device.

1,533,345. **FELT SHRINKING.** HERBERT MILLS SMITH, Farmington, Conn., assignor to United States Hat Machinery Corporation, Richmond, Va., a Corporation of Virginia. Filed June 8, 1921. Serial No. 475,864. 4 Claims. (Cl. 28—5.)



1. Shrinking means formed to act upon a fur-bat in flat unrolled condition, comprising a kneading member having a flat kneading surface provided with a multiplicity of soft yielding knuckles and placed together in close proximity, said surface adapted to engage flatwise against a flat bat, and a second kneading member co-operative with said first kneading member for repeatedly sinking the knuckles directly into the face of the flat bat and relieving the pressure to knead and shrink the bat throughout while it is held by one of said kneading members flatwise against the other one.

1,533,346. **FELT SHRINKING.** HOMER A. GENEST, Hartford, Conn., assignor, by mesne assignments, to United States Hat Machinery Corporation, Richmond, Va. a Corporation of Virginia. Filed June 25, 1921. Serial No. 480,284. 6 Claims. (Cl. 28—14.)

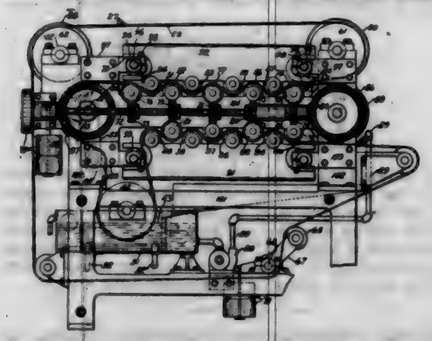


1. A felt-shrinking apparatus comprising a bed for a bat in a substantially flattened condition; a pad of sponge rubber and means to move it slightly to and fro upon said bat.

1,533,347. **FELT SHRINKING.** WILLIAM A. LORENZ, Hartford, Conn., assignor to United States Hat Machinery Corporation, Richmond, Va., a Corporation of Virginia. Filed July 1, 1921. Serial No. 481,753. 9 Claims. (Cl. 28—5.)

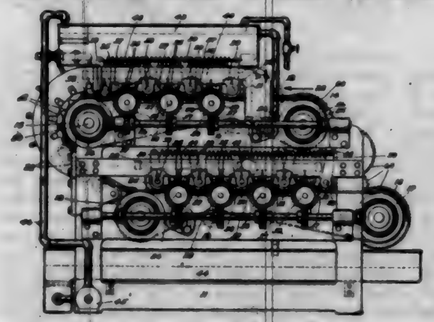
1. A blanket for kneading a hot, wet, fur bat to shrink the same, comprising a sheet of soft vulcanized rubber, having thereon substantially pyramidal knuckles whose bases adjoin each other so that the aggregate of the projecting knuckles occupies practically the entire working area of the sheet.

1,533,348. **FELT SHRINKING.** FRANK F. CHUDOBA, Glastonbury, Conn., assignor, by mesne assignments, to United States Hat Machinery Corporation, Richmond, Va., a Corporation of Virginia. Filed July 8, 1921. Serial No. 483,131. 7 Claims. (Cl. 28—6.)



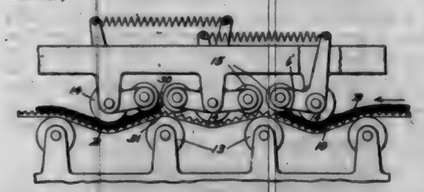
1. A bat-shrinking device comprising a rigid backing, a bed of yielding material mounted in surface engagement with said backing and provided with yielding knuckles placed close together to form substantially the entire working face of the bed, the latter constituting a support for a bat in a substantially flat condition, and a bat-kneading roll adapted to directly engage the bat, one of said elements being capable of relative travelling movement whereby co-operating flexing movements and movements of recovery are successively produced in the bat and the knuckles to cause vermicular actuation of the fibres of the bat.

1,533,349. **FELT SHRINKING.** HOMER A. GENEST, Hartford, Conn., assignor, by mesne assignments, to United States Hat Machinery Corporation, Richmond, Va., a Corporation of Virginia. Filed Aug. 27, 1921, Serial No. 495,982. Renewed Feb. 4, 1925. 6 Claims. (Cl. 28—6.)



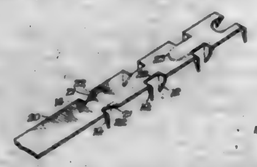
1. A bat-shrinking apparatus comprising two sets of cooperating rolls, the axes of the latter being so located that the rolls of one set are in overlapping relation to the rolls of the other set, and traveling pads guided

alternately over and under successive rolls and caused thereby to follow a wavy path, each of said pads comprising numerous elastic knuckles to knead a bat carried



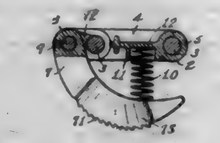
in a substantially flat condition between the pads, the aggregate of said knuckles occupying practically the entire working area of each pad.

1,533,350. **MACHINE FOR SHRINKING FELT ARTICLES.** HOMER A. GENEST, Hartford, Conn., assignor to United States Hat Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed June 9, 1923. Serial No. 644,360. 31 Claims. (Cl. 28—6.)



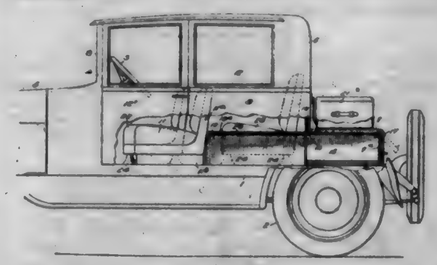
1. A bat shrinking apparatus comprising a bat carrying belt, guide rolls arranged to guide said belt in a wavy course, and pressure rollers in addition to said guide rolls bearing against said belt.

1,533,351. **PROCESS OF SHRINKING, ETC., FELT ARTICLES.** HOMER A. GENEST, Hartford, Conn., assignor to United States Hat Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed June 9, 1923. Serial No. 644,361. 21 Claims. (Cl. 28—5.)



1. The herein described method of simultaneously shrinking, felting and crozing hat batts and the like, which consists in kneading the bat under pressure and while wet by a multiplicity of elastic knuckles and relatively shifting the plies of the bat by creating a wave in one of them and advancing the wave.

1,533,352. **METHOD OF MAKING PAPER-BOX FASTENERS.** LOU W. SMITH, Chicago, Ill. Filed Aug. 3, 1920. Serial No. 401,036. 4 Claims. (Cl. 153—2.)

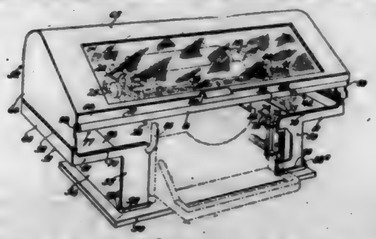


1. The method of constructing box fasteners out of a continuous strip of metal which comprises making lateral incisions in the edge of the strip and punching prongs for said fasteners by folding backwardly the metal adjacent said lateral incisions, and punching tongues on said fasteners from substantially the entire metal between said lateral incisions.

1,533,353. **FEED CONVEYER FOR PLANERS.** PHILIP J. SMITH, Saginaw, Mich. Filed May 24, 1924. Serial No. 715,578. 2 Claims. (Cl. 198—170.)

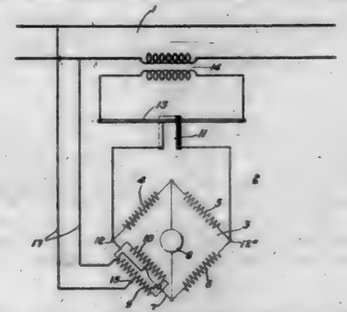
2. An endless feed conveyer chain comprising dog carrier links, each said link being provided with rearwardly projecting dog carrying ears, a feed dog, a pivot therefor and lateral rear bosses, and a sprocket wheel with teeth disposed to engage said bosses.

1,533,354. **VEHICLE BODY.** EDWARD J. STAHL, Cleveland, Ohio, assignor to The Baker R. & L. Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 25, 1923. Serial No. 634,578. 3 Claims. (Cl. 296—24.)



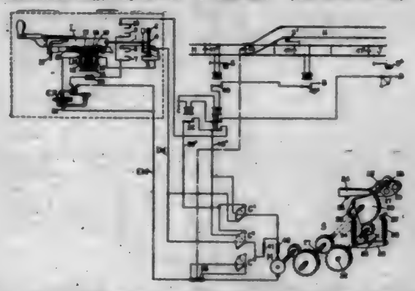
1. In a vehicle, the combination of a main body portion, a tail portion, and a compartment extending from the rear end of the tail portion inwardly into the main body portion, said compartment having openings leading thereinto from the exterior and interior of said main body portion.

1,533,355. **TYPEWRITING MACHINE.** BURNHAM C. STICKNEY, Elisabeth, N. J. Filed May 10, 1921. Serial No. 468,257. 27 Claims. (Cl. 197—186.)



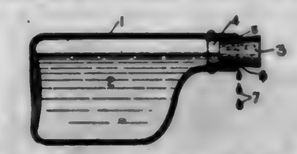
1. The combination with a typewriting machine, of a sound-deadening casing for the machine, said casing comprising a lower body-part and an upper cover-part hinged at the rear to said body-part, said body-part

comprising a front wall, said front wall having an opening to permit the insertion of the machine in said casing, a front cover-plate releasably mounted on said front



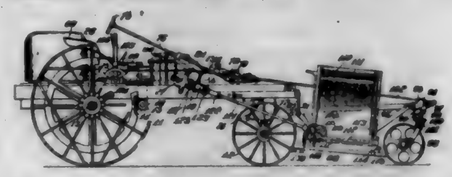
wall for closing said opening, and for pressing against the front of the machine-frame to hold the machine in position, and holding means for said cover-plate lying wholly within said casing.

1,533,356. ELECTRICAL MEASURING INSTRUMENT. VICTOR H. TODD, Rainbow Lake, N. Y. Filed May 3, 1919. Serial No. 294,568. 12 Claims. (Cl. 171—95.)



12. A measuring device for alternating current circuits comprising a Wheatstone bridge, means for changing the balance of the bridge in accordance with one alternating-current-circuit quantity and means for energizing the bridge in accordance with another alternating-current-circuit quantity.

1,533,357. RAILWAY SIGNALING SYSTEM. FRANK BENEDICT, Philadelphia, Pa., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Nov. 18, 1922, Serial No. 601,835. Renewed Mar. 5, 1925. 7 Claims. (Cl. 244—138.)



1. In a semi-automatic signaling system of the type described including an electric motor and operating circuits therefor, the combination of a track switch operated circuit controller having a contact included in one of said circuits, and means operated automatically by said signal for establishing a shunt for said contact in one indicating position of said signal.

1,533,358. SIDENECKED DROPPING BOTTLE. HENRY WEST, Oakland, Calif. Filed Jan. 14, 1924. Serial No. 686,026. 1 Claim. (Cl. 215—58.)

A bottle having its neck curved to one side other than its center, whereby the pressure of the liquid at the dropping surface is reduced, thereby obtaining a slow rate of dropping, and having a groove or channel in its neck to admit air into the bottle, and also having a similar groove or channel in its neck to permit liquids in the bottle to escape in combination with a cork.

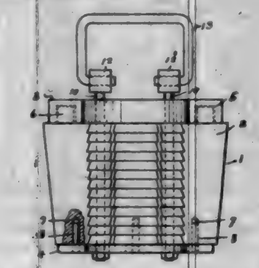
1,533,359. HARVESTING MACHINE. CHARLES E. WHITE, Moline, Ill. Filed Oct. 14, 1918. Serial No. 258,007. 3 Claims. (Cl. 56—23.)

1. A harvesting machine comprising a tractor frame having propelling means at the rear and dirigible wheels at the front, a transversely disposed power shaft on said frame, a transverse bar secured to the front of said frame, a harvester frame disposed transversely in front of said tractor frame and having upwardly extending arms pivotally connected with said bar, a sickle bar at the front of said harvester frame, a longitudinally extending shaft operatively connected with said sickle bar and with said power shaft, for driving said sickle bar from said power shaft, a caster wheel disposed in front of the harvester frame at one side of said sickle bar, said harvester frame being adjustably supported by said caster wheel, and means operable from the tractor frame for vertically adjusting the harvester frame relatively to said caster wheel.

1,533,360. AUTOMOBILE LIGHT. WILLIAM H. WOOD, South Euclid, Ohio. Filed Dec. 17, 1924. Serial No. 756,495. 13 Claims. (Cl. 176—26.)

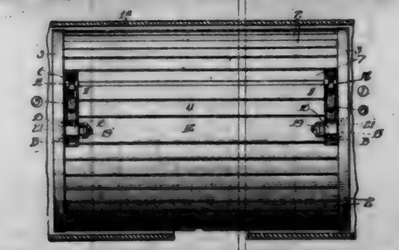
1. A lamp bulb for the purpose described comprising a base, a pair of leading-in wires projecting therefrom, and a plurality of simultaneously usable filaments connected across said leading-in wires cross-wise of the lamp axis, said filaments substantially defining a single, plane, lattice and said leading-in wires being so deflected relative to the lamp axis that the plane of said lattice is oblique thereto.

1,533,361. SPARKING RATTLE. LOUIS V. ARONSON, Newark, N. J. Filed Feb. 6, 1924. Serial No. 691,002. 3 Claims. (Cl. 46—46.)



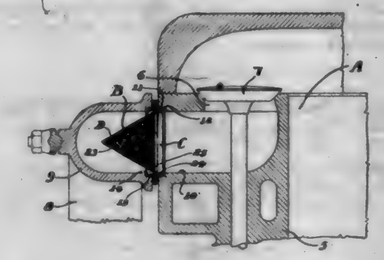
1. A sparking rattle comprising, in combination, a handle, a stationary rattle member rigidly carried thereby, a weighted revoluble element mounted thereon, a spring retracted rattle member carried by said weighted

element, a disk carried by one of said members, an abradant surface upon said disk, a pyrophoric element carried by the remaining member, means for pressing said pyrophoric element against said abradant surface,



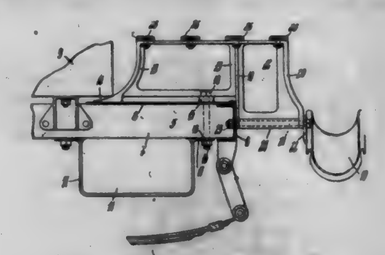
whereby normal relative movement between said pyrophoric material and said abradant material caused by revolution of the weighted element is increased by movement of the rattle member.

1,533,362. ROTARY SLIP. WHITNEY C. BABIN, Beaumont, Tex. Filed Mar. 17, 1924. Serial No. 699,959. 11 Claims. (Cl. 24—263.)



1. A rotary slip formed of independent sections, each section including a cage composed of an arcuate upper member formed with a bearing, and a lower arcuate member, a rod anchored to the lower member and fitted loosely through said bearing and forming means for handling said sections, a plurality of pipe engaging jaws mounted between said members.

1,533,363. WASHING MACHINE. FRITZ BALZER, Moline, Ill., assignor to Troy Laundry Machinery Co., Ltd., Chicago, Ill., a Corporation of New York. Filed Feb. 5, 1923. Serial No. 616,875. 10 Claims. (Cl. 217—37.)

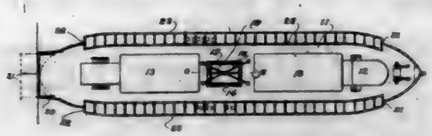


1. A washing cylinder comprising a cylindrical portion having a swinging door hinged about an axis parallel with the axis of said cylindrical portion, said swinging door being sunk below the peripheral surface of the remainder of said cylindrical portion, said swinging door being provided with a hinge and a latch portion, both located within the peripheral contour of said cylindrical portion.

1,533,364. CHARGE VAPORIZER FOR MANIFOLD BRANCHES. GEORGE HARTWELL BARROTT, Shelburne Falls, Mass., assignor to Barrott Stamping Company, Shelburne Falls, Mass., a Corporation of Massachusetts. Filed Feb. 18, 1922. Serial No. 537,611. 4 Claims. (Cl. 48—180.)

1. As a new article of manufacture, a charge mixing device comprising a gasket including companion sections consisting of base flanges and right angularly extending flanges, one of the outwardly extending flanges being bent over the other outwardly extending flange, a packing interposed between the outwardly extending flanges, a gauze cone having its base portion disposed between the base flanges or one of the sections of the gasket, one of said base flanges being provided with an inclined extension engaging the inclined base portion of the cone.

1,533,365. TRUNK-RACK BRACKET. HAROLD M. BATER and CLARENCE A. GLENTWORTH, Manchester, Mass. Filed May 1, 1924. Serial No. 710,268. 7 Claims. (Cl. 224—29.)

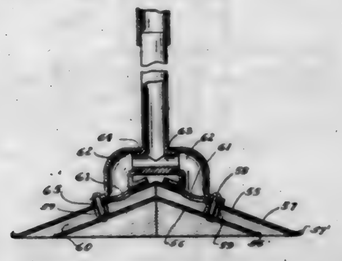


1. A trunk rack bracket embodying a vertical frame adapted to be positioned upon the rear end of an automobile chassis, a foot extending forwardly therefrom and adapted to project beneath and contact with the body of said automobile, a vertical flange projecting laterally from the rear portion of said bracket, and means to clamp said flange to the rear face of the rear cross beam of an automobile chassis.

1,533,366. COMBINED PLEASURE AND FISHING BOAT. CHARLES G. BATHE, Alhambra, Calif., assignor of one-eighth to Minnie H. Watson, Los Angeles, Calif., and one-eighth to Nathaniel W. Wiedrick, Long Beach, Calif. Filed Aug. 21, 1924. Serial No. 733,294. 9 Claims. (Cl. 114—0.5.)

1. The combination, with a boat, of a series of partitions arranged along the gunwales of said boat to form

a series of separate compartments, a receptacle within each compartment, which receptacle is provided with a



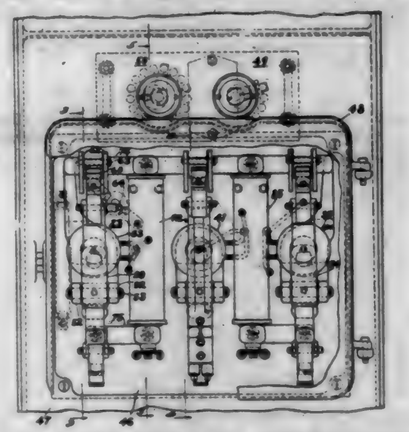
live bait compartment and a caught fish compartment, and means for effecting a constant flow of fresh water through said receptacle.

1,533,367. PAPER CLIP. HARRY R. BAYLIS, Seattle, Wash. Filed Oct. 6, 1923. Serial No. 666,956. 2 Claims. (Cl. 24—261.)

1. A paper-clip equally operable from either end, comprising a single piece of resilient wire bent to provide an elongated body having spaced parallel side portions, one of the side portions including the two free ends of the wire which overlie and extend in parallel relation, and a reentrant substantially V shaped paper-engaging member at each end of the body adapted to, in cooperation with the body, slidably engage and contact approximately flush with the adjacent edge portions of paper secured together by said clip.

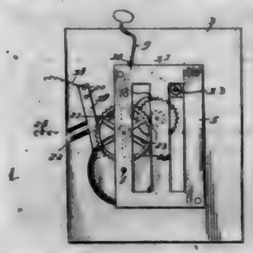
1,533,368. NOZZLE. FREDERICK A. BERG, Chicago, Ill. Filed Nov. 18, 1921. Serial No. 516,097. 3 Claims. (Cl. 15—155.)

1. An apparatus of the character described including suction means, a nozzle communicating with said suction means, said nozzle comprising members disposed one within the other and held in spaced relation, the outer edges of the floor engaging portion of the inner of said members being upwardly turned and forming a trap.



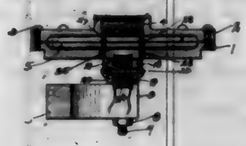
1,533,369. THREAD-GAUGE CONSTRUCTION. BRYANT H. BLOOD, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 3, 1921. Serial No. 489,501. 2 Claims. (Cl. 33—178.)

1. A thread gauge having a notch formed in one convolution of the gaging thread thereof at the juncture of the starting portion of the thread with the full thread portion thereof, the notch being so formed as to provide



a sharp shoulder at the beginning of the full thread portion of the gaging thread.

1,533,370. SWITCH MECHANISM. HAROLD L. BLOOD, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Original application filed Jan. 31, 1920, Serial No. 355,318. Divided and this application filed May 11, 1921. Serial No. 468,576. 12 Claims. (Cl. 200—98.)

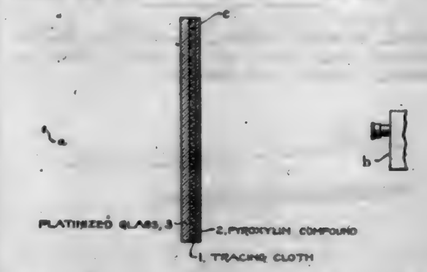


1. In a switch mechanism, the combination comprising a switch lever pivoted intermediate its ends, a contact member mounted on each end of said lever, stationary contact members co-acting with said movable contact members, a main magnet for operating the switch lever to close one set of said contact members, and means comprising a supplemental magnet for opposing the action of the main magnet on said lever and for blowing out the arcs formed at certain of the contact members.

1,533,371. ELECTRIC-LIGHTING APPARATUS FOR CHRISTMAS TREES AND THE LIKE. JOHN H. BOYD, Mount Vernon, N. Y. Filed Apr. 15, 1922. Serial No. 552,913. 1 Claim. (Cl. 161—1.)

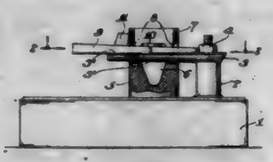
An intermittently actuated electric apparatus including a clock work mechanism of electric conducting material embodying a coil spring, a source of electrical energy, an electric circuit connected to said source, a resilient contact member connecting one portion of the circuit and engaging the edges of the coil spring whereby the engaging surfaces are retained clean by the relative movement between the coil spring and contact member due to the contraction and expansion of said coil spring, and a member connected to another portion of said circuit and cooperating with the spokes of one of the clock work mechanism wheels for intermittently making and breaking the circuit.

1,533,372. LOUD SPEAKER. CECIL E. BRIGHAM, East Orange, N. J., assignor to C. Brandes, Inc., New York, N. Y., a Corporation of New York. Filed June 14, 1924. Serial No. 720,067. 6 Claims. (Cl. 179—119.)



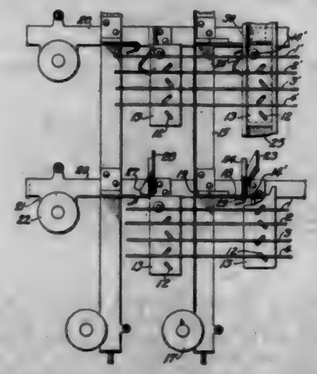
1. An electromagnetic sound reproducer comprising in combination a casing, a permanent horseshoe magnet, a pole piece secured to the extremity of each side of said horseshoe magnet, a pair of pole members attached to each of said pole pieces, each having extensions directed toward each other in overlapped relationship with their faces spaced apart, an electromagnetic winding having a hollow core, a diaphragm carried in said casing, an armature arranged to freely float within said hollow core and extending between said pole pieces and connections between extremities of said armature and said diaphragm for imparting movement to said diaphragm.

1,533,373. STARTING MECHANISM FOR AUTOMOBILES. ODILON BRISBOIS, Chicago, Ill. Filed Aug. 2, 1922. Serial No. 579,168. 7 Claims. (Cl. 74—7.)



1. In an engine starter, a freely floating driving shaft longitudinally balanced between two opposed forces susceptible of being unbalanced by slight variations, a driving pinion mounted upon said shaft for longitudinal movement thereof and rotary movement therewith, and means for causing a longitudinal movement of said shaft in a direction opposed to the movement of said pinion when traveling into meshing relation to reduce the longitudinal speed of said pinion into meshing relation.

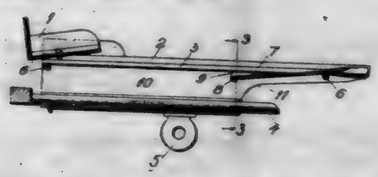
1,533,374. PROJECTED-LIGHT PICTURE SCREEN. AUSTIN DAY BRIXEY, Greenwich, Conn., assignor to The Replitura Corporation, a Corporation of New York. Filed Aug. 27, 1920, Serial No. 406,395. Renewed Apr. 4, 1924. 5 Claims. (Cl. 88—24.)



1. A picture screen for projectors of the transmission type comprising a compound of amyl acetate, alcohol, pyroxylin, a white pigment, camphor, fusel oil and benzine as a light diffusing medium.

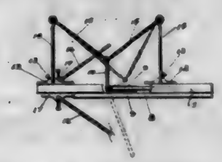
1,533,375. CORE-FORMING APPARATUS. THOMAS HAROLD BROWN, Philadelphia, Pa., assignor to E. E. Brown & Co., Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 29, 1923. Serial No. 659,886. 5 Claims. (Cl. 22—13.)

1. Core forming apparatus comprising a core box having an apertured wall and oppositely tapered molding bars independently movable longitudinally through said wall.



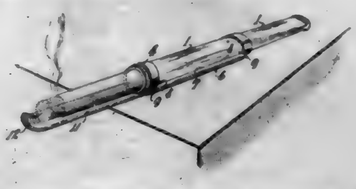
1,533,376. AUTOMATIC TELEPHONE SWITCH. FREDERICK J. BROWNELL, Queens, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 11, 1922. Serial No. 560,011. 12 Claims. (Cl. 179—27.5.)

1. The combination in a switching mechanism, of cooperating active and passive contacts, an operating card through which said active contacts pass, a movable support for said operating card, an operating member



normally movable in a path ineffective to engage said support, and resilient means for causing said operating member to deviate from its path to engage said support and cause the actuation of the active and passive contacts.

1,533,377. EGG SEPARATOR. ARCHER EARL BRUFFER, Portland, Oreg. Filed Dec. 4, 1924. Serial No. 753,818. 1 Claim. (Cl. 146—2.)

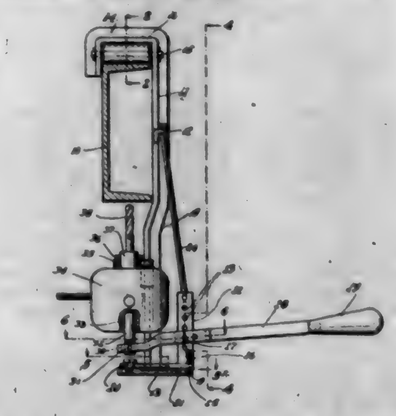


In a device of the character described, the combination of an inclined chute, having a slot at the longitudinal center line extending part ways down the chute, with a tongue rigidly affixed to the under side of the chute across the slot, said tongue beginning at substantially one-half the effective length of the slot in spaced relation to the chute and converging with said chute at the lower terminal of the slot, the diverging edge of the tongue being blunted, one longitudinal edge secured to the chute, the other longitudinal edge remaining unobstructed.

1,533,378. SWINGING CLOSURE. JOSEPH F. BUNKERS, Remsen, Iowa. Filed May 14, 1923. Serial No. 638,778. 4 Claims. (Cl. 20—16.)

1. In a device of the class described, a door frame, a rotatable upright within and adjacent one side of the frame, a door fixed to the upright, an arm on the upright extending at substantially right angles to the door, bracket arms on opposite sides of the frame, and retracting springs between said first-mentioned arm and the bracket arms.

1,533,379. SMOKING APPLIANCE. EMIL C. BUNTE, Portland, Oreg. Filed Nov. 26, 1923. Serial No. 677,067. 3 Claims. (Cl. 131—51.)



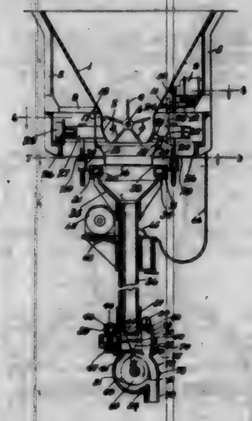
1. A device of the class described comprising a trough shaped guide member, bands secured to the guide member and adapted to grip a cigarette holder within the limits of its ends with retaining friction, and a slide member slidably collapsible into and extensible from the guide member and having an upturned end adapted for retaining ashes when extended and for engaging the holder when collapsed to prevent inadvertent removal of the device from the holder.

1,533,380. COMBINATION HAIR COMB AND BARRETTE. JACOB BURKHART, Elmhurst, Pa. Filed Mar. 17, 1924. Serial No. 699,826. 2 Claims. (Cl. 132—46.)

1. A combination hair comb and barrette comprising a pair of spaced substantially concentric resilient backs connected with each other at their ends, inner and outer series of substantially straight teeth projecting inwardly from said backs and disposed in a plane determined by the curvature of said backs, the teeth of each series converging throughout their lengths toward their free ends to grip the hair, said teeth being movable away from each other when the backs are jointly straightened to some extent.

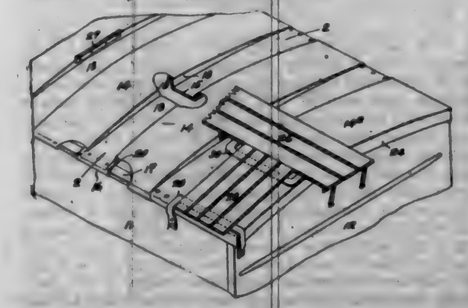
1,533,381. PORTABLE DRILL. EDWARD L. BURTON, Sandwich, Ill. Filed June 8, 1923. Serial No. 644,112. 7 Claims. (Cl. 77—6.)

1. A device of the character described comprising a frame including a base member and upright members having hook portions for suspending the frame; a power driven machine provided with a recess in its bottom; a supporting member pivotally mounted on said base member on a pin in line with the axis of said machine; an upright on said supporting member; a lever adjustably mounted on said upright and having a pin pivoted to its forward end and engaging in said recess, said lever and upright being swingable laterally towards said frame; and means slidably mounted on said frame for guiding said machine in its vertical movement.



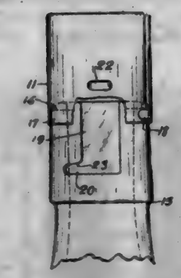
1,533,382. TYPEWRITER RIBBON. CHARLES CAMPBELL, New York, N. Y. Filed Dec. 6, 1923. Serial No. 679,039. 3 Claims. (Cl. 197—172.)

TYPEWRITER RIBBON



1. A typewriter ribbon composed mainly of cellulose fibres having a negative test with phloroglucinolhydrochloric acid, and comprising a narrow felted strip of substantially uniform width and thickness impregnated with ink.

1,533,383. MOLDING-SAND-HANDLING MACHINE. DONALD J. CAMPBELL, Muskegon Heights, Mich. Filed Nov. 13, 1922. Serial No. 600,687. 6 Claims. (Cl. 22—56.)

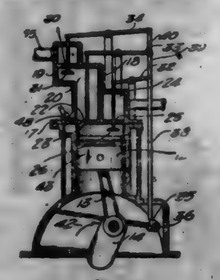


1. In a machine of the class described, a sand holding bin having a delivery opening in its lower side, means for delivering measured quantities of sand from the bin through said opening, a circular track mounted around and adjacent the lower part of the bin, a ring movably mounted on the track to move about a vertical axis, a frame supported by and below the ring, a second frame within the first frame mounted thereon to turn about a horizontal axis, a third frame within the second frame mounted to turn about a horizontal axis at right angles to the first mentioned horizontal axis, a downwardly extending extension to the third frame having converging sides, a tube connected to and depending from the lower end of said extension, a housing connected to the lower end of the tube, a screw conveyer in said housing located horizontally across the lower end of the tube, an extension to the housing below the conveyer having an outlet and an inlet into which the conveyer moves sand from the tube, and a sand throwing wheel rotatably mounted in the said housing extension and formed with outwardly projecting fingers for engaging with the sand fed thereto to throw the same outwardly through the outlet, substantially as described.

1,533,384. METAL CAR ROOF. ARTHUR J. CANFIELD, Chicago, Ill., and ERNEST R. V[illegible], Montreal, Quebec, Canada. Filed Dec. 1, 1921. Serial No. 519,202. 4 Claims. (Cl. 108—54.)

1. In a car roof, a transverse member comprising a central web, upstanding flanges at the edges of said web, said flanges decreasing in height from the centre towards the end of the web, and terminating a short distance from each end of the web, and lateral flanges on the upstanding flanges folded upon themselves to present grooves.

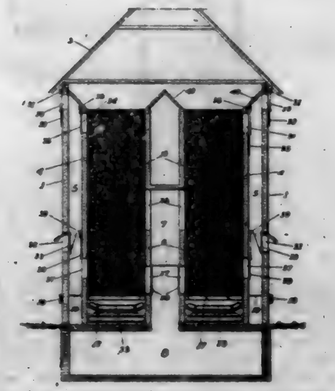
1,533,385. RECEPTACLE CLOSURE. LESLIE R. N. CARVALHO, Toledo, Ohio, assignor to The Closure Service, Company, Toledo, Ohio, a Corporation of Ohio. Filed June 4, 1923. Serial No. 643,351. 12 Claims. (Cl. 215—38.)



1. The combination with a container, of a cap therefor comprising an attaching means by which the cap is originally attached to the container, said attaching means being separable from the body of the cap to permit removal of the cap, a second attaching means by which the cap may be attached to the container after the original attaching means has been removed, said second attaching means being maintained out of attaching position during the original positioning and attachment of the cap to the container.

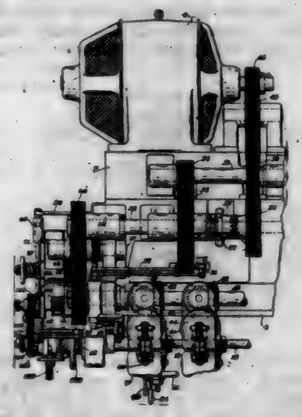
1,533,386. CLEANING AND POLISHING COMPOSITION. JOHN E. CATLETT, San Francisco, Calif. Filed June 12, 1923. Serial No. 644,965. 1 Claim. (Cl. 87—5.)

A cleaning preparation including ashes of rice husks, commercial soap powder, cane sugar, salt (NaCl) and a binder combined with sufficient water to make a paste.



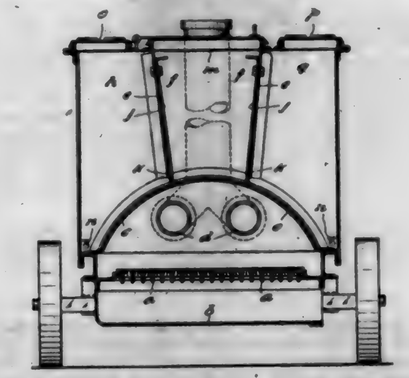
1,533,387. SUSTAINED EXPLOSION GAS ENGINE. ALONZO E. CHAPMAN, Los Angeles, Calif. Filed Nov. 5, 1923. Serial No. 672,849. 5 Claims. (Cl. 123—37.)

2. In an engine, the combination of: a cylinder; a piston operating in said cylinder; walls forming a secondary chamber at head or upper end of said cylinder; valve means of control of communication between said cylinder and said secondary chamber; valve means of exhausting the consumed gases from said secondary chamber and from said cylinder through said secondary chamber to the open air, such valve means to close the communication between said cylinder and said secondary chamber during the suction stroke, and such exhaust valve means to open air from said secondary chamber to



remain open until the beginning of the compression stroke to further reduce the amount of consumed gases remaining in said secondary chamber for the purpose of obtaining more perfect ignition in the following power stroke.

1,533,388. DEHYDRATOR FOR NUTS AND THE LIKE. FRANK C. CHAPMAN, Modesto, Calif. Filed Apr. 7, 1924. Serial No. 704,688. 20 Claims. (Cl. 34—34.)

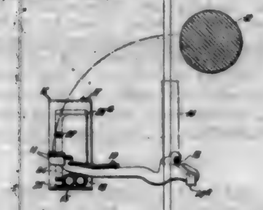


1. A dehydrator including a plurality of vertical bins arranged in parallel and spaced relation, and means for passing air through said bins from bottom to top thereof, and also alternately from a point centrally of the height thereof to both the upper and lower ends.

1,533,389. MULTIPLE DRILL. LYNDON C. COLE, OTTO PABST, and CARL MAY, Hamilton, Ohio, assignors to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 26, 1922. Serial No. 609,113. 18 Claims. (Cl. 10—139.)

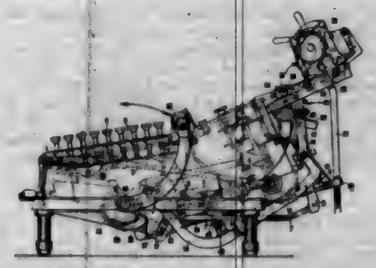
3. In a drilling machine, the combination of a cross rail, a plurality of drill heads slidably mounted thereon, a drill spindle mounted for axial movement in each head, a feed shaft extending along the cross rail and operatively connected with the spindles for feeding the same axially, a power element, and two optional driving connections between the power element and the feed shaft, one of said connections being adapted to feed the spindles for drilling and the other connection being adapted to feed the spindles for tapping.

1,533,390. APPARATUS FOR HEATING BITUMEN, TAR, AND OTHER SUBSTANCES. FRANK COLEMAN, Derby, England. Filed Sept. 15, 1924. Serial No. 737,662. 8 Claims. (Cl. 126—343.5.)



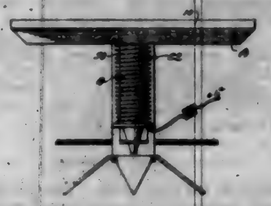
1. Apparatus for heating bitumen, tar, and other substances, comprising in combination a liquid container, means for heating said container, divisional walls in said container forming a number of chambers, communicating passages between said chambers and adjustable means for controlling said passages.

1,533,391. RADIANT GAS LOG. JAMES P. CONROY, East Orange, N. J., assignor to The Con-Den-Rit Radiant Log Corporation, Perth Amboy, N. J., a Corporation of New Jersey. Filed July 9, 1921. Serial No. 483,480. 3 Claims. (Cl. 126—92.)



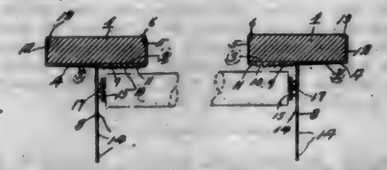
1. A gas log comprising in its constretion a body having a lower member, an upper member and a recess in its front wall between the upper and lower members, a radiant back wall in said recess, a removable radiant front wall in said recess continuing the front of the body and spaced from the back wall so as to form a combustion chamber therebetween, and gas burners leading into the bottom of the combustion chamber, the radiant front wall being formed with extensive and irregular longitudinal openings separated by a net work of irregular longitudinal ridges, so that the flaming gases issuing from the combustion chamber through the front openings will heat to incandescence the radiant back wall and the net work of radiant longitudinal ridges in the open-work front wall and highly effective heat rays as well as attractive light rays will thus be projected forwardly from between the upper and lower members of the gas log.

1,533,392. TYPE-BAR REST. CORNELIUS B. CORCORAN, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 21, 1922. Serial No. 576,416. 2 Claims. (Cl. 197—42.)



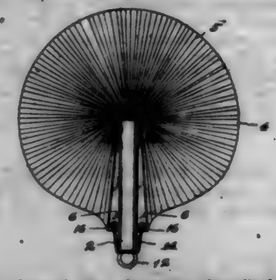
1. A type-rest comprising a plurality of helices laid alongside and in partial interlockment with one another.

1,533,393. PRINTING MECHANISM FOR THOMAS CALCULATING MACHINES HAVING A KEY ADJUSTMENT. HUGO CORDT, Berlin, Germany, assignor to Carl Lindström Aktiengesellschaft, Berlin, Germany. Filed Oct. 27, 1922. Serial No. 597,402. 5 Claims. (Cl. 235—60.)



1. Printing mechanism for Thomas calculating machines with keyboard adjustment and in which printing type wheels disposed in an oscillatory frame are advanced against the platen, comprising adjusting levers, adjusting wheels, printing type wheels and driving segments, said adjusting levers for the adjusting wheels having graded sectors for the values 1 to 9 to limit the stroke of the said driving segments of the printing type wheels and a bar oscillatably supported in the frame of the machine and provided with slide pieces which are movably supported thereon, the said graded sectors co-operating with said bar.

1,533,394. FIRE-ALARM APPARATUS. MICHAEL COSTELLO, Jersey City, N. J. Filed Nov. 21, 1923. Serial No. 676,091. 9 Claims. (Cl. 200—142.)



2. A safety switch comprising a support, a bracket carried by the support, a fixed contact supported by the bracket having an opening therein, a movable contact, means normally urging the movable contact into the opening of said fixed contact, and a destructible member adapted to be supported by said bracket on the opposite side of said fixed contact with respect to said movable contact adapted to engage the latter whereby to support it out of engagement with the fixed contact, said movable contact upon destruction of said destructible members adapted to engage the fixed contact for closing a circuit.

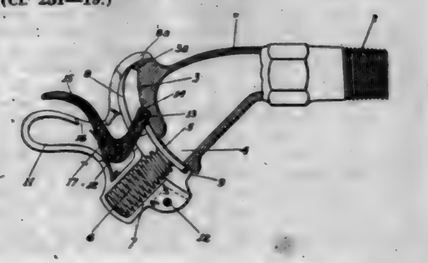
1,533,395. SHADE AND CURTAIN BRACKET. EARL CROSER, Council Bluffs, Iowa, WILLIAM BROWN, Omaha, Nebr., and CHARLES LENZ, Council Bluffs, Iowa. Filed Sept. 10, 1924. Serial No. 736,897. 3 Claims. (Cl. 156—24.)

1. A curtain bracket comprising a horizontal body member adapted to engage a window frame facing, notched flanges carried by the upper and lower sides of the body member, a facing engaging arm carried by one end of the body member, an outwardly extending shade and curtain pole supporting arm carried by the other end of the body member, an adjustable arm extending through a vertically elongated slot in the shade and pole supporting arm and disposed between the notched flanges of the body member, said adjustable arm being provided with a vertically disposed pin adapted to be received and held by the notched flanges of the body member, an angularly disposed toothed arm carried by the adjustable arm and adapted to engage the outer side of a window facing, said body member and shade and curtain supporting arm and notched flanged being formed from a single piece of metal bent to form.

1,533,396. FAN. LILLIAN M. DARNEY, Kansas City, Kans. Filed Nov. 6, 1924. Serial No. 748,174. 2 Claims. (Cl. 230—33.)

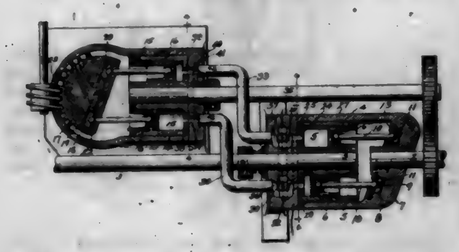
1. In a fan of the character described, a foldable body portion, a tubular element for supporting said body portion while in operative position and into which said body portion may be folded to inoperative position, an elastic attached to the body portion to adjust the same to operative position, and a stop to limit the inward movement of the body portion when the same is drawn into the handle.

1,533,397. COVER FOR SPRINGS. CHARLES ALBERT DAVIS and HOWARD L. MCCLOY, Stauffer, Pa. Filed Aug. 21, 1923. Serial No. 658,552. 1 Claim. (Cl. 267—37.)



The combination with a semielliptic vehicle spring, clip ends carried by the spring adjacent the ends thereof at opposite sides of the spring, of a cover for said

spring, said cover comprising an elongated body portion engaging the upper side of the spring, side members carried by said body portion and engaging the sides of the spring, members carried by the side portion adapted to underlie the spring and provided with recesses for the reception of the clip ends, a flap secured to one

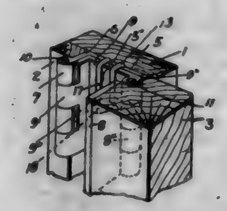


of the side portions and engaging the under side of the spring and disposed between the spring and the portions of the sides which underlie the spring and provided with apertures in registration with the recesses for the reception of the clip ends, and lacings connecting the underlying portions of the sides.

1,533,398. SAFETY-LOCK FAUCET. GEORGE W. DEMAN and JOSEPH A. MONIGHAN, Sacramento, Calif. Filed Oct. 1, 1923. Serial No. 665,886. 4 Claims. (Cl. 251—19.)

1. In combination with a faucet having a body provided with an outlet in one face thereof, a gate slidable over said face to cover or uncover the outlet, and a hollow handle member in which the gate is mounted normally enveloping the outlet-face of the body, a catch member mounted in the handle above the gate and engaging the body-face when the gate is closed, and a releasing member for said catch member extending through and above the handle and depressible theretoward to release the catch, the gate being opened by a movement of the handle in an upward direction.

1,533,399. MEANS FOR TRANSMITTING POWER. ROBERT H. DUNLAP, Washington, D. C. Filed Feb. 6, 1920. Serial No. 356,692. 5 Claims. (Cl. 60—53.)

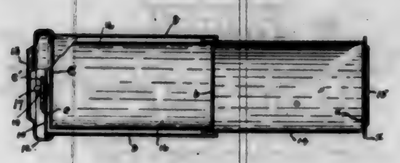


2. In means for transmitting power, a drive shaft, a driven shaft, and a variable speed fluid clutch therebetween, comprising a power transmission unit including a member fast on the driven shaft and having cylinders and pistons, and a member fast on the drive shaft and adapted to differentially operate said pistons, and means connecting the cylinders and including a speed controlling unit, two conduits, and a body of fluid contained in said conduits and in both units, said controlling unit being adapted to receive and separate a charge of fluid from one of said conduits and transfer said charge to the other conduit and including a member having cylinders and pistons and a member adapted to differentially operate the pistons and adjustable to vary the throw of the pistons to vary the velocity of the fluid and thereby to vary inversely the speed of the movement transmitted, one member being stationary and the other fast on the drive shaft.

1,533,400. SHUTTLE GUARD FOR LOOMS. WILLIAM G. FISHER, Sunbury, Pa. Filed Apr. 10, 1923. Serial No. 631,156. 2 Claims. (Cl. 139—193.)

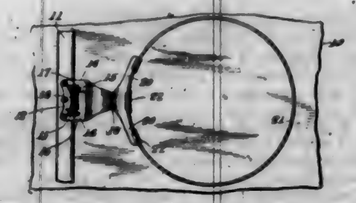
1. In a loom, the combination with the hand rail, of downwardly curved brackets rigidly connected to the hand rail, and deflectors secured to said brackets extending downwardly and outwardly in the direction of the length of the hand rail of longitudinal fixed rods connected to and extending between said brackets, and a plurality of longitudinal rods secured to end plates which are hinged to one of the fixed rods, and means for locking the said movable rods in operative position.

1,533,401. LOCKING DEVICE FOR HINGES. ETTA FLORENCE GALE, Toronto, Ontario, Canada. Filed July 14, 1924. Serial No. 726,017. 5 Claims. (Cl. 16—163.)



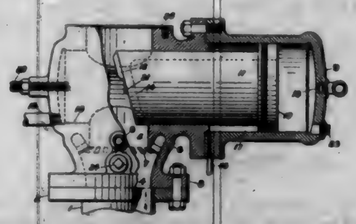
1. In a hinge locking device, the combination with a stationary member and movable member, a hinge leaf secured to the stationary member having a vertically grooved inner face, a hinge leaf secured to the movable member, and an intermediate hinge leaf pivotally connecting the hinge leaves of the stationary and movable members together, of a locking device formed by a rod member bent into inverted U shape form, one arm of which is slidable within the vertical grooved portion of the leaf of the stationary member and the other arm of which is adapted to be carried into and out of engagement with the outer face of the intermediate member when the locking device is slid vertically.

1,533,402. TRICK MATCH BOX. ALEXIS F. GILLET, Omaha, Nebr., assignor to Jubilee Manufacturing Company, Omaha, Nebr., a Corporation. Filed Aug. 7, 1922. Serial No. 580,079. 4 Claims. (Cl. 206—1.5.)



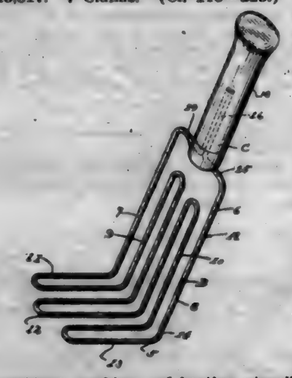
1. A receptacle having a cap below its bottom and an aperture in its bottom communicating with the cap, a drawer having a [illegible] and movable in the receptacle

to move its hook through the aperture into the cap, a locking-bar having an arm and pivotally mounted on said bottom to permit it to swing in a circle's arc for engag-



ing the hook, its arm moving into engagement with the wall of the cap, and to permit it to swing in a circle's arc for disengagement with said hook.

1,533,403. HAT SUPPORT. BENJAMIN GOLDBERG, New York, N. Y. Filed Feb. 19, 1924. Serial No. 693,802. 3 Claims. (Cl. 15—13.)

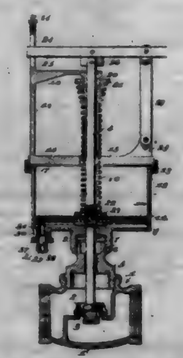


1. A hat holding device comprising a plate, ears formed on said plate, a second plate, ears formed on said second plate, a hinge forming pin journaled in all said ears, spring means for resiliently supporting one plate in relation with the other, a depending loop on the second plate, lateral extensions formed on the forward portion of the second plate, a hat supporting ring, fingers formed on said extensions for securing the ring on the extensions and the forward portion of the second plate, and a net secured to the hat ring providing a receptacle for the hat.

1,533,404. EMERGENCY CONTROL VALVE. DAVID H. GREEN, San Francisco, Calif. Filed Sept. 18, 1922. Serial No. 588,835. 9 Claims. (Cl. 166—15.)

1. An oil well closure operable by the force of its moving stream of oil and adapted to be controlled manually and from afar by a valve through which a portion of the oil passes.

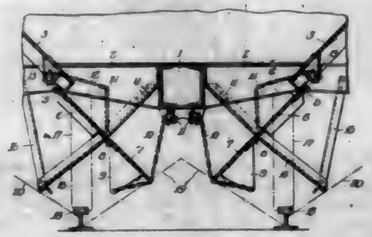
1,533,405. KITCHEN UTENSIL. JOHN PATRICK GRIFFIN, Waddington, N. Y. Filed Mar. 18, 1922. Serial No. 543,317. 7 Claims. (Cl. 146—213.)



1. A combined mashing and beating utensil comprising a beating portion, a mashing portion transversely carried by the beating portion extending only to one side of the beating portion, and a handle carried by said beating portion.

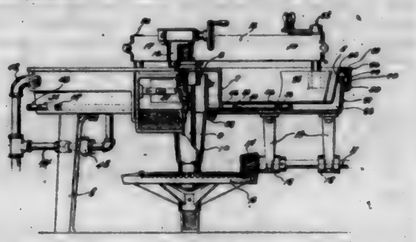
1,533,406. DEVICE FOR INSURING UNIFORM PRESSURE UPON EXPLOSIVE CHARGES. BENNETT GROTTA, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 6, 1924. Serial No. 754,353. 5 Claims. (Cl. 86—21.)

4. A device for equalizing the pressure applied to several detonator compositions by a single press, which consists of a suitable rack equipped with an individual backing of rubber of suitable resiliency for each detonator.



1,533,407. ADJUSTABLE AUTOMATIC VALVE REGULATOR. LOUIS H. HANSON, Austin, Tex., assignor of one-half to T. E. Reasonover, Austin, Tex. Filed Dec. 27, 1923. Serial No. 683,058. 6 Claims. (Cl. 137—139.)

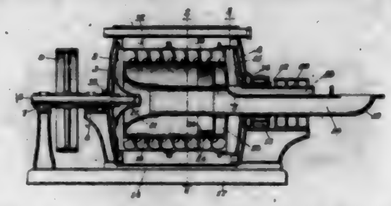
6. A Device of the character described comprising a valve casing, a closure cap having a cupped end, a cylinder surmounting the cap and having a complementary cupped end fitted on the aforesaid cupped end to pro-



vide a packing chamber, a valve in the casing having a stem passing through said chamber and cylinder, a piston carried by the stem and being operable in the cylinder, means for regulating the passage of air between the atmosphere and the interior of the cylinder beneath the piston, said means permitting a free unseating but retarded seating movement of the valve, and means embodied in and associated with said regulating means for governing the rate at which air may pass.

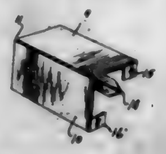
1,533,408. SELECTIVE DUMP CAR. HARRY S. HART, Chicago, Ill. Filed Apr. 22, 1924. Serial No. 708,144. 10 Claims. (Cl. 105—252.)

1. A car of the class described having a center sill, a hopper portion on each side of the center sill, a platform extending downwardly and outwardly from the apex of each hopper portion, a downwardly swinging door hinged adjacent to the upper edge of the platform, and an outwardly swinging door hinged to the car frame above said platform.



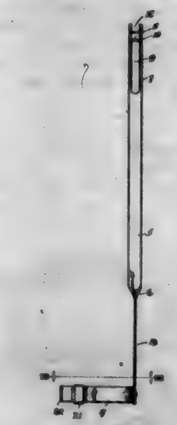
1,533,409. MATERIAL WORKING AND MIXING MACHINE. WILLIS N. HARTSHORN, Racine, Wis., assignor to Racine Confectioners' Machinery Co., Racine, Wis., a Corporation of Wisconsin. Filed Oct 22, 1923. Serial No. 670,127. 3 Claims. (Cl. 257—108.)

1. In a machine of the character described including a jacket member, a container nested in the jacket member, the side and bottom walls of the jacket member and container being spaced to provide a temperature regulating chamber and means for introducing a temperature controlling fluid in said chamber, an annular trough surrounding the upper portion of the jacket member, an annular spill-way passage communicating the temperature regulating chamber with said trough and a fluid outlet communicating with said trough whereby the temperature controlling fluid is substantially evenly withdrawn from the chamber by over-flowing into the trough through said spill-way passage.



1,533,410. PULP-SCREENING MACHINE. ANTON J. HAUG, Nashua, N. H. Filed Mar. 28, 1921. Serial No. 456,374. 32 Claims. (Cl. 92—35.)

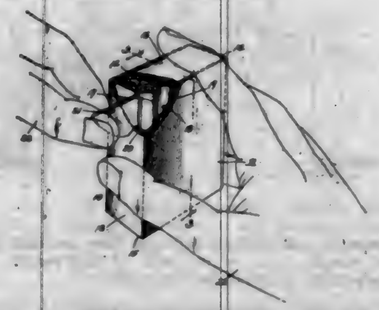
31. A pulp screening machine comprising, in combination, a horizontal rotary screening drum, means for rotating said drum with sufficient speed to cause it to exert a substantial centrifugal effect on the stock in contact therewith, a casing in which said drum is enclosed, and a weir over which the screened stock discharged from said



casing flows, said weir being arranged to back up the screened stock in said casing and keep said drum completely submerged in screened stock.

1,533,411. FORM SPACER. HOWARD B. HEILMAN and HAROLD SCARTH, Detroit, Mich. Filed Nov. 3, 1922. Serial No. 598,779. 4 Claims. (Cl. 72—122.)

3. A form spacer adapted for use in maintaining a form in spaced relation to material to be fireproofed, comprising a main body portion having a pair of angularly extending leaves adapted for free engagement at one end with said material; and affixing means projecting from said leaf members adjacent the opposite end and adapted for embedding in a portion of said form.

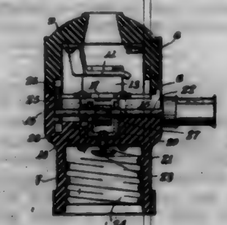


1,533,412. CORD HOLDER FOR SADIRONS. GEORGE A. HERRON, Ottawa, Ontario, Canada. Filed Feb. 18, 1925. Serial No. 9,051. 3 Claims. (Cl. 219—25.)

3. In a cord holder of the class described, a clamp shaped to engage the contact shield of the sadiron, said clamp being formed with projecting ends, means to maintain these ends closed comprising a ferrule slidingly mounted on said ends, a resilient metal band having a portion twisted at right angles pivoted at one end to said clamp, means to limit the rotation of said band upon said clamp comprising a stop depressed from said clamp

working against a sector cut out from said band, a bifurcation at the opposite end of said band, an opening below said bifurcation formed by cutting out the metal from said band on three sides, said metal being rolled upon itself to form a drum upon which the cord is wound.

1,533,413. CIGARETTE CONTAINER. PAUL R. HEYGEL, Morsemere, N. J., assignor to Harry H. Straus, New York, N. Y. Filed Nov. 28, 1923. Serial No. 677,856. 3 Claims. (Cl. 206—41.)



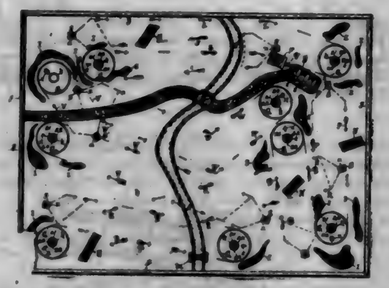
1. A container for original cigarette packages formed of relatively yielding material, said container comprising side, end and bottom portions of relatively stiff material, the top of said container being open and formed at one corner of the top with a depressed edge portion, said edge portion conforming to and serving as a guide for severing the desired opening to be formed in the package wrapper.

1,533,414. BUFFER FOR CARS. CHARLES HIBEL, Cleveland, Ohio. Filed Dec. 22, 1921. Serial No. 524,269. 8 Claims. (Cl. 104—259.)

1. In a buffer, the combination of means adapted to slide upon a track for bringing a moving body to a standstill, a pull-bar, the pull-bar having one end pivoted to said means, and the other end of the pull-bar being adapted to be engaged by the body when the body is moving in one direction to actuate said end of the pull-bar upwardly and to effect connection with the body when the body moves in the other direction, substantially as described.

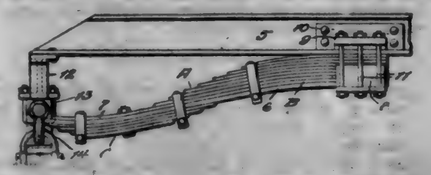
1,533,415. ELECTRIC SOCKET. JOHN HOHL, Newark, N. J. Filed Mar. 27, 1923. Serial No. 627,948. 8 Claims. (Cl. 173—351.)

1. In a separable key socket, a cap, a body having interlocking parts, engageable by relative rotation of the cap and body about their common axis, a switch



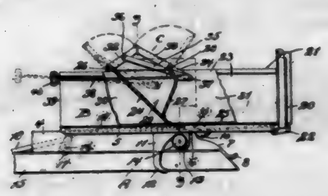
carried by one part including a switch operating member and a latch adapted to be operated by said operating member for preventing relative disengaging movement of said parts.

1,533,416. HAIR-DRYING BRUSH. JOHN M. HOLCHIN, Cleveland, Ohio. Filed Sept. 4, 1924. Serial No. 735,883. 6 Claims. (Cl. 34—26.)



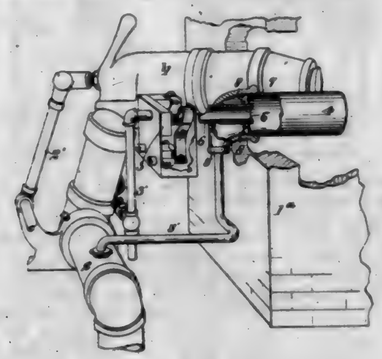
1. A hair drying brush including a sectional hollow back, a set of hollow teeth carried by the back and having communication with the interior, an electric heating element arranged in the back, and a handle attached to the back.

1,533,417. GAME—INDOOR GOLF. FRANK J. HOLLAND, Richmond, Ind. Filed Aug. 16, 1921. Serial No. 492,709. 1 Claim. (Cl. 273—87.)



The hereindescribed game of indoor golf, an oblong board, padding covering the board, rails forming a retaining border around the board, there being a plurality of holes formed through the board and padding, a cup located in each of said holes with their open ends flush with said padding, a flag for each cup, each of said flags being adapted to stand in display position in its cup or upon the padding, a driving disc for each player, and a driven disc for each player, the driving disc and the driven disc of each player being of the same color but of a color different from that of the other players, the representation of a green forming a circle around each cup, representation of a river, a roadway, and parking place shown upon said padding, and the representation of a golf course represented upon the padding, all substantially as shown.

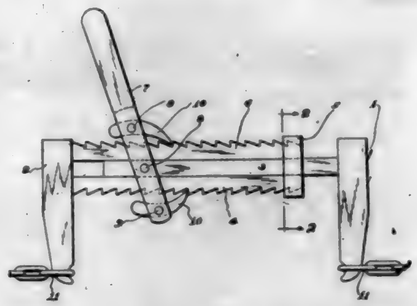
1,533,418. VEHICLE SPRING. CHRISTIAN J. HUG, Highland, Ill., assignor to The Hug Company, Highland, Ill., a Corporation of Illinois. Filed July 5, 1923. Serial No. 649,626. 4 Claims. (Cl. 267—46.)



1. A vehicle spring comprising a cantilever section and a leaf-spring section, said sections being composed of relatively short leaves built upon one or more leaves common to both sections.

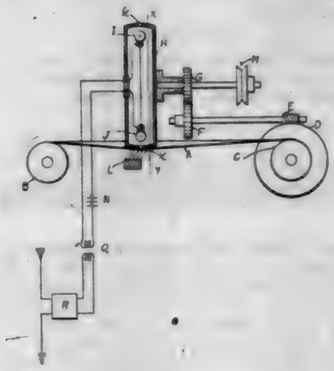
1,533,419. COMPARTMENT-DUMPING VEHICLE. CHRISTIAN J. HUG, Highland, Ill., assignor to The Hug Company, Highland, Ill., a Corporation of Illinois. Filed Feb. 21, 1924. Serial No. 694,216. 7 Claims. (Cl. 298—12.)

1. In a compartment dumping vehicle a body having a central compartment formed by two hinged plates, the bottom of said central compartment being above the plane of the bottom of said body, and end compartments formed by said plates when in loaded position.



1,533,420. OIL BURNER. BENJAMIN W. HURD, San Francisco, Calif., assignor to Turbine Fuel Oil Burner Co., San Francisco, Calif., a Corporation of Nevada. Filed Jan. 12, 1924. Serial No. 685,868. 2 Claims. (Cl. 158—28.)

1. The combination with an oil burner, of an automatically controlled pilot light structure associated therewith and disposed to cause the flame therefrom to intersect the flame issuing from the oil burner, and including an intensifier barrel arranged in advance of the pilot light structure, a tube for guiding the flame of the pilot light into the intensifier barrel and means for admitting air under pressure into the barrel of the intensifier for intermingling with the projected flame of the pilot light and projecting the same beyond the intensifier barrel for impingement against the stream of vapor issuing from the burner.

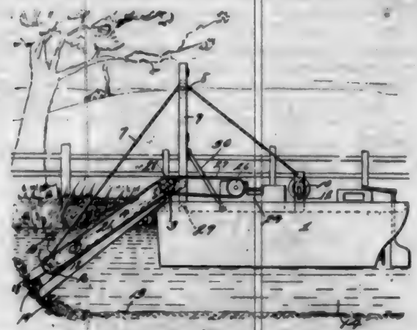


1,533,421. MOTOR-VEHICLE CHAIN TIGHTENER. ORIS L. HUTCHCROFT, Mediapolis, Iowa. Filed Mar. 21, 1924. Serial No. 700,851. 1 Claim. (Cl. 254—72.)

As a new article of manufacture, a chain tightener comprising a primary jaw and an auxiliary jaw, parallel bars provided with teeth on their outer edges fastened at their outer ends to said auxiliary jaw, a straight bar between said parallel bars and fastened at its outer end to said primary jaw, a narrow collar around the straight bar and the inner ends of said parallel bars only, a tooth at the extreme inner end of each of said parallel bars extending into the body of said collar, a

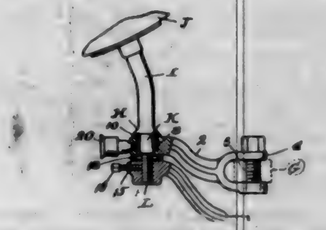
handle on said straight bar, and dogs on said handle and engaging some of the teeth of said parallel bars, substantially as shown and described.

1,533,422. WEB-PICTURE-MESSAGE TRANSMISSION. CHARLES FRANCIS JENKINS, Washington, D. C. Filed Feb. 16, 1924. Serial No. 693,226. 8 Claims. (Cl. 178—7.)



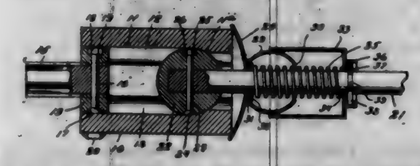
1. In apparatus of the class described, the combination of a moving picture surface, a moving light-enclosing casing in contact with said picture surface, a minute aperture in said casing at the point where it contacts with said surface, and means for yieldingly holding the casing and said picture surface in intimate contact.

1,533,423. STREAM-BED-DIGGING DEVICE. AARON JOHNSON, Corning, Mo. Filed July 9, 1924. Serial No. 724,988. 8 Claims. (Cl. 37—76.)



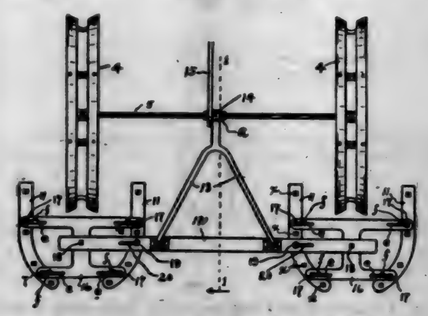
1. A river bottom excavating machine comprising a hull, a straight transversely disposed shaft rotatably mounted in bearings adjacent one end of the hull, means for rotating said shaft, said means driving the shaft from opposite ends thereof, a frame pivotally mounted on said transversely disposed shaft and extending downwardly, a crank shaft carried by the free end of the frame, driving connections between the crank shaft and the first mentioned shaft adjacent the opposite sides

of the frame, a plurality of bars carried by said crank shaft, digging elements carried by the lower ends of said bars, the rear ends of said bars being provided with



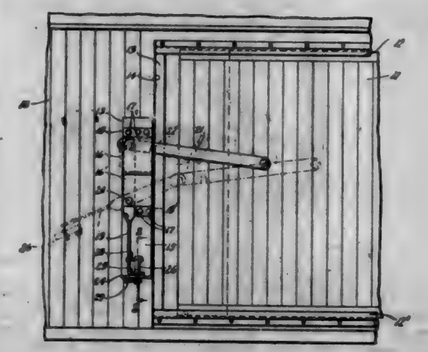
yokes arching the straight transversely disposed shaft and having a slidable connection on said shaft and means for raising and lowering said pivoted frame at its free end.

1,533,424. DIRIGIBLE HEADLIGHT. WILLIAM R. JOHNSTONE and WILLIAM A. MCDOUGALL, Kansas City, Mo.; said Johnstone assignor to said McDougall. Filed June 22, 1922. Serial No. 570,096. 2 Claims. (Cl. 240—62.)



1. In combination with a headlight and its post, a lamp bracket adapted to be secured at its rear end to the fender bracket of an automobile, a bearing journaled in the forward end of said lamp bracket and provided at its upper end with a channel to receive a complemental shoulder on the headlight post to rotate therewith, a steering arm secured at one end to the lower end of said headlight post where the same projects through said bearing, means connecting the opposite end of said steering arm to the steering mechanism of the automobile, and antirattler means interposed between the lamp bracket and said steering arm.

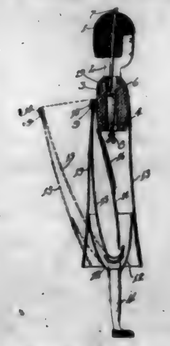
1,533,425. UNIVERSAL JOINT. HARRY JAMES JONES, San Angelo, Tex. Filed Oct. 17, 1923. Serial No. 669,095. 8 Claims. (Cl. 64—21.)



1. In a universal joint structure, a body having a bore formed with longitudinal channels, a plug detachably secured within one end of the body and formed with projections conformingly fitting within said channels, a spline carried by the plug, a shaft extending into the body at the open end thereof and carrying a ball head conformingly engaging within the bore and formed with sockets, members engaged within the sockets and said channels, the bore having its end at the open end of the body reduced in diameter to provide stop means preventing disengagement of the head from the bore.

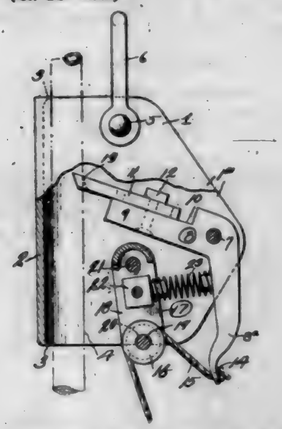
1,533,426. CORN-PLANTER ATTACHMENT. JOSEPH JUNGFERMAN, Neola, Iowa, assignor to Paul T. Hasen, Avoca, Iowa, and ROY C. FELL, Perry, Iowa. Filed Sept. 10, 1923. Serial No. 661,869. 2 Claims. (Cl. 97—6.)

1. In an attachment for a corn-planter provided with wheels and an axle, a tongue having journalled bearings and extending rearwardly of the axle, a cross-bar rigid with the tongue, a plurality of shoes each having teeth disposed in non-alignment, a pair of spacing-plates each having a pair of connected, approximately parallel arms provided with slots and pivotally connected midway between said arms with the cross-bar, keepers traversing the shoes forwardly of the cross-bar engaging in the slots of the spacing-plates, keepers traversing the shoes rearwardly of the cross-bar engaging in the slots of the spacing-plates to permit transverse adjustments of said shoes relative to the spacing-plates, and means for maintaining the arms of the spacing-plates approximately parallel with the cross-bar.



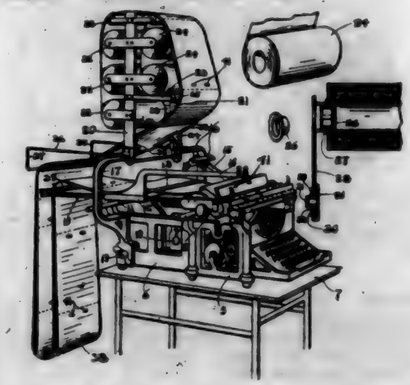
1,533,427. CAR-DOOR-LOCKING MEANS. JOHN KARTHMSER, Aurora, Ill. Filed May 16, 1923. Serial No. 639,339. 6 Claims. (Cl. 292—263.)

1. In combination with a car and a door thereon, a member swingably mounted on one thereof, a lever mounted on the other thereof, means on said lever engageable with said swingable member for partly opening



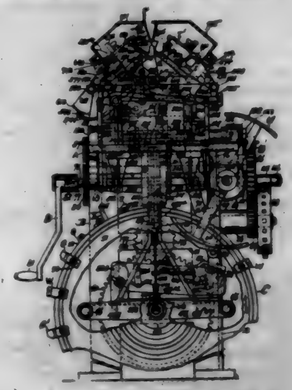
said door, means embracing said lever and said member and being arranged to prevent release movement of said member while said lever is in locked position, and means for locking said lever while in engagement with said swingable member for locking said door in either a closed position or in a partly opened position.

1,533,428. CHILD'S HAND BAG. CAROLINE T. KITTLESON, Chicago, Ill. Filed Oct. 11, 1923. Serial No. 668,015. 4 Claims. (Cl. 150—11.)



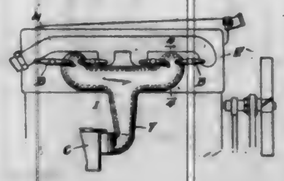
1. A combined doll and hand bag comprising a body portion having bores therein, a skirt having its front portion secured to said body portion, and its rear portion free of said body, a drawstring for carrying the doll, said string being passed through said bores and through the rear portion of said skirt, and a pocket having one side secured to said body and the other side secured to the rear portion of said skirt, whereby said pocket is adapted to be closed when said drawstring is tightened.

1,533,429. PIPE JACK. JOHN M. KOEHN, Buffalo, Nebr. Filed Oct. 24, 1924. Serial No. 745,670. 2 Claims. (Cl. 24—249.)



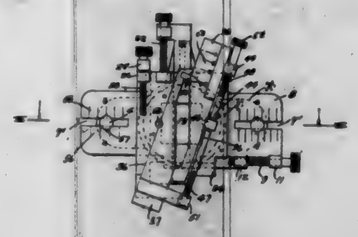
1. The combination with a pipe and rod jack comprising a U-shaped frame in which a pipe is received, spaced teeth carried by the frame adjacent its upper and lower ends and adapted to bite into a pipe, an angularly shaped gripping lever pivoted within the frame, an adjustable gripping bar carried by said lever and adapted to engage the outer side of a pipe, of a U-shaped member rigidly disposed within the U-shaped frame, a pulley carried by said U-shaped member, a cable extending over said pulley and connected to the angularly shaped gripping member, and a coiled spring interposed between the gripping lever and the U-shaped member.

1,533,430. ATTACHMENT FOR MANIFOLDING TYPEWRITERS. HARRY H. KONERMAN, Newport, Ky., and ROBERT C. LEIMBERGER, Cincinnati, Ohio, assignors to The Globe Register Co., Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 24, 1922. Serial No. 546,239. 2 Claims. (Cl. 197—133.)



1. An attachment for manifolding typewriters, comprising in combination with a typewriter, a roll-carrying rack above the typewriter, a series of paper rolls mounted in the rack, a rearwardly extending paper supporting loop having guiding sides, and an adjustable plate between the rolls and the loop adapted to direct the paper from the rolls over the loop, whereby a loop of paper may be established and maintained between the typewriter and the loop.

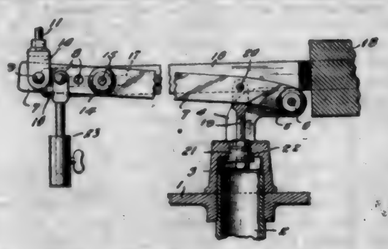
1,533,431. ADJUSTABLE AUTOMATIC KNITTING MACHINE. BENJAMIN KOTKOVSKY, Brooklyn, GEORGE LUTER, New York, and BORIS DUBI, Brooklyn, N. Y., assignors to Chainless Knitting Machine Corp., New York, N. Y., a Corporation of New York. Filed Aug. 3, 1922. Serial No. 579,459. 12 Claims. (Cl. 66—28.)



1. In a knitting machine the combination of knitting appurtenances, an adjusting dial journaled in the machine, means to intermittently rotate the dial, scales indicated on the dial, means in the machine for turning said dial a complete revolution, means in the machine to operate the knitting appurtenances for one cycle of their operations for a movement of said dial through an angle between a pair of adjacent divisions of one of its scales and means in the machine to operate said knitting appurtenances an increased number of times for a movement of the dial through an angle of a second scale thereon, to obtain for one revolution of the adjusting dial the predetermined length of the material to be knitted, and its predetermined pattern of stitches.

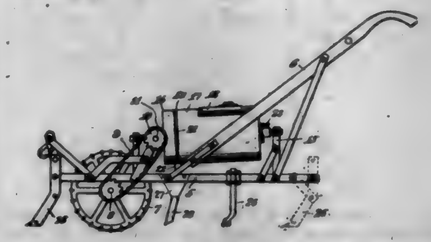
1,533,432. INTAKE-MANIFOLD HEATER. WILLIAM F. LEVISON, Cleveland, Ohio. Filed Sept. 15, 1923. Serial No. 662,853. 4 Claims. (Cl. 123—122.)

1. An intake manifold heater comprising a casing entirely enclosing the manifold between the carbureter and the engine block, a heat insulating material arranged between the manifold and casing and a connection between the upper portion of the casing and the exhaust manifold for directing additional heat into the casing.



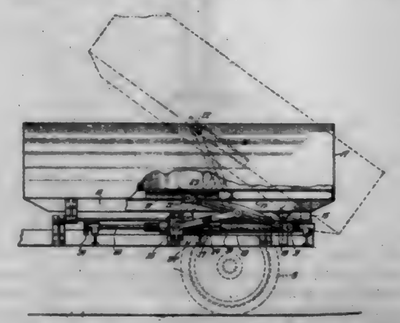
1,533,433. MULTIPLE-EXPOSURE ATTACHMENT FOR CAMERAS. SVENNUM CHRISTIAN LINDEN, San Francisco, Calif. Filed Mar. 15, 1923. Serial No. 625,344. 4 Claims. (Cl. 95—36.)

1. A camera attachment comprising a fixed plate having an aperture therein exposing the whole area of the film, a second plate movable thereon having a smaller aperture exposing a part only of the film, means for advancing the second plate over the first plate whereby parts of the same film are exposed successively and means for adjusting the width of the second aperture, comprising a pair of plates mounted on the second plate with freedom of diagonal sliding motion having parallel edges facing one another so as to define a slot adapted to be widened and narrowed by relative motion of the plates.



1,533,434. FLOAT VALVE. OTTO LINSTADT, Madison, Nebr. Filed Nov. 28, 1923. Serial No. 677,431. 3 Claims. (Cl. 137—104.)

1. In a valve of the class described, the combination of an inlet pipe, a valve casing attached to said pipe, the valve casing having a port therethrough, a valve seating upwardly to close said port, a pivotally supported arm to which the valve is operatively connected,



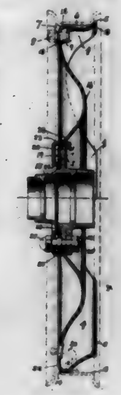
a float element adjustably attached to the free end of the pivotally mounted arm, and a weighted twin arm adjustably attached to the pivotally mounted arm.

1,533,435. FERTILIZER MIXER AND DISTRIBUTOR. MILTON A. LOKEY, Hatcher Station, Ga. Filed Sept. 29, 1924. Serial No. 740,521. 1 Claim. (Cl. 221—128.)

In an implement for mixing and distributing fertiliser, a frame, a shaft journaled on the frame and inclining forwardly and downwardly, traction-wheel means for driving said shaft, a hopper mounted on said shaft and consisting of two cylindrical sections relatively adjustable on said shaft to provide an annular circumferential discharge-slot of the desired uniform width, and means for keeping said slot clear of accumulations of fertilising materials, the forward end of the front section being closed and the two adjacent ends of the section being open, whereby the fertilizer will gravitate across the discharge-slot and into the forward section.

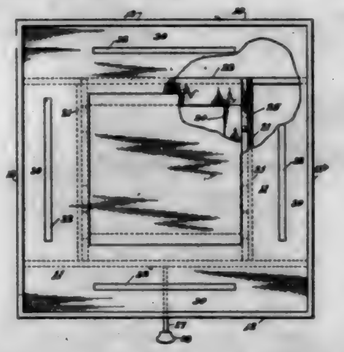
1,533,436. DUMP WAGON. THOMAS K. LOWRY, Chicago, Ill. Filed Feb. 10, 1921. Serial No. 443,795. 13 Claims. (Cl. 298—21.)

1. A dump wagon comprising a suporting frame; a wagon box supported on said frame and having detachable connections along the bottom lower edges of said



box; two connecting links pivoted about a common axis; a lever bifurcated at its ends and pivoted intermediate its ends between said links; a track circular in cross-section attached to the lower central portion of said box; a roller pivoted between the bifurcated portions of one end of said lever and engaging said track; a sleeve pivoted between the bifurcated portions at the other end of said lever; and a screw journaled in said frame and threaded in said sleeve.

1,533,437. EDUCATIONAL DEVICE. ALFRED J. MACY, Chicago, Ill., assignor to Macy Art Process Corporation, a Corporation of Illinois. Filed Apr. 11, 1921, Serial No. 460,431. Renewed Aug. 25, 1924. 5 Claims. (Cl. 88—30.)



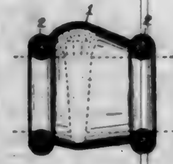
1. In combination, a leaf of a publication, an optical instrument, means for supporting it adjacent the edge of the leaf, a picture on the leaf illustrating the use of said instrument, a picture on said leaf to be viewed through said instrument, and a legend located between said pictures, opposite said instrument, giving directions to use the instrument in the manner indicated by the one picture to view the other.

1,533,438. VEHICLE WHEEL. FRANK L. MAIN, Birmingham, Mich., assignor to Hayes Wheel Company, Jackson, Mich., a Corporation of Michigan. Filed Apr. 2, 1923. Serial No. 629,280. 5 Claims. (Cl. 301—63.)

4. A disc for vehicle wheels to connect the hub and the rim, said disc being formed with laterally extending substantially cylindrical flanges at intervals along its outer periphery, said disc adapted to have a continuous line contact along one edge of the rim and the flanges to have interrupted line contacts along the other edge of the rim, the edges of said flanges constituting zig-zag lines.

1,533,439. GAME BOARD. LUCIEN A. MARSH, Mill Valley, Calif. Filed Apr. 9, 1923. Serial No. 630,750. 3 Claims. (Cl. 273—136.)

2. A game board having a playing surface with a rectangular opening at the center thereof, a hollow case having a hinged cover mounted in said opening and vertically movable therein, said case being normally disposed within the top surface of said cover flush with the playing surface, a reciprocable slide below the case, and co-operating means on the slide and the case adapted to vertically move the case when said slide is operated.

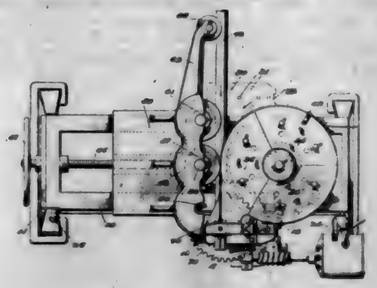


1,533,440. PUMP. BENJAMIN FRANKLIN MARTY, Friant, Calif., assignor of two-thirds to Elizabeth Donaghy, O'Neals, Calif. Filed Nov. 20, 1922. Serial No. 602,168. 5 Claims. (Cl. 103—155.)

1. A pump comprising a casing having a reduced lower portion; a shoulder formed at the upper end of the reduced portion and a flange formed at the lower end of said reduced portion; an annulus mounted within the casing upon the shoulder; a cylinder mounted within the casing in engagement with the flange and the annulus; valve means removably mounted within the lower portion of the cylinder to form an intake to the cylinder and the[illegible] to the casing through openings formed

in the cylinder above the valve means; a plunger mounted within the cylinder; and means for reciprocating the plunger within the cylinder to draw liquid into the cylinder when moved in one direction, and to force said liquid into the casing and upwardly past the valve controlled opening in the annulus when moved in the opposite direction.

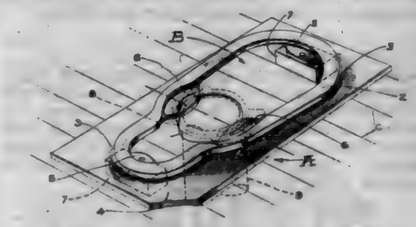
1,533,441. FINGER-RING GUARD. GEORGE MELLING, Lansing, Mich., assignor of one-half to Alice M. Melling, Lansing, Mich. Filed Nov. 28, 1923. Serial No. 677,576. 4 Claims. (Cl. 63—17.)



1. As an article of manufacture, a finger ring guard comprising an annular resilient body portion to yieldingly embrace a ring upon a finger and terminating in a thickened integral finger embracing rim at each end.

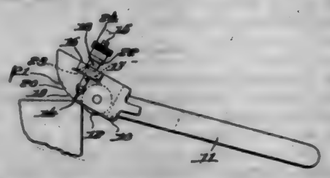
1,533,442. MECHANISM FOR SHIFTING BINDER POSTS. ARTHUR R. MEYER and ELMER A. REED, Chicago, Ill., assignors, by mesne assignments, to Wilson-Jones Loose Leaf Company, Chicago, Ill., a Corporation of Massachusetts. Filed June 18, 1921. Serial No. 478,491. 11 Claims. (Cl. 129—13.)

3. In a loose leaf binder, the combination with the shiftable elements for expanding and contracting the binder, of shiftable leaf-holding posts operatively connected to said elements, a loose leaf having a plurality of mush-room-shaped slots for accommodating the leaf-holding posts and allowing said posts to be shifted therein for locking said leaf in the binder.



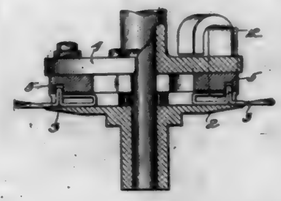
1,533,443. PIPE-BENDING MACHINE. ANDREW MILLER, Newport News, Va. Filed May 21, 1924. Serial No. 714,850. 5 Claims. (Cl. 153—40.)

4. In a pipe bending machine, a bending member including a base plate having similar oppositely disposed supporting extensions, a vise similarly attachable to either of said extensions for right and left pipe bends, a series of segments forming a bending wheel around and secured to the said base plate, a shaft on which the base plate is mounted, and means to rotate said shaft, one



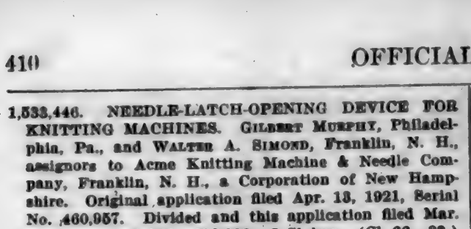
of said bending wheel segments having an angularly outstanding extension engaging the vise and forming a bracing support therefor.

1,533,444. FLOOR SLAB FOR PLUMBING FIXTURES. OSCAR H. MOHR, Berkeley, Calif., assignor of one-half to Franklin W. Dakin, Berkeley, Calif. Filed Apr. 10, 1924. Serial No. 705,483. 6 Claims. (Cl. 4—252.)



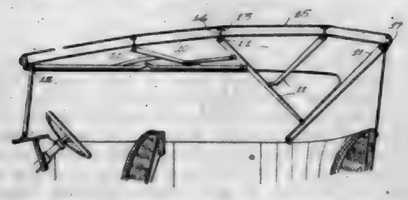
1. A floor slab of the character described, having a raised supporting surface formed thereon, the contour of said raised surface conforming to the outline or base of a fixture to be supported thereon, said raised portion having an opening formed therein substantially centrally thereof.

1,533,445. CUTTER FOR CHEESE, BUTTER, AND THE LIKE. HUGO ADOLF OTTO MÖLLER, Boston, Mass., assignor to Maurice M. Saunders, Boston, Mass. Filed Aug. 21, 1924. Serial No. 733,262. 5 Claims. (Cl. 31—27.)



1. A cutter of the class described comprising a yoke and attached handle, the limbs of said yoke having their under sides rocker shaped at the ends thereof, and provided with means to retain a cutting wire in one of a plurality of predetermined positions; a cutting wire mounted on said yoke and normally held thereon under tension; means to exert tension on said wire; means to change the position of said tension exerting means whereby said cutting wire may be made to register with one of a plurality of positions predetermined by said wire retaining means; and a work contact device arranged to guide said wire during the cutting operation.

1,533,446. NEEDLE-LATCH-OPENING DEVICE FOR KNITTING MACHINES. GILBERT MURPHY, Philadelphia, Pa., and WALTER A. SIMOND, Franklin, N. H., assignors to Acme Knitting Machine & Needle Company, Franklin, N. H., a Corporation of New Hampshire. Original application filed Apr. 13, 1921, Serial No. 460,957. Divided and this application filed Mar. 10, 1924. Serial No. 698,006. 3 Claims. (Cl. 66—28.)

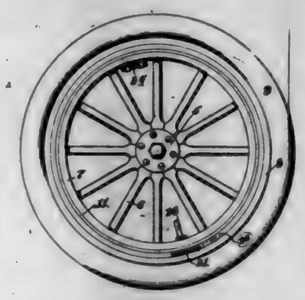


1. In a knitting machine, the combination of a series of needles, supporting means for said needles, cams for operating said needles, and a magnet mounted adjacent to the path of movement of said needles and having a face comprising a leading portion located close to said path to act on the ends of the needle latches to initiate their opening movement, and trailing portions located at successively increasing distances from said path and arranged to continue the opening movement of the latches as the magnet is relatively moved past said needles.

1,533,447. APPARATUS AND PROCESS FOR ELECTROPLATING METAL AND FORMING ARTICLES THEREFROM. GEORGE W. NEWMAN, Chicago, Ill., assignor, by mesne assignments, to Wilson-Jones Loose Leaf Company, Chicago, Ill., a Corporation of Massachusetts. Filed July 20, 1923. Serial No. 652,747. 4 Claims. (Cl. 204—11.)

1. The method of treating metal, which consists in first subjecting the same to an electrolytic bath to cleanse the same and to remove a portion of the surface thereof, and then plating said surface.

1,533,448. AUTOMOBILE TOP. MOORE NOBLE, Los Angeles, Calif. Filed Mar. 13, 1924. Serial No. 698,950. 2 Claims. (Cl. 296—137.)

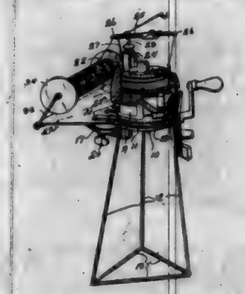


1. The combination, with an automobile top and its supporting bows, of short posts that project upwardly from the upper portions of said bows, transverse rails supported by said short posts, a protective cover supported by said transverse rails and wholly covering the vehicle top, and the edges of which protective cover are extended downward so as to overlie the corresponding edges of the vehicle top, thus forming an air chamber between said vehicle top and protective cover.

1,533,449. TRAILER. AXEL O. NORDINE, Seattle, Wash., assignor to Puget Electric Welding Inc., Seattle, Wash. Filed Dec. 31, 1923. Serial No. 683,704. 4 Claims. (Cl. 280—33.1.)

1. In a trailer for tractors or the like a connection at the forward end in the form of an inverted U with an arm projecting from its forward side, said arm resting upon a spring saddle on top of the axle of the tractor, and a connection between the lower ends of the forward side of the U and the yoke on the under side of the axle of the tractor.

1,533,450. VEHICLE WHEEL. ROSCOE O'FLAHERTY, Lanham, Md. Filed Dec. 13, 1923. Serial No. 680,888. 3 Claims. (Cl. 301—16.)



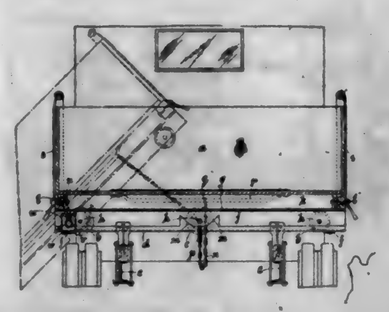
1. The combination with a felly of a vehicle wheel having its outer surface laterally inclined at an angle to the axis of the wheel, and a trans-split rim securing ring adapted to snugly surround the felly between the latter and the rim and normally tending to contract to a smaller diameter for releasing the rim, of means for causing lateral displacement of the ring relative to the felly for causing expansion of the ring into engagement with the rim, wherein the means for causing lateral displacement of the ring embodies a second ring rotatably mounted between the first named ring and the felly, and wherein said means embodies co-operating teeth with inclined co-operating edges provided upon the said rings.

1,533,451. BOBBIN SUPPORT FOR HAND KNITTING MACHINES. NELLIE C. OVERCASH, Sawtelle, Calif. Filed July 24, 1924. Serial No. 727,998. 3 Claims. (Cl. 66—12.)

1. As an article of manufacture, an auxiliary spool support for hand operated knitting machines comprising a sheet metal member cut out at one end to form a substantially annular portion adapted to be disposed beneath

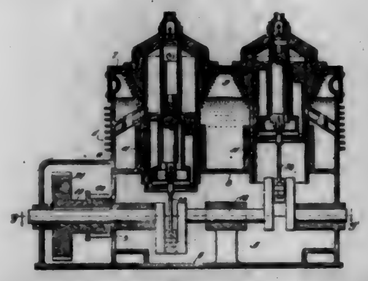
the knitting machine and engaged therewith against rotary movement, the annular member having a radial outstanding web carrying an auxiliary spool at its outer

end, the opening of the annular member being extended outward into said web, whereby to accommodate the usual clamps on a knitting machine.



1,533,452. ELECTRICAL SEAL. PERCY H. PAULEN, Cleveland, Ohio, assignor to The Electrical Seal Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 16, 1922. Serial No. 601,687. 3 Claims. (Cl. 219—21.)

1. In a sealing device, the combination with a handle; of a heating device mounted upon said handle and including a cylindrical shell, a cap-piece intermediate of said shell and handle and closing the inner end of said shell, an insulating member secured to the bottom end of said shell, bolts passing through said cap-piece, interior of said shell and insulating member, nuts for said bolts, whereby said cap-piece, shell and insulating member are secured to each other, a hollow heating cap detachably secured to said insulating member, an electrical heating element within said heating cap and detachably mounted upon said insulating member, electrical terminals embedded in said insulating member and terminating in sockets adapted to receive the terminals of said heating element, and electrical conductors connected with said terminals; said handle and cap-piece being formed with central alined passages through which said conductors pass.

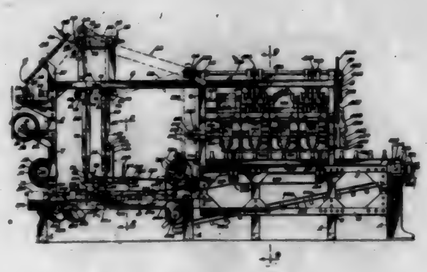


1,533,453. SIDE-TIPPING BODY FOR VEHICLES. WILLIAM L. PAYNTER, Newcastle-upon-Tyne, England. Filed Dec. 5, 1924. Serial No. 754,171. 3 Claims. (Cl. 298—13.)

1. For a road or rail vehicle, a side-tipping body, three pairs of flanged rollers on the underside thereof with their spindles transversely of the body, the flanges of the central pair of rollers being of larger diameter than the flanges of the two outer pairs of rollers, a pair of transverse channel bars on the vehicle chassis between which said rollers run, stop bars at the ends of said

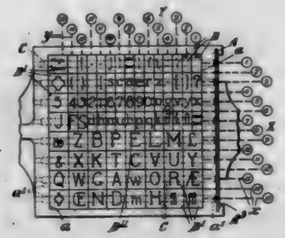
channel bars with which said central rollers coact and which prevent the central rollers overrunning the channel bars, and apertures in the centres of the top flanges of the channel bars which allow the outer rollers to rise out of the channel bars when the body tips.

1,533,454. INTERNAL-COMBUSTION MOTOR. MANUEL HUMBERTO PÉREZ, San Pedro Sula, Honduras. Filed Nov. 20, 1923. Serial No. 675,926. 2 Claims. (Cl. 74—57.)



1. A motor comprising a casing, sets of cylinders on opposite sides of the center of the casing, pistons operating in said cylinders, shafts on opposite sides of the center of the casing and driven respectively by the respective sets of pistons, high and low speed gears carried by said shafts, a driven shaft having a gear thereon, and intermediate loose gears meshing with the high and low speed gears on the respective piston driven shafts and adapted to be fixed for engagement with the gear on the driven shaft, and means for adjusting the driven shaft to move the gear thereon into or out of engagement with the high or low speed loose gears.

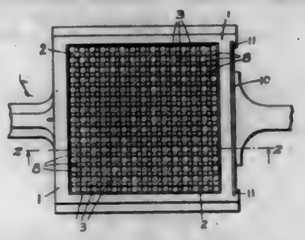
1,533,455. PACKAGING MECHANISM. JONATHAN PETERSON, Brooklyn, N. Y., and JAMES C. THOM, Chicago, Ill., assignors to Combination Machine Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 23, 1921. Serial No. 447,151. 22 Claims. (Cl. 93—51.)



1. In mechanism for producing a succession of package pouches, means for feeding a continuous strip of pouch material, means for covering the strip at blank

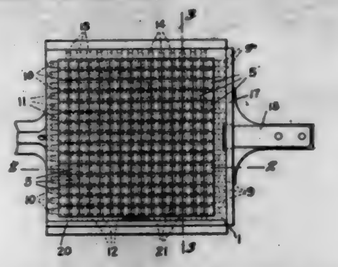
intervals, means for positioning the severed blanks, means for forming the successive blanks into pouches,

and means for adjusting the severing mechanism and for simultaneously adjusting the positioning mechanism to maintain the centering of the blanks.



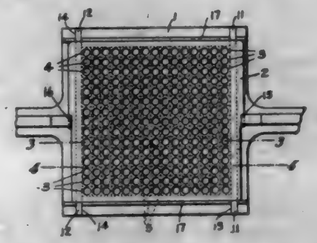
1,533,456. TYPOGRAPHIC MECHANISM. FRANK HINMAN PIERPONT and JOSEPH EARL TIPTON, Horley, England, assignors to Lanston Monotype Machine Company, Philadelphia, Pa., a Corporation of Virginia. Filed June 11, 1923. Serial No. 644,737. 4 Claims. (Cl. 199—79.)

1. A matrix case comprising a frame capable of holding a definite number of setwise rows of normal matrices and adapted to be used in a type casting and composing machine provided with matrix case positioning mechanism capable of said definite number of positions in a pointwise direction, each position representing a definite setwise dimension for the type to be produced, rows of matrices in said case of a size to embrace in a pointwise direction two of said definite positions, and a positioning cone hole on one end of each matrix and central thereof in a pointwise direction to cause the central positioning of each matrix row with reference to one of the said definite positions whereby the setwise matrix rows are less in number than the said positions and those positions corresponding to matrix rows are central of said rows in a pointwise direction.



1,533,457. MATRIX-CASE EQUIPMENT FOR TYPE-CASTING MACHINES. FRANK HINMAN PIERPONT, Horley, England, assignor to Lanston Monotype Machine Company, Philadelphia, Pa., a Corporation of Virginia. Filed Feb. 19, 1924. Serial No. 693,853. 6 Claims. (Cl. 199—79.)

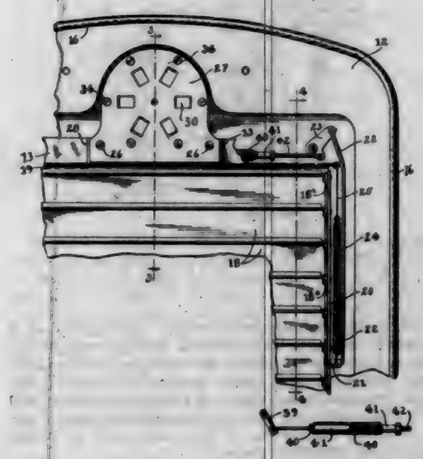
1. A matrix case comprising a frame, a series of matrices arranged therein in rows and columns, said matrices being cut away at their upper ends to form spaces, and a plate provided with a series of projec-



tions fitting into said matrix spaces, said plate being supported on said frame.

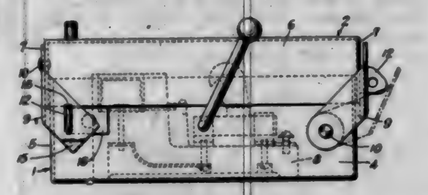
1,533,458. MATRIX-CASE EQUIPMENT FOR TYPOGRAPHIC MACHINES. FRANK HINMAN PIERPONT, Horley, England, assignor to Lanston Monotype Machine Company, Philadelphia, Pa., a Corporation of Virginia. Filed Feb. 19, 1924. Serial No. 693,854. 3 Claims. (Cl. 199—79.)

1. A matrix case comprising a frame, a series of matrices therein arranged in rows and columns, two series of suspension bars extending at right angles to each other to support the matrices and limit lateral movements of individual matrices, each series of bars being supported in openings in the said frame, extending lengthwise of the bars whereby each series of bars may be withdrawn or inserted in a direction lengthwise of the bars thereof through the frame openings therefor.



1,533,459. TYPOGRAPHIC MATRIX-CASE EQUIPMENT. FRANK HINMAN PIERPONT, Horley, England, assignor to Lanston Monotype Machine Company, Philadelphia, Pa., a Corporation of Virginia. Filed Feb. 19, 1924. Serial No. 693,855. 4 Claims. (Cl. 199—79.)

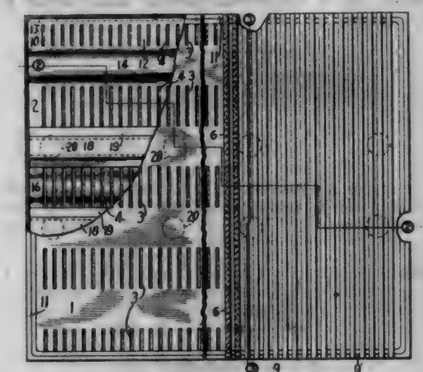
1. A matrix case comprising a frame, matrices therein arranged in a row, each matrix being provided with an annular groove providing a matrix stem portion, and a bar detachably supported in the frame and entering



the matrix grooves of the row of matrices to support said row, said bar being provided with lateral, approximately semi-circular notches to accommodate said matrix stem portions.

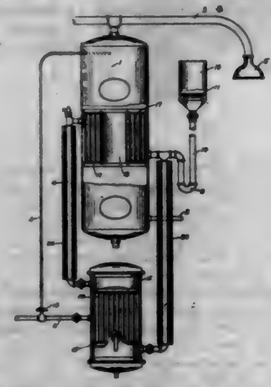
1,533,460. SHUTTER APPARATUS FOR RADIATORS. CHARLES A. PIPENHAGEN, Chicago, Ill., assignor to Pines Manufacturing Company, a Corporation of Delaware. Filed Mar. 1, 1920. Serial No. 362,251. 24 Claims. (Cl. 236—35.)

8. In a thermostatic device of the class described, a heat conducting plate adapted to lie in contact with the front surface of a radiator, a heat conducting wafer receptacle carried by said plate, a thermowafer disposed in said receptacle, and a follower for said thermowafer.



1,533,461. INCLOSED SWITCH CATCH. CLARENCE D. PLATT, Bridgeport, Conn. Filed Jan. 27, 1923. Serial No. 615,279. 3 Claims. (Cl. 292—202.)

1. In an inclosed switch, a box comprising a body having side and end wall members and a cover for the body having side and end flange members overlapping the edges of said body, a strap pivoted at one end to one of said members and extending around a corner of the box, and an anchorage for the strap secured to the other of said members.

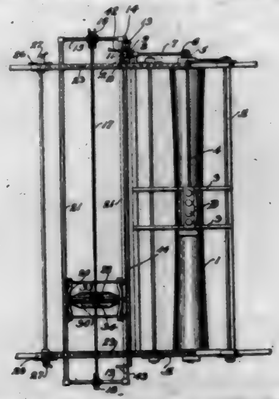


1,533,462. PRINTER'S CHASE. FRANK H. POEPPELMEIER, Dayton, Ohio, assignor to The Haas Letter Service Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 16, 1923. Serial No. 632,294. 20 Claims. (Cl. 101—381.)

1. In a device of the character described, a plate having therein a series of slots, bars mounted on said plate in spaced relation one to the other and each having a part extending through one of the slots in said

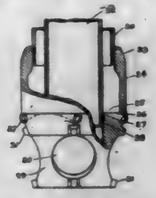
plate, and means for supporting said bar rigidly in position on said plate.

1,533,463. TEMPERATURE-LIMITING HEATER. FRED J. POSTEL, Chicago, Ill. Filed Apr. 30, 1920. Serial No. 378,002. 2 Claims. (Cl. 122—32.)



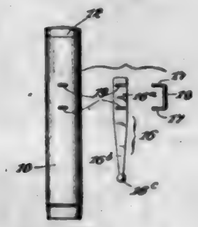
1. A device for heating a liquid to a predetermined temperature below its boiling point, including in combination with a source of heat, an endless tubular liquid receiving member having a part to receive heat from said source and a part to conduct heat to the first named liquid, a liquid in said member rapidly vaporizable substantially at the said predetermined temperature, an expansion tank freely open to the air and communicating with the endless liquid receiving member, and a layer of oil on the surface of the liquid in the tank for normally forming an air seal to prevent evaporation, the oil being unaffected by the liquid and adapted to permit the vaporized liquid to escape to the open air and thereby permanently interrupt the operative connection between the source of heat and the first named liquid so as to prevent heating of said liquid beyond the predetermined temperature.

1,533,464. FINISHING MACHINE. JOHN F. ROSS, Cleveland Heights, Ohio, assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Feb. 2, 1923. Serial No. 616,562. 15 Claims. (Cl. 94—45.)



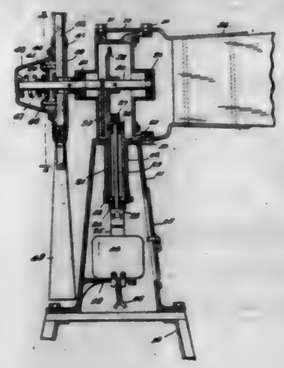
1. In a concrete road finishing machine, in combination, a portable support adapted to move over the roadbed on which the plastic concrete is disposed, a trans-

verse finishing roller mounted on said support and disposed transversely of the road-bed over which the support operates, and a longitudinal finishing roller carried by



said support and also adapted to operate upon the materials operated upon by the transverse roller, and means to move the longitudinal roller transversely of the machine and of the road-bed.

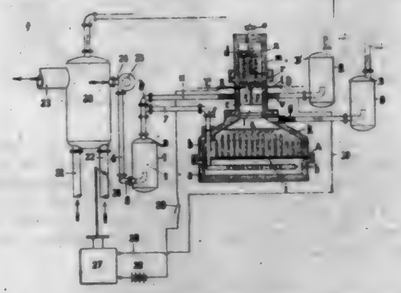
1,533,465. HYDRAULIC DREDGE. FREDERICK AUGUSTUS ROWE, Vancouver, British Columbia, Canada. Filed Apr. 17, 1922. Serial No. 553,546. 3 Claims. (Cl. 37—63.)



1. In an hydraulic dredge, the combination with the water flow pipe and return pipe located concentrically one within the other, a head forming a chamber into which the water flow pipe is secured and leads, a nozzle into which the return pipe extends and forming the lower portion of the head having laterally directed openings and tangentially set nozzles communicating respectively with the interior of the lower head and return pipe and with the interior of the upper head and water flow pipe.

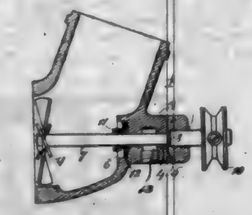
1,533,466. CLIP. IGNATZ SALZ, New York, N. Y. Filed Nov. 25, 1924. Serial No. 752,094. 13 Claims. (Cl. 24—11.)

1. The combination with a hollow cylindrical member and a spring retaining clip therefor, of means for securing the clip to the member including a pair of bendable securing devices passed through aligned openings in the clip and member, and turned over inside of the cylindrical member, and an escutcheon plate overlying the clip and retained in place by said securing devices.



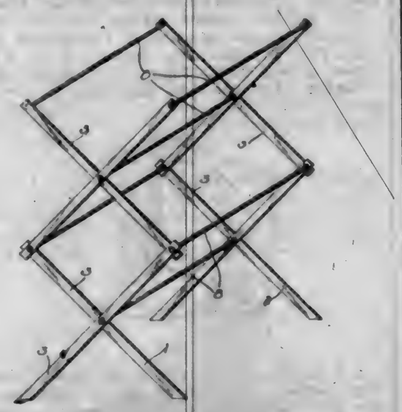
1,533,467. GOVERNOR FOR WINDMILLS. CHARLES E. SARGENT, Indianapolis, Ind. Filed June 16, 1921. Serial No. 477,913. 5 Claims. (Cl. 170—63.)

2. In a wind-wheel governor, the combination of a wind-wheel shaft, a hub mounted thereon and having radial sockets, radial shafts mounted in said sockets, blades carried by said radial shafts, lateral pins projecting from said radial shafts, a sleeve mounted on said first-named shaft and having eccentrically located sockets receiving the heads of said pins, and a torsion spring acting upon said sleeve.



5. In a wind-wheel, a plurality of blades rotatable to vary their respective angles of incidence, and means actuated by the centrifugal force of said blades to decrease their angles of incidence as the speed of rotation of the wind-wheel increases and to increase their angles of incidence as the speed of rotation decreases.

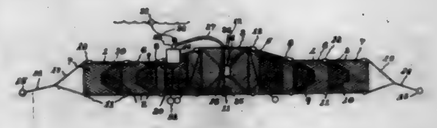
1,533,468. METHOD AND APPARATUS FOR REGULATING THE MIXTURE OF GASES. GEORG SCHMIDT, Berlin, Germany, assignor of one-fourth to Hans Güntherberg, one-fourth to Richard Ihlenfeldt, and one-fourth to Max Koch, all of Berlin, Germany. Filed Sept. 25, 1920. Serial No. 412,889. 6 Claims. (Cl. 48—180.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



6. An apparatus controlling a regulator for the mixture of gases which comprises a cylinder having a gas inlet and outlet, a piston movable in said cylinder and acted on one side by the gas within the cylinder, means connected to said piston for controlling the adjustment of the regulator, an absorbing chamber having a gas inlet and outlet and in communication with said cylinder on the side of said piston opposite to that acted upon by the gas within the cylinder, means for conveying gas into the inlets of said cylinder and absorbing chamber, and liquid baffles interposed in the inlets and outlets of said absorbing chamber.

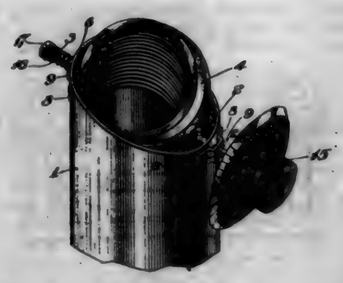
1,533,469. WATER-CIRCULATING SYSTEM FOR AUTOMOBILE ENGINES. CHARLES R. SCHMIDT, Baltimore, Md. Filed May 11, 1923. Serial No. 638,254. 2 Claims. (Cl. 286—7.)

2. In a device of the class described, the combination of a bearing for a rotating shaft having a bore of a plurality of different diameters, with a shaft of a plurality of different diameters closely filling said bore, the shaft and bearing being formed with abutting shoulders between the portions of different diameters, and the shaft provided with a collar adapted to seal said bore at its inner end, said shoulder portions and said collar being constructed, arranged and adapted to form metal to metal fluid tight joints under inward and outward thrusts of the shaft.



1,533,470. CLOTHESRACK. OTTO G. SCHMITT, Chicago, Ill. Filed Apr. 14, 1922. Serial No. 552,465. 2 Claims. (Cl. 68—34.)

1. A collapsible clothes rack comprising a plurality of bars, sleeves for pivotally securing said bars together, rods having their ends mounted in said sleeves, and means for permanently locking said rods in said sleeves.



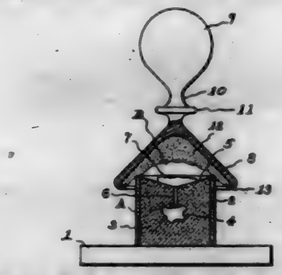
1,533,471. FISHING DEVICE. WILLIAM R. SHEPHERD, Huron, Ohio. Filed May 14, 1923. Serial No. 638,850. 7 Claims. (Cl. 43—100.)

1. A fish catching device of the character described, including a trap enclosure, an electric light associated with the trap enclosure to attract the fish, a battery, a buoy supporting the battery, and a cable connecting

the battery with the light and of sufficient length to enable the battery to be replaced without disturbing the trap enclosure.

1,533,472. CYLINDER BEARING FOR COUPLERS. CHARLES L. SHINE, Philadelphia, Pa. Filed Sept. 28, 1923. Serial No. 665,509. 2 Claims. (Cl. 64—10.)

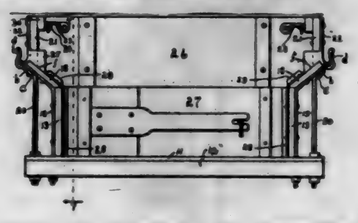
1. A journal mounting for coupler shafts, comprising in combination with the coupler and its support, an apertured bar to engage the inner face of the coupler support, an outer bar to engage the outer face of said coupler support, and fastening devices passing through one bar and the coupler support and engaging the other bar, said outer bar having an outwardly deflected apertured portion, and said inner bar having an aperture aligning with the aperture of the outer bar, said apertures being adapted to receive the coupler shafts.



1,533,473. METAL-COATING PROCESS. ROBERT JAY SHOEMAKER, Chicago, Ill., assignor to Leadizing Company, Chicago, Ill., a Corporation of Illinois. Original application filed Apr. 15, 1920, Serial No. 374,089. Divided and this application filed July 19, 1920. Serial No. 397,179. 3 Claims. (Cl. 91—68.3.)

1. Method of plating a metal article with lead or tin which consists in subjecting the surface to be plated to contact with a molten bath containing a chloride of the plating metal capable of reacting with the metal to be plated to form a chloride of said metal to be plated and to produce deposition on said surface of a thin, dense, adherent film of the plating metal, then bringing the plated surface into contact with a solvent of the salt of the plating metal, at fusion temperature, and washing the article.

1,533,474. DENTAL CASTING DEVICE AND PROCESS. JOHN C. SHOTTON, Lakewood, Ohio. Filed July 30, 1923. Serial No. 654,633. 2 Claims. (Cl. 22—69.)

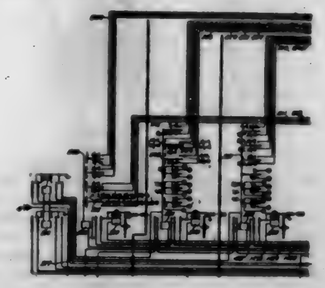


1. A dental casting device including a flared cup member adapted to be fitted upon a mold to provide a closed chamber, the inclined sides of the cup member enabling it to be fitted upon different sizes of molds, and a plastic

lining for the cup member which engages the edges of the mold to provide a gas tight joint therewith, said plastic material including an ingredient which will be

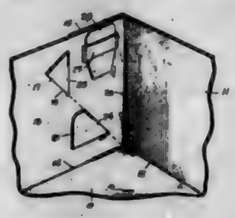
acted upon by the heat of the mold and molten metal to generate a gas and produce a pressure to force the molten metal into the mold cavity.

1,533,475. VEHICLE BODY FOR GRAIN OR STOCK. ELLIOTT B. SMOAK, Daytona, Fla. Filed Aug. 10, 1923. Serial No. 656,723. 1 Claim. (Cl. 296—12.)



A vehicle body comprising a box having side plates projecting inclinedly from its top, coupling-bars each provided with an eye and secured to a side plate and a side of the box, a stock-rack including side-frames having vertical strips formed with inclined facets at their lower ends, a plurality of bars secured to the vertical strips of the side frames each being provided with a bearing-block and having a hook for engaging in an eye of a coupling bar to permit swinging movements of the side-frames to a vertical position, the inclined facets of said vertical strips and said bearing-blocks moving into engagement with the inclined side plates of said box.

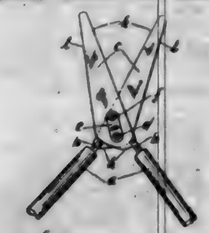
1,533,476. SHEAVE. EDWARD A. SOHN, Bedford, Ind., assignor to Bedford Foundry & Machine Company, Bedford, Ind., a Corporation of Indiana. Filed Mar. 19, 1924. Serial No. 700,267. 1 Claim. (Cl. 64—26.)



A sheave comprising, a main body provided with a bore, said main body having end portions integrally connected together by substantial connecting portions forming part of said bore and providing an oil passage intermediate each two successive connecting portions, a bushing in said bore, and oil feeding holes extending through the wall of the bushing, the number, spacing, and circumferential width of oil passages, being so related to the number and spacing of the oil feeding holes, that at least one of said holes registers with one of said passages, irrespective of the circumferential position of any point on said bushing relative to any point in said bore.

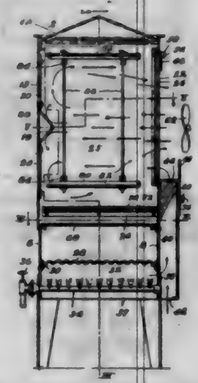
1,533,477. ROUTINE TEST CIRCUITS FOR CENTRAL-OFFICE SENDERS. FRANKLIN A. STEARN, Paterson, N. J., and JOHN C. MCAULIFFE, Bronx, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 23, 1922. Serial No. 589,980. 44 Claims. (Cl. 179—175.)

1. In a telephone exchange system in which connections are established under the control of central office sending devices, a plurality of sending devices, a testing device, and means for associating said sending devices in rotation with said testing device.



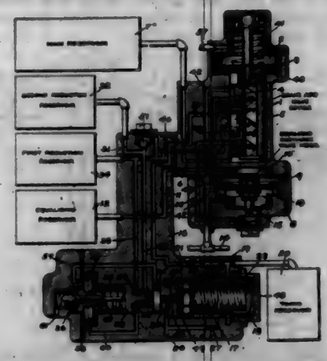
1,533,478. CORNER-FASTENING MEANS FOR FOLDING BOXES. JOSEPH STELLA, New York, and WILLIAM R. WISSER, Brooklyn, N. Y., assignors to Brooklyn Fibre Syndicate, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Oct. 4, 1924. Serial No. 741,552. 4 Claims. (Cl. 229—35.)

1. A folding box made of a cut blank comprising a body portion, side portions having cooperable tongue and slot connections, and supplementary corner fastening means comprising loop and wedge members.



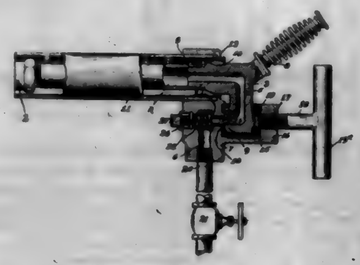
1,533,479. SHEARS FOR CUTTING AND TRIMMING GRASS AND HEDGES. JAMES THOMAS STITT, Nemegos, Ontario, Canada. Filed Nov. 17, 1924. Serial No. 750,335. 2 Claims. (Cl. 30—13.)

1. In grass cutting shears, a pair of double-edged blades pivotally connected at a point in a line intermediate of their cutting edges, the blades being adapted to pass one another so that the right hand edge of one blade may be brought into co-operative relationship with the left hand edge of the other or vice versa, the handles being positioned relative to the blades so that each handle is movable between two extreme positions at



its own side of the line of cut, whereby cutting with one set of edges takes place as the handles are spread apart and with the other set of edges as they are brought together.

1,533,480. DRIER. WILLIAM STRICKER, Kansas City, Mo. Filed May 23, 1924. Serial No. 715,319. 10 Claims. (Cl. 34—19.)

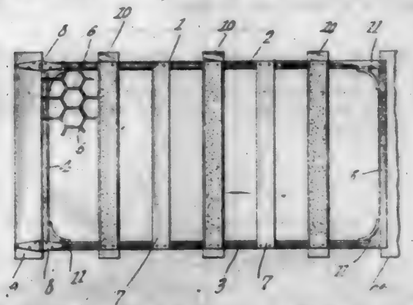


1. In a drier a container having an opening in one wall thereof, means for forcing air into the container through said opening, and a warm air duct leading from the lower portion of the container for discharging warm air to be forced into said opening.

1,533,481. FLUID-PRESSURE-BRAKE DEVICE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 9, 1923. Serial No. 630,686. 18 Claims. (Cl. 303—18.)

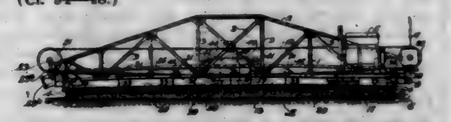
1. In a fluid pressure brake, the combination with a brake pipe, of means for effecting a predetermined reduction in brake pipe pressure and means operated automatically upon completion of said predetermined reduction in brake pipe pressure for effecting a second reduction in brake pipe pressure.

1,533,482. BURNER HEAD AND MOUNTING. JOSEPH T. VOORHIES, Oakland, Calif., assignor to Coen Co., Inc., San Francisco, Calif., a Corporation of California. Filed Sept. 16, 1920. Serial No. 410,678. 6 Claims. (Cl. 158—73.)



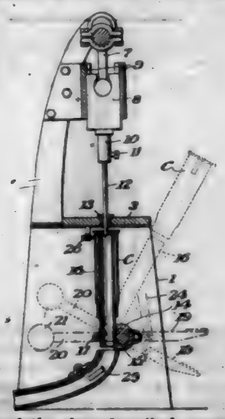
5. In a burner of the character described a stationary support, having a central opening formed in the upper end, a burner head retractable with relation to said opening and turnable therein, said burner head being substantially L-shaped and having a seat member formed on its lower end, a burner tube and nozzle supported by the burner head, and oil duct formed in the burner head communicating with the seat member and with the burner tube, a seat member formed on the stationary support, an oil duct formed in the stationary support connected with a source of supply and communicating with the central opening formed in the seat member and with the oil duct in the burner head, a rigid lug formed on the stationary support, a clamping screw carried by the lug, said clamping screw being positioned in alignment with the seat members and engageable with the burner head to insure engagement of the seat members, a valve carried by the stationary support, said valve having a projection formed thereon engageable with the burner head, said projection automatically opening the valve to permit an oil flow through the support and the burner head when the burner head is applied, and a spring for automatically closing the valve and the oil flow through the support when the burner head is removed.

1,533,483. EXHAUST-GAS REMOVER. JACK VOSS, Boyden, Iowa. Filed Aug. 14, 1924. Serial No. 732,132. 1 Claim. (Cl. 230—11.)



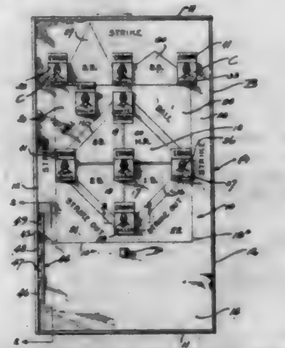
In combination, a frame, a drum mounted in the frame and provided with a slot leading inwardly from one end, guides arranged alongside of the slot, a fan disposed within the drum and including a pedestal extending through the slot and supported on the frame, and a plate slidable in the guide for engaging the pedestal and holding the fan and pedestal assembled in relation to the drum and frame.

1,533,484. POULTRY RACK. WARREN E. WALLER, Charles City, Iowa. Filed Dec. 26, 1924. Serial No. 758,203. 2 Claims. (Cl. 119—24.)



1. A poultry perch supporting rack made in the form of a skeleton frame having an open mesh wire arranged thereover and equipped with hinges for connecting it to a support at one end, the other end being designed to rest on a suitable support, and perches mounted on said rack.

1,533,485. CONCRETE-PAVEMENT-FINISHING MACHINE. GEORGE E. WEBB, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed June 15, 1921. Serial No. 477,779. 28 Claims. (Cl. 94—48.)

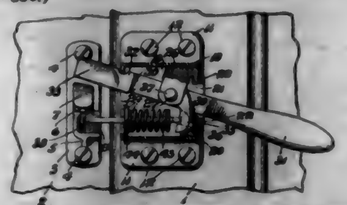


1. In a concrete finishing machine, the combination of a portable support a tamping apron thereon adapted to contact with the concrete surface to be finished, a vibrator thereon operating in engagement with said apron, means to move the vibrator along the apron and means for actuating the vibrator to press on and vibrate the apron.

1,533,486. METHOD AND APPARATUS FOR REMOVING PRIMERS FROM ARTILLERY CARTRIDGE CASINGS. AUGUSTINE WALTER WELCH, Philadelphia, Pa., assignor to Columbia Salvage Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 10, 1924. Serial No. 748,914. 9 Claims. (Cl. 86—1.)

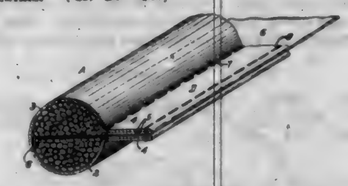
1. A device of the class described comprising a punch, a cartridge casing support adapted to be shifted to move the shell into and out of alinement with the punch, and means to cause the automatic operation of the punch to detonate the primer charge and force the primer shell from the cartridge casing when the casing is moved into alinement with the punch.

1,533,487. GAME APPARATUS. WILLIAM L. WHITE, Newburgh, N. Y. Filed Oct. 18, 1922. Serial No. 595,355. 4 Claims. (Cl. 273—88.)



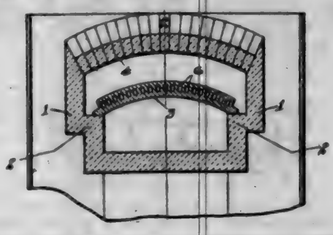
1. A game comprising a playing board subdivided into zones designating plays, movable player members, a playing element designating a ball adapted for rolling over said playing board, and a base indicating arrangement for a batting team disposed out of the bounds of the playing field.

1,533,488. SUITCASE AND LUGGAGE HOLDER. EMMET WILSON, Calexico, Calif. Filed May 29, 1922. Serial No. 564,593. 2 Claims. (Cl. 224—29.)



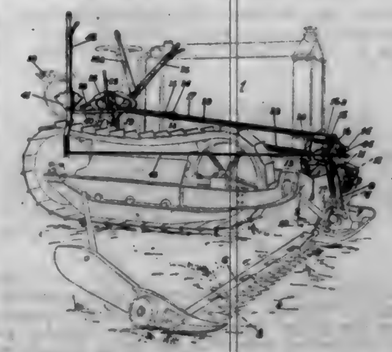
2. In a luggage carrier, a clamp member adapted to be secured to the running board of a vehicle and provided in the sides thereof with a plurality of spaced apart, oppositely disposed holes, means for securing said clamp member to said running board, resilient, laterally expansible luggage positioning members formed of flexible metal rods and provided at their inner ends with inwardly extending, oppositely disposed lugs adapted to extend into the spaced apart, oppositely disposed holes of said clamp member and pivotally support said luggage positioning members thereon, and means adapted to connect the free ends of the luggage positioning members for supporting the same at their free ends and retaining luggage therebetween.

1,533,489. LATCH. ALEXANDER F. WINTERS and BASIL R. CRAMPTON, Grand Rapids, Mich. Filed Apr. 27, 1923. Serial No. 634,951. 11 Claims. (Cl. 292—336.)



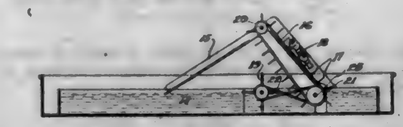
1. A latch comprising a housing, a latch lever pivotally mounted therein, spring means to action the lever to normally hold it in one position, and releasable latching means for holding the spring means out of operative relation to the lever whereby the lever is free for pivotal movement.

1,533,490. WEATHER STRIP. EDWARD J. WIBBS, St. Louis, Mo. Filed July 3, 1924. Serial No. 723,901. 8 Claims. (Cl. 20—69.)



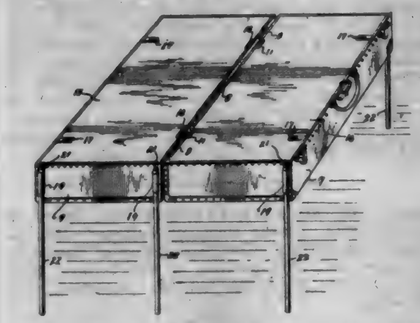
1. A weatherstrip comprising an elongated body of yielding packing, a strip of flexible pliable material having a tubular enclosing portion surrounding said packing and attaching portions extending from one side of said packing to form an attaching flange, a resilient element arranged within said weatherstrip and means whereby said resilient element is secured in place and said attaching portions secured together.

1,533,491. FURNACE FOR HEAT TREATMENT OF METAL. GEORGE F. WRIGHT and ALBERT S. KNAPP, Worcester, Mass., assignors to G. F. Wright Steel & Wire Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 23, 1923. Serial No. 653,238. 8 Claims. (Cl. 263—3.)



1. A furnace for the heat treatment of metal, comprising a casting provided with longitudinal passages for the reception of the material under treatment.

1,533,492. MOWING ATTACHMENT FOR TRACTORS. REMO C. ZANON, Modesto, Calif., assignor of one-half to John J. Ferlin, Modesto, Calif. Filed Aug. 31, 1920. Serial No. 407,248. 5 Claims. (Cl. 56—25.)

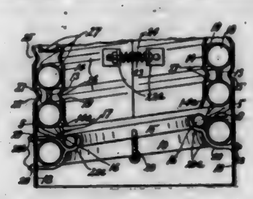


1. A mowing attachment for tractors comprising a cutting mechanism means for attaching said mechanism, to the tractor, means for enabling said mechanism to be tilted in a vertical plane lengthwise of the line of travel, an arm projecting up from the cutting mechanism, a lever mounted on the tractor, a rod extending therefrom to the arm and passing freely through the latter, and counteracting springs on the rod on opposite sides of the arm and bearing thereagainst, whereby the cutting mechanism may have a certain amount of tilting movement without disturbing the lever.

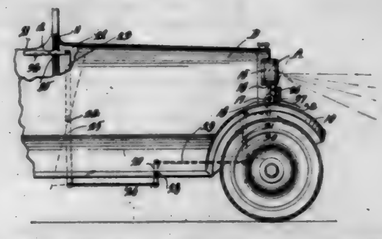
1,533,493. MECHANICAL TOY. CHARLES BATT, Jr., Sacramento, Calif. Filed Nov. 14, 1922. Serial No. 600,809. 2 Claims. (Cl. 46—37.)

1. A toy comprising a rectangular tank having a continuous waterway formed therein containing water, a plurality of buoyant miniature manikins, an inclined slide positioned above the water, an endless elevator inclined opposite to the slide and interposed between the upper end of the slide and the tank, pins on said elevtor for engaging the manikins and elevating them from the water to the top of the slide and there permitting them to plunge down the slide into the water, a paddle wheel in said waterway for creating a constant current therein to carry the manikins from the foot of the slide to the foot of the elevator, an operative connection between the paddle wheel and the elevator, and a crank for operating the same in unison.

1,533,494. TOURIST'S KIT. CHARLES BILLBURG, Detroit, Mich. Filed Dec. 21, 1922. Serial No. 608,138. 3 Claims. (Cl. 19—12.)



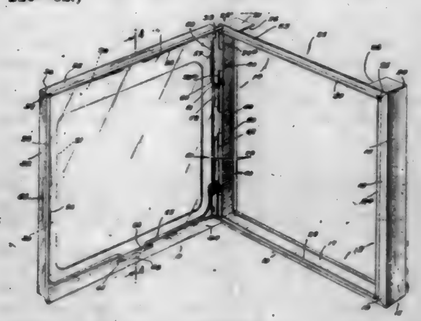
1. A tourist's kit comprising a container; socket bearing members on said container; legs adapted for insertion into said sockets each leg being provided with a pocket formed therein; a ball positioned in said pocket and adapted for projecting slightly therefrom; and means for retaining said ball normally projecting from said pocket.



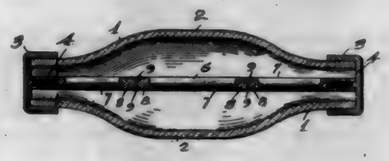
1,533,495. WATER HEATER. EDWARD C. DOELLE and EDWARD J. EGGERT, St. Paul, Minn.; said Doelle assignor to said Eggert. Filed Jan. 25, 1924. Serial No. 688,400. 4 Claims. (Cl. 122—250.)

1. In a water heater, a vertically arranged spiral water pipe, a cylindrical longitudinally split outer shell inclosing the coils of said pipe and adjusting means for causing said shell to engage the outer sides thereof, an inner longitudinally split cylindrical shell, automatic means causing said inner shell to continuously engage the inner sides of the said coils, means for heating the entire length of coiled pipe, and means for vertically spacing the adjacent coils of the water pipe, said heat-

ing means comprising a fuel conducting pipe fixed in parallel relation to the lowest spiral portion of the pipe, said fuel pipe having a row of outwardly and upwardly directed fuel outlet apertures adapted to direct flames from ignited fuel onto the adjacent surfaces of the water pipe.



1,533,496. HEADLIGHT. PETER JOSEPH DOLLAR, Green Bay, Wis. Filed June 16, 1924. Serial No. 720,443. 3 Claims. (Cl. 240—61.)

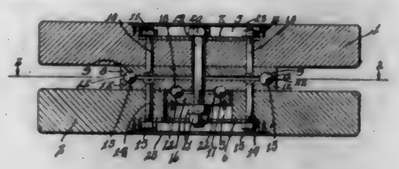


1. The combination with an automobile including a right-hand fender, of an attachment therefor including a headlight, a horizontally disposed shaft extending transversely across the fender and rotatably mounted thereon, a standard rigidly secured to the headlight and rotatably mounted on the shaft, an operating hand lever, means for operatively connecting the hand lever with the shaft for bringing about the rotation thereof upon actuation of the hand lever, a U-shaped yoke rigidly secured to the fender, and a radially extending arm secured to the standard disposed between the arms of the U-shaped yoke.

1,533,497. DETACHABLE CLOSURE FOR DISPLAY CONTAINERS. HENRY HERMANI, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Dec. 4, 1922. Serial No. 604,734. 8 Claims. (Cl. 220—82.)

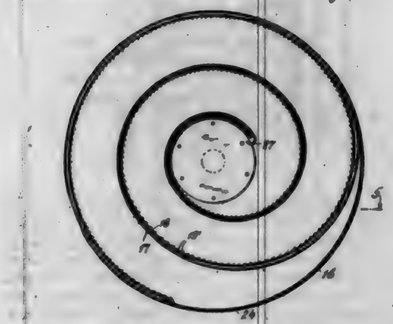
1. A closure structure designed for ready attachment to a display container, comprising an open main frame of sheet metal having side walls adapted to closely fit the walls of a container about the open mouth thereof and a front wall surrounding an opening in the front face of the frame, the front wall being reinforced by a metal rod enclosed in tubularly bent inward margins of said front wall, and a sheet metal cover having an apertured front wall and side walls, said sheet metal side walls formed to fit closely around the reinforcement of the front wall of the main frame, the cover being hingedly connected to the main frame by marginal portions of one of its side walls tubularly bent about said main frame reinforcement rod at one side of the main frame opening.

1,533,498. FUSE. JOHN H. HICKEY, San Francisco, Calif. Filed July 11, 1923. Serial No. 650,902. 4 Claims. (Cl. 200—131.)



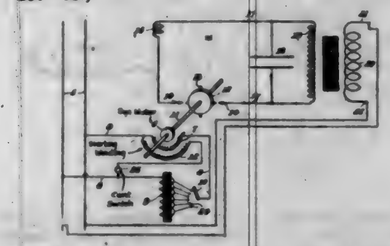
1. A fuse comprising an articulate conductor having segments provided with semi-spherical ends; and a fusible material connecting said semi-spherical ends of said segments whereby the same may be separated when said fusible material is melted.

1,533,499. INCUBATOR TRAY. DAVID M. HOLBROOK, Portland, Oreg. Filed Nov. 24, 1924. Serial No. 751,989. 6 Claims. (Cl. 119—44.)



6. A turning device for pivoted troughs of an egg tray, comprising an elongated plate adapted to be disposed transversely under the troughs, one edge of said plate having spaced upstanding trough-engaging projections, the other edge of said plate having an upstanding flange whose upper edge is bent horizontally over said plate to hook over a portion of the tray.

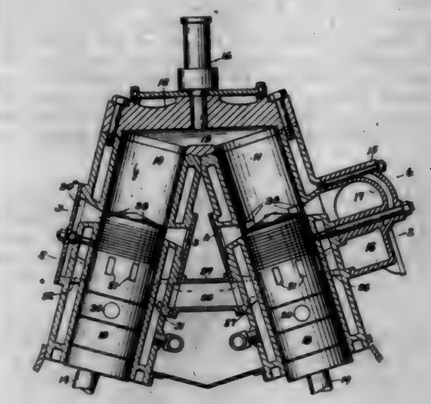
1,533,500. DEVICE FOR DEMONSTRATING ANGULAR MOMENTUM. OLAF HOVDA, Evansville, Ind. Filed May 26, 1924. Serial No. 716,002. 4 Claims. (Cl. 35—16.)



1. A device for use in demonstrating the conservation of angular momentum or energy of rotation comprising a pair of circular flat discs, bearing plates carried by said discs, and having registering ball races, balls in said races, a central pivotal member for securing said discs together, each of said discs having a recess for receiving said central pivotal member, plates for covering each recess to provide a flat surface on the faces of the plates opposite the bearing portions, and an auxiliary bearing plate carried by said pivotal member within one of said recesses, and auxiliary antifriction devices between said auxiliary bearing plate and one of said first named bearing plates.

1,533,501. SEPARATOR. BURTON S. HUGHES, Buffalo, N. Y., assignor to Zaremba Company, Buffalo, N. Y., a Corporation of Maine. Filed Dec. 8, 1920. Serial No. 429,071. 2 Claims. (Cl. 183—79.)

1. In a foam separator to remove entrained liquid from vapor, the combination of top and bottom walls, spaced walls to form a spiral passage terminating at an inlet and an outlet, the inner wall of the passage extending from the top to the bottom wall to prevent transverse communication between the convolutions of the passage and having a curved lip at the outlet end of the passage to prevent entrainment of liquid, the outer wall of the passage being perforated and having a plurality of tongues projecting in the path of the vapor in the passage.



1,533,502. METHOD OF AND MEANS FOR ADJUSTING ROTARY SPARK GAPS OF WIRELESS APPARATUS. JAMES L. JENKS, Jr., Medford, Mass. Filed Feb. 11, 1922. Serial No. 535,814. 3 Claims. (Cl. 250—38.)

1. That method of adjusting a rotary synchronous spark gap which includes a rotary spark and is directly driven by a synchronous motor which consists in controlling the phase of the current supplied to the motor and thereby regulating the discharge according to the spark gap.

1,533,503. INTERNAL-COMBUSTION ENGINE. CARL H. KNUDSEN, Brooklyn, N. Y., assignor to The Knudsen Motor Corporation, Wilmington, Del., a Corporation of Delaware. Filed June 18, 1921. Serial No. 478,582. 5 Claims. (Cl. 123—53.)

3. An engine of the class described comprising a pair of cylinders having a common combustion chamber, one of said cylinders being provided with intake ports and the other with exhaust ports, each of said cylinders being provided below the first named ports therein with other ports, means for placing the last named ports of both cylinders in communication, a compressed air supply means in communication with the last named ports of the exhaust cylinder, pistons in said cylinders for controlling said intake and exhaust ports in such manner as to open and close the exhaust ports in advance of the intake ports, said pistons being provided with

ports or passages adapted to register with the second named ports of the cylinders whereby air from said compressed air supply means may be passed directly into and through first the piston in the exhaust cylinder and then into and through the piston in the intake cylinder and into both cylinders through said intake ports, and means in each of the pistons for confining the air passed therethrough to the head end portions of said pistons.

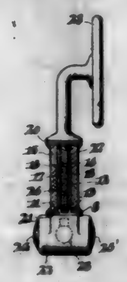
1,533,504. LINE CLAMP. JOSEPH A. KUNZ, Hartford, Conn. Filed Nov. 8, 1921. Serial No. 513,640. 2 Claims. (Cl. 24—133.)

1. A line clamp including a body having a groove therein, a lever pivotally attached to the body within said groove and comprising an actuating arm, and a clamping arm, and means located on said body opposite said actuating arm and at the same end of the body for attachment of the end of a line thereto.

1,533,505. METHOD OF PRODUCING METALLIC TITANIUM OR ITS ALLOYS. SIMON JOSEPH LUDOWSKY, Jersey City, N. J. Filed May 3, 1923. Serial No. 636,458. 2 Claims. (Cl. 75—17.)

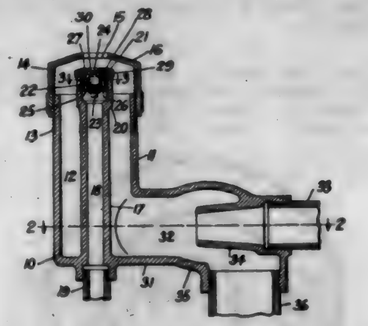
1. The method of producing metallic titanium which comprises treating a gray-black oxide of titanium by the application of heat in the presence of metallic aluminum.

1,533,506. BOW ATTACHMENT FOR SPECTACLES. WILLIAM A. MANN, Kankakee, Ill. Filed Mar. 12, 1923. Serial No. 624,549. 2 Claims. (Cl. 88—52.)



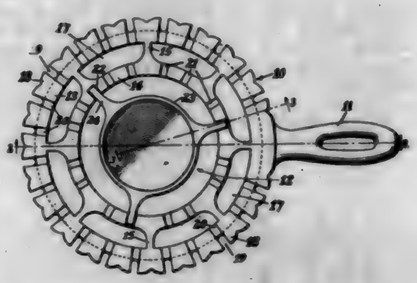
1. In an attachment for spectacles of the above described character, a convexo-concave member slidably supported on the bows of the spectacles, a screw threaded shank formed centrally of each of said convexo-concave members, means mounted on said screw threaded shank for holding said convexo-concave members in any adjusted position, and means for creating a suction between the concave face of each of the said convexo-concave members for supporting the glasses in position.

1,533,507. PUZZLE. NICOLAUS J. MAY, San Francisco, Calif. Filed Nov. 27, 1922. Serial No. 603,484. 1 Claim. (Cl. 273—157.)



A puzzle consisting of four pieces which when laid in proper relation will form a predetermined figure of rectilinear outline, the face sides of said pieces being of the same color and the reverse sides being of a different color, said pieces being so shaped that when all are laid with the face sides uppermost, a figure other than that predetermined will be produced and when properly laid to form the predetermined figure one of the pieces is required to be reversed.

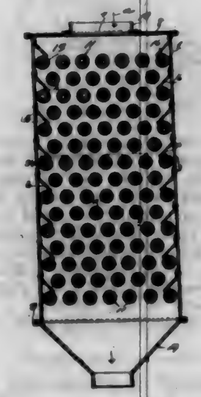
1,533,508. PROTECTOR FOR AUTOMOBILES. JOHN STROTHER MILLER, Jr., Rahway, N. J. Filed June 13, 1923. Serial No. 645,097. 7 Claims. (Cl. 40—3.2.)



1. A protective device for automobiles comprising a frame of grooved cross-section material, a closure therefor, means for locking the closure, an extension from said frame adapted for a clamping fixture, spaced sight-glasses in the grooved frame, a stationary signal member intermediate the sight-glasses, said sight-glasses and signal member affording intervening spaces adapted to receive indentification data, and means housed below the frames for illuminating the device.

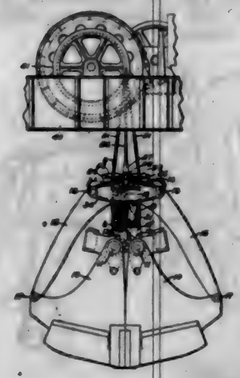
1,533,509. LIQUID AND GAS MIXER. ALBERT W. MORSE, Long Island City, N. Y. Filed Sept. 6, 1922. Serial No. 586,491. 3 Claims. (Cl. 158—11.)

1. In a liquid fuel and natural gas burner, a casing having one end cylindrical in shape forming a mixing chamber, a liquid fuel supply conduit extending through the said mixing chamber and being in central alignment therewith, a nebulizer at the outlet end of the said conduit, a gas connection and an air connection, the said air connection being provided with a nozzle converging toward the said chamber, and projecting into the said gas connection and being adapted to discharge air and gas into the said mixing chamber, and a cap at the end of the mixing chamber adapted to deflect the mixture of air and gas against the liquid fuel issuing from the said nebulizer at a velocity sufficient to prevent back firing.



1,533,510. HEAT DISTRIBUTING AND OXIDIZING UTENSIL. WILLIAM J. NAGB, Los Angeles, Calif. Filed June 2, 1924. Serial No. 717,313. 3 Claims. (Cl. 126—215.)

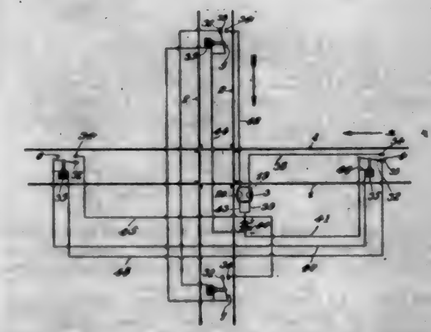
1. A heat distributing and gas oxidizing utensil comprising a circular outer member provided with a handle and having passages from its upper to its lower surfaces and grooves in its upper surface communicating with said passages, and an inner member adapted to be removably supported in the center of said outer member so that vertical openings are left between said outer and inner members through which heat and fuel gas may pass.



1,533,511. GRAIN-DRYING DEVICE. LOUIS A. NEMETS, Omaha, Nebr. Filed Nov. 14, 1922. Serial No. 600,893. 4 Claims. (Cl. 34—34.)

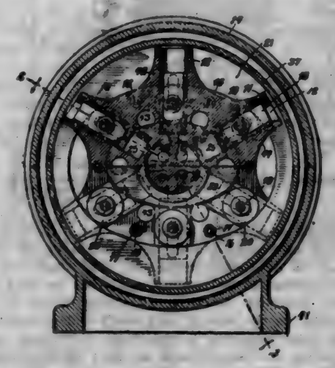
3. A grain drying device, said device comprising a casing rectangular shaped in horisontal cross section, horisontally and transversely disposed independently non-connected electric heating elements extending through the casing and supported in opposite walls thereof, said heating elements being arranged in horizontal rows, the adjacent rows being in staggered relation, downwardly and inwardly inclined deflecting plates in substantial

parallel relation to the heating elements and carried by opposite walls of the casing, said deflecting plates being disposed above the outer heating elements.



1,533,512. BUCKET. ALMON E. NORRIS, Brookline, Mass. Filed July 11, 1923. Serial No. 650,816. 7 Claims. (Cl. 37—186.)

1. The combination with a suitable support, of a grab having holding and opening and closing ropes connecting the same with said support, and means providing for longitudinal or transverse positioning of said grab with reference to said support.

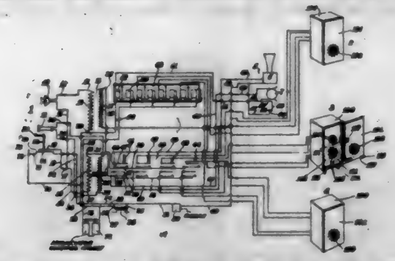


1,533,513. SIGNALING APPARATUS FOR RAILROAD CROSSINGS. EUGENE SILVESTER PEARCE, Philadelphia, Pa. Filed Mar. 12, 1924. Serial No. 698,576. 4 Claims. (Cl. 246—114.)

1. Signaling apparatus for railroad crossings including a lamp bulb; a cut-in switch on one side of the crossing electrically connected for illuminating the lamp bulb and adapted to be closed by a moving train; a cut-out switch on the other side of the crossing electrically connected for opening the cut-in switch and adapted to be

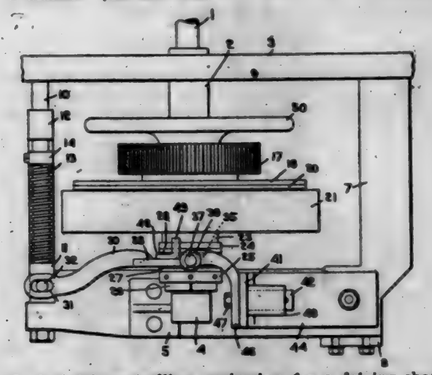
closed by the moving train, and means electrically connected with the cut-in switch for opening the cut-out switch after the cut-in switch is opened.

1,533,514. ROTARY ENGINE. CHARLES L. RAGOT, New York, N. Y., assignor to Ragot Motor Corporation, a Corporation of New York. Filed Jan. 31, 1923. Serial No. 616,019. 20 Claims. (Cl. 121—121.)



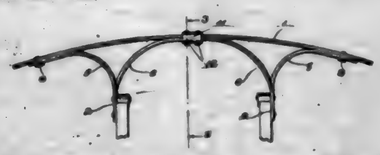
20. In combination a casing, an annular row of radially disposed cylinders integral therewith, said casing having a hub portion provided with annular passages therein, a motive fluid distributer rotatably mounted in said casing and having passages communicating with said first mentioned passages and having ports for communication with said cylinders, pistons in said cylinders, a track rigidly connected to said distributer and rotatable therewith, and means engaging said pistons and said track for reciprocating the pistons during the rotation of the track.

1,533,515. SIGNALING SYSTEM. DR ELBERT A. REYNOLDS, Yonkers, N. Y., assignor, by mesne assignments, to Audiphone Company of America, New York, N. Y., a Corporation of Delaware. Filed Feb. 3, 1921. Serial No. 442,051. 10 Claims. (Cl. 179—1.)



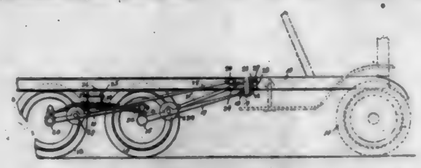
1. A police call system comprising a plurality of call boxes, each of said call boxes being provided with a loud speaking receiver and a sensitive transmitter, a central station comprising a transmitter and receiver therefor, and further comprising a set of individual switches respectively for said plurality of call boxes and sep-

arate circuit means for connecting the loud speaking receiver and the sensitive transmitter of any individual



call box with its said individual switch and said central transmitter and said central receiver respectively independently of the remainder of said individual switches.

1,533,516. CLUTCH-CONTROLLING MECHANISM. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Sept. 16, 1922. Serial No. 588,569. 4 Claims. (Cl. 192—93.)

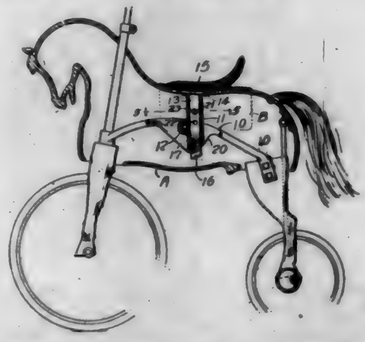


2. A clutch controlling mechanism for a driving shaft having fast and loose clutch members mounted thereon comprising an abutment carried by said shaft and fixed against longitudinal movement relatively to said shaft, a carrier pivotally mounted to swing about an axis perpendicular to the axis of said shaft and provided with separable yoke members, a controller fulcrumed in said yoke members to swing about an axis perpendicular to said shaft and provided with integral actuating members interposed between said abutment and said loose clutch member operable when swung about said fulcrum to exert force upon said abutment and said loose clutch member to force said loose clutch member into engagement with said fast clutch member.

1,533,517. BUMPER FOR MOTOR VEHICLES. JAMES H. SAGER, Rochester, N. Y., assignor to J. H. Sager Company, Rochester, N. Y., a Corporation of New York. Filed June 12, 1923. Serial No. 644,975. 4 Claims. (Cl. 293—55.)

2. A bumper supporting member comprising a flat anchoring portion provided with bolt openings, one in advance of the other, and two flat arms proceeding in a single vertical plane from the flat anchoring portion and extending in opposite directions.

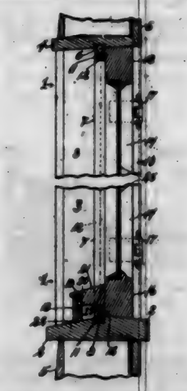
1,533,518. AUTOTRUCK. FRED C. SCHLACK, Laurel, Oreg. Filed May 10, 1924. Serial No. 712,422. 2 Claims. (Cl. 180—22.)



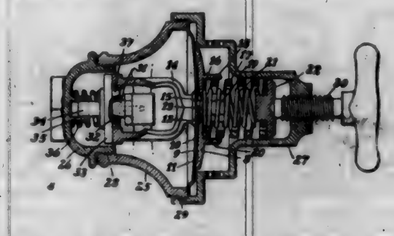
2. In an automobile truck having a frame and front wheels in combination with four drive wheels under its rearward end, the forward pair of said drive wheels carrying a pivoted bolster and having its axle joined by a tongue to said truck frame and having its rear axle joined by a reach to said front bolster, spring suspended between said rear axle and said front bolster, a bunk across said springs, a middle bolster pivoted over said bunk and secured to said truck frame, a separate differential for each of the two pairs of drive wheels, and means for driving both differentials from the main drive shaft.

1,533,519. METHOD OF PRODUCING METALS OR ALLOYS. CARL ROBERT SCHROEDER, Hoboken, N. J. Filed Nov. 22, 1919. Serial No. 339,905. 3 Claims. (Cl. 75—17.)

1. The method of producing metals or alloys from compounds comparatively high in impurities, which comprises effecting the aluminothermic reaction in the compound, and so regulating the amount of aluminum as to substantially restrict the reducing action to the desired metalliferous material.



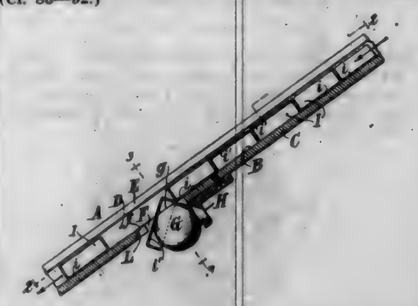
1,533,520. CHILD'S VEHICLE. JACOB K. SELENKOW, Brooklyn, N. Y., assignor to Hygrade Mechanical Toy Manufacturing Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 24, 1922. Serial No. 531,422. 4 Claims. (Cl. 208—42.)



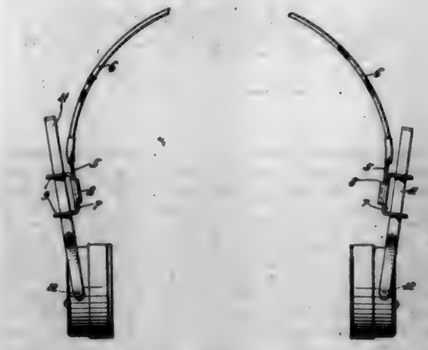
1. A child's vehicle comprising a relatively stationary frame, a movable body portion, a saddle, and locking means for causing the saddle to either remain fixed with relation to said stationary frame portion, or to derive its motion from said movable body portion.

1,533,521. CASEMENT WINDOW. ALBERT F. STUKEY, East Hollywood, Calif. Filed Sept. 27, 1922. Serial No. 590,992. 2 Claims. (Cl. 20—53.)

1. The casement window set forth comprising a frame having a sill that has top surfaces inclining downwardly from the center thereof toward the outer and inner edges of the sill; a stop in the top center portion of the sill; a sash hinged to said frame having a bottom rail adapted when in closed position to engage the top surface of the sill and the inside wall of said stop; a baffle plate secured to the sill and arranged adjacent said stop; and an extension to the bottom rail that is adapted to extend over said stop when said sash is in a closed position and to engage the top and a side surface of said baffle plate.

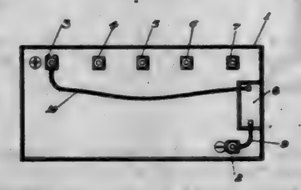


1,533,522. ADJUSTABLE DIAPHRAGM PLATE. ROY W. TADD, Los Angeles, Calif. Filed Sept. 4, 1923. Serial No. 660,696. 4 Claims. (Cl. 50—23.)



1. In a valve as disclosed, in combination with the regulating diaphragm thereof, means for adjusting said diaphragm to prevent collapsing thereof.

1,533,523. CUP SEPARATOR FOR FEEDS. WALTER THOMA, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed Nov. 25, 1924. Serial No. 752,077. 4 Claims. (Cl. 53—92.)

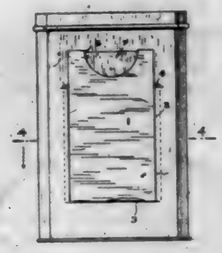


1. A feed mechanism for cups or the like, comprising a slideway on which said cups are adapted to move, an opening in said slideway through which improperly positioned cups are adapted to drop, and means in said opening adapted to support the bottoms of cups which pass bottom side down over said opening, and adapted to allow cups which pass hollow side down to fall into said opening, and out.

1,533,524. TELEPHONE HEADSET. EUGENE T. TURNEY, Holmes, N. Y., assignor to Eugene T. Turney Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Apr. 26, 1922. Serial No. 556,573. 4 Claims. (Cl. 179—156.)

1. In a telephone head set, a head band carrying spaced lugs perforated to provide aligned bearings, a telephone receiver and a post connected therewith slidably and rotatably engaged in said bearings, said post comprising longitudinally separated strips spaced under spring tension to each yieldingly grip the bearings at longitudinally separated points.

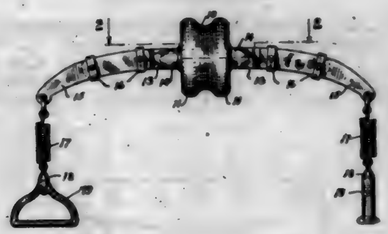
1,533,525. COMBINATION ELECTRIC BATTERY AND CONDENSER. HARRY R. VAN DEVENTER, New York, N. Y., assignor to Dubilier Condenser and Radio Corporation, a Corporation of Delaware. Filed June 14, 1923. Serial No. 645,314. 5 Claims. (Cl. 136—88.)



1. A unit structure comprising a plurality of battery cells, a casing therefor, and a condenser within said casing adapted to be connected to said battery cells.

1,533,526. PROCESS OF WATER AND FIRE PROOFING TIMBER. FERNANDO SOMOZA VIVAS, Oakland, Calif. Filed June 14, 1923. Serial No. 645,349. 3 Claims. (Cl. 99—12.)

2. The process of treating timber which comprises immersing the timber in a hot aqueous solution of borax, and calcium chloride and subsequently immersing the same in an aqueous solution of iron sulfate.



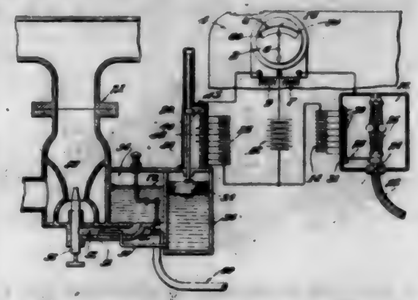
3. A water and fireproof timber comprising, wood having calcium sulfate and calcium borate deposited in its pores.

1,533,527. TOBACCO BOX. WILLIAM J. WARD, San Francisco, Calif. Filed July 23, 1923. Serial No. 653,194. 1 Claim. (Cl. 206—38.)

The combination with a tobacco can having spaced longitudinal slits in one wall and lateral entering slits formed in said wall at the upper ends of the first named slits, a plate for forming with said wall a pocket for cigarette papers, right angular flanges on the sides of the plate forming side walls of the pocket, a similar flange on one end edge of the plate forming the bottom wall of the pocket and outwardly extending flanges formed integral with the side flanges, adapted to enter the first named slits through the entering slits and to lie under said wall of the can to removably hold the plate in pocket forming position, said lateral flanges at their lower ends engaging the closed ends of the longitudinal slits.

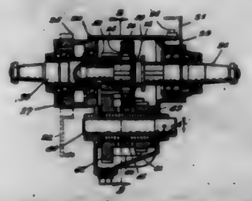
1,533,528. MASSAGE INSTRUMENT. JOHN A. WEAVER, Greeley, Colo. Filed Oct. 18, 1923. Serial No. 669,232. 1 Claim. (Cl. 128—57.)

A massage instrument comprising, in combination, a shaft having threaded ends, a handle member, having a threaded socket, secured to one end of said shaft, said member having a ball raceway, a ball raceway threadedly secured to the other end of said shaft, a tubular member surrounding said shaft, a massage roller on said tubular member, said tubular member having a ball race at each end, balls between said tubular member and said raceways, a washer on said shaft, said washer having a diameter somewhat greater than the tubular member, and a handle portion engaging said shaft and engaging said washer.



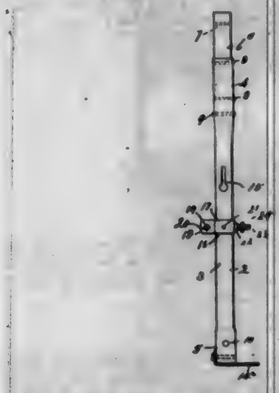
1,533,529. CLOCK MOVEMENT. FREDERICK WEHINGER, Waterbury, Conn., assignor to The Waterbury Clock Co., Waterbury, Conn., a Corporation. Filed Dec. 6, 1923. Serial No. 678,837. 5 Claims. (Cl. 58—46.)

1. In a clock-movement, the combination with movement-plates thereof, of a running main-spring barrel, a sleeve-like hub therefor, a removable main winding-arbor passing through the said sleeve-like hub and removable therefrom and having bearing in the said plates,



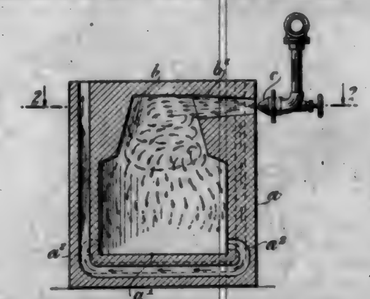
and a co-axial, supplementary winding-arbor, one end of which has pivotal bearing upon one end of the said main winding-arbor.

1,533,530. INDICATOR. RUSSELL H. WHEATLEY and LELAND V. CLARK, North Abington, Mass. Filed Oct. 6, 1919. Serial No. 328,644. 4 Claims. (Cl. 235—1.)



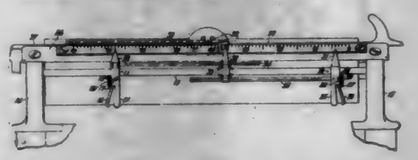
1. In a vehicle having an engine for propelling the same and a tachometer, the combination with a float chamber adapted to contain liquid fuel, means whereby the level of the liquid fuel is controlled in accordance with the rate of consumption of fuel by the engine, a float in the chamber, and devices controlled by the tachometer and the float for indicating the relation between the speed of the vehicle and the fuel consumed by the engine in propelling the vehicle.

1,533,531. AUXILIARY TRANSMISSION. SAMUEL O. WHITE, Muncie, Ind., assignor to Warner Gear Company, Muncie, Ind., a Corporation of Indiana. Filed Apr. 14, 1921. Serial No. 461,289. 4 Claims. (Cl. 180—70.)



1. In an automobile the combination with a main transmission mechanism provided with a plurality of speed ratios, of an auxiliary transmission provided with a plurality of speed ratios and including two aligned shafts one of which is driven from the main transmission and a rotatable member in substantially the same vertical plane with the two aligned shafts and adapted to be driven from one of them independently of the other shaft, said rotatable member having a gear accessible on both sides and a casing for said auxiliary transmission mechanism provided with an opening or openings at one or both sides of said gear.

1,533,532. PICKER STICK. WALTER WILKINSON, Philadelphia, Pa. Filed Jan. 18, 1923. Serial No. 613,378. 2 Claims. (Cl. 139—157.



1. A picker stick comprising in combination, a metal body having a socket at each end and provided with a button hole slot, said slot adapted to receive suitable fastening means for connecting a check strap to the stick, a wooden filler in the socket at one end, said filler and the socket on which it is mounted having a hole therethrough to receive a stud, a wooden section reversibly and invertibly mounted in the other socket means to limit the inward movement of said wooden section, means to prevent the accidental displacement of said wooden section and a clamp adjustably mounted upon a metallic body, said clamp adapted to connect the sweep stick to the picker stick.

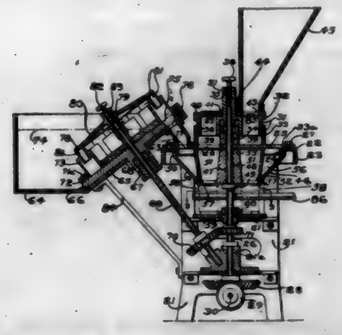
1,533,533. COMBUSTION CHAMBER FOR OIL-BURNING FURNACES. GOTTFRIED WIEBER, Plainfield, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 6, 1922. Serial No. 566,238. 3 Claims. (Cl. 158—1.)

1. An over-fired oil or gas burning furnace having a hearth, a combustion chamber in the upper wall of the furnace of generally frusto-conical form and having its walls flaring downwardly and outwardly with respect to the hearth, an elongated fuel inlet opening frusto-conical in form and having its widest portion extending through the wall of the combustion chamber and discharging thereinto adjacent the upper end thereto and tangential thereto.

1,533,534. TYPEWRITING MACHINE. LOUIS L. ANSART, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 26, 1922. Serial No. 556,626. 9 Claims. (Cl. 197—187.)

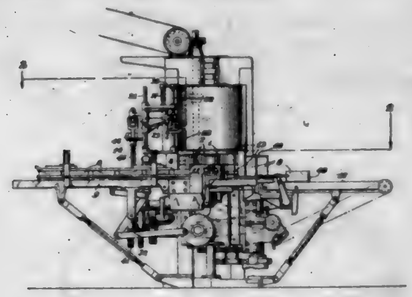
1. In a typewriting machine, in combination, a carriage having a letter-feeding movement, margin-stops adjustable to different positions to determine the limits of movement of said carriage, and heading-centering means, comprising a half-letter-space scale on the carriage and a pointer to co-operate therewith, whereby the carriage may be brought to the proper preliminary position for typing the heading in centered position, with reference to the margin-stops, by placing in alignment the pointer and a graduation of the half-letter-space scale corresponding to the number of letter-spaces in the heading.

1,533,535. FLOWER AND FRUIT GATHERING PINCHING SCISSORS. MARCEL AUDIBERT, Salon, France. Filed Mar. 10, 1924. Serial No. 698,258. 1 Claim. (Cl. 30—24.)



Flower and fruit gathering pinching scissor in which the one jaw only of the pinching scissor is carved out to receive a rubber block flush with a removable cutting blade fixed upon the one face of said jaw by means of screws holding at the same time the rubber block in its lodging, the other massive jaw serving as rest for the rubber block and as the counter piece to the cutting blade contacting with it when cutting.

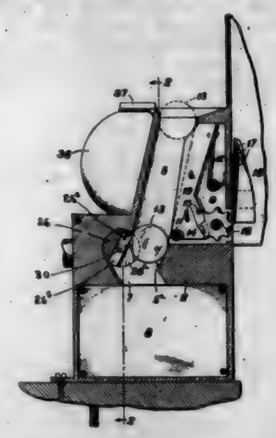
1,533,536. CAN-FILLING MACHINE. CHARLES H. AYARS, Salem, N. J. Original application filed May 18, 1920, Serial No. 382,368. Divided and this application filed Oct. 8, 1921. Serial No. 506,299. 28 Claims. (Cl. 226—06.)



1. A can filling machine including a member having a port for discharge of liquid; means for causing cans to

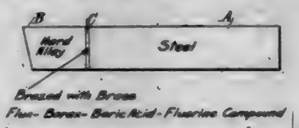
travel under the port; means for segregating measured quantities of liquid, and traveling pockets adapted to receive the measured quantities of liquid, the pockets

having elongated restricted openings whereby liquid is carried beyond the port and gradually discharge into the cans.



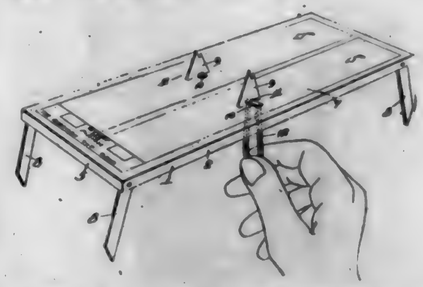
1,533,537. EJECTING MECHANISM FOR HOLLOW BODIES. JULIUS BRENZINGER, Fairfield, and PAUL H. LANGE, Bridgeport, Conn., assignors to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed Nov. 22, 1922. Serial No. 602,506. 3 Claims. (Cl. 113—14.)

1. Ejecting mechanism for hollow bodies comprising: an upright rockshaft capable of an up-and-down movement, a detector member carried by said rockshaft to prevent downward movement of the rockshaft beyond a certain point when said detector member encounters a cover on a hollow body and to project within said hollow body when a cover is absent, reciprocating means which on its upstroke raises said rockshaft and which on its downstroke admits of the lowering of said rockshaft, and means for turning the rockshaft effective only when the detector member projects within the hollow body and permits the rockshaft to descend into the plane of said turning means.



1,533,538. CHECK-CONTROLLED APPARATUS. DANIEL J. BUTTERFIELD, Los Angeles, Calif. Filed Feb. 4, 1922. Serial No. 534,062. 1 Claim. (Cl. 194—73.)

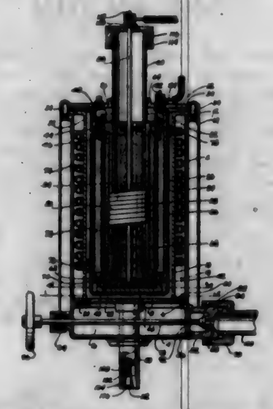
In a structure of the character described, a casing, a coin chute intersecting said casing, dispensing means including a spring pressed inner plunger having a head at its outer end provided with a transversely extending slot normally registering with the coin chute, the head having a pocket extending axially of the plunger, a strip movably mounted in the slot and adapted to be engaged by a coin placed in the chute and be moved to extend across the pocket, an outer actuating plunger spring held against inward movement and slidable into the pocket and adapted to impart movement to the inner plunger when a coin is positioned in the slot and the strip moved



across the pocket and engaged by the inner end of the outer plunger, and an abutment in the coin chute for supporting the coin until the inner plunger is moved inwradly by the outer plunger.

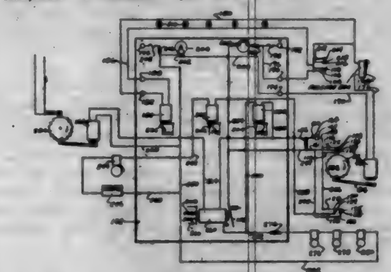
1,533,539. METHOD OF UNITING PIECES OF CERTAIN ALLOYS TO ONE ANOTHER OR TO OTHER METALS OR ALLOYS, A FLUX FOR USE THEREIN, AND THE PRODUCT THEREOF. HENRY PRENTISS CLEVELAND, New York, N. Y. Filed Aug. 2, 1921. Serial No. 489,161. 10 Claims. (Cl. 148—23.)

1. A method of uniting one or more pieces of a chromium, cobalt alloy, or the like; to one another or to other metals or alloys, comprising applying a flux containing a fluorine compound and brazing the parts together with brass.



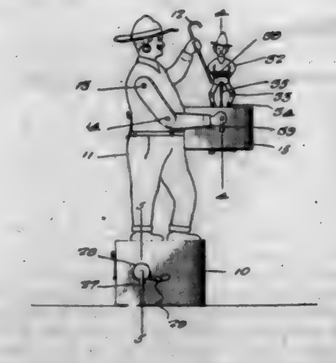
1,533,540. GAME. WILLIAM G. CRAIGEN, Aberdeen, Scotland. Filed Mar. 9, 1921. Serial No. 451,026. 1 Claim. (Cl. 273—86.)

A game of the character described comprising a rectangular frame having a relatively thin covering mounted on the top thereof, said frame adapted to be supported in a horizontal plane and high enough to permit the hand



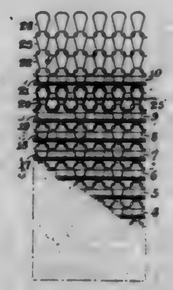
of the player to be extended beneath the frame, pivotally mounted folding legs mounted on the frame, game pieces shaped to simulate yachts, base members each consisting of a strip of metallic material folded upon itself at each end and having up-turned portions between which the lower marginal edge of a game piece is secured, permanent magnets designed to attract the base members of said game pieces, the top surface of the covering being inscribed to provide a race course having the starting and finishing points at one end, said metallic bases being attracted to the magnets for moving the game pieces when the magnets are moved beneath the covering.

1,533,541. ELECTRIC LIQUID-HEATING APPARATUS. JOHN H. DERBY, New York, N. Y. Filed Jan. 11, 1922. Serial No. 528,428. 18 Claims. (Cl. 219—38.)



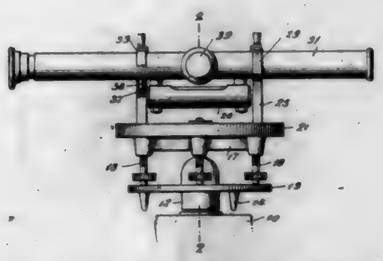
1. In apparatus of the class described, circuit terminals, metallic conductors connecting said terminals comprising an electric heating element, a liquid heat storage medium in which said heating element is immersed, a container for said liquid and means governed by variations in the heat in said liquid storage medium for automatically effecting compensating variations in the current flow through said heating element.

1,533,542. SIGNAL TRANSMITTER. JOHN H. DERBY, New York, N. Y. Filed June 17, 1922. Serial No. 569,069. 6 Claims. (Cl. 177—369.)



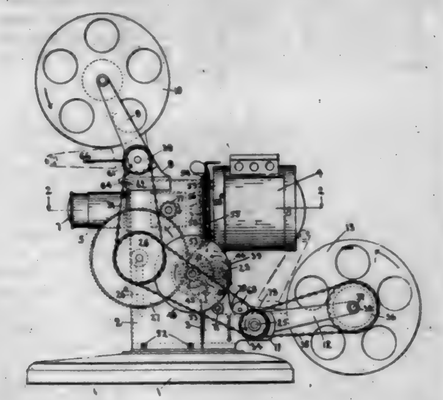
1. In an electric signal transmitting system, a transmitter box and a local signal circuit through which said box is arranged to transmit local signals, a second transmitter box and a circuit through which it transmits signals to headquarters, connections between the first box and the second transmitter box resistance in the connections to said second transmitter, and means at said first transmitter for cutting out said resistance when it is desired to automatically transmit a signal to headquarters.

1,533,543. FIGURE TOY. FRANK D'ONOFRIO, Wilmington, Del. Filed July 21, 1923. Serial No. 653,040. 2 Claims. (Cl. 46—40.)



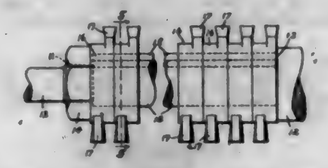
1. A musical toy comprising a base, a figure mounted thereon and shaped to represent a human figure, a box supported thereby, sound producing mechanism within the box, a spring motor within the base, a motor shaft operatively connected to the sound producing mechanism, whereby the latter may be actuated, a movable arm for the figure, means connecting the sound producing mechanism with the arm of the figure for moving said arm, a movable figure mounted upon the box, means operatively connecting the sound producing mechanism and the movable figure, whereby the latter may be actuated, a wheel mounted upon the motor shaft at one side of the base, a rod slidingly mounted upon the base for engaging the wheel to regulate rotation of the motor shaft, a spring for forcing the rod into such engagement and a lateral extension at one end of the rod to engage the base and prevent engagement of the rod and wheel.

1,533,544. FABRIC AND ART OF PRODUCING SAME. WILLIAM J. FOX, Philadelphia, Pa., assignor to James R. Kendrick Co., Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 25, 1923. Serial No. 659,351. 12 Claims. (Cl. 66—4.)



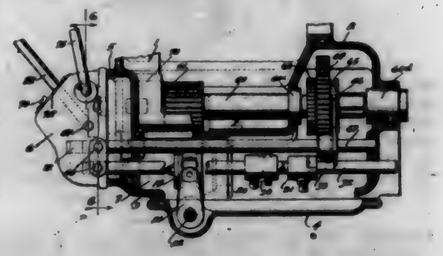
1. A fabric comprising filling strands arranged side by side, knitted binding thread courses having rows of connected loops extending longitudinally of and forming enclosures which confine the filling strands, a supplemental filling strand outwardly of the outermost filling strand confined by said loops at one edge portion of the fabric, and edge finishing threads sewed into certain of said loops and forming a line of overedge stitches enclosing said supplemental filling strand.

1,533,545. CONVERTIBLE LEVEL AND TRANSIT. JAMES GRIME, Troy, N. Y. Filed Feb. 28, 1924. Serial No. 695,686. 11 Claims. (Cl. 33—73.)



1. A convertible level and transit comprising a base provided with an annular vernier scale for measuring horizontal angles, there being an annular raceway formed in said base adjacent said vernier scale, a platform having an annular portion rotatably received within said raceway, a pair of spaced standards extending upwardly from said platform adjacent said raceway and located entirely within the inner edge of said vernier scale, a telescope adapted to be seated within said standards for use as a level, a spirit level associated with said telescope, a pair of trunnions rigidly secured to and projecting laterally from said telescope, and adapted to be seated within said standards, the distance between the outer faces of said trunnions being less than the inner diameter of said vernier scale whereby said trunnions will not obstruct the view of said scale when the instrument is used as a level.

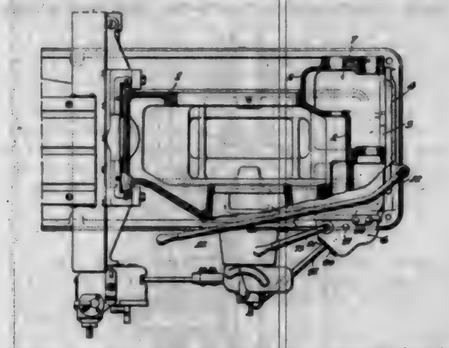
1,533,546. MOTION-PICTURE PROJECTOR. CLARENCE B. HALL, Winthrop, Mass., assignor to Hall Projector Company, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Aug. 9, 1921. Serial No. 490,878. 6 Claims. (Cl. 88—17.)



1. In a motion picture projector, the combination of two reels; mechanism, including two shafts and driving connections between said shafts and said reels, respectively, for causing the film to be unwound from one reel and wound onto the other; and two reel supporting arms, one for each reel, one arm being mounted to swing about the axis of one shaft from a normal, extended position to an approximately upstanding, retracted position without interrupting the driving connection of such shaft with its reel, and the other arm being mounted to swing about the axis of the other shaft from a normal, extended position to an approximately depending, retracted position without interrupting the driving connection of such shaft with its reel.

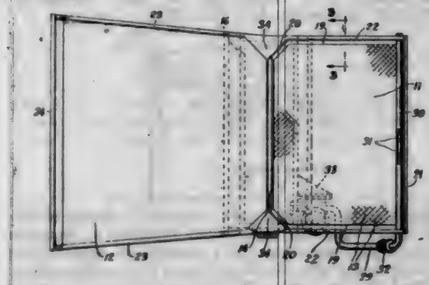
1,533,547. SLOTTING TOOL. HOSEA HATHAWAY, Brookline, Mass. Filed Jan. 23, 1924. Serial No. 687,916. 2 Claims. (Cl. 144—237.)

1. A slotting tool comprising a rotary spindle, and a plurality of annular collars fitted about and connected to the spindle to rotate therewith, each collar being provided with a pair of chisels, one positioned adjacent one edge of the collar and the other adjacent the opposite edge of the collar, and out of alignment with the first said chisel the arrangement being such that the chisels are disposed in a plurality of rows with those in each row in staggered relation to those in another row.



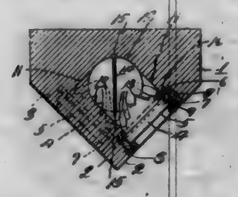
1,533,548. GEAR CASING FOR SHAPERS. ROBERT T. HAZELTON, Cincinnati, Ohio, assignor to The Cincinnati Shaper Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 21, 1922. Serial No. 576,439. 3 Claims. (Cl. 74—56.)

1. In a machine tool of the character disclosed, a hollow frame structure interiorly having cross walls integral with the main walls of the frame structure subdividing the interior of the frame into a plurality of compartments, one compartment thereof at one end of the frame structure providing a liquid lubricant holder and enclosure for transmission gearing, and subcompartments related to said compartment for independently housing respective portions of said transmission gear and guarding the same from the lubricant in said first named compartment, and a removable closure for one of said sub-compartments supporting actuating mechanism for transmission control connecting with controlling elements of said transmission gearing engaging into the sub-compartment.



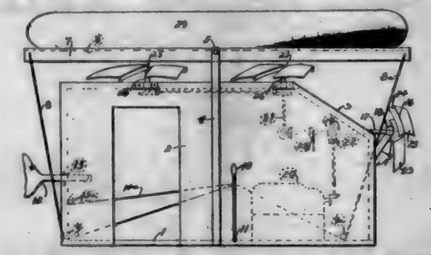
1,533,549. SHAPER. ROBERT T. HAZELTON, Cincinnati, Ohio, assignor to The Cincinnati Shaper Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 21, 1924. Serial No. 694,381. 5 Claims. (Cl. 74—89.)

1. In a machine tool of the character described, a hollow casing, said casing interiorly subdivided to provide a separate compartment, speed change gearing within said compartment, a closure cap for sealing an opening through a wall of the casing leading into said compartment, and a plurality of levers for controlling said gearing supported by said cap for localized control of said gearing, each lever integrally combining a shank



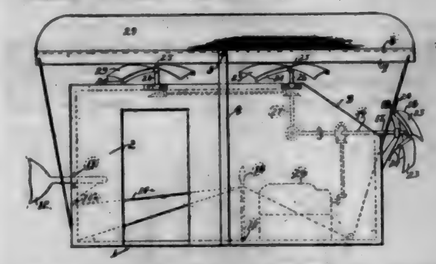
portion journaled in said cap and an extended handle portion at an angle to the shank portion, the handle portions of said levers extending in a corresponding direction beyond the cap.

1,533,550. DEVICE FOR OILING MOLDED LOAVES. LAWRENCE S. HESS, Middletown, N. Y. Filed Dec. 30, 1921. Serial No. 525,947. 14 Claims. (Cl. 91—18.)



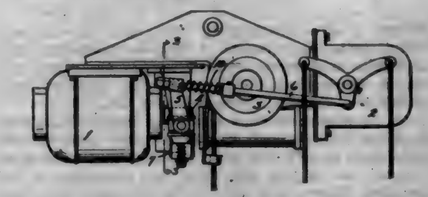
14. An oiling device comprising an elongated metallic member adapted to be supported in a position inclined to the horizontal, a portion of said member having a diagonally grooved surface, a supply tank, means for feeding oil to said surface and means for collecting and returning excess oil to said tank.

1,533,551. WATER GAUGE. FRANK L. HOMAN, Omaha, Nebr. Filed Oct. 10, 1922. Serial No. 593,518. 1 Claim. (Cl. 73—54.)



The combination with a water gauge having a sight opening therein, a round lens disposed within the sight opening, of a plurality of vertically disposed V-shaped ribs carried by the inner side of the lens, said ribs being in stepped relation to each other from centrally of the lens outwardly to opposite sides thereof.

1,533,552. PROPELLER. JAMES D. HORNBUCKLE, Sr., San Jose, Calif. Filed Dec. 3, 1923. Serial No. 678,315. 2 Claims. (Cl. 170—170.)

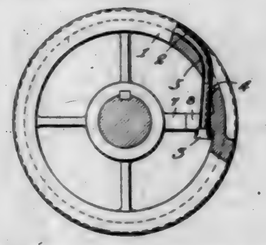


1. In an aeroplane a propeller comprising a plurality of rectangular blades arranged at substantially right angles to its axis of rotation, each blade being curved to bite into the air and having a flange formed on one edge only and extending at right angles to its operative surface and on the inner edge thereof and extending from the center to the outer edge of the propeller.

1,533,553. AEROPLANE. JAMES D. HORNBUCKLE, Sr., San Jose, Calif. Filed Nov. 17, 1924. Serial No. 750,321. 1 Claim. (Cl. 244—5.)

An aeroplane comprising a housing for the operator thereof, a standard rising from each side of said housing midway its length, a plane pivotally mounted on said standards and normally lying in a horizontal plane and having depending side edges, means for tilting said plane on its pivot, motor operated propellers mounted upon horizontal shafts at one end of the said housing, and motor operated propellers mounted upon vertical shafts on each side of said housing and extending thereabove.

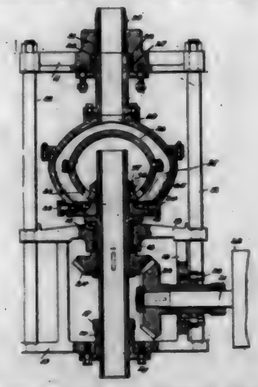
1,533,554. BRAKE ATTACHMENT FOR HOISTS. FRANK H. HOWARD and HARRY W. HOFFMASTER, Reading, Pa., assignors to Reading Chain and Block Corporation, Reading, Pa., a Corporation of Pennsylvania. Filed Aug. 27, 1924. Serial No. 734,368. 3 Claims. (Cl. 192—2.)



1. A brake attachment for electric hoists, comprising a brake, a brake lever, a spring for actuating the brake, a controller, a controller lever slidably connected to the brake lever, and a spring interposed between the controller lever and the brake lever whereby the lowering action of the hoist is controlled.

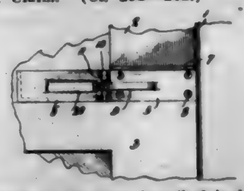
1,533,555. HOIST-CABLE-SECURING DEVICE. FRANK H. HOWARD, Reading, Pa., assignor to Reading Chain and Block Corporation, Reading, Pa., a Corporation of Pennsylvania. Filed Jan. 14, 1925. Serial No. 2,460. 2 Claims. (Cl. 24—123.)

1. In a hoist cable securing device, a pair of substantially hemi-spherical block members, a cable engaging pin carried by one member, depressions in the face of each member adapted to register with the depressions in the other member to form cable engaging space, a cable, provided with an enlarged extremity, lying within said space while the enlargement rests against the outer surface of the block members, and means for securing the two block members together.



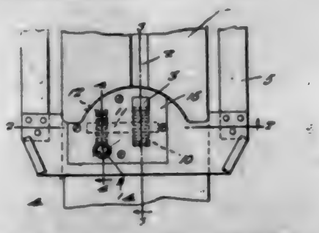
1,533,556. HOIST-CABLE-SECURING DEVICE. FRANK H. HOWARD, Reading, Pa., assignor to Reading Chain and Block Corporation, Reading, Pa., a Corporation of Pennsylvania. Filed Jan. 14, 1925. Serial No. 2,461. 1 Claim. (Cl. 242—117.)

In a cable securing device, a winding drum formed with a perforation whose one edge is inclined, a web on the inside of the drum, said drum having a cable receiving slot in alinement with the perforation, and a cable having an enlargement formed on its extremity, said enlargement being adapted to pass through the perforation and engage the slot, while that portion of the cable adjoining the enlargement on its end rests on the inclined surface on the edge of the perforation.



1,533,557. AMALGAMATOR. WILLIAM P. JOBSON, Philadelphia, and HARVEY S. SOUDER, Souderton, Pa., assignors to Souderton Manufacturing Co., Souderton, Pa., a Corporation of Delaware. Filed Apr. 27, 1921. Serial No. 464,790. 2 Claims. (Cl. 83—67.)

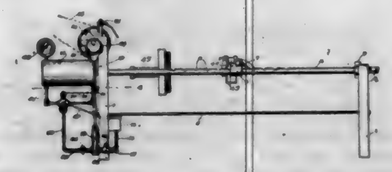
1. In an amalgamator, a frame, an exhaust pipe journalled vertically in said frame, an outer bowl screwed on the upper end of said pipe, an inner bowl screwed on the upper end of said pipe above the connection of the outer bowl thereto, said bowls being arranged with their sides and tops in spaced relation, said pipe terminating near the top of the inner bowl, said inner bowl having ports opening into the space between the bowl and the outer bowl having normally closed draw off ports, said inner bowl having an upwardly extending boss surrounding said pipe and projecting above the openings, the boss being provided with a frusto-conical upper end, an inlet pipe journalled vertically in the frame and communicating with the top of the outer bowl and having a counter sunk portion in its upper end, a pipe



connection having the same internal diameter as the inlet pipe and fitted within the counter sink of said inlet pipe to swivel in relation thereto and means to rotate said bowls.

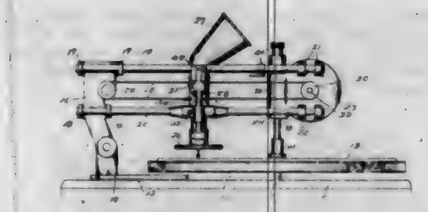
1,533,558. SASH ATTACHMENT. JOHN I. KOLTES, Milwaukee, Wis. Filed Jan. 16, 1923. Serial No. 613,030. 1 Claim. (Cl. 292—202.)

An attachment of the class described including a fixed leaf and a movable leaf hinged together so that the movable leaf may swing to a position in substantially the same plane with the fixed leaf or to a position superimposed on the fixed leaf, said movable leaf provided with a longitudinally extending slot and an extension disposed laterally at one end of the slot, said fixed leaf provided with a spring extending beyond the hinged edge thereof so as to engage the extension of the movable leaf to hold it in the same plane with the fixed leaf so as to extend through the slot of the movable leaf when superimposed on the fixed leaf.



1,533,559. CUTTER-BAR JACK. JOHN LAPSHANSKY, Nokomis, Ill. Filed Sept. 8, 1924. Serial No. 736,611. 1 Claim. (Cl. 262—29.)

A device of the class described comprising a cutter bar provided with an elongated guide slot, a yoke extending crosswise of the top of said cutter bar and in slidable contact therewith, said yoke being provided with



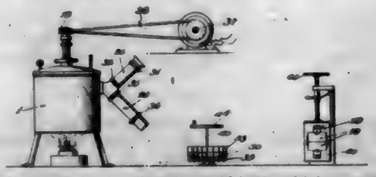
a vertically disposed bore in alignment with said slot, the upper side of the yoke being recessed, a cover plate for said recess, a base located beneath said cutter bar, a standard pivotally connected to said base and rising therefrom and extending slidably through said slot and then through said bore, one edge of said standard being provided with rack teeth, a shaft rotatably mounted in the aforesaid recess and provided on one end with a pinion in mesh with the teeth of said rack, and at its opposite end with a gear, a vertically disposed and rotatably mounted worm also located in said recess, and having its threads engaging the teeth of said gear, the shank of said worm extending through an opening in the aforesaid cover plate and having its extremity fashioned to permit engagement of the wrench therewith.

1,533,560. HYDRAULIC PRESS FOR CRANK SHAFTS AND THE LIKE. WILLIS W. LINDER, Salisbury, N. C. Filed Sept. 4, 1923. Serial No. 660,835. 1 Claim. (Cl. 29—86.)

In a hydraulic press, a pair of spaced, horizontal bars provided with notches, a fixed and a movable crosshead mounted on said bars, gravity-operated pawls carried by the movable crosshead and adapted to cooperate with the notches of the bars, said crossheads being formed with aligned grooves for the reception of an axle or the like, a plunger in alignment with said grooves, and means for operating said plunger.

1,533,561. RECORD-PRODUCING DEVICE. ARTHUR LINDNER, Newport News, Va., assignor of one-half to Raymond M. Brown, Newport News, Va. Filed Sept. 17, 1923. Serial No. 663,229. 5 Claims. (Cl. 274—13.)

1. In a sound reproducing and recording device, in combination, a rotatable record disk, a transverse guide member mounted above said disk, a sound box carriage mounted upon said guide member, a travelling belt, releasable means for clamping said carriage to said belt, and a stop secured to said guide member adapted to cooperate with said clamping means for releasing said carriage from said belt.



1,533,562. ELECTRIC-SWITCH-ACTUATING MECHANISM. HENRY PERCY MCCOLL, Melbourne, Victoria, Australia. Filed Aug. 21, 1922. Serial No. 583,600. 2 Claims. (Cl. 200—161.)

1. A pull cord electric switch comprising a pivoted switch arm having a pin on each side of its pivot, a spring fixed to the arm midway between said pins, a draw bar formed at each side with hooks having sloping

noses, and means to reciprocate said draw bar and retain it centrally of the switch arm, whereby said hooks alternately engage the pins.

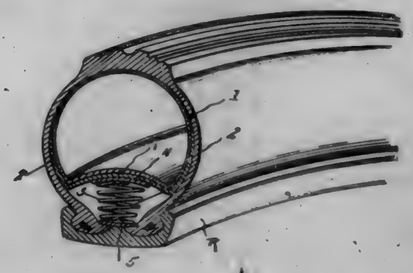
1,533,563. METHOD OF RE-FORMING GOLF BALLS. SABATINO MAGGI, Chicago, Ill. Filed Dec. 27, 1922. Serial No. 609,285. 9 Claims. (Cl. 18—48.)

1. The method of re-forming golf balls which comprises simultaneously subjecting the balls to heat to soften the cover layer thereof and subjecting the balls to a rolling action to eliminate inequalities in the surfaces thereof.

1,533,564. CLIPPER ATTACHMENT. CHARLES Z. MANI, New York, N. Y. Filed May 12, 1924. Serial No. 712,855. 3 Claims. (Cl. 30—1.)

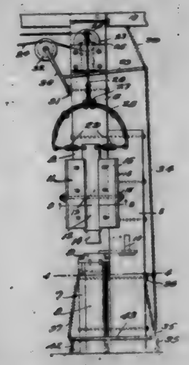
1. A hair clipper attachment comprising a guard plate having a plurality of teeth uniformly increasing in length from one side of the said plate to the opposite side, said teeth being of varying thickness.

1,533,565. SECURING DEVICE. CHARLES MENDLER, San Francisco, Calif. Filed Oct. 23, 1922. Serial No. 596,476. 2 Claims. (Cl. 24—217.)



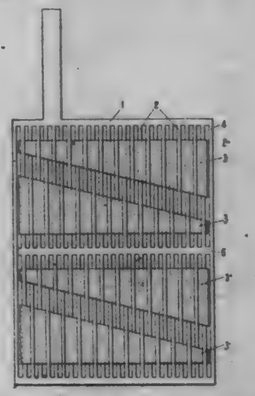
1. In a securing device, a clamping member comprising a rim having a pair of proximate spring clamping elements formed integral therewith and having oppositely disposed notches formed in the proximate edges thereof to frictionally engage a shank inserted therebetween the sides of said notches being angularly disposed and forming gripping seats to engage the shank at spaced points when sprung apart by said shank, to prevent longitudinal movement of said elements on said shank.

1,533,566. AUTOMOBILE TIRE. SOPHONIO A. NANTES, Chicago, Ill. Filed June 25, 1924. Serial No. 722,811. 1 Claim. (Cl. 152—8.)



In an automobile tire, a casing, an inner tube therein, a rim to which the casing is connected, a follower interposed between the tube and the rim, and including a

transversely bowed central portion and arcuate side walls, the transversely bowed central portion engaging the tube and the arcuate side walls engaging the casing

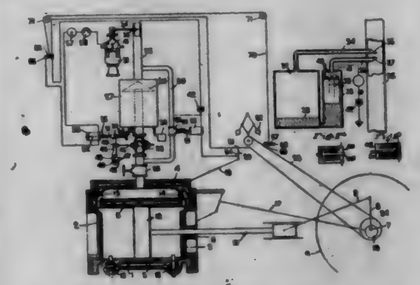


between the inner surface of the casing and the inner tube, and a plurality of springs mounted between the transversely bowed central portion of the follower and the rim.

1,533,567. TRIP HAMMER. WILLIAM C. NICOL, Everett, Wash., assignor of one-half to Alexander G. Paschke, Everett, Wash. Filed Oct. 2, 1923. Serial No. 666,147. 2 Claims. (Cl. 78—40.)

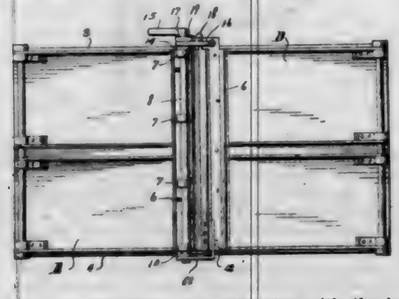
1. A power trip hammer comprising a supporting post, an anvil block, an anvil secured to the block, a supplemental supporting post secured to one side face of the main supporting post, a guide carried by the supplemental supporting post, a reciprocatory hammer head mounted in said guide, bearings carried by the supporting post, a rotatable drive shaft mounted in the bearings, and a crank carried by one end of the drive shaft, a pitman connected with the crank, a semi-elliptical leaf spring secured to the pitman rod, links connecting the terminals of the leaf spring with the upper end of the hammer head, a drive pulley secured to the drive shaft, a brake drum secured to the drive shaft, a brake band for the drum, a frame pivotally connected with the supplemental post, an idler pulley connected with the frame for engaging the drive belt, means connecting the brake band with the swinging frame, an operating lever secured to the frame at one side of the pivot, means for normally holding the frame away from said post and the idler pulley out of operative contact with the drive pulley belt and the brake band in operative braking engagement with the brake drum, a foot treadle carried by the lower end of the supporting post, means operatively connecting the lever with the foot treadle, and means for normally holding the foot treadle in a raised position.

1,533,568. NEGATIVE ELECTRODE FOR ELECTRIC ACCUMULATORS. ADOLFO POUCHAIN, Turin, Italy. Filed Mar. 24, 1921. Serial No. 455,274. 2 Claims. (Cl. 136—29.)



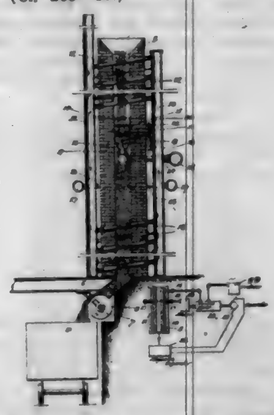
1. A negative electrode for zinc electric accumulators, comprising, a good conducting metal plate with a surface incapable of attack by the electrolyte in the accumulator in which the electrode is used, and zinc pieces carried by said plate, said zinc pieces being exposed over substantially their entire area to the electrolyte, whereby zinc is deposited on the said plate during charging of the accumulator, and dissolved therefrom during discharge of the accumulator.

1,533,569. ELECTRIC ACCUMULATOR. ADOLFO POUCHAIN, Turin, Italy. Filed Sept. 25, 1922. Serial No. 590,524. 4 Claims. (Cl. 136—29.)



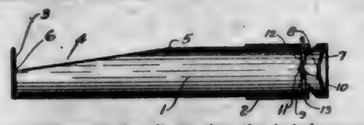
1. A method for preparing an electrolyte for electric accumulators comprising zinc as active material, comprising dissolving zinc sulphate, aluminium sulphate, sulphates of alkaline metals and mercuric sulphate in sulphuric acid, and then submitting this solution to a passage of electric current.

1,533,570. METHOD AND APPARATUS FOR CONTROLLING THE TRANSFORMATION OF FLUID ENERGY INTO WORK. JOSEPH G. PROSSER, Chicago, Ill. Filed Feb. 7, 1920. Serial No. 356,982. 11 Claims. (Cl. 121—148.)



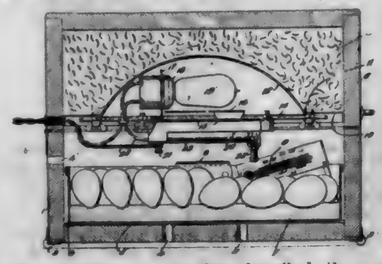
1. A vapor motor, a feed pipe leading thereto, means controlled by the speed of the motor acting to regulate the quantity of vapor admitted to the motor, a controlling valve in the feed pipe, an electric circuit and connections for operating said valve, an electric resistance in said circuit, means for varying said resistance in accordance with the variation in the differential in the dynamic and static pressures due to variation in the velocity of flow in the feed pipe, an elastic resistance balancing the movement of the controlling valve caused by said electric circuit and connections, the said electric circuit, electric resistance, connections, and elastic resistance including means for causing the opening in the feed pipe controlled by the controlling valve to vary with the said differentials in pressures whereby the said opening varies proportionally with the variation in velocity of flow in the feed pipe.

1,533,571. DROP DOOR FOR DUMPING CARS. WILLIAM R. PROUT, Elrama, Pa. Filed July 1, 1924. Serial No. 723,558. 3 Claims. (Cl. 105—308.)



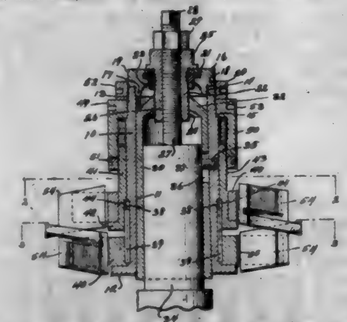
1. In a dumping car, in combination with the body, dropping doors therefor, a slidable bar carried by one of the doors and having an end portion operatively engageable, upon movement in one direction, with the second door and a wall of the body to hold the doors in closed position, and means coacting with the bar and the opposite wall of the body to hold the doors in closed position.

1,533,572. FURNACE. ROBERT H. RICHARDS, Boston, Mass. Filed Oct. 2, 1922. Serial No. 591,841. 6 Claims. (Cl. 263—30.)



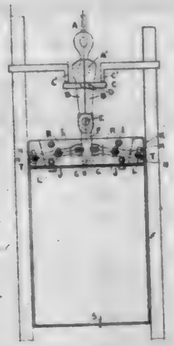
1. In an ore roasting furnace, the combination of a furnace shaft providing in order a drying zone, an ignition zone, a reducing zone and a cooling zone; a tubular heat-radiating structure in the drying zone; a tubular heat-abstracting structure in the cooling zone; means for passing a heat conveying fluid in a closed circuit through said heat-radiating and heat-abstracting structures; tuyères and off-takes for said reducing zone; and means for feeding a mixture of ore and fuel at a controlled rate through said zones in order, the fuel being burned in contact with the ore in said reducing zones.

1,533,573. PHORIOSCOPE. JOSEPH SPILLER, Seattle, Wash. Filed Mar. 12, 1923. Serial No. 624,514. 7 Claims. (Cl. 88—20.)



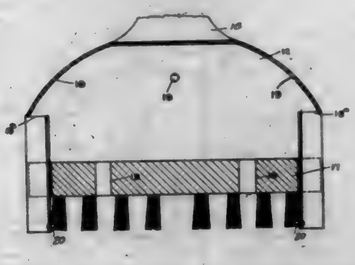
1. An instrument for diagnosing the imbalance of the ocular muscles comprising a telescoping casing having a chart in the far end; a sight opening in the opposite end; a testing device adjacent the sight opening and inside of the casing; and an opening in the side of the casing through which the chart in the far end may be seen.

1,533,574. POULTRY-RAISING APPARATUS. ROPER C. SPRATLING, Opelika, Ala. Filed Jan. 2, 1923. Serial No. 610,353. 3 Claims. (Cl. 119—37.)



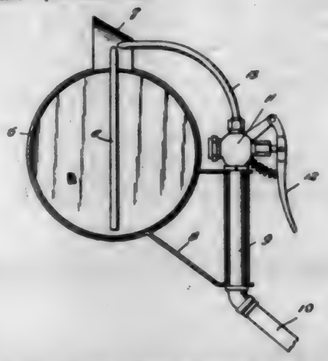
1. In a structure of the class described, the combination with upper and lower sections movably connected, of a reflector carried by the upper section, insulation interposed between the reflector and the upper section, a cover plate under and spaced from the reflector, a heater interposed between the reflector and the cover plate, an egg holding pan below the cover plate, and means for directing fresh air through the bottom of the structure and around the pan to the heater.

1,533,575. ADJUSTABLE CUTTER HEAD. WILLIAM HUNTER TOOLE, Lockhart, Ala. Filed Aug. 26, 1924. Serial No. 734,260. 9 Claims. (Cl. 144—218.)



1. In a cutter head for woodworking machines, a main sleeve, means for attaching the main sleeve to a shaft, a pair of cutter disks carried by the main sleeve and having cutter heads, means upon the main sleeve for maintaining the cutter disks stationary with relation to the main sleeve with the cutters thereof in staggered relation, one of said cutter disks being adjustable toward and from the other of said cutter disks upon the main sleeve, and means for shifting the last named cutter disk to align the cutters thereof with the cutters of the other cutter disk.

1,533,576. SAFETY DEVICE FOR MINE CAGES, LIFTS, AND THE LIKE. WILLIAM FORSYTH TORRANCE, Dalmuir, Scotland, assignor of one-half to Arthur Clark Stewart, Clydebank, Scotland. Filed Apr. 14, 1923. Serial No. 632,050. 1 Claim. (Cl. 187—72.)

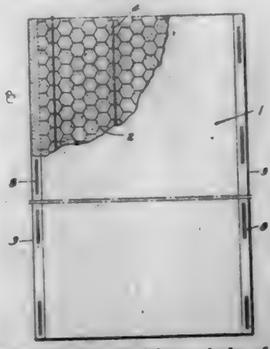


Safety apparatus for lifts, comprising in combination with arresting means, a lift-carried double bridle having outwardly and upwardly inclined slots near the ends and having upwardly and outwardly inclined beveled ends, wedge-shaped brake blocks arranged to engage said inclined beveled ends, levers pivotally mounted on said double bridle, having longitudinal slots in their inner ends, bolts connecting said brake blocks to the outer ends of said levers and arranged to operate in said inclined slots, a connecting rod, bolts connecting the same to the inner ends of said levers and arranged to operate in the slots of said levers, a pair of jaws pivotally connected to said connecting rod and having a socket formed in the opposing sides of their upper ends, a cable having a ball gripped in said socket between said jaws, a plate, and frangible pins securing said plate to said jaws to normally hold the jaws in closed gripping position, said plate being arranged to engage said arresting means in the event of over-winding of the cable.

1,533,577. WASHING PLUNGER. SIDNEY OSWALD ULLATHORNE VEAL, Harrogate, England, assignor to Vac-Scrub Company, Limited, South Shields, England. Filed Sept. 2, 1924. Serial No. 735,476. 1 Claim. (Cl. 68—5.)

A washing plunger comprising a casing provided with an open bottom, a piston member in said casing freely slidable toward and from the open bottom thereof, guides on said casing for said member, said member, and the casing above said member having openings therethrough for the ingress and egress of water, and brush-like clothes engaging means on said member.

1,533,578. ANIMAL-SPRAYING ATTACHMENT FOR MILKING MACHINES. GEORGE W. WALKER, Platteville, Wis. Filed Mar. 16, 1923. Serial No. 625,435. 1 Claim. (Cl. 299—88.)



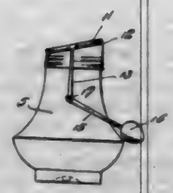
An animal spraying device including a tank, a bracket mounted on the tank and having a tubular handle portion, a pipe turnably mounted in the tubular handle portion of the bracket and traversing the length thereof, a valve casing mounted upon the pipe, a tube communicating with the interior of the tank and having an end portion disposed beyond the side thereof, and a second tube rigidly connected with the valve casing and provided with an angular configuration and having one end disposed adjacent the end of the first mentioned tube.

1,533,579. LOG-SPLITTING GUN. JOSEPH A. WEBBER, Vancouver, Wash. Filed Oct. 28, 1924. Serial No. 746,429. 5 Claims. (Cl. 89—1.)

1. A wood splitting gun comprising a body of hard steel tapered at one end whereby it may be driven into a log, the body being formed with a longitudinally extending bore extending approximately half the length of the body and designed to contain a charge and the body having an ignition opening extending laterally into the bore from the exterior of the body.

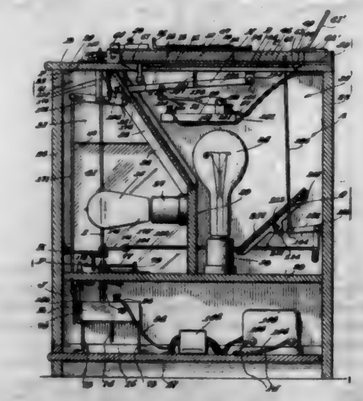
1,533,580. PLASTER BOARD. BENJAMIN WOODHOUSE, Seattle, Wash. Filed Aug. 22, 1924. Serial No. 733,521. 4 Claims. (Cl. 72—124.)

1. A plaster board comprising a body of plastic composition, a rigid reinforcing strips of channel form, embedded therein along its edges having a slot for the reception of anchor nails; said strips comprising relatively



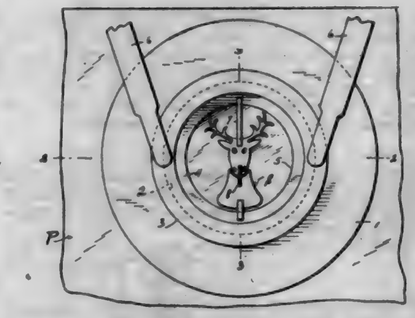
wide base flanges lying flush with a face of the board with a laterally turned flange at one edge overlapping the edge of the board and a laterally turned flange at its other edge embedded within the board.

1,533,581. SEPARABLE FASTENER. FREDERICK, O. BERG, Spokane, Wash. Filed July 26, 1924. Serial No. 728,446. 9 Claims. (Cl. 24—207.)



1. The combination with companion flap portions provided with beaded edges, of a series of runners having sliding connection with said edges and provided with loops, and a closure strip threaded through said loops and being held thereby in a position to close the space between said edges, said loops being crimped or deformed against said strip to anochor the latter to the former.

1,533,582. CONDIMENT HOLDER. JOHN DI BERNARDI, East Lynn, Mass. Filed Mar. 31, 1924. Serial No. 703,283. 1 Claim. (Cl. 65—45.)



A condiment holder and distributor comprising a receptacle having a neck provided with a discharge opening, a cap applied to the neck, said neck having a central plane perforated portion covering the discharge opening, said plane portion being disposed at an acute angle to the central axis of said neck, a U-shaped bail, the arms of which are bent between their ends and provided at the juncture of the bend with pivot eyes, the upper portions of the arms extending upwardly in a vertical line from said eyes, and the lower portion inclining outwardly and downwardly, a counterbalancing weight carried by the intermediate portion of the bail, and a closing plate connected to the free ends of the vertical portion of the bail arm, said blade being disposed at an angle with respect to said arm to permit it to tightly contact the inclined surface of said cap, when the receptacle is in an upright position.

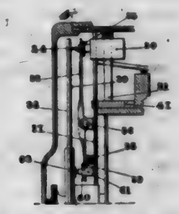
1,533,583. ELECTRICALLY-CONTROLLED PRINT BOX. AUGUST A. BRACY, Detroit, Mich. Filed Apr. 30, 1920. Serial No. 377,916. 22 Claims. (Cl. 95—73.)

1. In a photographic printing apparatus, a casing having a lamp therein and provided with means for receiving a negative and a sensitized element, an electric circuit for the lamp, a magnetic switch interposed in the circuit, a motor arranged to control the energizing of the magnetic switch, and means operated from the means for receiving the sensitized element for controlling the operation of the motor.

1,533,584. STENCIL. LOUIS H. CARUPEL, Minneapolis, Minn. Filed Sept. 22, 1923. Serial No. 664,217. 2 Claims. (Cl. 101—127.)

1. A device of the class described comprising a strip of material defining an opening, a member carried by the strip and partially overlying the central opening defined by the strip, and a separable member defining an opening, said member being snugly insertible within the opening defined by the strip, the strip and second member being of yieldable material and coplaner when in assembled relation.

1,533,585. TYPEWRITING MACHINE. CORNELIUS B. CONCORAN, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 9, 1922. Serial No. 599,760. 4 Claims. (Cl. 197—105.)



1. The combination with a typewriting machine, having a standard, a front plate and upper and lower screws, at each side of the front plate, for securing the front plate to the standard, of a keyboard-shield

having upper and lower ears thereon, at each side of the machine, for holding the shield to the machine by means of said screws; said ears having vertical slots therein, open at their lower ends, to receive the screws upon downward movement of the ears along the front

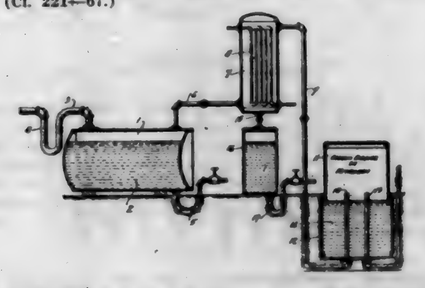


plate in placement of the shield, and to clear the screws upon upward movement of the ears along the front plate in removal of the shield; and the lower ears having inclined surfaces thereon, for camming the same clear of the upper screws in removal of the shield.

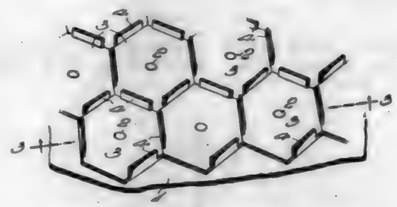
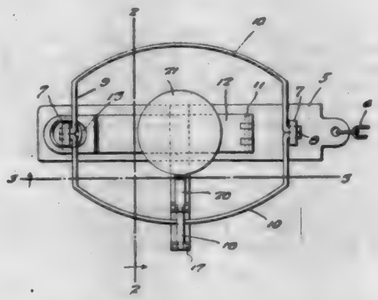
1,533,586. AUTOMATIC RECORDER FOR MACHINE OUTPUT. GEORGES DEBENNE, Courbevoie, France. Filed Jan. 12, 1922. Serial No. 528,742. 1 Claim. (Cl. 234—32.)



A recorder of the character described, comprising a rotatable record sheet, means for rotating the record sheet, a marking device, and means for actuating the marking device, in combination with an automatically acting spring pressed pivoted lever for moving the marking device away from the record sheet, after a predetermined period of operation of the recorder.

1,533,587. SAFETY DEVICE FOR GASOLINE STORAGE TANKS. WILLIAM E. DURBOROW, Columbia, Pa. Filed Oct. 5, 1922. Serial No. 592,549. 6 Claims. (Cl. 221—67.)

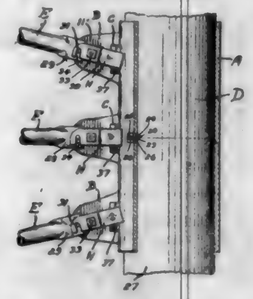


2. An apparatus of the character described, comprising, in combination with a gasoline storage tank, a floating bell designed to contain noninflammable gas and having a capacity greater than the capacity of the storage tank and a connection between the bell and the top of the gasoline storage tank, a condenser in said connection, and a receptacle connected to said condenser for the purpose specified.

1,533,588. TILE-MOUNTING DEVICE. ELMER E. ELLIS, Pomona, Calif. Filed Aug. 21, 1924. Serial No. 733,404. 4 Claims. (Cl. 41—1.)

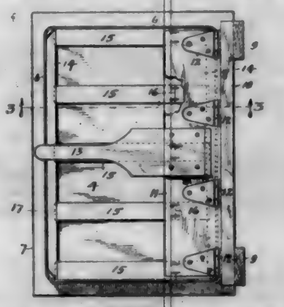
1. A device for holding tiling while applying a sheet thereto, comprising a flat horizontal metal support upon which to rest a plurality of blocks of tile, and flanges integral with and rising from said support for reception between the blocks of tile to hold the latter in properly spaced relation, each flange having its ends spaced from adjacent ends of other flanges, permitting easy access to a corner or corners of each tile until obstructed by laying of another tile or tiles.

1,533,589. ANIMAL TRAP. VIRGIL M. FROGGE, Centralia, Mo. Filed Oct. 30, 1923. Serial No. 671,781. 1 Claim. (Cl. 43—88.)



An animal trap comprising a base plate provided on its top and on its opposite end with vertically disposed posts, a pair of animal gripping jaws pivotally connected at their ends to said posts, a jaw closing spring surrounding one of the posts, an elongated spring compressing and jaw closing plate pivoted at one end to the base plate and extending in alignment with the latter, said operating plate being provided at its free end with an opening surrounding the last named post and engaging said spring, a metal strip secured to the intermediate portion of the base plate and extending laterally therefrom, said strip being bent upon itself at spaced points to provide vertically disposed standards having eyes at their upper ends, an animal depressing plate provided with a latch pivoted in one of said eyes, a pin pivotally connected to the remaining eye and extending over the edge of one jaw to permit its free end to be engaged by said latch.

1,533,590. TUBULAR-DRILLING-DERRICK ASSEMBLY. CLYDE JAMES GOUGLER, Tulsa, Okla. Filed Jan. 22, 1924. Serial No. 687,876. 6 Claims. (Cl. 189—19.)

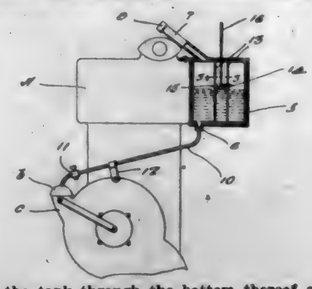


1. A connection for uprights comprising a sleeve having a longitudinally extending slot formed in each end thereof, outwardly extending ears formed on said

sleeve at one side of said longitudinally extending slot, companion lugs for said ears formed on the sleeve at the opposite side of said longitudinally extending slots

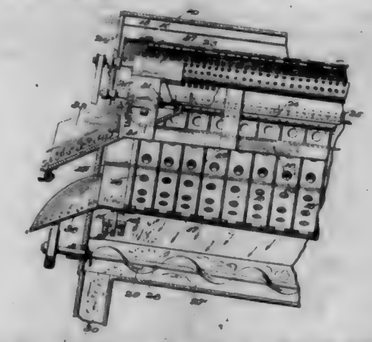
from said ears and co-acting means between said ears and lugs for rigidly clamping the sleeve about said uprights.

1,533,591. METAL TABLE-TOP STRETCHING METHOD AND MEANS. HARRY A. HALL, Newcastle, Ind., assignor to Hoosier Manufacturing Company, Newcastle, Ind., a Corporation of Indiana. Filed May 12, 1924. Serial No. 712,814. 5 Claims. (Cl. 153—1.)



1. The herein described method of stretching sheet metal table-tops with side and end flanges, which consists of assembling the top with side rails capable of sliding movement away from each other, placing braces each comprising two transversely divided parts breaking outwardly, between the side rails with the two outermost ones in contact with the respective end flanges of the top, and applying pressure simultaneously to the braces at their joints to straighten the parts and slide the rails away from each other.

4. A sheet metal table top stretching device comprising a pair of side rails capable of sliding movement away from each other, a plurality of brace strips each in two transversely divided parts breaking in a direction away from the table top, at the resulting joints when first assembled on the table top, a hinged member adapted to simultaneously contact the broken joints of all of the brace strips, and a lever to move the hinged member against the joints to straighten the brace strips and slide the rails apart.



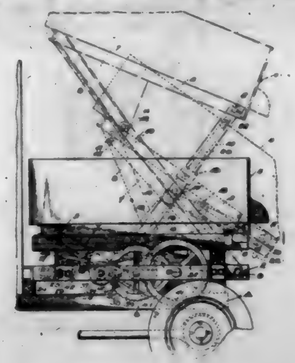
1,533,592. RESERVE OIL SUPPLY FOR VEHICLE ENGINES. FRANK D. HANES, Mullen, Nebr. Filed Jan. 2, 1924. Serial No. 684,025. 1 Claim. (Cl. 184—105.)

An oil supply device for an automobile machine comprising a tank having spaced vertically disposed rods located therein, a float movably mounted between the rods and provided at opposite edges with eyes which receive the rods, the stem carried by the float and passing through the top of the tank, a nozzle mounted upon the top of the tank and having its inlet end disposed beyond one of the vertical sides of the tank, a valve controlled outlet pipe communicating with the in-

terior of the tank through the bottom thereof and having its outlet end disposed beyond the same vertical side of the tank as that at which the inlet end of the nozzle is disposed and supporting means for the body and including a securing device disposed beyond the same vertical side of the tank.

1,533,593. COTTON-CLEANING MACHINE. VAN DON HARLAN, Humphrey, Ark. Filed Apr. 15, 1924. Serial No. 706,737. 8 Claims. (Cl. 19—36.)

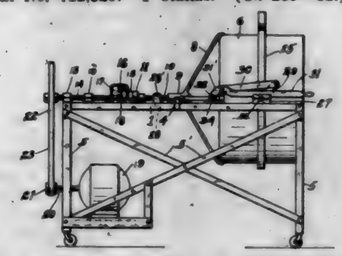
1. A cotton cleaning machine of the character described, comprising a rotatable drum adapted to permit uncleaned cotton to be deposited therein, cotton gathering members carried upon the inner peripheral surface of said drum, a conveyor movable through the drum, and means adapted to deposit the cotton gathered upon said conveyor.



1,533,594. TANNING AGENT. FRANZ HASSLER, Volksdorf, near Hamburg, Germany. Filed Sept. 1, 1921. Serial No. 497,727. 4 Claims. (Cl. 149—5.)

1. A condensation product of aromatic hydrocarbon, sulphuric acid and sulphur, such product having tanning properties.

1,533,595. HOISTING TRUCK. JOSEPH DALE HERRON, Trenton, N. J., assignor to Fitz Gibbon & Crisp, Inc., Trenton, N. J., a Corporation of New Jersey. Filed Dec. 19, 1924. Serial No. 757,015. 3 Claims. (Cl. 298—11.)



1. Apparatus of the character described, comprising, in combination with a vehicle frame and a load-carrying body, hoisting links connected to a fixed pivot carried by the frame and slidably engaging said body, inclined hoisting arms connected at the lower ends to a movable pivot mounted on the frame and pivotally connected at the upper ends to said links, hoisting stub-arms pivot-

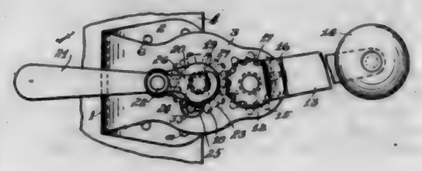
ally connected at the lower ends to said links and at the other ends to said body, means for moving the pivot at the lower ends of said inclined hoisting arms, where-

by to raise the upper ends of said links, members movable into position to detachably connect the said hoisting arms and the said stub-arms in alignment and means carried at the end of the body and adapted for actuation to move said members into operative or inoperative position.

1,533,596. WASHING MACHINE. HOBART M. HINKEL, Springfield, Ohio, assignor of one-fourth to Carson Dinges, Springfield, Ohio. Filed May 12, 1924. Serial No. 712,529. 4 Claims. (Cl. 259—81.)

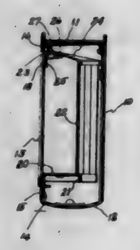
1. In a washing machine, an unenclosed cylinder adapted to receive the clothes and washing fluid, a pivoted annular member upon which said cylinder is mounted to rotate, means for rotating said cylinder, said means being arranged in line with the axis of rotation of said cylinder and including a clutch, a removable lid for one end of said cylinder, and means for tilting said cylinder together with its supporting member to bring the lid in an upper horizontal position.

1,533,597. DEPOSITOR FOR PLASTIC MATERIALS. ROBERT SCOTT HISLOP, Racine, Wis., assignor to Racine Confectioners' Machinery Company, Racine, Wis. Filed June 5, 1924. Serial No. 718,000. 6 Claims. (Cl. 107—28.)



4. In a depositor for plastic material, a valve casing, a valve member therein, said valve member having a recess the end walls of which are provided with grooves, and a plunger movable in said recess to expel the material therefrom.

1,533,598. PROCESS OF TREATING FABRICS AND THE PRODUCT THEREOF. JACOB S. HOFFMAN, New York, N. Y. Filed June 7, 1921. Serial No. 475,609. 4 Claims. (Cl. 134—79.)

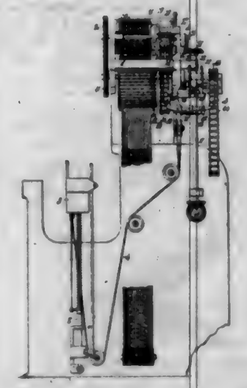


8. Fibrous material whereof the constituent fibers are impregnated with a transparent water-proof mixture of celluloid amyl acetate and formaldehyde in about the proportion of celluloid 20 parts, amyl acetate 60 parts, and formaldehyde (40% aqueous solution) 20 parts.

1,533,599. CAN OPENER. FRANK B. LA MAY, Rochester, N. Y., assignor to La May-Smith-Walker, Inc., Rochester, N. Y. Filed June 24, 1924. Serial No. 722,010. 10 Claims. (Cl. 30—8.)

1. In a can opener, a lever pivoted intermediate its ends, a stud rotatably mounted in one arm of the lever, a disc cutter fixed to said stud, and means for releasably holding the stud in said lever and against axial movement.

1,533,600. RECORDING BOOK BANK. JOSEPH LEVINE, Brooklyn, N. Y. Filed May 15, 1923, Serial No. 639,048. Renewed Mar. 7, 1925. 15 Claims. (Cl. 232—4.)

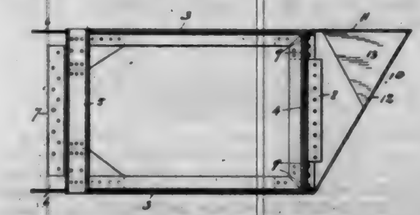


1. A recording book bank comprising a rectangular casing, one side of said casing being open, a removable door covering said opening and having slots therein, a hinge pin mounted on said door, spring arms on said hinge pin normally covering said slots, a platform on said door, coin-receiving cylinders on said platform, a cover plate pivoted on said hinge pin and adapted to cover the cylinders, a locking bar in said casing, and means on said cover plate for engaging the locking bar.

1,533,601. PATTERN MECHANISM FOR LOOMS. WILLIAM J. LUTTON, Paterson, N. J., assignor of one-half to Maurice Franck, Paterson, N. J. Filed Aug. 28, 1923. Serial No. 659,760. 10 Claims. (Cl. 139—326.)

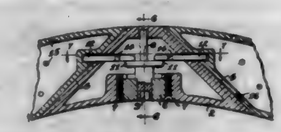
1. In a pattern mechanism of a loom, the combination with a shuttle box pattern chain, a multiplier pattern

chain, mechanism coacting with said chains to control the movement of the chains, and vibrating levers, of a



supplemental shuttle box pattern chain, rocking levers coacting therewith and connected to the vibrating levers, and means for rendering said rocking levers inoperable.

1,533,602. WRENCH. EARNEST R. LYNCH, Hilmar, and HOMER A. MEAD, Turlock, Calif., assignors to Masterench Corporation, a Corporation of California. Filed Nov. 21, 1921. Serial No. 516,589. 2 Claims. (Cl. 81—99.)

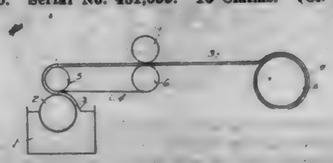


1. A wrench comprising a bar with a fixed jaw on one end and a handle on the other, and a swinging jaw pivoted thereto adjacent the fixed jaw, said swinging jaw having a flat gripping surface extending substantially at right angles to a radial line passing through the pivot center and said gripping surface where it intersects another flat gripping surface of the movable jaw, the said intersection being substantially double the distance from the pivot center that said pivot center is from the intersection of the aforesaid radial line with the outer face of the fixed jaw when the movable jaw is closed.

1,533,603. COAL-BUCKET PLOW. NORMAN H. MCCLEVEE, Petersburg, Ind. Filed Jan. 12, 1925. Serial No. 2,017. 7 Claims. (Cl. 37—147.)

1. The combination, with a coal gathering bucket, of a plow having an oblique side which extends from one side of the path of the bucket to the other.

1,533,604. MANDREL. HARVEY F. MARANVILLE, Akron, Ohio, assignor, by mesne assignments, to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 11, 1919. Serial No. 344,131. 11 Claims. (Cl. 18—45.)

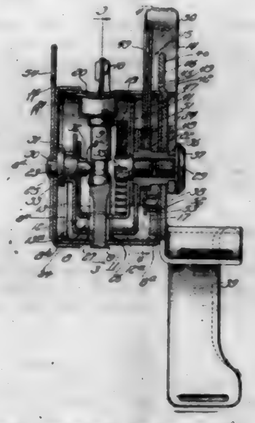


4. In a mandrel, the combination with a substantially torus-shaped body made in one piece and subtending nearly but not quite a complete circle and having inclined ends spaced apart to provide a gap much wider at the inner circumference of the mandrel than at the outer, of a removable section adapted to fit in said gap and to complete the contour of said mandrel, and a longitudinally protrudable latch carried by said removable segment, the end of the body having a recess adapted to receive said latch.

1,533,605. DENTAL AND SURGICAL LAMP. CHAUNCEY R. PELTON and HAROLD W. HOUGHTON, Detroit, Mich., assignors to Pelton & Crane Company, Detroit, Mich., a Corporation of Michigan. Filed May 16, 1923. Serial No. 639,311. 4 Claims. (Cl. 128—23.)

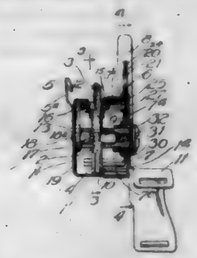
1. A dental or surgical lamp, comprising an elongated transparent tube having at the end an enlarged bulbous head, thickened on one side thereof to form a lens, a non-transparent white glass covering entirely surrounding said transparent tube except at the lens portion thereof, and light projecting means within said bulbous head.

1,533,606. PROCESS OF PRODUCING RECEPTACLES. RAY P. PERRY, Upper Montclair, N. J. Filed Dec. 16, 1920. Serial No. 431,099. 10 Claims. (Cl. 92—66.)



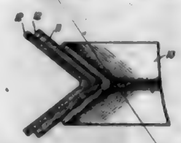
3. The process which comprises forming a receptacle from a sheet containing felted fibrous material and waterproofing material in which a large percentage of said fibers extend in the same general direction, pressing said receptacle in directions substantially perpendicular

to said fibers at such a temperature that said waterproofing material is melted and at such a pressure that the density of the receptacle becomes substantially the same as that of said waterproofing material



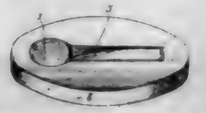
---

1,533,607. KNOTTER. BURT A. PETERSON, Rockford, Ill., assignor, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois (1922). Filed Apr. 1, 1920, Serial No. 370,394. Renewed Apr. 2, 1924. 22 Claims. (Cl. 289—5.)



1. A knotter comprising, in combination, a supporting structure, a spindle journaled therein, a tying bill at one end of the spindle, thread-guiding means on the supporting structure, a rotatable stem journaled in the supporting structure, a driving member fixed to said stem and having an operative connection with said spindle to rotate it, a member relative to which said stem is adapted to rotate and having a gearing connection with the spindle, and a device connected with the last mentioned member whereby a rotation of said spindle effects a relative swinging movement between the tying bill and said device to strip the looped thread from the tying bill.

1,533,608. KNOT-TYING IMPLEMENT. BURT A. PETERSON, Rockford, Ill., assignor, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois (1922). Filed Apr. 1, 1920. Serial No. 370,395. 30 Claims. (Cl. 289—5.)

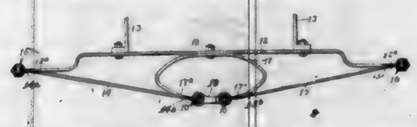


9. A knotter comprising, in combination, a stationary casing formed in two sections, a tubular stem disposed on a horizontal axis in said casing, a bracket fixed on said stem, a spindle journaled in said bracket and extending transversely through said stem, means for rotatably securing one end of the stem to one wall of the casing, a stud mounted on the other wall of the casing and providing a bearing for the opposite end of said stem, said spindle having within the stem an annular groove and said stud having a portion projecting into said groove whereby to prevent longitudinal movement of the spindle, a tying bill on the spindle, means for guiding and holding threads to be united in operative relation to said tying bill, and means for imparting rotary and swinging movement to the spindle and tying bill.

1,533,609. METHOD OF MANUFACTURING TUBE PROTECTORS. FRED BROWN PFEIFFER, Akron, Ohio, assignor to The Star Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 27, 1923. Serial No. 671,083. 5 Claims. (Cl. 18—56.)

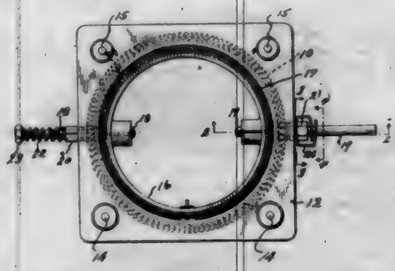
1. The method of manufacturing tube protectors, comprising forming a length of rubber of even thickness throughout, wrapping the rubber about a ring substantially V-shape in cross section, curing the rubber while upon the ring whereby it is given a circumferential curvature and a circumferential valley, skiving the edges of the strip, and cutting protectors therefrom.

1,533,610. HOLDER FOR SMOKING PIPES. GEORGE G. PLACE, Chicago, Ill. Filed Sept. 19, 1924. Serial No. 738,581. 1 Claim. (Cl. 131—10.)



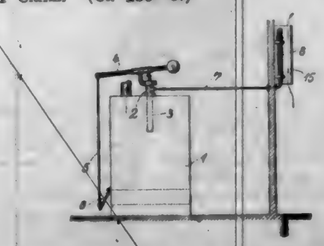
A holder for smoking pipes including a member formed to seat flat on a supporting surface and having its upper face provided with a cup-like socket and a trough leading at its inner end from the socket and merging at its outer end into the upper face of the member, the trough being inclined throughout its length and formed to receive the pipe stem and the bottom of the socket being disposed in the plane of the bottom of the trough and formed to engage the bottom of the pipe bowl whereby to firmly support the stem and bowl and with the pipe at a relatively slight angle to the plane of the member, the walls defining the socket being of such depth so as to engage and hold the pipe bowl from rocking.

1,533,611. ELECTRICAL CONDENSER AND METHOD OF MANUFACTURING THE SAME. WILLIAM R. RENPESS, St. George, N. Y., assignor to New Jersey Research Company, a Corporation of New Jersey. Filed Dec. 22, 1923. Serial No. 682,288. 7 Claims. (Cl. 250—41.)



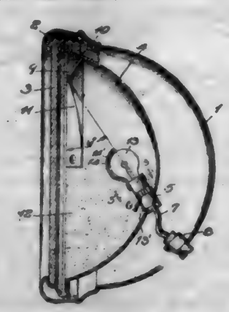
1. The method of making a condenser which consists in coating metallic armatures with rubber in solution, evaporating the moisture content from said coating on said armatures leaving a rubberized insulated film and building up said armatures one adjacent another to form a condenser.

1,533,612. BUMPER FOR MOTOR VEHICLES. CHARLES G. ROSS, Chicago, Ill., assignor of one-half to William L. Ross, Chicago, Ill. Filed May 29, 1924. Serial No. 716,578. 19 Claims. (Cl. 293—55.)



1. In a bumper construction, the combination of two bars disposed so that one end of one bar is adjacent one end of the other bar, a tubular member having slot means adapted to receive the aforesaid ends of said bars, and means for holding the aforesaid ends of said bars within said member.

1,533,613. VARIOMETER CONNECTER. ABRAHAM RUBIN, New York, N. Y., assignor to Henry Hyman & Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 22, 1922. Serial No. 589,774. 5 Claims. (Cl. 171—142.)

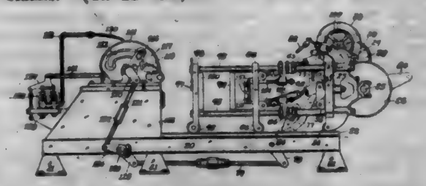


3. The combination in an apparatus of the class described of a fixed element, bearings, shafts in said bearings, a movable element mounted on said shafts so as to be capable of rotation with respect to said fixed element, and means to make an electrical connection to said movable element comprising a flat spring attached to one of said bearings and having an opening through which a shaft extends, said spring being arranged to press the edge of the opening laterally against the shaft.

1,533,614. APPARATUS FOR REGULATING HEATING SYSTEMS. WILLY SANYOSA, Frankfort-on-the-Main, Germany. Filed Dec. 27, 1921. Serial No. 525,211. 1 Claim. (Cl. 236—9.)

In combination with a heater, a regulator including an exteriorly arranged head threaded into the heater, a casing arranged within the heater and carried by the head in communication therewith, means closing the inner end of the casing, a remotely arranged receptacle, a pipe establishing communication from the head, outwardly of the heater, to and through the bottom of the receptacle, a head for the receptacle, each head having its inner face formed with an axial bore and a concentrically arranged, annular recess, an expansible cylinder within the casing and the receptacle and secured at one end within the annular recess of the respective head, a closure for the opposite end of each expansible cylinder, a rod secured to each closure and guided through the bore of the respective head, and tensioning means on the outer end of the rod in the receptacle, the outer end of rod of the casing being designed to control the heater.

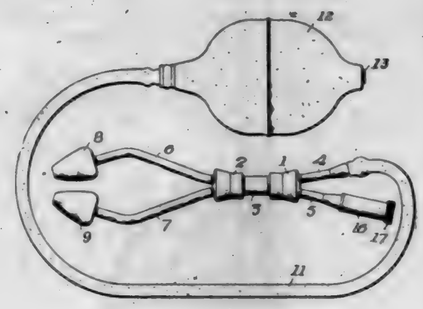
1,533,615. HEADLIGHT. HERBERT W. SCHWARTZ, Chicago, Ill. Filed Aug. 2, 1923. Serial No. 655,281. 8 Claims. (Cl. 240—48.2.)



1. In a headlight of the kind described and in combination, a concave reflector, means for absorbing the rays of light directed onto the lower half of said reflector, a visor arranged transversely of said reflector at its upper portion, said reflector having an aperture therethrough below the center thereof, and a lamp arranged at said aperture so that the longitudinal axis through said lamp intersects the intersection of the plane of the front edge of said reflector and the center of the inner surface of the lower edge of said visor.

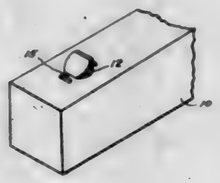
1,533,616. LACQUER AND LACQUER ENAMEL. STANLEY D. SHIPLEY and GUY C. GIVEN, Stamford, Conn., assignors to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed June 24, 1924. Serial No. 722,032. 24 Claims. (Cl. 134—79.)

1. A composition comprising nitrocellulose and ethyl-glycol.



16. A nitrocellulose solvent comprising a mixture of ethyl-glycol and a benzene hydrocarbon.

1,533,617. DIE-CASTING MACHINE. JOSEPH SOSS and LOUIS H. MORIN, New York, N. Y., assignors to Soss Manufacturing Co., Brooklyn, N. Y., a Corporation of Maine. Filed Feb. 18, 1922. Serial No. 537,419. 54 Claims. (Cl. 22—69.)

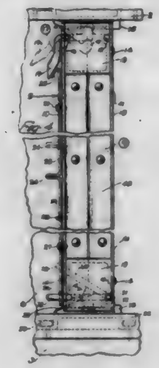


1. In a die-casting machine, an automatically operated molten metal discharge element, an automatically operated die holder and carrier movable toward and from said discharge element, and said holder being composed of separate parts movable toward and from each other and to which the separate parts of the die are adapted to be secured in the movement thereof toward and from said element.

1,533,618. INSTRUMENT FOR EAR TREATMENT. JAMES TAYLOR, Jr., Worcester, Mass. Filed Apr. 8, 1920. Serial No. 372,196. 2 Claims. (Cl. 128—257.)

2. In apparatus of the class described, a chamber having a pair of nasal tubes leading therefrom and providing opposed divergent and convergent portions, each convergent tube portion terminating in a conical nasal bulb having a passage therethrough coaxial with its associated tube portion, whereby opposed surfaces of said bulbs are maintained substantially parallel and are adapted to press evenly against the nasal septum when inserted in the nostrils.

1,533,619. LATCH DEVICE. JAMES ARTHUR THOMPSON, Rushville, Ill., assignor to Gladacres Incorporated, a Corporation of Illinois. Filed July 1, 1922. Serial No. 572,256. 4 Claims. (Cl. 292—153.)



1. A latch device comprising a member having a cylindrical bore, a retractable latch bolt seated in said bore and having an oblique face upon its outer end extending in the same plane across said bolt, and an overhanging flange extending into the outer portion of the bore and overlapping the lowermost edge of the inclined portion of the bolt to retain the same in said bore, whereby said bolt is caused to orient to its normal position when displaced.

1,533,620. SIDE-DOOR CONSTRUCTION. KENNETH J. TOBIN and WILLIAM W. DARROW, Chicago, Ill., assignors to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1924. Serial No. 732,047. 40 Claims. (Cl. 20—22.)

6. A car having a door opening, a door jamb movable longitudinally of said opening, means for automatically locking said jamb at its top and bottom, said means including a pair of latching members, and means for preventing the locking at the bottom of said car except when locking is effected at the top of said car.

7. A railway car having a door opening, a jamb movable longitudinally of said car, and a pair of slidable doors cooperating with said jamb, said jamb comprising

an angular construction adapted to receive a nailing strip, the reentrant angle of said angular construction being presented transversely and inwardly of said car.

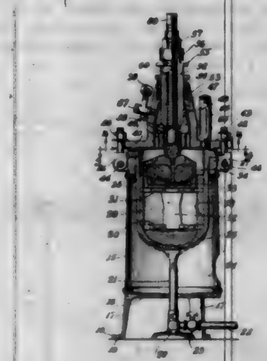
1,533,621. LATCHING MECHANISM. KENNETH J. TOBIN and WILLIAM W. DARROW, Chicago, Ill., assignors to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 24, 1924. Serial No. 757,936. 12 Claims. (Cl. 20—22.)

1. In a box car, in combination, a movable door jamb, a pair of detent members for holding the two ends of said jamb, latch members at the two ends of said jamb for cooperation with said detent members, a member operable in a single movement for operating said latch members, one of said latch members being provided with automatically operating means for holding said operable member in its unlatching position after said operable member has been moved to said unlatching position.

1,533,622. RUST-REMOVING COMPOUND. JOHN J. VARN BUHLER, Detroit, Mich. Filed Dec. 28, 1921. Serial No. 525,472. 9 Claims. (Cl. 148—8.)

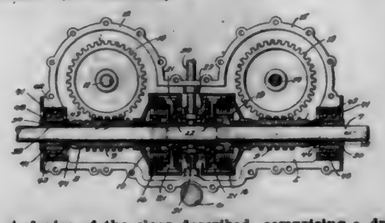
1. The metal cleaning compound containing an acid which will attack rust, a rust preventing oil which is not attacked by the acid and a solvent for the oil.

1,533,623. TRANSMISSION OF ELECTRIC ENERGY. GEORGES VIEL, St. Etienne, France. Filed Jan. 18, 1921. Serial No. 438,111. 2 Claims. (Cl. 173—318.)



1. In the transmission of electric energy the combination with the line wire, a series of chain insulators supporting said line wire and an insulated cable connecting together elements of the chains of the same order or position in each chain over a length dependent on the difference of potential to be maintained at the terminals of such elements.

1,533,624. VENTILATED HEAD GARMENT. EMIL B. WERROTT, Moline, Ill. Filed Oct. 24, 1924. Serial No. 745,039. 9 Claims. (Cl. 2—176.)

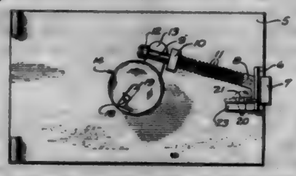


1. In a head garment, ventilating means comprising an open member extending through a wall of the garment and a cover member extending through an opening in the garment and adapted to be so placed as to cover the opening in the open member or uncover the same.

1,533,625. INLAY VULCANIZER AND PRESS. JOHN HOD WILLIAMS, West Palm Beach, Fla. Filed Sept. 1, 1923. Serial No. 660,460. 9 Claims. (Cl. 18—7.)

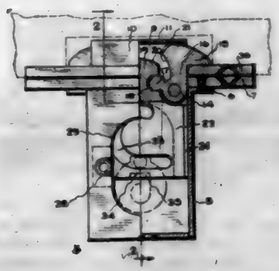
3. A vulcanizer comprising an upright cylindrical casing, a stand on which said casing is supported, a boiler suspended within said casing, means extending through said stand for heating said boiler, said boiler having internal longitudinal ribs, one of said ribs extending inward to a greater extent than the others, grates disposed in said boiler, said grates being guided by said ribs, a flask supported on one of said grates, said flask engaging said ribs, a chambered cover gasketed to the top of said boiler, and means carried by said casing for clamping said cover thereover.

1,533,626. TRANSMISSION DEVICE. FREDERICK D. WILSON and LEONARD S. BURNS, Harvey, Ill., assignors, by mesne assignments, to Austin Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1923, Serial No. 610,131. Renewed Oct. 27, 1924. 6 Claims. (Cl. 180—17.)



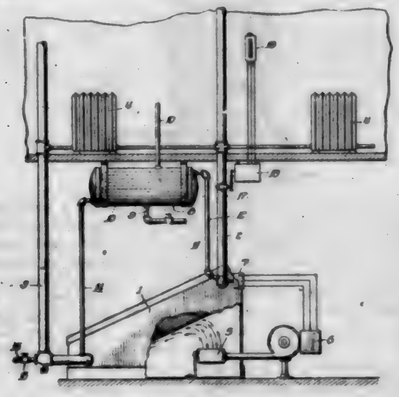
1. A device of the class described, comprising a driven shaft, and shaft to be driven thereby; worm-drive mechanism operatively connected with said last-named shaft; a plurality of friction clutch elements adapted to cooperate to impart the movement of the first-named shaft to said worm-drive mechanism; a plurality of friction clutch elements capable of a brake action on said worm-drive mechanism; and means for actuating said first-named clutch elements, the reverse movement of such means operating to actuate said brake clutch elements.

1,533,627. INKSTAND. WILLIAM H. AVERILL, Boston, Mass., assignor to The Carter's Ink Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Mar. 25, 1924. Serial No. 701,714. 4 Claims. (Cl. 120—59.)



1. An inkstand of the type specified having a body and mounted upon said body and detachably secured to it an inverted bottle providing a reservoir for ink, said bottle having a neck, said body of the inkstand having within it an ink well and means forming communication between the bottle and the ink well by which ink will be supplied to the ink well from out of said bottle, said body of the inkstand, also, having in it a socket into which the neck of the bottle extends, and an elastic means yieldable by distortion for retaining the neck of the bottle within said socket.

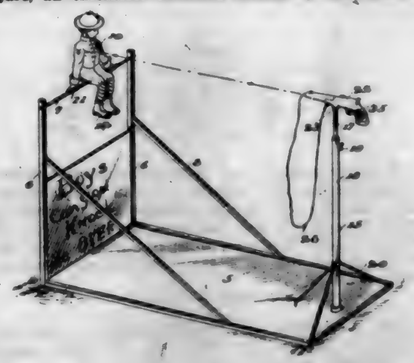
1,533,628. POST-OFFICE MAIL-BOX LOCK. FRANK E. BEST, Seattle, Wash., assignor to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed June 19, 1923. Serial No. 646,335. 7 Claims. (Cl. 70—46.)



1. In a lock of the class described, a door, a lock housing protruding inwardly from said door, a sleeve rotatable on said lock housing, latch mechanism on said door and means on said sleeve adjacent said door for operating said latch mechanism.

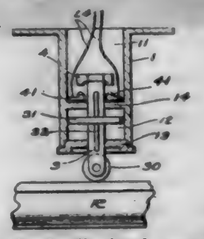
1,533,629. DISAPPEARING-ANCHOR LOCK. FRANK ELLISON BEST, Seattle, Wash., assignor to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed June 28, 1923. Serial No. 648,308. 8 Claims. (Cl. 70—20.)

1. In a lock of the class described, a bolt, a pair of anchor members pivotally connected with the bolt, a throw member operatively connected with said anchor members and key controlled means for moving said throw member and locking said anchor members and said bolt co-operatively.



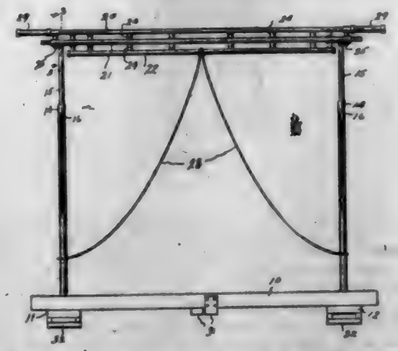
1,533,630. COMBINED HOUSE-HEATING AND DOMESTIC WATER-HEATING SYSTEM. JAMES L. BREESE, Jr., Chicago, Ill., assignor to Breese & Bettle, Inc., Chicago, Ill., a Corporation of Illinois. Filed Aug. 26, 1921. Serial No. 495,457. 2 Claims. (Cl. 237—8.)

1. In a heating apparatus, a boiler, a pair of independent heating medium circuits, said circuits having the boiler as a common source of supply, and one thereof supplying house heating devices, the other operatively connected to a hot water storage tank, a burner for supplying heat to the boiler, thermostatic means responsive to boiler temperature for controlling the burner, and thermostatic means responsive to house temperature conditions for cutting in or out the house heating circuit.



1,533,631. TOY. JAMES BROWNLEE, Newark, N. J. Filed Feb. 14, 1922. Serial No. 536,440. 1 Claim. (Cl. 273—101.)

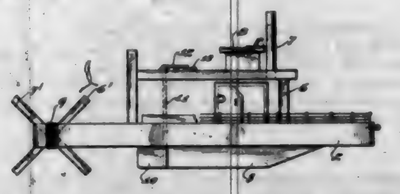
A toy of the class described comprising a base, standards mounted thereon, a rotatable crossbar carried by the upper ends of said standards, a figure seated on the crossbar and having hands gripping the same, said figure being provided with weighted feet forming a means whereby the figure is promptly returned to an upright position, bracing members supporting said standards, a gun adapted for firing a projectile in the direction of the figure, an extensible standard carried by said base and



adapted for supporting said gun, and means provided on the uppermost portion of said extensible standard for adjusting the gun to any desired range.

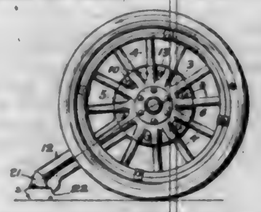
1,533,632. AUTOMATIC DERAIL SIGNAL. FRANK BUTORAC, Seattle, Wash. Filed May 29, 1924. Serial No. 716,641. 7 Claims. (Cl. 246—171.)

1. An automatic derail signal comprising, in combination, an electrically energized signal, a circuit including said signal, a normally open switch in said circuit, and means adjacent a wheel, normally in contact with the track and operable as the wheel leaves the track, to close said switch.



1,533,633. HURDLE. EDWARD L. CAREY, Brooklyn, N. Y. Filed Oct. 21, 1922. Serial No. 595,894. 9 Claims. (Cl. 272—59.)

1. In a device of the class described, a pair of standards and a cross bar having a support at either end above the center of gravity of the bar, said supports

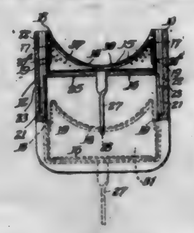


resting on the tops of said standards and being held thereon by gravity only, the tops of said standards being curved and said supports having surfaces engaging with said curved tops and adapted to permit free oscillation of the cross bar through a predetermined arc and to cause the bar to fall when the predetermined arc is exceeded.

1,533,634. TOY RIVER BOAT. HARRY R. L. CHELLMAN, Mount Oliver, Pa. Filed Mar. 21, 1923. Serial No. 626,618. 2 Claims. (Cl. 46—37.)

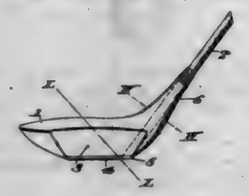
1. A toy constructed to resemble a river boat, a pair of spaced arms extending rearwardly from said boat, a paddle wheel mounted between the arms, and elastic bands about both of said arms and extending across said paddle wheel for propelling the boat through the water.

1,533,635. SAFETY DEVICE FOR AUTOMOBILES. LEWIS B. CURTIS, Bridgeport, Conn. Filed Jan. 10, 1924. Serial No. 685,334. 3 Claims. (Cl. 180—83.)



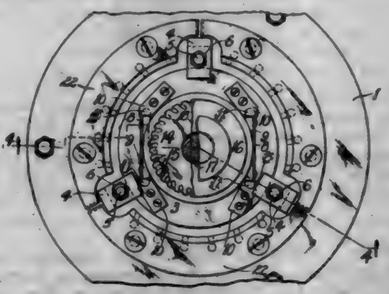
1. In an automobile safety fender, a member normally spaced from the roadbed and swung concentrically from the axle and extending to a plane slightly beyond a front wheel and releasably held in this position and adapted, when impacting a body, to yield and to be forced against the roadway, thereby functioning as a lever to oppose the speed of the automobile, whereby the wheel adjacent said lever will be bodily raised over said body and deposited on the roadbed beyond said body.

1,533,636. COLLAPSIBLE BOX OR THE LIKE. ELIZABETH DAY, Chicago, Ill. Filed June 23, 1924. Serial No. 721,682. 10 Claims. (Cl. 150—49.)



1. A collapsible box or the like including a frame like structure, said structure including spaced sectional annular members, sectional uprights interposed between and connecting the annular members, the said parts being respectively foldable, the sections of the uprights being foldable from the periphery of the annular members inwardly, and means connected with the said uprights for maintaining them in folded and unfolded relation.

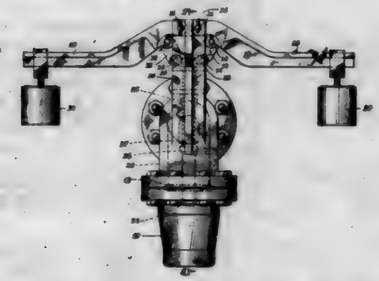
1,533,637. JOURNAL-BOX LUBRICATOR. THOMAS W. DEMAREST, Chicago, Ill. Filed July 18, 1921. Serial No. 485,400. 21 Claims. (Cl. 64—35.)



1. In a device of the character described, in combination with a journal box, a lubricator container bodily displaceable therein, a lubricator supporting riser or follower, and means associated with said container for forcing grease between the hub face of a wheel and the journal box as the riser moves upwardly.

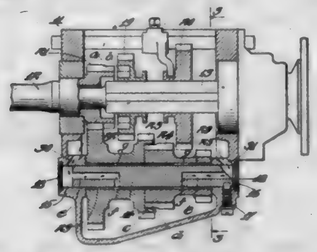
1,533,638. GOLF CLUB. PIERPONT E. DUTCHER, Upper Montclair, N. J. Filed Nov. 7, 1924. Serial No. 748,426. 4 Claims. (Cl. 273—77.)

4. A golf club head having a striking face, said head being provided with a body portion extending rearwardly from said face, said body portion being rearwardly tapered to constitute a stream-line form, the longitudinal axis of the vertical section of said tapered portion extending upwardly at an acute angle to the plane of said striking face and at an obtuse angle away from a horizontal projection of the shaft, said head also having a neck of stream-line form in cross section.



1,533,639. QUENCHING APPARATUS. ERIK W. EHN, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed July 11, 1924. Serial No. 725,407. 9 Claims. (Cl. 266—6.)

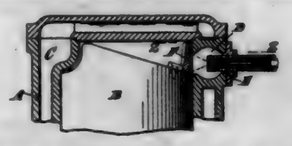
5. A hardening device comprising a base, a plate thereon, an annular member on said base surrounding said plate, a fluted plug on said plate adapted to fit one conical bore of a double conical cup for roller bearings, spring-pressed bars in said plate for supporting



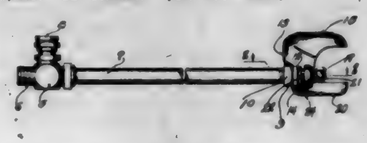
said cup, a second fluted plug adapted to fit the other bore of said cup and to be pressed thereinto to force said cup onto said first plug and passageways for quenching liquid through said base, annular member and first plug, there being a space between said plugs around their peripheries, the spaces between the flutes of the plugs opening into said space and the passageways of said lower plug opening into said space.

1,533,640. RELIEF VALVE. FRED C. FANTS and HOWARD G. HILL, Port Arthur, Tex., assignors to The Texas Company, New York, N. Y., a Corporation of Texas. Filed May 4, 1921. Serial No. 466,858. 10 Claims. (Cl. 137—53.)

9. A relief valve comprising a chambered casing having a valve seat therein, a movable valve normally resting upon said seat and a plurality of weighted toggle mechanisms connected to said valve and acting concurrently thereon to cause the valve to open and to close with an accelerated movement under different predetermined pressure conditions.



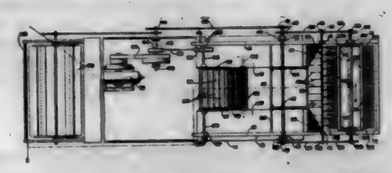
1,533,641. TRANSMISSION FOR AUTOMOBILES. STEPHEN I. FEKETE and STUART G. BAITS, Detroit, Mich., assignors to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 2, 1923. Serial No. 655,261. 4 Claims. (Cl. 74—58.)



1. In a transmission gearing, a casing, a countershaft mounted in said casing in holes, the ends of which are closed, gears rotatable on said countershaft, said countershaft being provided with an oil passage leading from the closed end of the hole in the casing and emerging through a peripheral surface under said gears.

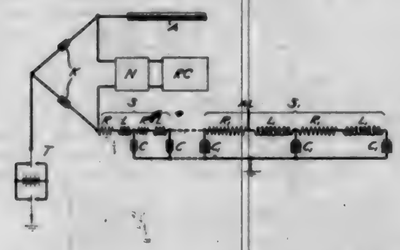
1,533,642. INTERNAL-COMBUSTION ENGINE. LEON P. FRUSTMAN, Harrison, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed June 4, 1920. Serial No. 386,535. 4 Claims. (Cl. 123—33.)

1. The method of feeding liquid or solid fuel to an internal combustion engine cylinder, which consists in compressing air in the engine cylinder and in a precombustion chamber having an opening into the cylinder restricted during the latter part of the compression stroke and early part of the working stroke by a guard on the piston, injecting fuel during or about the end of compression into the precombustion chamber and securing limited combustion, feeding the fuel to the cylinder from the precombustion chamber through the guard-restricted opening by the relative pressure in the precombustion chamber and cylinder, and gradually removing said restriction by the withdrawal of the guard on the outward stroke of the piston.



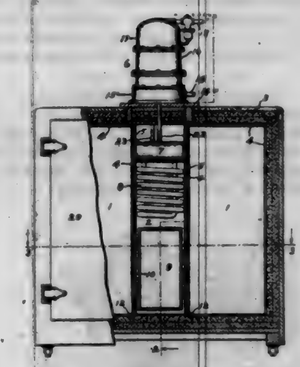
1,533,643. LIGHTER. FRANK A. GAUGER and ROY W. JOHNSON, Milwaukee, Wis., assignors to Milwaukee Gas Specialty Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 28, 1922. Serial No. 557,139. 13 Claims. (Cl. 158—115.)

1. In a flash igniter for gas burners, a supply pipe, a torch-head on one end of the pipe, a disc-like protective covering separate from the torch-head and disposed thereover in a substantially horizontal position, and a depending attaching portion integral with the covering and connectable with the supply pipe, the air surrounding the torch-head being unconfined an influenced only by the covering and its attaching portions.



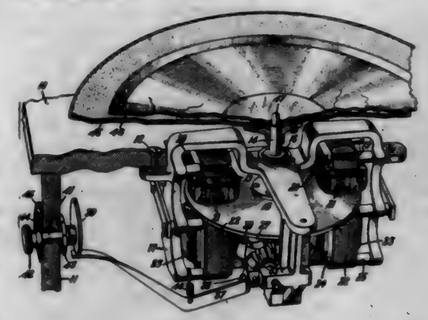
1,533,644. CRANBERRY HARVESTER. GEORGE CHARLES GERHARDT, Millston, Wis. Filed Mar. 5, 1920. Serial No. 363,485. 12 Claims. (Cl. 56—330.)

1. In a machine for harvesting cranberries and the like, a vehicle, a frame mounted thereon for movement in a vertical plane, a knocker wheel carried by the frame and provided with a plurality of series of radial teeth to comb the bushes, an apron disposed at the rear of the knocker wheel, a carrier moving to the rear over the apron and in contact therewith to receive the berries dislodged by the wheel and carry the same rearwardly and means to drive the knocker wheel and the carrier.



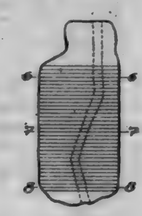
5. In a machine for wet harvesting of cranberries and means to drive the knocker wheel and the carrier. movement in a vertical plane, a knocker wheel carried by the forward end of the frame and provided with radial teeth to comb the bushes beneath the surface of the water, an apron disposed at an upward inclination behind the knocker wheel, a carrier moving to the rear over the apron to receive the berries dislodged by the knocker wheel and carry the same rearwardly, and means to drive the knocker wheel and the carrier.

1,533,645. SUBMARINE SIGNALING SYSTEM. JOHN J. GILBERT, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 31, 1922. Serial No. 564,915. 5 Claims. (Cl. 178—63.)



1. The combination at a signaling station of a source of signaling current with a signal receiving means more readily responsive to certain frequencies than to others, and an electrical network upon which current from said source is impressed, said network comprising a plurality of sections each having lumped inductance and capacity of such value that oscillatory currents impulsively produced in said sections by said source of signaling current do not have frequencies to which said signaling means is readily responsive whereby the disturbing effect of said impulsively produced currents upon said signal receiving means is small.

1,533,646. REFRIGERATOR. ALBERT L. GIVENS, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed July 5, 1924. Serial No. 724,215. 7 Claims. (Cl. 62—95.)

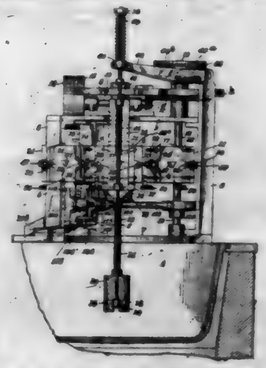


1. In combination, a refrigerator comprising a casing of heat insulating material having a food compartment and a cooling compartment therein provided with metal walls, the adjacent walls of the two compartments being in good thermal relation to each other, an artificial refrigerating machine mounted in proximity to said refrigerator and having an evaporator, said evaporator being located in said cooling compartment and being in good thermal relation with the walls of said compartment, the walls of the food compartment being of such thickness that the heat entering said refrigerator through the casing thereof flows substantially solely by conduction through the metal walls of the food compartment to the cooling compartment and thence to said evaporator.

1,533,647. ELECTRIC DRIVE FOR PHONOGRAPHS. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed May 18, 1923. Serial No. 639,895. 10 Claims. (Cl. 172—278.)

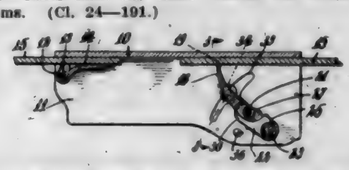
1. In a phonograph, an electric motor drive of the induction disc type, a rotatably mounted disc of conducting material and a plurality of similar field magnet members symmetrically distributed both radially and circumferentially about said disc for driving the same by induction motor action, the energizing coils of said field members being arranged to be excited by alternating current in such relation that the component of the motor forces acting on the disc at right angles thereto at any instant are in the same direction, whereby the tendency of such forces to vibrate the disc is minimized.

1,533,648. METHOD OF PREPARING SMOKED JOINT MEATS. JOHN A. HAWKINSON, Nashville, Tenn., assignor to Allied Packers, Incorporated, Chicago, Ill., a Corporation of Delaware. Filed Apr. 7, 1924. Serial No. 704,585. 6 Claims. (Cl. 99—11.)



1. A method of preparing smoked joint meats, which consists in subjecting the meat while in a flaccid condition on the articulated bone structure to a pressure sufficient to convert the same into a form which is substantially uniform in cross-sectional area throughout the greater portion of its length, and smoking the meat while in such form.

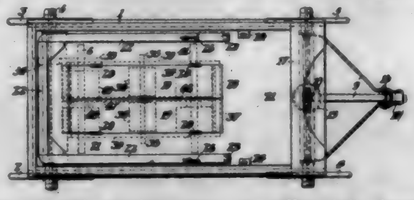
1,533,649. CASTING APPARATUS AND PROCESS OF CASTING. CHARLES E. HOPKINS, Plainfield, N. J.; The Plainfield Trust Company, Plainfield, N. J., administrator of estate of Charles E. Hopkins, deceased. Filed Oct. 21, 1918. Serial No. 259,048. 43 Claims. (Cl. 22—77.)



1. Casting apparatus comprising: means for delivering molten material at a casting point, a rotatable supporting member, a plurality of casting molds carried thereby each composed of a plurality of members movable relatively to each other to open and close the mold, means for intermittently moving said supporting member to successively bring said molds to and from the casting

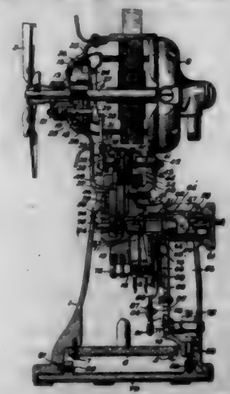
point so that the molds successively receive a charge of molten material, means for opening each mold after

it has received a charge of material and for closing it before it receives another charge, and means for separating the casting from both members of each mold.



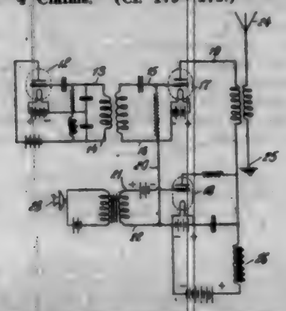
1,533,650. BELT BUCKLE. SEBERO JASO, San Antonio, Tex. Filed Nov. 13, 1924. Serial No. 749,610. 2 Claims. (Cl. 24—191.)

1. A buckle comprising a plate formed with rearwardly projected side flanges, a pair of arms pivotally mounted on said flanges, to swing toward and away from the said plate, a belt gripping jaw hinged to the free ends of the said arms, and springs engaged with the said arms and the said jaw and acting to urge the said arms toward the said plate, and the said jaw in an opposite direction on the said arms, and abutment stops on the said arms limiting movement of the jaw thereon under the influence of the springs applied to said jaw, and handle elements fixed to said jaw and passing through slots in the said flanges.



1,533,651. TOY WAGON. HARRY KISTER, Philadelphia, Pa. Filed Oct. 11, 1924. Serial No. 742,992. 7 Claims. (Cl. 208—38.)

1. In a toy wagon, the combination with a rectangular express body, having a pair of trap doors in the floor thereof, hinged on axes parallel with the length of said body and adapted to lie flat on said floor when opened, and serving to normally close a rectangular opening in said floor; of a hand rail, of inverted U-shape, hinged to said floor and adapted to be upturned in vertical position toward the front of said body; braces upon opposite sides of said body arranged to serve as stop supports for said hand rail in its upturned position; means arranged to detachably secure said hand rail in its upright position, including hooks and eyes; a frame including a non-rotatable axle provided with two dirigible wheels at the front of said body; means pivotally securing said dirigible wheel frame to said body; a rigid tractor member pivotally connected to said frame and arranged to extend in front of said body and be upturned against said hand rail; whereby said dirigible wheels may be turned to steer the wagon; an axle frame, rigidly connected with said body, at the rear end thereof; an axle mounted to rotate in said rear axle frame and provided with one supporting wheel rigidly connected therewith upon one side of said body; another supporting wheel mounted to turn freely upon said rear axle at the opposite side of said body; a gear wheel rigidly connected with said rear axle; a treadmill mechanism, adapted to propel said wagon, including a gear wheel in mesh with said gear on said rear axle and rigidly connected with a rear driving shaft; journal bearings for said rear driving shaft, rigidly connected with said body at opposite sides of said opening; a front driving shaft, parallel with said rear driving shaft; journal bearings for said front driving shaft, rigidly connected with said body, at opposite sides of said opening, and arranged to support said front shaft at a higher level than said rear shaft; sprocket gear wheels respectively rigidly connected with said rear and front driving shafts, intermediate of the length thereof; an endless sprocket chain extending around said sprocket gears and operatively connecting said shafts; belt rollers on said shafts, extending upon axially opposite

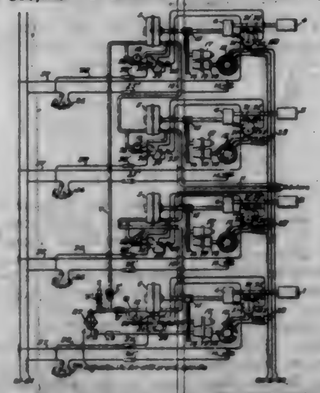


sides of said sprocket gears; an endless belt, formed of textile fabric, extending around said rollers, and having a longitudinal series of transverse slats arranged as footholds upon the outer face thereof; an idle roller, parallel with said front and rear shafts and extending between them and beneath the upper reach of said endless belt, arranged to support the weight of the operator on said belt, within said opening; and journal bearings for said idle roller, at respectively opposite sides of said opening in said body; whereby, when said doors are opened and said hand rail and tractor raised, to cooperative relation, said wagon may be propelled by the weight of an opreator bearing upon said belt and, when said doors are closed and said hand rail and tractor lowered, said body affords a receptacle for the transportation of articles, and the wagon may be drawn by said tractor, regardless of said treadmill mechanism.

1,533,652. PREPAYMENT ELECTRIC FAN. GEORGE E. LE COUNT, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Original application filed Aug. 24, 1922, Serial No. 583,960. Divided and this application filed May 24, 1924. Serial No. 715,704. 4 Claims. (Cl. 230—1.)

1. A prepayment electric fan with a hollow pedestal having housed therein an electric switch, coin controlled setting means therefor, a timing gear train, and electric connections between said motor and said switch.

1,533,653. MODULATION. WILLIAM A. MACDONALD, Hartsdale, N. Y. Filed Nov. 12, 1920. Serial No. 423,536. 4 Claims. (Cl. 179—171.)

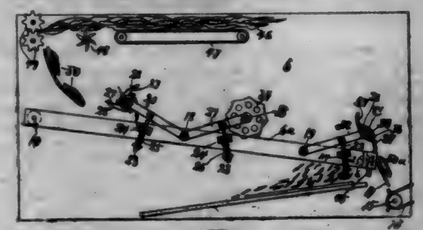


1. In a wave signaling system, means for generating continuous high frequency carrier oscillations, and amplifier for amplifying said carrier oscillations, a source of unidirectional voltage for said amplifier, a variable impedance in series in a direct current circuit with said source of voltage, means for keeping the current from said source substantially constant, and means for varying said impedance in accordance with signals.

1,533,654. MOTOR-OPERATED RAZOR. LAURIER A. MAYNARD, Detroit, Mich. Filed Mar. 13, 1924. Serial No. 699,050. 10 Claims. (Cl. 30—12.)

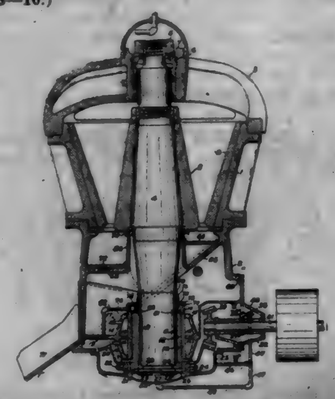
9. A power razor comprising a handle, a blade having a shank in said handle, a power shaft extending into said handle parallel to the blade shank, a power transmission means between said power shaft and said blade shank to support and guide the movement of the entire blade and shank in similar arcuated paths of like amplitude.

1,533,655. SEGREGATED DRIVE FOR PAPER MACHINES AND THE LIKE. WILBUR L. MERRILL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 9, 1920. Serial No. 357,219. 9 Claims. (Cl. 172—236.)



1. An apparatus of the class described wherein a plurality of elements are required to run in fixed but adjustable speed relation, characterized by the fact that motors are arranged to drive said elements and means arranged to be coupled together to run in synchronism are connected to each of said elements, and by the fact that speed adjusting means is provided in at least one of said connections whereby the speed relation of said elements may be varied.

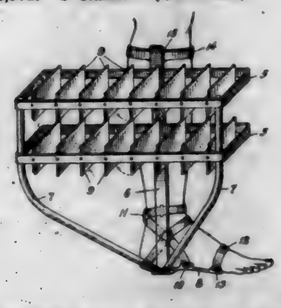
1,533,656. ART OF MAKING ELECTROTYPES. GEORGE WILBUR MULLEN, Flushing, N. Y., assignor to John C. Wiarda & Co., Inc., New York, N. Y., a Corporation of New York. Filed May 6, 1924. Serial No. 711,471. 4 Claims. (Cl. 204—8.)



1. An electrotype comprising a printing surface constituted of a thin metal shell and a backing of type metal and, interposed between the shell and the backing, a thin layer of electrolytically deposited tin in permanent adherence on one of its sides with the metal constituting the shell and on the other side with the type metal backing.

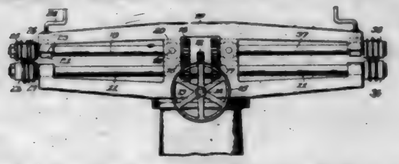
1,533,657. CORN-HUSKING MACHINE. HENRY L. NELSON, Cannon Falls, Minn. Filed Apr. 14, 1924. Serial No. 706,255. 4 Claims. (Cl. 130—5.)

1. In a corn husking machine the combination with inclined husking rollers arranged in pairs, of a series of rollers arranged across the upper sides of the husking rollers and means fixed on the crossing rollers for pressing downward on and moving the corn along the grooves formed by the upper sides of each pair of husking rollers; and springs arranged to impel the crossing rollers downward; said means fixed on the crossing rollers comprising on one roller a series of fixed, radiating, curved and rigid arms each with teeth upon its largest curved face.



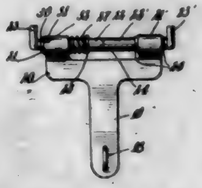
1,533,658. CRUSHER. RAY C. NEWHOUSE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Jan. 3, 1921. Serial No. 434,493. 18 Claims. (Cl. 83—10.)

1. A crusher comprising a shell having a pair of adjacent openings in said shell wall, a bearing disposed in and adapted to transmit crushing stresses to said shell,



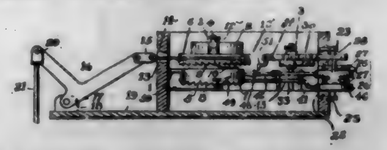
and means including a diaphragm within said shell whereby the crushed material descends upon said diaphragm to said openings in a pair of separately maintained streams.

1,533,650. SWIMMING DEVICE. AXEL W. NILSSON, Port Washington, N. Y. Filed Sept. 21, 1922. Serial No. 589,572. 4 Claims. (Cl. 9—21.)



1. A swimming device comprising a footpiece of less length than the foot it is intended to accommodate and arranged to leave the toes of a swimmer free and unobstructed, a carrying element mounted on said footpiece toward the rear thereof and adapted to extend lengthwise of a leg of the swimmer, hollow rods fixed upon said foot-piece, spaced, rectangular frames carried by said element and rods in approximately perpendicular relation to said element, blades pivotaly mounted in said frames in groups and enclosed thereby, said blades being movable about axes perpendicular to said element, and straps whereby said element and footpiece are detachably secured in place to attach the device to a swimmer.

1,533,660. JIG FOR MAKING PIPE ELBOWS. LEMUEL H. PURNELL, Chicago, Ill., assignor of one-half to Henry G. Goelitz and one-half to Enoch Purnell, both of Oak Park, Ill. Filed Apr. 23, 1923. Serial No. 633,986. 5 Claims. (Cl. 113—37.)



1. A jig for use in cutting off lengths of pipe, comprising a band adapted to be placed about the pipe, means on the band for causing it to grip the pipe, and means on the band for guiding the cutters.

1,533,661. GARMENT HANGER. NICK REMILLONG, Glen Ullin, N. Dak. Filed Dec. 4, 1923. Serial No. 678,416. 2 Claims. (Cl. 45—13.)

2. A garment hanger comprising a body member, a pair of alined rods one of which is rotatably mounted on said body member and the other of which is both rotatably and slidably mounted on said body member, hook elements projecting from the remote ends of said rods, ratchet clutch elements on the adjacent ends of said rod engaged with each other to cause the first named rod to be retained against rotary movement in one direction by the other rod, a stud fixed on the last named rod and engaging in a notch in said body member and adapted to be disengaged therefrom by sliding movement of the rod, and a spring engaged with said last named rod and acting to hold the latter in position with the said ratchet clutch elements engaged with each other and said stud engaged with said notch.

1,533,662. MUSIC-SHEET TURNER. KAY N. RODGERS, Pittsburgh, Pa. Filed Sept. 29, 1923. Serial No. 665,512. 1 Claim. (Cl. 84—510.)

In combination, a device for the purpose set forth comprising a casing provided with a rear bottom extension, a substantially V-shaped operating lever pivotally mounted on said extension and adapted to be connected with a treadle, a pair of annular plates rotatably mounted in the forward end of said casing, each of said plates formed with a peripheral recess and carrying a tuning arm provided at its outer end with a swivelly connected sheet clamping member, each of said plates associated with a spring element for shifting said arm in the clockwise direction, a drum mounted in said casing and capable of rotation in the counter clockwise direction, a disk wheel rotatably mounted in said casing, means carried by said drum and engaging said wheel for intermittently revolving said drum during the operation of said wheel, a flexible member connected with said wheel and with said operating lever for partially rotating said wheel when said operating lever is actuated, a spring element for returning said wheel to the operative position, a pair of trip levers adapted to engage in said recesses of said plates for securing said arms in the initial position, means carried on the periphery of said drum and adapted to engage said trip levers for consecutively releasing said plates for shifting said arms, and means actuated by the rotation of said drum for returning said arms to the initial position, substantially as described and for the purpose set forth.

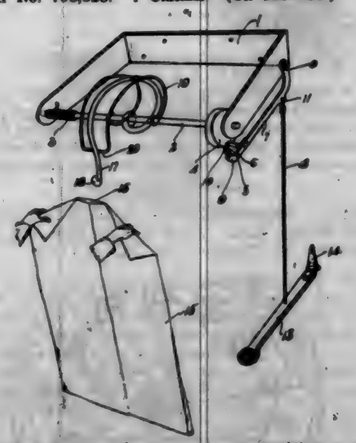
1,533,663. MAN'S NECKWEAR. CHARLES RUBEN, Pittsburgh, Pa. Filed Mar. 24, 1924. Serial No. 701,315. 5 Claims. (Cl. 2—154.)

1. A bow necktie including an interior supporting frame consisting of a resilient metal strip cross-bar having its central portion disposed to extend at right angles with respect to the end portions thereof, and a cylindrical member fixed to each end of said cross-bar, substantially as described and for the purpose set forth.

1,533,664. FINGER-NAIL CLEANER. CHARLES F. SANFORD, New Orleans, La., assignor of one-half to Alma Herbst, New York, N. Y. Filed Nov. 6, 1924. Serial No. 748,021. 1 Claim. (Cl. 132—78.)

A finger nail cleaner comprising a bow of flexible material having greater width than thickness and having slotted ends, a string extending through the slotted ends

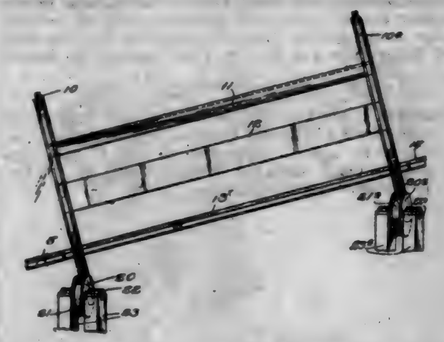
of said bow and provided with knots engaging the outer sides of the latter, a handle having a head portion adapted to be grasped by the user and provided with



a concave portion conforming to the middle portion of the convex side of said bow, and means for securing said bow and handle to one another.

1,533,665. MEANS FOR RETAINING CHECK-VALVE BALLS IN PISTONS. CHARLES F. SCHURINER, Cleveland, Ohio, assignor to The National Steel Barrel Company, a Corporation of Ohio. Filed Apr. 17, 1922. Serial No. 553,852. 3 Claims. (Cl. 103—225.)

1. In a device of the class described, the combination of a piston, the piston being provided with a recess extending from one face thereof, a ball in the recess, said face of the piston having a slot extending from said recess, a finger, and the finger being arranged in the slot and extending over said recess for retaining the said ball therein, substantially as described.

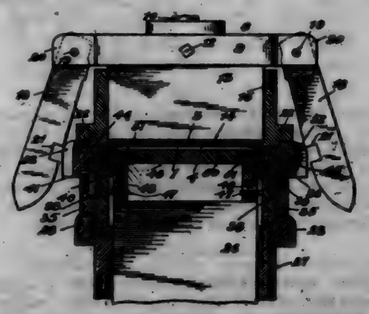


1,533,666. BAG-MOUNTING APPLIANCE. WILLIE A. SHIELDS, Birmingham, Ala. Filed Apr. 23, 1924. Serial No. 708,328. 7 Claims. (Cl. 226—18.)

1. A bag mounter for garments, comprising a spiral mounting wire having a hook at its free end, and means to wind said wire through a paper bag and expose its hook to receive a garment hanger, substantially as described.

1,533,667. CAR DUMPER. GEORGE N. SIMPSON, Chicago, Ill. Filed Mar. 13, 1924. Serial No. 698,898. 4 Claims. (Cl. 214—52.)

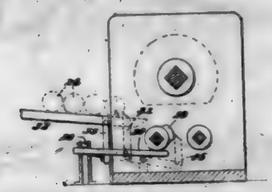
1. A device of the character described comprising an inclined rotatable cage having a ring rail at each end, a pair of supporting wheels carrying each ring rail, the axes of each pair of supporting wheels lying in the



same substantially horizontal plane and converging in the direction toward which the cage is inclined downwardly.

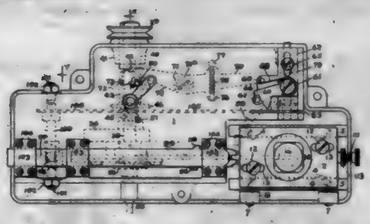
1,533,668. MANUFACTURE OF FOOTWEAR. HARRY H. SMITH, Conimicut, R. I., assignor to Respro Inc., Providence, R. I., a Corporation of Rhode Island. Filed Aug. 15, 1924. Serial No. 732,193. 8 Claims. (Cl. 36—45.)

1. That process of making shoes which comprises providing corresponding inner and outer elements which tend to adhere only under pressure, and simultaneously subjecting said elements to the strain and pressure of lasting whereby they are stretched as a unit, said elements again separating except where united by seams after cessation of the strain and pressure of lasting until subjected to use, whereupon temporary adhesion under the stresses incident to use again occurs.



1,533,669. MACHINE FOR APPLYING BACKS TO MIRRORS. HARRY SOLOMON, New York, N. Y. Filed June 17, 1924. Serial No. 720,671. 7 Claims. (Cl. 153—1.)

1. A mechanism of the class described, comprising a pair of dies adapted to co-operate to partly fold the edges of a metal stiffener and a cover, a support for a mirror, said support having an exterior movable and

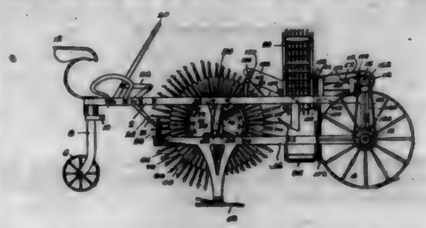


resiliently supported frame provided with an inclined edge adapted to contact with and bend the folded edges of the stiffener and cover, and an inclined edge on the mirror support adapted to co-operate with the inclined edge on the exterior frame to completely fold the edges of the stiffener and cover over the edges of the mirror.

1,533,670. APPARATUS FOR MAKING METALLIC AXLES. CHARLES G. STEELE, Berkeley, Calif., assignor, by mesne assignments, to Jos. I. Finn, Los Angeles, Calif. Filed Apr. 1, 1922. Serial No. 548,751. 14 Claims. (Cl. 80—23.)

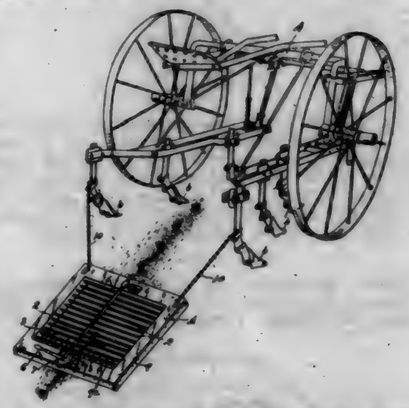
14. A machine for forging billets, including forging members comprising supporting rolls and a pressure roll; gearing associated with the rolls for driving them in predetermined speed relation; one of the rolls having a cut-away portion; mechanism for feeding a billet to the rolls, including a stop member; lever mechanism for actuating the stop member in predetermined relation to the rotation of the rolls, said mechanism including a cam associated operatively with one of the rolls and adapted to actuate the lever mechanism; a pusher member also connected with the lever mechanism and operable thereby to move a billet in timed relation to the movement of the stop mechanism; and an instrumentality including an arm connected with the lever mechanism and operable thereby to positively force a completed billet out of position upon the supporting rolls.

1,533,671. MACHINE TO TEST THE TEETH OF SPUR-GEARS. HERBERT H. STEELE, Syracuse, N. Y. Filed Aug. 19, 1921. Serial No. 493,698. 35 Claims. (Cl. 73—51.)



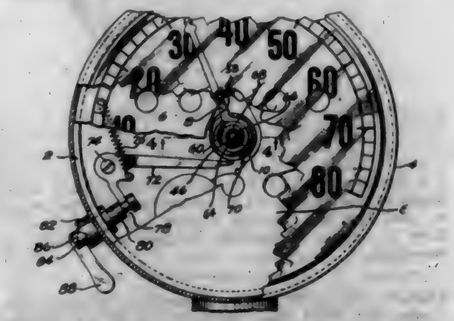
1. In a machine to test a gear tooth, the combination with a movable member provided with a notch conforming to a master tooth profile, of a power driven carrier having a to and fro movement to bring a tooth into co-operation with the movable member and devices controlled by the movable member for stopping the carrier through any error in the form of the tooth.

1,533,672. BEET HARVESTER. JAMES O. STOCKSTILL, Rocky Ford, Colo. Filed July 27, 1923. Serial No. 654,128. 8 Claims. (Cl. 55—108.)



1. In a beet harvester, a rotary member, tubes radiating from said rotary member, and means yieldably mounted in said tubes for picking up beets from the ground.

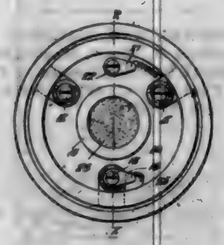
3. In a beet harvester, a rotary member, tubes radiating from said rotary member, rods extending through said tubes and adapted to pick up beets from the ground,



an arm for lifting said rods as they approach the ground at each revolution, and springs for forcibly throwing the rods downwardly when released from said arm.

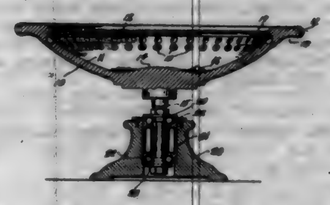
1,533,673. WEEDING ATTACHMENT FOR CULTIVATORS. LOUIS J. STONE, Hallock, Minn. Filed Feb. 3, 1922. Serial No. 533,742. 5 Claims. (Cl. 55—103.)

5. A device adapted to be drawn over a row of plants to remove weeds comprising a flat surface adapted to travel close to the ground and having depending from its undersurface a multiplicity of small short spaced rigid pins, said pins being arranged in close proximity.



1,533,674. SPEEDOMETER. CHARLES W. SVENSON, New Britain, Conn. Filed Nov. 24, 1923. Serial No. 676,738. 11 Claims. (Cl. 264—1.)

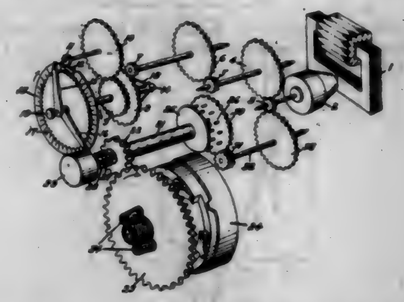
10. A speedometer having, in combination, an indicating member, an indicating member staff, said member and staff having cooperating stops associated therewith,



respectively, for moving said member when said staff is turned in one direction, and a second set of cooperating stops associated therewith, respectively, for moving said member when said staff is turned in the opposite direction, and springs associated with said two sets of stops, respectively, tending to hold said stops in engagement and manually controllable means for holding said indicating member from movement when desired, said stops, springs and member being removable as a unit from said staff.

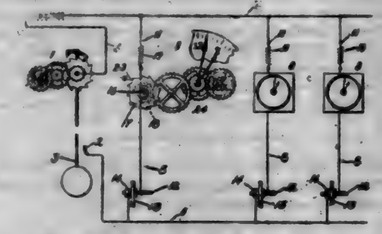
1,533,675. MICROPHONE. ALBERT THOMAS, Paris, France. Filed Aug. 11, 1920. Serial No. 402,778. 3 Claims. (Cl. 179—122.)

1. A microphone transmitter comprising a member adapted to be vibrated by sound waves, a body of loose conducting material engaged by said member and forming a plurality of contacts, and means whereby said contacts are protected from injury, said means comprising a discharge resistance connected to bridge said contacts.



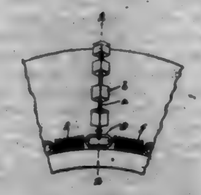
1,533,676. GAME. THOMAS THOMANS, Bridgeport, and ERNEST L. WHITNEY, Stratford, Conn. Filed Apr. 22, 1924. Serial No. 708,103. 4 Claims. (Cl. 273—110.)

1. A game comprising a receptacle having a concave interior surface, one or more balls in said receptacle, said receptacle being provided with a plurality of depressed pockets arranged about the same adjacent its upper edge adapted to receive the balls, said receptacle being also provided with a convex centrally arranged hump projecting above the bottom thereof, and means whereby the receptacle may be rotated.



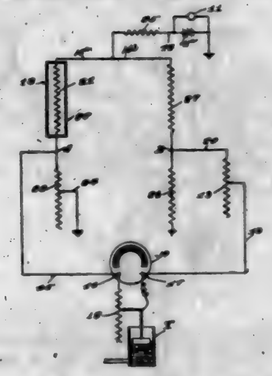
1,533,677. MOTOR-OPERATED TIME SWITCH. HENRY E. WARREN, Ashland, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 25, 1921. Serial No. 510,232. 9 Claims. (Cl. 200—38.)

1. A time switch comprising in combination a continuously rotating motor, a time element driven thereby, a circuit controller, operating means for said controller adapted to be driven by said motor through a train of gears, one of said gears being movable to a position to interrupt said train, means controlled by said time element for allowing said movable gear to move into driving position at predetermined different times, and



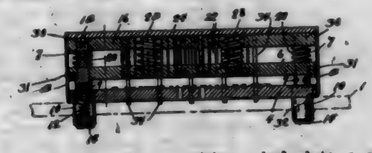
means dependent upon the subsequent operation of said controller for moving said gear out of said driving position.

1,533,678. ELECTRIC CLOCK SYSTEM. HENRY E. WARREN, Ashland, Mass., assignor to Warren Clock Company, a Corporation of Maine. Filed Sept. 27, 1922. Serial No. 590,968. 8 Claims. (Cl. 58—24.)



1. An electric clock system comprising an electric circuit, a master clock, a secondary clock, an escapement for said secondary clock, a thermal responsive electric conductor in said circuit for controlling the operating of said escapement and means controlled by said master clock for periodically energizing said circuit.

1,533,679. TRACTION GRIP FOR TIRES. RALPH C. WEBSTER, Haverhill, Mass. Filed Jan. 31, 1923. Serial No. 616,001. 14 Claims. (Cl. 152—14.)



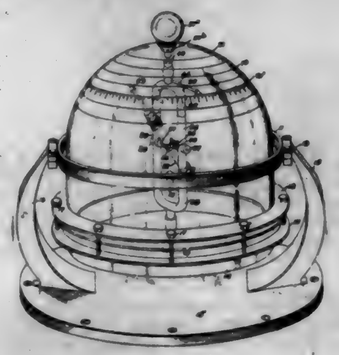
1. A traction grip for tires comprising essentially a block and a tying member arranged to hold said block against the outer surface of the tire, the block having a protuberant face next to the tire on which it is adapted to rock in a manner permitting movement of a side edge of the block away from the tire, whereby to increase the surface of the block opposed to soft ground material in which the tire may be embedded.

1,533,680. ELECTRICALLY-ACTUATED GAUGE. OSCAR WIEDERHOLD, Philadelphia, Pa. Filed Feb. 21, 1923. Serial No. 620,543. 3 Claims. (Cl. 177—351.)

1. A means for determining the contents of the fluid fuel containers of vehicles including a variable source of electro-motive force, a circuit including the source having parallel branches, each branch containing a main resistance and a secondary resistance, an electrically operated gauge, a connection between each of the branches of said circuit and a terminal of said gauge connected with each branch intermediate the resistances thereof, and a float operated rheostat shunting said gauge and connecting the terminals thereof, said main resistances being of different values, one of said main resistances consisting of a wire having a temperature coefficient of resistance maintaining a substantially constant voltage in the connection between said branches.

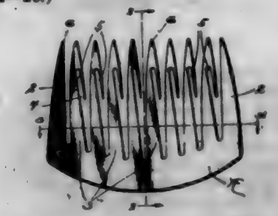
1,533,681. TIP-PERFORATING MACHINE. FRANK F. WITHUS, Newport, N. H. Filed Jan. 12, 1923. Serial No. 612,300. 2 Claims. (Cl. 164—118.)

1. A perforating die comprising a bed plate, a clamping plate and a head plate disposed thereover, one above the other in parallel relation thereto, each plate having a series of perforations therethrough in registering relation, a series of guide posts connected to said head plate and extending through and slidable in said clamping and base plates, said posts having stop shoulders for engaging the under sides of said clamping plate to limit its movement from said head plate, clamping springs interposed between said head and clamping plates and normally holding said clamping plate against said shoulders, adjusting screws connected to said bed plate, lifting springs interposed between said screws and the lower ends of said guide posts, means to limit the extent of separation of said base and clamping plate by said lifting springs and punch rods mounted in the perforations of said head plate and extending into the perforations of said clamping plates.



1,533,682. ASH RECEIVER. WALTER J. WOTWOT, Chicago, Ill., assignor of one-half to Hugo Zacseck, Chicago, Ill. Filed June 13, 1924. Serial No. 719,793. 8 Claims. (Cl. 131—51.)

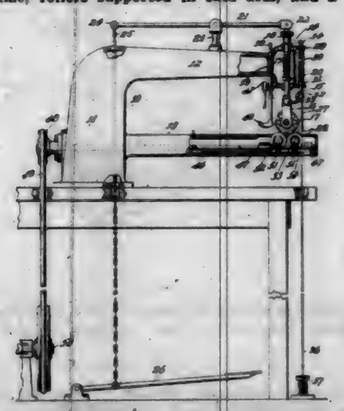
1. A receptacle for the purpose set forth, comprising a casing containing an inlet, and means closing said inlet comprising a closure-element supported to be movable into and out of a position for closing said inlet, and



means yieldingly forcing said closure-element into sliding engagement with the portion of the wall of said casing containing said inlet.

1,533,683. COMPASS AND MAGNETIC DIP INDICATOR. CHARLES G. ABBOT, Washington, D. C., assignor to General Electric Company, a Corporation of New York. Filed Oct. 27, 1921. Serial No. 510,802. 11 Claims. (Cl. 33—204.)

1. A compass and magnetic dip indicator comprising a vessel, a liquid contained in said vessel, a magnetic needle supported in said liquid so as to be free to take up a position in the direction of the earth's magnetic field, and bearings for said needle for defining its movements about definite axes.

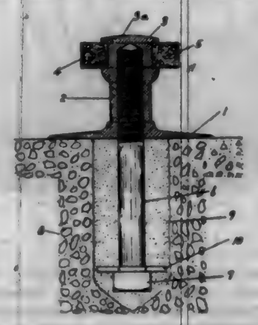


1,533,684. COMB. EDWIN A. ABBEL, Berkeley, Calif. Filed May 10, 1924. Serial No. 712,234. 4 Claims. (Cl. 132—26.)

1. A comb comprising a head member, a pair of end teeth projecting therefrom, a plurality of intermediate teeth, and hooks formed in the intermediate teeth at their outer ends and in the sides thereof.

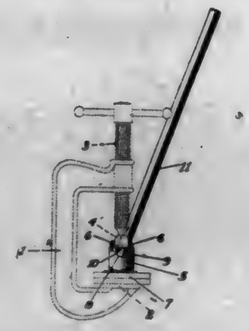
1,533,685. CLOTHING-SEAM-PRESSING MACHINE. FRANK W. BAILEY and MAX WEINBERG, St. Louis, Mo. Filed Oct. 21, 1920. Serial No. 418,427. 7 Claims. (Cl. 68—9.)

1. A clothing seam pressing machine comprising a frame, a stationary overhanging head, a garment supporting arm formed integral with and extending from the frame, rollers supported in said arm, and a heated



ironing roller, located above the arm and supported in the overhanging head to contact with a garment for ironing out the seam, substantially as specified.

1,533,686. METHOD OF OPERATION OF REFUSE DESTRUCTORS AND MEANS FOR PRACTICING SAME. ROBERT BALMER, Toronto, Ontario, Canada. Filed July 22, 1922. Serial No. 576,690. 31 Claims. (Cl. 110—8.)

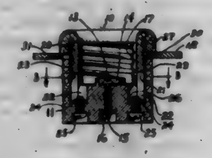


1. The method of operation of refuse destructors consisting in burning the refuse in a primary combustion chamber, leading the gaseous products of combustion therefrom to a second chamber, and there separating the inorganic matter suspended in said products from the gases thereof while maintaining the temperature in said chamber approximately at the combustion point of said gases and slightly below the fusion point of said matter.

1,533,687. DOORSTOP. KENNETH H. BECK and EDWARD H. BLACKBURN, Pittsburgh, Pa. Filed Apr. 28, 1924. Serial No. 709,341. 4 Claims. (Cl. 16—86.)

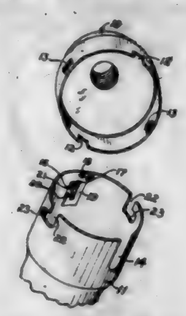
1. A stop structure for doors comprising an anchoring bolt set into a floor with its threaded portion extending above the surface thereof, an integral stop member tapped throughout approximately its entire vertical extent to receive the threaded portion of said bolt, and a washer of yielding material on said stop member.

1,533,688. EXCESS-PRESSURE ATTACHMENT FOR CLAMPS. LOUIS T. BERGH, Fairoaks, Calif. Filed May 12, 1924. Serial No. 712,772. 7 Claims. (Cl. 144—304.)



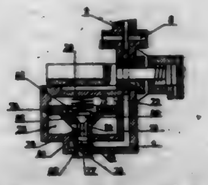
1. An excess pressure attachment for screw clamps including a head adapted to be placed between the head and foot pad of the clamps, said heads normally abutting, and means applicable to said first named head for separating the heads.

1,533,689. MAKING REFRACTORY ARTICLES AND THE LIKE. ANSON GARDNER BETTS, Kinderhook, N. Y. Filed Sept. 9, 1922. Serial No. 587,241. 4 Claims. (Cl. 18—47.5.)



1. Process of making a refractory article which consists in molding comminuted refractory acid-insoluble material with an aqueous aluminum salt, in a metal mold, heating mold and contents driving off volatile matters, forming the contained mix to a solid physically-dry article, and separating the same from the mold.

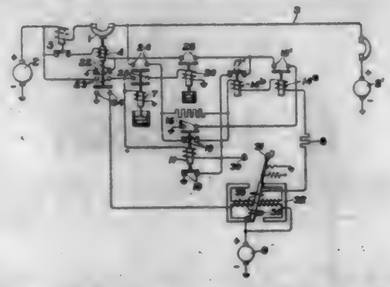
1,533,690. ELECTRIC RECEPTACLE. TOMJES A. BOTH, Stratford, Conn., assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 24, 1920. Serial No. 376,290. 8 Claims. (Cl. 173—339.)



2. An electric receptacle comprising an insulating body member provided with a recess leading from one side thereof, lamp contacts including a screw shell mounted in said recess, a threaded securing element also mounted in said recess and extending longitudinally of said shell, and a clamping ring provided with a flange for clamping a plate to said body member and provided with an externally threaded substantially cylindrical body portion extending between the shell and the securing element and having threaded engagement with said element to secure the ring to the body member.

1,533,601. SOCKET SHELL OR CASING. TONJES A. BOTH, Stratford, Conn., assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed July 29, 1920. Serial No. 399,751. 4 Claims. (Cl. 173—362.)

1. A shell comprising two members one of which is adapted to be inserted in the other, one of said members being provided with an opening, the other member having slits and the wall between the slits projecting laterally, and a spring latch having a portion thereof inserted under said projecting wall and another portion being bowed with the curved portion of the bow projecting into said opening.

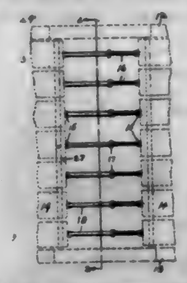


1,533,692. ACCELERATOR. DOBRIVOJE BOŽIĆ, Belgrade, Yugoslavia. Filed Nov. 5, 1923. Serial No. 672,965. 4 Claims. (Cl. 303—82.)

1. The combination, with a train-pipe normally containing fluid under pressure, of a casing, a chamber within said casing, a piston within said chamber dividing the same into upper and lower compartments, a spring acting to depress said piston, and a hollow stem for said piston extending down through the bottom wall of said lower compartment, and being formed at its lower end as a valve to control a port in the bottom wall of the casing, said hollow stem having ports communicating with said lower compartment through which the air therein can escape into said hollow stem and thence into the upper compartment on the operation of the device, and also having ports communicating with a passage located between the chamber and the casing which passage is connected with the train-pipe, and a branch of which passage communicates with the upper compartment of the chamber.

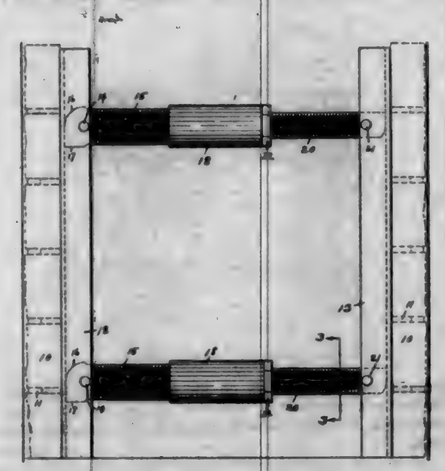
1,533,693. AUTOMATIC RECLOSING CIRCUIT-BREAKER SYSTEM. ERNEST C. BRITTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 2, 1924. Serial No. 710,673. 9 Claims. (Cl. 175—294.)

1. In an automatic reclosing circuit breaker system wherein a circuit breaker is arranged to connect a source of current to a load circuit under stub end and multiple feed conditions thereof, the combination of a low voltage auxiliary source of current arranged to be connected across said load circuit when said circuit breaker is open, and means for reclosing said circuit breaker when the current through said auxiliary source decreases below a predetermined value under the stub end feed condition



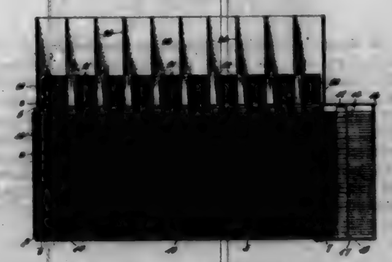
of said load circuit and increases above a predetermined value under the multiple feed condition of said load circuit.

1,533,694. MAP HOLDER. GEORGE A. CHAPMAN, Minneapolis, Minn. Filed Jan. 8, 1923. Serial No. 611,441. 4 Claims. (Cl. 129—20.)



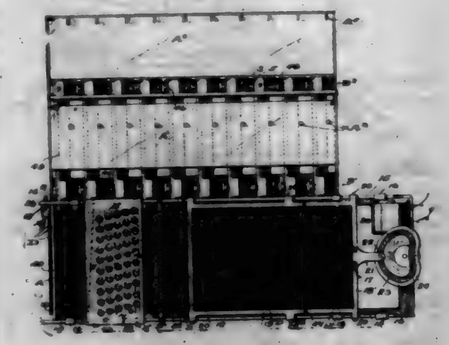
1. A map holder comprising a sheet folded along parallel lines to form a series of sections, a map folded to receive one edge of said sheet and also folded to correspond to the folds of the sheet sections, and means for holding the map in place on said sections.

1,533,695. GREEN-FRUIT BRACE. SIDNEY L. CONLAN and HERBERT F. PLOUGH, Inglewood, Calif. Filed Dec. 20, 1923. Serial No. 683,430. 4 Claims. (Cl. 105—369.)



1. A plurality of spaced green fruit braces adapted to be placed longitudinally in the doorway of a fruit car between boxes piled at each end of the car, each of said braces having, in combination, a pair of upright channel members; a plurality of vertically spaced braces hinged at each end between said channels, each of said braces including a hollow pedestal hinged to one of the uprights; a screw telescoping into said pedestal; a nut on said screw touching said pedestal; and hinges joining said channels to said pedestal and screw, said hinges having stop means on opposite sides thereof adapted to permit all of the braces to fold in one direction only.

1,533,696. FRUIT-BOX BRACE. SIDNEY L. CONLAN, Oakland, and HERBERT F. PLOUGH, Inglewood, Calif. Filed Apr. 7, 1924. Serial No. 704,608. 1 Claim. (Cl. 105—369.)



A fruit brace having, in combination, a pair of upright channel members adapted to be nailed between the boxes of fruit stacked in the ends of a car, said members having their channel sides facing each other; pairs of tubular members between said channels, said tubes having a large diameter internal thread almost their entire length and a small diameter internal thread at one end thereof; screws hinged to one of said channels threading into the smaller threaded openings of said tubular members; a pair of externally threaded tubes hinged to the opposite channel and screwing into the larger openings in said first mentioned tubular member, said last mentioned tubular member having an opening large enough to receive said screw member.

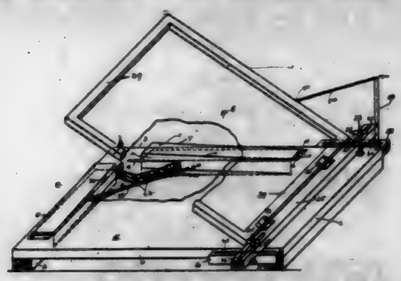
1,533,697. SORTING MACHINE. GEORGE W. COX, Jr., Washington, D. C., assignor to National Assorting Company, Washington, D. C., a Corporation of Delaware. Filed May 6, 1922. Serial No. 559,020. 73 Claims. (Cl. 129—16.1.)

2. The method of sorting a multiplicity of promiscuously arranged papers into a plurality of appropriate groups which consists in simultaneously providing paper-receiving spaces in each group and then inserting the appropriate paper in proper place in its appropriate group.

1,533,698. SORTING MACHINE. GEORGE W. COX, Jr., Washington, D. C., assignor to National Assorting Company, Washington, D. C., a Corporation of Delaware. Filed May 13, 1924. Serial No. 713,089. 56 Claims. (Cl. 129—16.1.)

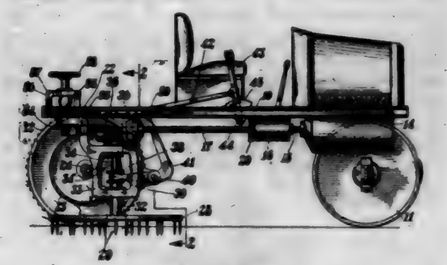
1. A sorting machine provided with a plurality of movable separator elements, and power-actuated mechanism adapted to selectively move any one of said elements.

1,533,699. ELECTRICAL SWITCH MECHANISM. ALFRED CARLYLE DAY, Melbourne, Victoria, Australia. Filed Feb. 14, 1923. Serial No. 618,978. 1 Claim. (Cl. 200—168.)



In electrical switch mechanism in combination a chamber casing having a front which is closed except for two spaced openings, the material around each opening being raised to accommodate projecting portions of the mechanism, a primary switch located in said casing and a portion thereof extending through one of said openings, subsidiary circuit mechanism also located within said casing and a portion thereof projecting into the raised portion and through said other opening, an insulating support overlying the latter mentioned raised portion on the inside of the casing, and spring contact fingers carried by the insulating support and adapted to co-operatively co-act with said primary switch and said subsidiary circuit mechanism.

1,533,700. CARD-REGISTERING MACHINE. CARROLL WALLACE DERBY and MARION PHILLIPS, Portland, Oreg., assignors of one-fifth to J. T. Loofbourow, one-fifth to J. G. Meeks, and one-fifth to E. D. Howe. Filed Sept. 27, 1920. Serial No. 413,055. Renewed Mar. 12, 1925. 9 Claims. (Cl. 101—126.)



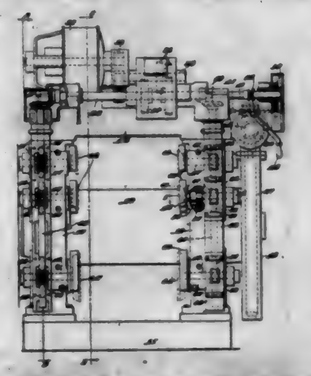
1. In a device of the class described, the combination with a rectangular bed-plate, of two disappearing guide members operatively disposed in parallel relationship.

respectively, to two adjacent edges of the bed-plate, said guide members each provided with means engaging the

top of the bed-plate for limiting their downward movement, said means being adapted to substantially coincide with the plane of the top of the bed-plate.

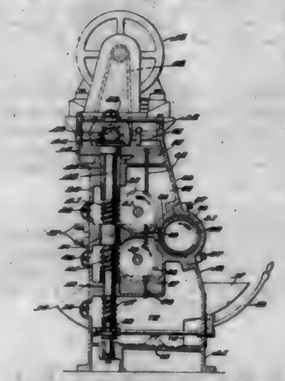
1,533,701. HARROW. MICHAEL EVANUK, New York, N. Y. Filed July 17, 1924. Serial No. 726,464. 3 Claims. (Cl. 97—48.)

1. A harrow comprising a truck, a bracket hinged to said truck, a circular harrow, a shaft on which said harrow is mounted, said shaft being supported by said bracket, means for rotating said shaft, and means for angularly adjusting said bracket on said truck.



1,533,702. CONCEALED CLASP. BERNARD GERLA, New York, N. Y. Filed July 6, 1923. Serial No. 649,827. 5 Claims. (Cl. 24—85.)

2. A tie clip comprising a flat strip of metal doubled upon itself to form an intermediate reach and two outer reaches, one of the outer reaches being pointed to form a pin, the other outer reach projecting at its free end beyond the adjacent end of the intermediate reach, said free end being in the form of an outwardly curved lip, and a safety catch in the form of a tongue struck out from said intermediate reach for engaging the free end of said pointed reach.

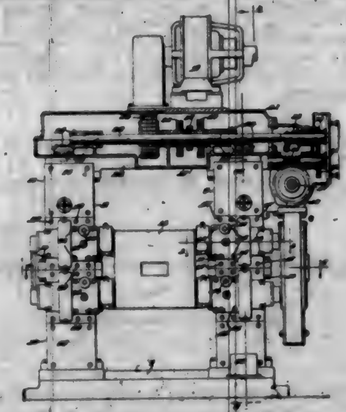


1,533,703. DRUM-TYPE MILLING MACHINE. JOHN R. JOHNSON, Rockford, Ill., assignor to The Ingersoll Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Oct. 17, 1921. Serial No. 508,340. 30 Claims. (Cl. 90—20.)

1. A drum type continuous milling machine comprising, in combination, a rigid frame structure including laterally spaced upright housings, vertically spaced spindles journaled in bearings within each housing disposed adjacent to the front thereof and adapted to carry roughing and finishing surface milling tools, a rotary work-carrying drum interposed between and

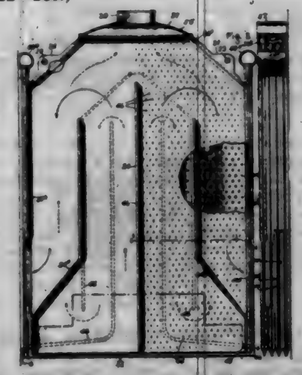
mounted on the housings on an axis intermediate the spindles and adjacent to the rear of the machine, and mechanism for continuously rotating the spindles and drum.

1,533,704. DRUM-TYPE MILLING MACHINE. JOHN R. JOHNSON, Rockford, Ill., assignor to The Ingersoll Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Oct. 17, 1921. Serial No. 508,341. 32 Claims. (Cl. 90—20.)



1. A drum type milling machine, comprising, in combination, an integral frame structure including laterally spaced upright hollow column housings joined by a base portion and a hollow top portion and shaped at its top to provide an interior oil reservoir, a rotary work-carrying drum and tool spindles mounted on the housings, mechanism for rotating the drum and spindles, and means providing a circulation of oil from said reservoir down through the housings for lubricating said mechanism and parts driven thereby.

1,533,705. DRUM-TYPE MILLING MACHINE. JOHN R. JOHNSON, Rockford, Ill., assignor to The Ingersoll Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Nov. 8, 1921, Serial No. 513,843. Renewed Dec. 10, 1924. 9 Claims. (Cl. 90—20.)



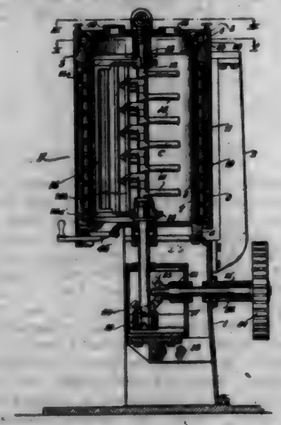
1. In a milling machine, in combination, a housing having a front opening; a spindle-driving worm in the housing in registration with said opening; a spindle unit

comprising a tool spindle, a saddle in which the spindle is mounted for rotation, and a worm gear concentric and in driving connection with the spindle; and means for removably securing the spindle unit on the front of

the housing in which position the spindle worm gear extends through said opening and meshes with the spindle-driving worm and from which position the spindle unit is removable independently of the worm.

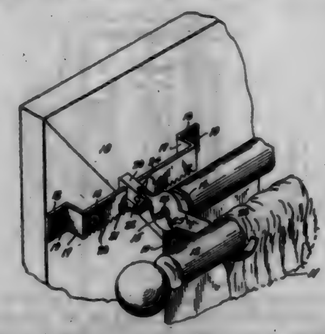
1,533,706. BOILER. LOUIS C. LOEWENSTEIN, Lynn, and HARVEY N. DAVIS, Cambridge, Mass., assignors to General Electric Company, a Corporation of New York. Filed Mar. 22, 1919. Serial No. 284,383. 6 Claims. (Cl. 122—260.)

1. In a boiler, the combination of a casing, a plurality of grids each comprising a pair of sheets of thin metal united along their edges, separators between the sheets forming definite liquid and vapor spaces, means separating the grids to form passages for the flue gases, a super-heater into which the grids discharge vapor, and which is supported by the grids and heated by the flue gases, means for supporting the grids within the casing, an inlet for feeding liquid to each of the grids, and an outlet for the vapor which communicates with the super-heater.



1,533,707. SHUTTLE GUARD FOR LOOMS. PHILIP NATHANSON and JACOB SONTAG, Allentown, Pa. Filed Apr. 16, 1924. Serial No. 706,812. 2 Claims. (Cl. 139—198.)

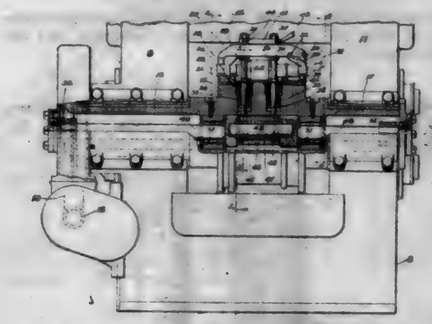
1. A shuttle guard of the character designated, formed with a plurality of longitudinal bars rigidly attached to end members slidably mounted on brackets secured to the reed cap and all movable in unison, said brackets, and gravity latch means interposed between said brackets and said slidable members of the guard, one side of



the guard being capable of being raised independently of the other side, substantially in the manner and for the purpose set forth.

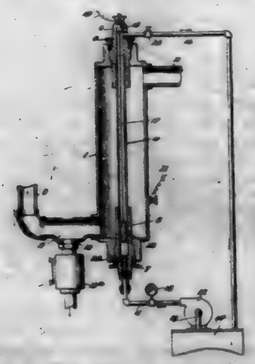
1,533,708. ICE-CREAM FREEZER. LEROY S. PROUTS, Canton, Ohio. Filed Sept. 23, 1924. Serial No. 739,310. 6 Claims. (Cl. 62—174.)

1. The method of making ice cream and the like in a freezing chamber, which consists in introducing a gas into the freezing chamber to displace air therefrom, then introducing liquid ingredients into the chamber and freezing the same therein.



1,533,709. SUPPORTING BRACKET. ANDREW SAKSA, Bridgeport, Conn. Filed May 9, 1923. Serial No. 637,782. 6 Claims. (Cl. 156—24.)

5. In an article supporting device, a substantially flat bar placed on edge and provided with a plurality of notches in its lower edge, means for mounting the bar, a block provided with a transverse slot adapted to receive the upper edge of the bar, and an article support pivoted to the block and supported thereby, said



support being provided with a portion extending under the bar and adapted to seat in the notches in the lower edge thereof and be held therein under action of the article supported.

1,533,710. AUTOMATIC WORK FIXTURE. WILLIAM C. SPROUL, Rockford, Ill., assignor to The Ingersoll Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Jan. 10, 1921. Serial No. 438,402. 26 Claims. (Cl. 90—59.)

1. In a machine of the character described, in combination, a frame having laterally spaced side housings, a work-carrying drum interposed between said housings and having cylindrical ends journaled thereon, means for rotating the drum, a pair of locating rings axially spaced on the drum having circumferentially spaced work seats, clamps for holding the work down on said seats, radially disposed clamp bolts held in the drum and connected to the work clamps, a coil compression spring on each bolt operative against the work drum for moving its bolt inwardly to clamp the work, an eccentric cam within the work drum, and each clamp bolt having a follower at its inner end adapted to ride on said cam and to be operated thereby for releasing its clamp from the work.

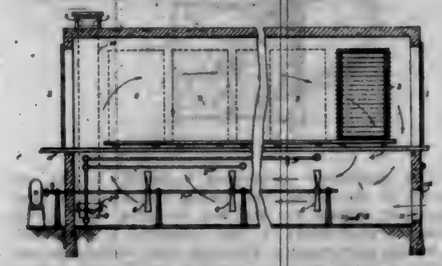
1,533,711. APPARATUS FOR AND PROCESS OF TREATING WITH HIGH-TENSION CURRENTS. EMBRIDGE W. STEVENS, Baltimore, Md., assignor to The Petroleum Hydrogenation Company of America, Incorporated, Wilmington, Del., a Corporation of Delaware. Filed Nov. 20, 1924. Serial No. 751,130. 38 Claims. (Cl. 204—24.)

1. In an apparatus of the class described, a device for containing gases and electrodes connected with the poles of a source of high potential current, one of said electrodes being insulated.

1,533,712. STEEL ALLOY. BENNO STRAUSS, Essen-Bredeney, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed July 17, 1923. Serial No. 652,128. 1 Claim. (Cl. 75—1.)

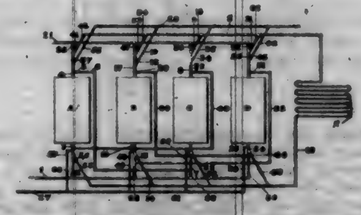
As a composition of matter for use in manufacturing articles requiring a high resistibility against corrosion by ammonium-chloride solutions, a steel alloy containing 18 to 24 per cent of chromium, 7 to 20 per cent of nickel, 2 to 6 per cent of copper and 0.1 to 0.4 per cent of carbon.

1,533,713. HELICOPTER MECHANISM FOR FLYING MACHINES. FRANK TATAY, New York, N. Y. Filed Apr. 10, 1924. Serial No. 705,485. 5 Claims. (Cl. 244—16.)



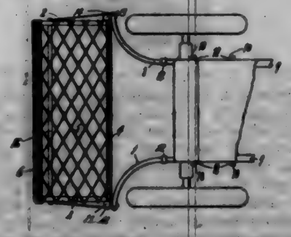
2. A flying machine having a pair of paddle wheels arranged on axes transverse to the machine, fixed housings covering the rear halves of the said wheels and rotary housings adapted to cover to varying extents the front halves of said wheels, and means for adjusting said housings either independently of one another or in unison, including gear teeth formed on said housings, a pair of shafts having gear connections with the respective gears on the housings, gears on said pair of shafts, a third shaft located between said pair of shafts, and gears on said third shaft adapted to selectively engage the gears on the said pair of shafts.

1,533,714. MULTIPLE-FUSE PLUG. WILLIAM H. TAYLOR, CHARLES W. DOWNS, and JACOB W. BARBEY, Detroit, Mich. Filed May 6, 1922. Serial No. 559,075. 10 Claims. (Cl. 200—125.)



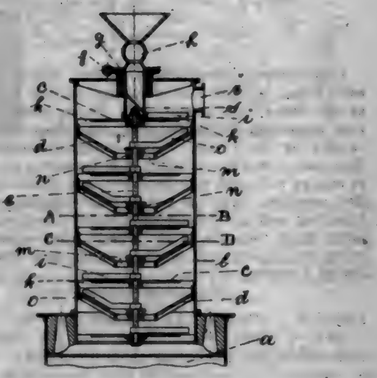
1. In a fuse plug, a body of insulating material having a central longitudinal aperture and a series of longitudinal apertures spaced radially thereabout, the lower end of the body being provided with a series of notches arranged radially between the central aperture and the series of apertures, a transparent disc cemented on the upper face of the body and covering the apertures therein, a series of fuse elements each having an end extending into one of the notches of the body, the said fuse elements each extending upwardly into one of the series of apertures and being provided with a portion of least current capacity adjacent the transparent disc, a metal shell secured to the body, the opposite ends of the fuse elements being secured to the said shell, a foldable paper member closing the apertures of the body to the shell, a rod extending upwardly through the central aperture and having a pointer on the upper end thereof indicating the fuse element in the circuit, the lower end of the rod being return bent and adapted to contact the ends of the fuse elements in the notches of the body, and a spring holding the return bent end of the rod in contact with the respective fuse element.

1,533,715. PROGRESSIVE DRY KILN FOR LUMBER. HARRY DONALD TIEMANN, Madison, Wis., dedicated, by mesne assignments, to the Citizens of The United States of America. Filed May 23, 1924. Serial No. 715,450. 6 Claims. (Cl. 34—16.) (Granted under the act of Mar. 3, 1883, 22 Stat. L. 625.)



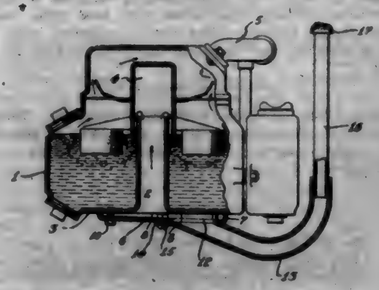
1. In a progressive dry kiln arranged for flatwise cross-piling or for edgewise end- or cross-piling of lumber, fans without housing placed beneath the lumber in such a manner as to accelerate the endwise circulation of air in the kiln, and means for rotating the fans.

1,533,716. PROCESS AND APPARATUS FOR THE RECOVERY OF GASEOUS VAPORS. CLYDE LEONARD VORESS, VERNON CHARLES CANTER, and ROBERT WALFRED SKOOG, Charleston, W. Va. Filed Nov. 12, 1924. Serial No. 749,465. 11 Claims. (Cl. 183—114.6.)



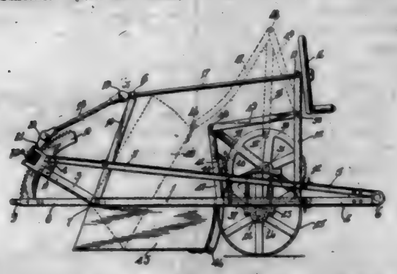
1. A process for the extraction of gaseous vapors from gas mixtures which consists in a multiple step system, each step having the successive parts of absorption of recoverable vapors in a solid absorbent displacement absorbed vapors by distilling vapors and cooling with the lighter vapors carried along with the residue vapors from the previous absorption in multiple successive contacts, wherein forced cooling by conventional means is resorted to between each of the last mentioned successive multiple contacts.

1,533,717. SAFETY DEVICE FOR AUTOMOBILES. WILLIAM P. WILLIAMSON and AUSTIN C. QUIMBY, Ludlow, Mass. Filed Dec. 17, 1924. Serial No. 756,463. 7 Claims. (Cl. 293—44.)



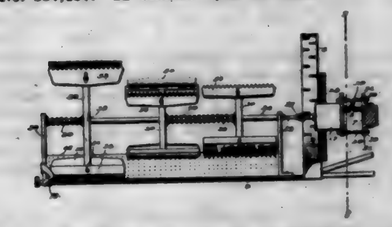
1. As an improved article of manufacture, a safety device, for automobiles, comprising arms which are adapted to be attached to the frame of an automobile, flexible members attached at their ends to said arms and forming a yielding back, side-pieces pivotally connected at their rear ends with said arms, flexible material attached at its ends to said side-pieces to form a yielding platform, and means to support in an approximately horizontal position said side-pieces from said arms.

1,533,718. DEVICE FOR DEFLECTING, OPENING, AND CRUSHING FUEL, OR MATERIAL IN A RETORT ABOVE A GAS PRODUCER. THOMAS ROLAND WOLLASTON, Manchester, England. Filed Oct. 22, 1923. Serial No. 670,028. 2 Claims. (Cl. 202—9.)



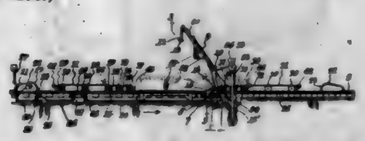
1. In a continuously carbonizing retort mounted in gas communication with a gas producer, and provided with fixed floors or stages alternate peripheral and central apertures therein and movable ploughs adjacent to said stages, movable material-crushing members at such central apertures and gearing and connections operating said ploughs and crushing members, substantially as herein set forth.

1,533,719. INTAKE ATTACHMENT FOR AIR WASHERS. MILLARD O. WOOLF, Oatville, Kans. Filed Nov. 26, 1921. Serial No. 517,881. 1 Claim. (Cl. 261—1.)



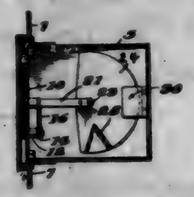
In an air-washer provided with a liquid-containing casing having an air-inlet, an intake-attachment comprising a plate having extending flanges and secured to the liquid-containing casing adjacent the air-intake so as to form a chamber between itself and the said casing and communicating with the air-intake, and a conduit associated with the plate so as to communicate with said chamber and extending to a point remote from the air-intake.

1,533,720. SCRAPER. PHILIP C. ANDERSON, Rapid City, S. Dak. Filed Apr. 30, 1923. Serial No. 635,746. 6 Claims. (Cl. 37—126.)



1. A scraper comprising a frame, wheels secured to said frame, a draw bar pivotally secured to the frame at the front end thereof, said frame having an extension projecting forwardly above the draw bar, a bucket carried by the frame, a rack-quadrant secured to said draw bar, a worm carried by said extension and arranged to engage with said rack-quadrant, and means for rotating the worm to cause a relative movement between the draw bar and the extension, whereby the frame is oscillated about the axis of the wheels, thus raising or lowering the bucket said worm locking said frame in adjusted position.

1,533,721. MOWER ATTACHMENT. ROY CLARENCE BECTON, Dyer, Tenn. Filed Apr. 29, 1922. Serial No. 557,437. 11 Claims. (Cl. 56—207.)



1. An attachment for mowers comprising a reel inclusive of an axle and a series of arms mounted loosely on the axle, driving members mounted on said axle, said arms being formed with shoulders adapted to be engaged by said driving members to establish a driving connection between said arms and said axle, and a spring urging said shoulders into engagement with said driving member, and brushing members carried by said arms.

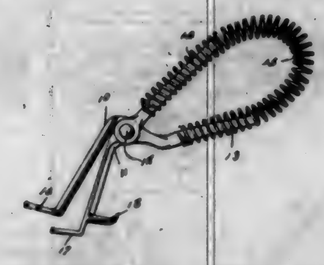
1,533,722. RAILWAY-CROSSING GATE. THOMAS MITCHELL BLACKWELL, Basic City, Va. Filed Nov. 22, 1924. Serial No. 751,635. 4 Claims. (Cl. 246—293.)

1. A gate operating mechanism including a gate supporting shaft, a disk eccentrically mounted on the shaft and having a notch portion, a latch member disposed within the notched portion for holding the shaft normally against movement, train controlled means for operating the latch member to release the shaft to permit the gates supported thereby to move to their active positions, and gate controlled means for returning the shaft and gates to their normal positions.

1,533,723. GRADOMETER. LEON M. BROWN, Spokane, Wash. Filed Feb. 15, 1924. Serial No. 693,079. 7 Claims. (Cl. 33—215.)

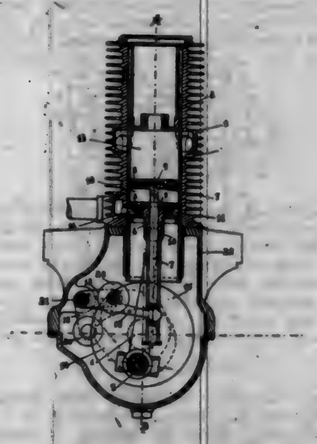
1. A gradometer comprising a casing, a dial connected to the casing and having graduations, a shaft extending through the dial and having a hand playing over the graduations, a gear connected to said shaft, a second gear meshing with said first named gear and having a radial extension, a spring arm pressing against said extension, and a weighted operating member having connection with said spring arm for operating the same.

1,533,724. FITTING FOR CONNECTING TOGETHER PARTS OF WOODEN STRUCTURES AND THE LIKE. WILLIAM HENRY CLARKE-JAMES, London, England. Filed Oct. 16, 1922. Serial No. 595,012. 1 Claim. (Cl. 20—92.)



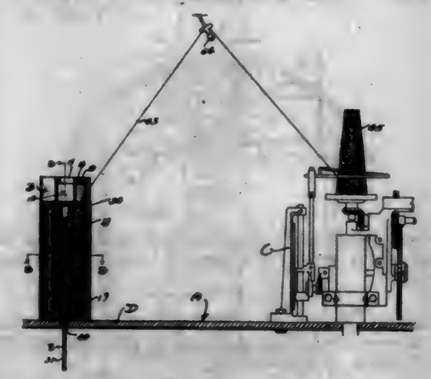
A fitting for connecting together parts of wooden structures comprising a bracket secured to one part to be connected and a clip adapted to be secured to the other part, the bracket comprising vertical spaced members, the front one being a rectangular plate and having attached to its back surface a smaller member of a wedge shaped tongue formation which flares downwardly and outwardly from its top end and the clip consisting of a front plate having formed therein a flared slot corresponding to the shape and disposition of the flaring tongue and provided with means for keeping the said tapered slot portion spaced from the surface to which the clip is secured, as set forth.

1,533,725. SASH OR SCREEN LOCK. FRED M. DAVENPORT, Los Angeles, Calif. Filed May 10, 1923. Serial No. 637,968. 7 Claims. (Cl. 292—256.)



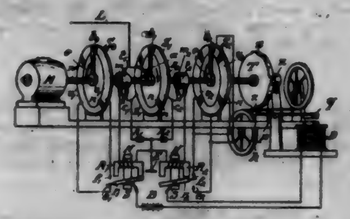
1. A double sash lock comprising a box having a bottom for attachment to a support, a side for mounting, a clamping screw, a second side rigid with the bottom and opposite the first side, there being an opening through the bottom, a shoe fitting in the opening against the side and having a laterally extending tongue, a set screw mounted through the side and engaging the shoe, a central tongue having flanges resting upon the first tongue and extending through the opening in the bottom so as to form two spaces for the reception of sash frames and so as to grip and lock the sash frames by manipulation of the set screw.

1,533,726. COMBINATION LIFTER. BENJAMIN F. DAVIS, Plainview, Tex. Filed Sept. 6, 1924. Serial No. 736,307. 1 Claim. (Cl. 294—18.)



In a device of the character described, a pair of angular members pivoted in cross relation and connected at one end by a coil spring telescoped thereonto and defining a handle, the other end of said angular members being formed with jaws located in spaced parallel relation when the angular members are brought into contact, the outermost angular member being formed at a point spaced from the jaw with a spur extending oppositely to the direction of extension of the jaw member and adapted for engagement upon the top of a stove lid when the jaw member is engaged beneath the transverse web in the lifter hole of the lid.

1,533,727. TWO-STROKE EXPLOSION ENGINE. JOSEPH DE COSMO, Neuilly-sur-Seine, France. Filed June 6, 1923. Serial 643,701. 1 Claim. (Cl. 123—66.)

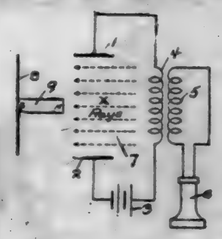


In a two-stroke explosion engine, a cylinder having intake ports, a distributing piston in said cylinder, a scavenging piston in said cylinder movable relatively to the distributing piston, valves in both of said pistons, said distributing piston having an internal chamber, adapted to communicate directly with the intake ports of the cylinder, a transfer chamber arranged between said pistons, the valves in the distributing piston permitting a fuel mixture from the intake ports to pass into the transfer chamber, and means for moving the pistons relatively to one another to cause the scavenging piston to draw the fuel mixture into the transfer chamber.

1,533,728. APPARATUS FOR SEPARATING AND UNRAVELING YARNS OF KNITTED FABRICS. HENRY F. DRENK, Riverside, N. J. Filed Mar. 7, 1923. Serial No. 623,419. 12 Claims. (Cl. 28—17.)

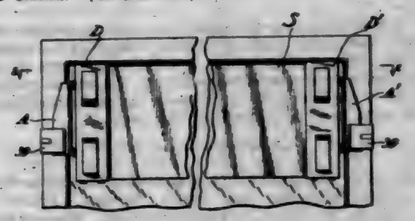
1. An apparatus for separating and unraveling the main and splice yarns of hosiery comprising a hosiery holder, backwinding means for the main yarn of the hosiery, and a weight supported by the splice yarn to exert a constant pull on the same during unraveling of the main yarn to separate it therefrom.

1,533,729. TYPEPRINTING TELEGRAPH. ERWIN EHRHARDT, Hermsdorf, near Berlin, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a German Corporation. Filed Oct. 26, 1920. Serial No. 419,779. 2 Claims. (Cl. 178—34.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



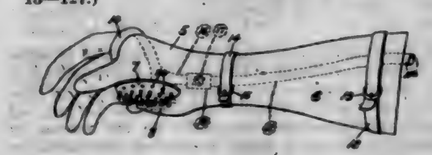
1. In a receiver for type-printing telegraphs in which the signal to be printed is composed of a plurality of line current impulses, in combination a distributor consisting of a moving element connected to the line and contact segments equal in number to the number of impulses composing a signal, condensers each connected to one of said segments, relays equal in number to that of the condensers and each connected to the other side of one of said condensers, a switching device adapted to mechanically coact with the moving element of said distributor and electrically connected to said relays and condensers to cause their connection in circuit with each other when no line impulses are transmitted to said condensers, and a printing mechanism electrically controlled by the armatures of said relays.

1,533,730. TELEPHONE TRANSMITTER. RICHARD A. ENGLUND, New York, N. Y. Original application filed Sept. 2, 1919, Serial No. 321,195. Divided and this application filed July 29, 1924. Serial No. 728,974. 26 Claims. (Cl. 179—121.)



1. In a telephone transmitter, the combination of a pair of electrodes and an ionized column of air between

them, both included in a circuit consisting further of a battery and an induction coil, said ionized air column serving both as the sound wave conveying medium and

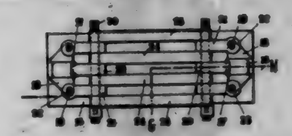


current conducting medium, the said column of air being directly spoken to to vary the current flow in said circuit.

1,533,731. AUTO SHADE. JOSEPH W. FOLEY, Los Angeles, Calif. Filed July 6, 1923. Serial No. 649,789. 5 Claims. (Cl. 296—97.)

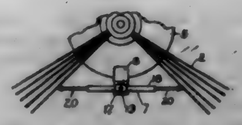
4. An auto shade, comprising a strip of screen material such as celluloid, attaching devices connected to the ends of the sheet of material, and supporting devices adapted to be mounted upon the side bars of a windshield and having hooks projecting inwardly, the attaching device having strips yieldingly mounted with eyes at their outer ends to engage the hooks.

1,533,732. SPRAY AND WASH RUBBER GLOVE. RUPERT LIVINGSTONE FROST, Cincinnati, Ohio, assignor of one-half to Enoch P. Pinkston, Norwood, Ohio. Filed July 25, 1924. Serial No. 728,276. 1 Claims. (Cl. 15—127.)



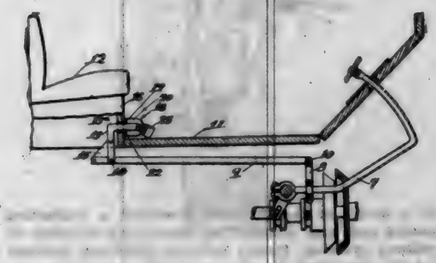
In a spray and wash water-proof glove, the combination of a main hand-portion, finger and thumb portions normally-extending in an inwardly turned or flexed grasping-form from the said hand-portion, a gauntlet-cuff portion, a minutely-perforated auxiliary or false palm portion seamed along its edge within the palm-proper of the said hand-portion, a tubular loop-portion having an exit leading to the distributing-chamber formed by the presence of the said auxiliary-palm portion and adapted to pass around the back of the hand of the user, a regulating and controlling valve provided in the said tubular loop-portion, a water-conveying feed-tube leading to the said tubular loop-portion, an encircling band having a fastening-buckle and provided on the feed-tube to the rear of the said hand fastening-loop portion, an elbow-band having a securing-buckle and provided on the upper extended-end of the said feed-tube to encircle the said gauntlet-cuff portion and thereby support the device on the fore-arm of the user thereof, and coupling-means at the extreme inner end of the said feed-tube for attachment to the source of water-supply, substantially as shown and described.

1,533,733. WASH CLOTH. CLARA P. GILLUM, Los Angeles, Calif. Filed Aug. 4, 1924. Serial No. 729,873. 4 Claims. (Cl. 15—223.)



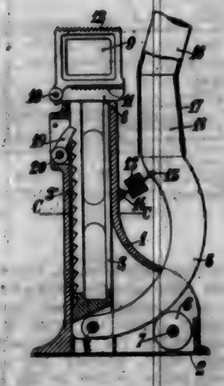
1. A strip having engaging means for the respective hands adjacent its ends so that the intermediate portion of the strip may be drawn across a surface, said engaging means comprising retaining members spaced from the back of the strip for insertion of the outstretched hands beneath the same and against the strip, said retaining members being secured at their sides to the strip whereby the sides of the hands inserted beneath the retaining members will abut against the sides of said retaining members to maintain the strip extended to its full width.

1,533,734. CHILL MOLD. OTTO GÖTZE, Messingwerk, near Eberswalde, Germany, assignor to Hirsch, Kupfer- und Messingwerke Aktien Gesellschaft, Berlin, Germany, a Corporation of Prussia, Germany. Filed Jan. 3, 1924. Serial No. 684,147. 7 Claims. (Cl. 22—149.)



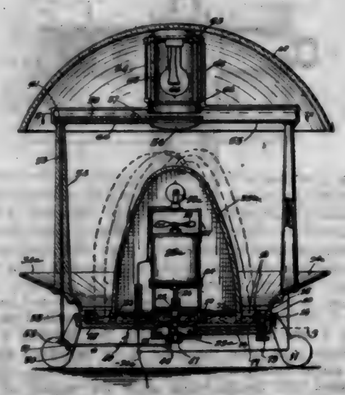
1. A chill mold, comprising, in combination, spaced detachable side-plates adapted to be reversed so as to have either face located at the interior of the mold; intermediate members adapted to close the gap between said plates and the sides; standards to which said intermediate members are detachably attached; a base plate bearing said standards; and means for connecting said plates and the intermediate members with each other.

1,533,735. SPACING ELEMENT FOR ROTARY INDICES. WILLIAM HINES, Washington, D. C. Filed Feb. 14, 1924. Serial No. 692,926. 3 Claims. (Cl. 40—72.)



1. The combination with a rotary index including a series of hinged leaves and a support for the index; of a clamping member affixed to the support, an arm pivotally connected to the clamping member and having vertical and horizontal positions, an extendable crosshead mounted on the free end of the arm and forming a spacing element, said element being located exterior of the index when the arm is in a horizontal position and between the index leaves to effect a predetermined spacing thereof when said arm is in a vertical position.

1,533,736. CLUTCH LOCK FOR MOTOR VEHICLES. CHARLES F. HUMPHREY and GERALD M. JEFFREY, Pasadena, Calif. Filed May 5, 1924. Serial No. 711,124. 1 Claim. (Cl. 70—128.)

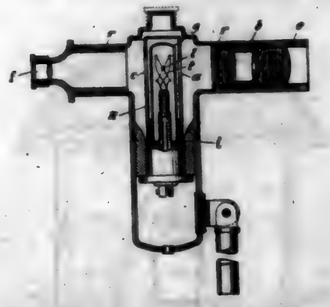


A clutch lock for automobiles comprising a clamp adapted to be attached to the clutch lever, a link pivotally connected to said clamp and extending under the floor of the automobile, an L-shaped member secured to said link and extending upwardly under the seat of the automobile and forwardly to the front of the seat, a lug secured to a support of the seat and a lock engaging said lug and said L-shaped member.

1,533,737. LEVER JACK. PIERRE JACOMY, Toulouse, France, assignor to Société Anonyme la Chevrette, Toulouse, Haute-Garonne, France. Filed May 28, 1923. Serial No. 642,070. 1 Claim. (Cl. 254—113.)

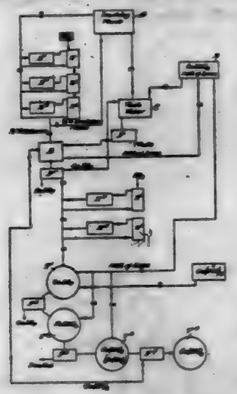
A jack comprising a frame, a base at the lower end thereof, the frame and base being formed with a vertical guideway, a toothed lifting rod slidable in the guide, a housing formed on the side of the frame and communicating with the guideway, a shaft journalled through the housing, a pawl keyed to the shaft within the housing and engageable with the toothed lifting rod, a counterweight keyed to the shaft exteriorly of the housing, a curved lever pivoted to the lower end of the rod and extending through and above the base, and a roller journalled in the base for supporting the lever.

1,533,738. ILLUMINATED ELECTRIC FOUNTAIN. JOSEPH I. KANE, Los Angeles, and HENRY W. A. FUHRMANN, Alhambra, Calif., assignors, by mesne assignments, to Eugene John Pineau, Los Angeles, Calif. Filed July 21, 1921. Serial No. 486,890. 1 Claim. (Cl. 299—4.)



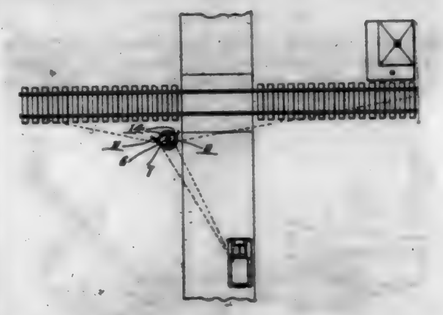
A fountain comprising a transparent housing, a motor operated impeller for spraying water about the housing, illuminating means within the housing, a lens above the housing, a lamp above the lens, rotatable coloring means interposed between the lamp and lens, and means operatively connecting said motor with said coloring means to impart rotation thereto.

1,533,739. TREE HOLDER. LAURENCE G. KARR, Long Beach, Calif. Filed Apr. 2, 1924. Serial No. 703,628. 5 Claims. (Cl. 248—36.)



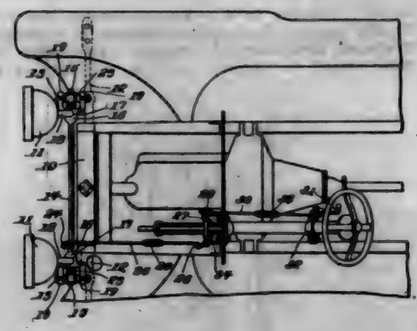
3. A tree holder comprising a lower plate, legs for said plate, said legs having flexible extensions upwardly beyond said plate and forming gripping members for a tree, a plate above the first mentioned plate and adapted to bear the weight of a tree, hinged means for suspending the upper plate from said extensions, a hold bolt passing through said plates and secured to the upper plate, said bolt comprising a series of cones, a guide for said bolt and spring latches adapted to engage any one of said cones.

1,533,740. PYROMETER. GEORGE KEINATH, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Aug. 27, 1921. Serial No. 495,914. 12 Claims. (Cl. 73—32.)



1. In a pyrometer of the character described in combination a thermo element, means for leading a part of the heat rays from the body to be measured directly to the warm soldered junction of said thermo element and means for transmitting such an extent of heat of another part of the heat rays from the body to be measured to the cold soldered junctions so that both of said warm and cold junctions will reach their respective final temperatures simultaneously.

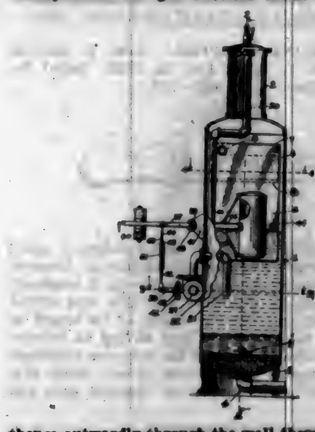
1,533,741. METALLURGICAL PROCESS. FRANK O. KICHLINE and HAROLD W. SLOKER, Lebanon, Pa., assignors to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed June 13, 1924. Serial No. 719,877. 13 Claims. (Cl. 204—15.)



1. A metallurgical process for recovering copper from its ores comprising first treating the ores with an acid solution to dissolve the copper, whereby a relatively rich copper solution is obtained, and then treating the same with wash water, whereby a relatively lean copper solution is obtained, maintaining separate the resulting rich and lean copper solutions, electrolyzing the rich copper solution to deposit copper therefrom, withdrawing from the electrolyzing system a portion of the electrolyte solution after the same has been subjected to electrolysis, precipitating the copper in said lean solution, adding said precipitate to said withdrawn portion of electrolyte, and electrolyzing the solution thus obtained to deposit copper therefrom.

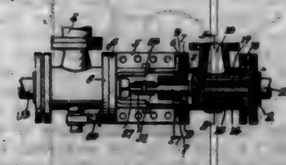
1,533,742. RAILROAD REFLECTOR SIGNAL. CHARLES H. KILPATRICK, Abingdon, Ill. Filed Jan. 21, 1925. Serial No. 3,800. 1 Claim. (Cl. 246—474.)

In a device of the character described, a supporting standard and base adapted for positioning adjacent to a railway crossing, frames carrying reflecting members pivotally supported by the standard, means for connecting the frames to permit the frames to be adjusted with respect to each other, and means for securing the frames in various positions of adjustment.



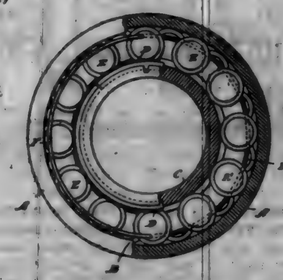
1,533,743. CONTROLLING DEVICE FOR HEADLIGHTS. JOHN A. KIMBALL, Taylorville, Ill. Filed Dec. 7, 1923. Serial No. 679,224. 6 Claims. (Cl. 240—61.)

1. The combination with a motor vehicle, of bearing brackets mounted upon opposite sides of the vehicle, a horizontal rock shaft mounted in said brackets and extending transversely across the front of the vehicle, means extending within the vehicle and operatively connected to said shaft, whereby the latter may be rocked, adjustable means carried by the shaft and engaging one of the brackets to limit movement of the shaft in opposite directions and means for yieldingly holding one of the stops in engaged position.



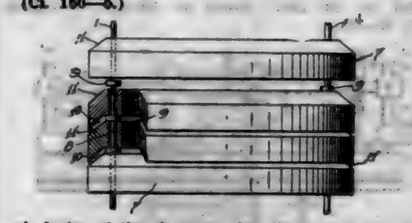
1,533,744. OIL AND GAS SEPARATOR. DAVID G. LOMBAINE, Los Angeles, Calif. Filed Nov. 6, 1922. Serial No. 599,420. 11 Claims. (Cl. 183—2.7.)

1. A device of the character described comprising a tank having a flow inlet and forming a settling chamber and a gas chamber above said settling chamber, a discharge from said settling chamber, a valve for said discharge controlled by the level of the flow relative to the device, a gas discharge conduit extending downwardly from said gas chamber inside of said tank and



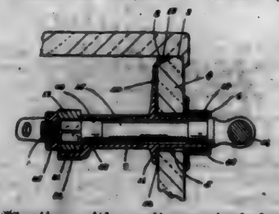
thence outwardly through the wall thereof, and a valvular control for said gas discharge conduit in the portion thereof outside of said tank.

1,533,745. VALVE. DAVID G. LOMBAINE, Los Angeles, Calif. Original application filed Nov. 6, 1922, Serial No. 599,420. Divided and this application filed Feb. 23, 1923. Serial No. 620,720. 7 Claims. (Cl. 277—4.)



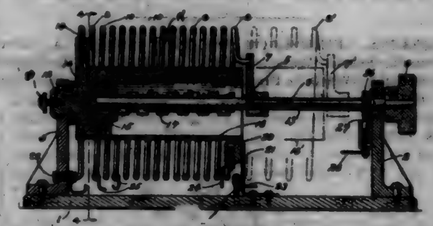
1. A valve mechanism comprising a cradle having alined positioning means, valves having operating shafts and supported by said cradle in engagement with said positioning means for alining said operating shafts, means for rotatably adjusting said shafts relative to one another, and an operating connection fixed to said adjusting means.

1,533,746. METHOD OF ASSEMBLING ROLLER BEARINGS. CHARLES I. LOTT, Norfolk, Va. Filed Dec. 14, 1922. Serial No. 606,985. 3 Claims. (Cl. 29—84.)



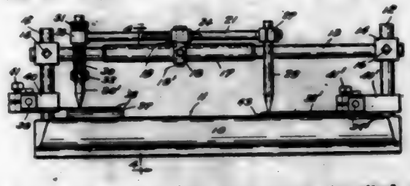
1. In assembling magnetic parts of mechanical structures, the method which consists in supplying electro-magnetic devices in position to hold said parts magnetically, adjusting the parts as desired, securing them mechanically, and breaking the electro-magnetic circuit.

1,533,747. ADJUSTABLE WELL CASING AND SAND SCREEN. WILLIAM DAVID LOUGH, Scott City, Kans. Filed May 21, 1923. Serial No. 640,543. 1 Claim. (Cl. 166—5.)



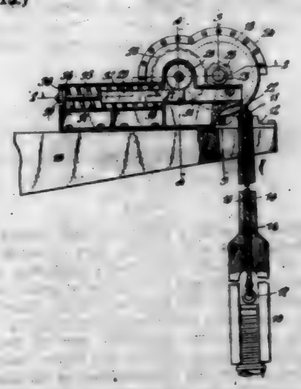
A device of the character described comprising a plurality of movable sections having a convex end wall and a concave end wall, the angle of inclination of the concave wall being greater than the angle of inclination of the convex wall, rods for mounting said movable sections in axial alignment with one another, and separable spacing members for spacing certain of said sections back from one another a predetermined distance, whereby water may enter said casing.

1,533,748. TANK LEVER. DANIEL W. MCNEIL, Cincinnati, Ohio, assignor to The John Douglas Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 2, 1922. Serial No. 540,619. 1 Claim. (Cl. 4—67.)



The combination with a vitreous tank having a perforation through one wall thereof and a notch at the upper edge of said wall, of a sleeve extending through the perforation, comprising a finger of a metal bendable by light hammer blows, the bent end of the finger adapted to enter the notch for precluding turning of the sleeve in the perforation, the outer end of the sleeve being threaded, the inner end of the sleeve carrying a lug, a nut mounted on the threaded end of the sleeve for holding the sleeve in the perforation, a level bar extending through the sleeve and carrying a handle at its outer end, and an arm fixedly mounted on the inner end of the lever bar and having an elongated arcuate notch therein for receiving the lug on the sleeve.

1,533,749. INDUCTANCE. OSKAR MENOWSKY, Palisade, N. J. Filed June 11, 1923. Serial No. 644,691. 8 Claims. (Cl. 171—119.)

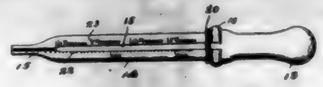


1. An inductance system comprising in combination a primary coil and a secondary coil, said primary coil being fixed in position with its turns spaced one from another, and means for moving the turns of said secondary coil in an axial direction between the turns of said other coil.

1,533,750. INSTRUMENT FOR MARKING MOLDING CUTTERS OR BITS. HARRISON J. MITCHELL, Seattle, Wash., assignor to William H. Payne, Seattle, Wash. Filed Oct. 13, 1921. Serial No. 507,499. 7 Claims. (Cl. 33—23.)

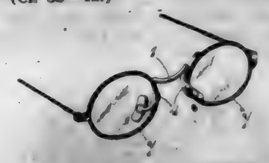
1. In an instrument of the character described, the combination with a frame, of a carriage arranged for movements longitudinally of said frame, a trammel beam pivotally connected intermediate its length to said carriage for movements parallel and in angular relations with respect to the direction of the carriage travel, a stylus carried by one arm of said beam, and a pattern tracing point carried by the other arm of the beam.

1,533,751. LIFTING DEVICE FOR TEMPER SCREWS. GUSTAVUS A. MONTGOMERY, Titusville, Pa. Filed Apr. 29, 1924. Serial No. 709,931. 9 Claims. (Cl. 255—15.)



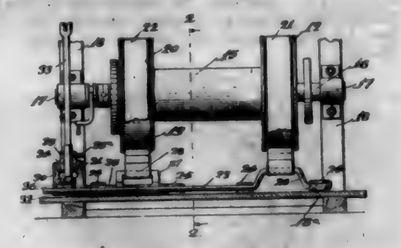
1. The combination with the walking beam of a drilling apparatus and the temper screw supported thereby, of an elevating device for the temper screw, comprising a casing mounted on the walking beam, a winding drum carried by said casing, a flexible member connected at one end to said temper screw and at its other end to said drum, and means in said casing operatively connected to said drum and tending constantly to rotate the latter in a direction to elevate the temper screw.

1,533,752. FIREPLACE DAMPER. GLENN A. MONELL, Seattle, Wash., assignor to Albert P. Robinson, Seattle, Wash. Filed Mar. 8, 1924. Serial No. 697,735. 7 Claims. (Cl. 126—288.)



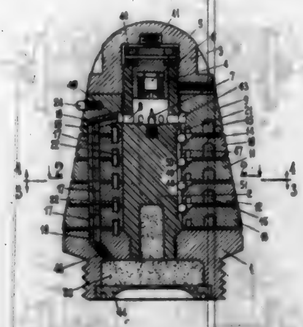
1. In a damper, a damper frame having a bolster element rigid therewith, a damper plate pivotally connected to said frame, and a stud protruding from an end of the damper plate to bear upon said bolster element for sustaining the damper plate at one edge thereof and serving to frictionally resist movement of the damper plate.

1,533,753. MEDICINE DROPPER. EARL L. MUNCH, Johnson City, N. Y. Filed Feb. 26, 1923. Serial No. 621,181. 3 Claims. (Cl. 128—233.)



1. As an improved article of manufacture, a guard and measure indicating casing for medicine droppers comprising a cylindrical body portion having a longitudinal slot throughout its length at one side, and slitted longitudinally from one end for a part of its length at the opposite side, the slitted end part having an interior circumferential groove therein for the purposes described, the two parts between the slit and groove being constructed to spring together upon an inserted tube and bulb end.

1,533,754. EYEGLASSES AND SPECTACLES. HARRY NEWBOLD, St. Albans, and ANDREW JAMES HARRISON, Olton, England; said Newbold assignor to said Harrison. Filed Dec. 21, 1923. Serial No. 682,024. 4 Claims. (Cl. 88—42.)



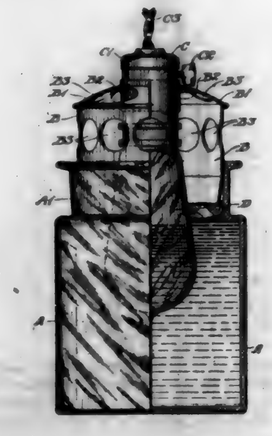
1. A frame for eyeglasses comprising a strip-like bridge member; a pair of spaced projections extending laterally from one edge of the bridge member in the plane of the strip; and a pair of lens holders formed separately from the bridge member and attached one to each of the projections thereon.

1,533,755. BRAKE EQUALIZER. FRANK L. ODENBRETT, Long Beach, Calif. Filed July 3, 1923. Serial No. 649,242. 5 Claims. (Cl. 188—204.)

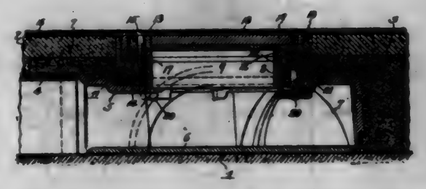
3. In combination, a pair of brake bands having one of their ends fixed, a pair of shafts, eccentric connections between said shafts and the other end of said bands, gears fixed to said shafts, an operating lever, a gear rotatable on the lever, said gear being arranged between and meshing with both of the first gears, and means for limiting the movement of the lever with respect to the first gears, said means comprising a pin carried by the lever and shoulders formed on the first gears and engageable by said pin.

1,533,756. TIME FUSE. UMBERTO PANIGATTI, Brescia, Italy, assignor to Metallurgica Bresciana Gia Tempini, Brescia, Italy, a Corporation of Italy. Filed June 9, 1924. Serial No. 718,897. 7 Claims. (Cl. 102—36.)

7. A time fuse, comprising, a supporting member, firing means in said member, a first ring rotatable on said supporting member, a delay powder pellet in said ring, a series of rings rotatable on said supporting member, a delay powder pellet in each of said rings, cooperating means on said rings to cause each of them to engage that following it in the flame path after the said delay powder pellet of each ring has been carried entirely into operative condition, said supporting member and one of said rings of said series having recesses cooperating with each other to provide a chamber, a ball in said chamber locking said recessed ring with said supporting member, the ring preceding said recessed ring having a depressed portion to register with said chamber when said preceding ring has been moved through its entire possible turning movement, the recess in said recessed ring having an inclined surface acting to shift said ball into said hollow on said recessed ring being moved into rotation, to release said recessed ring from said supporting member.



1,533,757. APPARATUS FOR CHANGING ELECTRICAL VARIATIONS TO MECHANICAL. KNUD RAHBEK and FREDERIK ALFRED JOHNSEN, Copenhagen, Denmark. Filed Mar. 10, 1919. Serial No. 281,755. 5 Claims. (Cl. 179—108.)

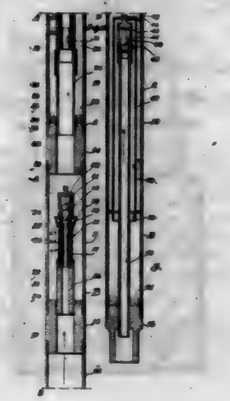


1. A telephonic receiver comprising an electro-adhesion system having a rotary element and a non-rotary element, said elements, one of which is non-metallic sliding on one another and exerting electro-adhesion on one another, and a stationary diaphragm connected mechanically to the non-rotary element.

1,533,758. HUMIDOR. CHARLES REYNOLDS, Nashville, Tenn., assignor to Elyma Reynolds. Filed May 3, 1924. Serial No. 710,915. 10 Claims. (Cl. 219—45.)

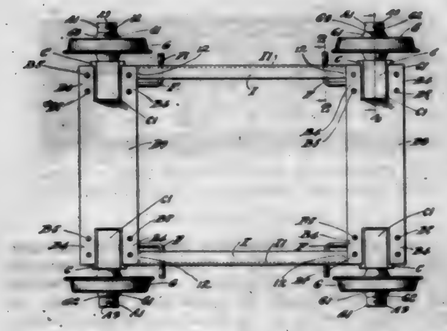
1. In an apparatus of the kind described, the combination of an upright tank having at its upper end an upward-directed open neck, a cap adapted to engage said neck, one of said members being apertured for the escape of vapor, an upright lamp socket in said cap, and an upright lamp extending downward from said socket, substantially as described.

1,533,759. JUNCTION BOX. HENRY F. RICHARDSON, Brooklyn, and ALLAN COGGESHALL, Pleasantville, N. Y., assignors of one-fourth to Henry F. Richardson, Brooklyn, N. Y.; one-fourth to Allan Coggeshall, Pleasantville, N. Y.; one-sixth to S. R. Bradley, Nyack, N. Y.; one-sixth to A. M. Cregier and one-sixth to Alonzo B. Bradley, both of Orangeburg, N. Y. Filed July 12, 1924. Serial No. 725,667. 3 Claims. (Cl. 247—15.)



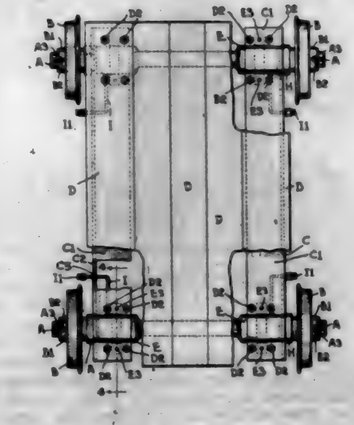
1. An outlet box comprising a main portion, an outer curb with a substantially horizontal shoulder between its ends, an inner curb mounted on and fitting within said outer curb, means to fasten said inner curb so that it rests directly on the shoulder or is spaced therefrom a distance to bring its upper end to a desired position above the upper end of the inner curb, and a cover fitting within said inner curb and flush with the top thereof.

1,533,760. OIL-WELL BARREL. CHARLES B. ROSE, Kiefer, Okla. Filed Apr. 16, 1923. Serial No. 632,490. 2 Claims. (Cl. 103—179.)



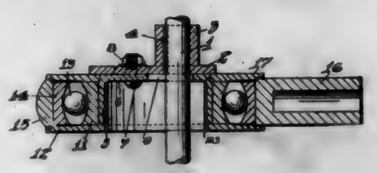
1. In a deep well pump, an outer casing, a casting carried by the lower end of the casing, a fluid inlet pipe carried by the casting, a standing valve carried by the

fluid inlet pipe, a working plunger including a working valve operatively mounted in the casing above and in spaced relation to the standing valve, a casting arranged



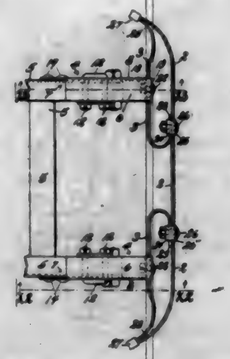
between the standing valve and working plunger, and a dropping standing valve adapted to be dropped into the last mentioned casting when the first mentioned standing valve becomes inoperative.

1,533,761. RAILWAY CAR. HUGH W. SANFORD, Knoxville, Tenn. Filed Sept. 25, 1923. Serial No. 664,652. 16 Claims. (Cl. 295—42.)



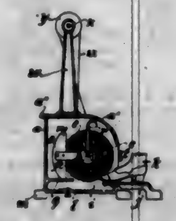
1. In a railway car, the combination of cross plates, connecting members joining the cross plates, pedestals applied to the cross plates, axle boxes applied to the pedestals, lubricant delivering pipes extending through the connecting members and into the axle boxes, axles extending through the axle boxes, and wheels on the axles, substantially as described.

1,533,762. MINE CAR. HUGH W. SANFORD, Knoxville, Tenn. Filed Aug. 8, 1924. Serial No. 730,892. 27 Claims. (Cl. 295—42.)



1. In a railway car, the combination with an axle and a wheel surrounding the axle, of a horizontal angle plate extending above and crosswise of the axle and having an upper horizontal flange and a notched downward-directed flange, an axle box surrounding the axle under the horizontal flange of the angle plate and bearing against said notched flange, and means for holding the axle box in relation to said angle plate horizontal flange, substantially as described.

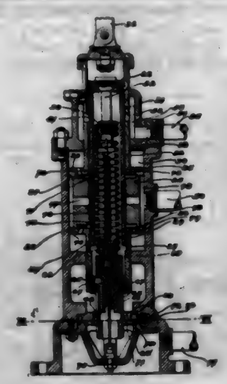
1,533,763. ANTIFRICTION DEVICE FOR ECCENTRIC CONNECTIONS. JOSEPH F. SCHIMPF, Holden, Mass., assignor to Cushiko Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 30, 1922. Serial No. 609,961. 1 Claim. (Cl. 74—1.)



In an anti-friction eccentric device, a plate with a hub eccentrically located thereon, a shaft passing through said hub and keyed thereto, a cylindrical member with a circular flange extending outwardly from one of its bases and a hole eccentrically located therein for the passage of said shaft, said cylindrical member adapted to be secured to said plate, a one-piece collar adapted to cooperate with said flanged cylindrical member to form an outer channel substantially rectangular in cross section, a pair of anti-friction races, anti-friction bodies, and means for locking said cylindrical body and said races together in operative position to enclose said anti-friction bodies.

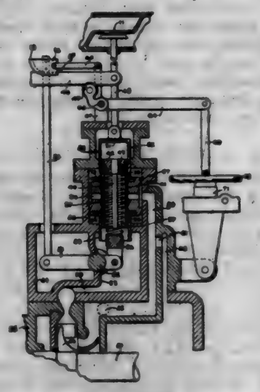
1,533,764. BUMPER FOR VEHICLES. MOSES SCHLATTER and LEWIS C. FREEMAN, Los Angeles, Calif. Filed Aug. 11, 1924. Serial No. 731,841. 10 Claims. (Cl. 293—55.)

1. The bumper set forth having a pair of angle irons adapted to be secured to a vehicle, said angle irons provided with jaws adapted to support a buffer, and having registering holes to receive means to force the jaws toward each other.



1,533,765. APPARATUS FOR CLEANING BOOTS AND SHOES. PAUL SCHMALBUSS, Seiferitz, near Meerane, Germany. Filed June 9, 1924. Serial No. 718,989. 2 Claims. (Cl. 15—34.)

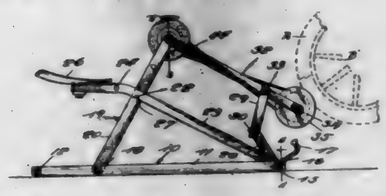
1. Apparatus for cleaning boots and shoes, comprising in combination, a casing with open front side, a rotary shaft mounted in the side walls of said casing, a plurality of fixed brush rollers on said shaft within said casing, and a polish receiver located within said casing and behind one of said brush rollers in contact with the same and adapted to be adjusted with reference to said roller, substantially as set forth.



1,533,766. GOVERNOR. HENRY F. SCHMIDT, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 29, 1922. Serial No. 604,033. 24 Claims. (Cl. 264—14.)

8. In a pressure-actuated governor, an operating piston, a piston valve for admitting fluid under pressure to the operating piston upon relative movement of the valve with respect to the piston and the admission of fluid under pressure being cut off by a relative movement of the operating piston with respect to the valve, biasing means arranged between the piston valve and the operating piston and exerting a substantially constant force on the fluid except when the piston valve moves relatively to the operating piston, and biasing means arranged between the piston valve and a stationary element which assists the first biasing means in opposing the fluid pressure and which serves substantially to absorb the change in pressure taking place in the first biasing means when

the piston valve moves relatively to the operating piston so that the force of said first biasing means is maintained substantially constant when the piston valve and the operating piston are in a neutral or cut-off position.

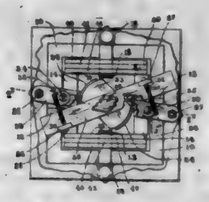


1,533,767. GOVERNOR. HENRY F. SCHMIDT, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 12, 1924. Serial No. 737,396. 28 Claims. (Cl. 264—14.)

28. In a variable fluid pressure governing apparatus for a prime mover having an admission valve, the combination of a pilot valve actuated by the variable fluid pressure, an operating piston controlled by the pilot valve and following its movements, said piston being actuated by the variable fluid pressure and controlling the opening and closing of the admission valve, a spring attached at one end to the pilot valve and at the opposite end to a movable abutment, means for actuating the movable abutment in the same direction, but at a lesser rate of movement than the operating piston comprising two substantially parallel levers each fulcrumed at an intermediate point and having lever arms of unequal length, means connecting one of said levers at one end to the operating piston, means connecting the other of said levers at one end to the movable abutment, a link for transmitting the movements of the first-mentioned lever to the second-mentioned lever, and a cam member carried by said link through which the motion of the first-mentioned lever

is transmitted to the other, said cam member permitting a constant radius of movement of the lever arm through a limited distance when the admission valve is being opened and thereafter increasing the radius of movement of said lever arm whereby motion transmitted to the movable abutment relative to the movement of the operating piston is increased.

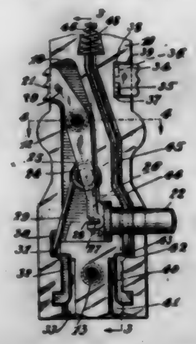
1,533,768. AUTO POWER FOLDING TOOL GRINDER. HERMAN R. SCHODROWSKY, Marion Township, Saginaw County, Mich. Filed Sept. 26, 1923. Serial No. 664,953. 7 Claims. (Cl. 51—166.)



1. A device of the character described comprising a base, a standard mounted thereon, supporting arms pivoted upon the standard and carrying a roller adapted to be engaged against the tire of a jacked up motor vehicle wheel, a grinding wheel journaled on the standard, and an operative connection between said roller and said grinding wheel for imparting movement to the latter when said vehicle wheel is rotated.

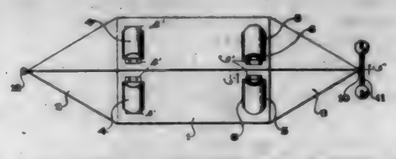
1,533,769. PROCESS FOR DYEING TEXTILE AND LIKE MATERIAL. MARIA SCHOLZ, Leichlingen, Germany. Filed Jan. 17, 1925. Serial No. 3,048. 4 Claims. (Cl. 8—5.)

2. The described step in the art of dyeing, which consists in relatively quickly passing the dyed material through a hot hydrocarbon bath.



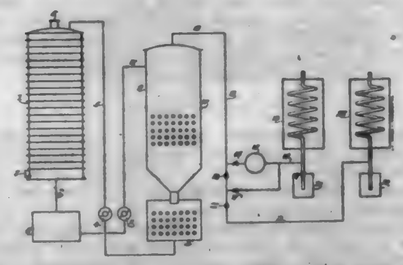
1,533,770. AUTOMATIC CIRCUIT MAKER AND BREAKER. HAROLD N. SHAW, Milwaukee, Wis. Filed May 8, 1922. Serial No. 559,321. 8 Claims. (Cl. 219—20.)

1. An automatic circuit controlling device comprising a plurality of contact members; and means responsive to variations in the resistance of an electric circuit, for controlling said contact members.



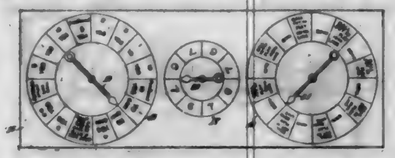
1,533,771. SOCKET PLUG. HAROLD E. SLADE, Newark, N. J., assignor to Beaver Machine & Tool Company, Inc., Newark, N. J. a Corporation of New Jersey. Filed Oct. 12, 1923. Serial No. 668,084. 7 Claims. (Cl. 173—300.)

1. A socket plug comprising a casing, a lever pivotally mounted in the casing and having a contact member at one end thereof adapted to project an appreciable distance beyond the casing, a button movable in the casing and adapted to engage the opposite end of the lever to swing the same in one direction to move the contact member to a position in which it lies within the casing, plug terminals mounted in the casing, and means coacting with the said lever to move the same in the opposite



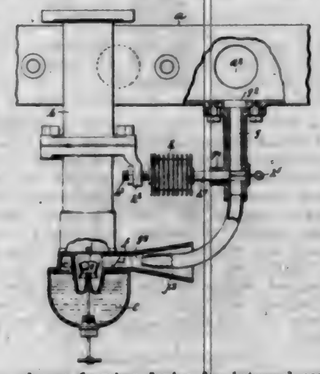
direction to normally maintain the contact member in a position in which a part thereof projects beyond the side of the casing and to complete the circuit between the said contact member and a plug terminal.

1,533,772. PROPELLING TOY. HAROLD D. SLOAN, Colony, Wyo. Filed Aug. 2, 1922. Serial No. 579,185. 3 Claims. (Cl. 46—48.)



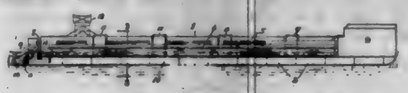
1. A toy having a triangular body provided with pointed ends, rollers journaled on all sides of the body, and intermeshing means between the rollers.

1,533,773. GAS-PURIFICATION PROCESS. FREDERICK W. SPERR, Jr., and RALPH E. HALL, Pittsburgh, Pa., assignors to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 8, 1921, Serial No. 520,805. Renewed June 5, 1924. 12 Claims. (Cl. 23—10.)



4. The process of removing hydrogen sulphide and carbon dioxide from gases, which consists in: passing a gas containing such constituents into contact with a sodium carbonate solution to absorb the hydrogen sulphide and carbon dioxide from the gas; and then subjecting the solution containing the absorbed impurities to heating under vacuum to expel the bulk of hydrogen sulphide from the solution; substantially as specified.

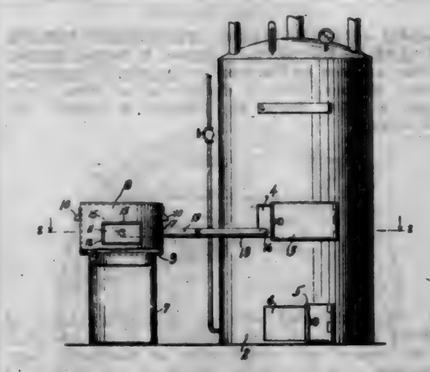
1,533,774. GAME. WALTER C. SPINDLER, Stevens Point, Wis. Filed May 21, 1924. Serial No. 714,865. 1 Claim. (Cl. 273—94.)



A game device including a board having a football field marked thereon, sockets at the opposite ends of each transverse line of the field, a socket at the intermediate portion of each line, game pieces for disposition in said sockets, and spinners for ascertaining the positions and movements of the pieces of the sockets of the terminal sockets, and spinners for ascertaining respectively the position of the piece of the intermediate sockets and the scores of the plays.

1,533,775. CHARGE-FORMING DEVICE FOR INTERNAL-COMBUSTION ENGINES. HORACE T. THOMAS, Lansing, Mich. Filed June 22, 1920. Serial No. 390,762. 7 Claims. (Cl. 123—119.)

1. In a charge forming device for internal combustion engines, the combination with an intake passage of means for supplying hot exhaust gases to said passage and mingling them with the air therein, said exhaust gases being projected in a jet through an injector tube whereby atmospheric air is drawn and forced into said intake passage and a thermostatic means for regulating said jet of exhaust gases the supply of said gases being interrupted after the engine is started.



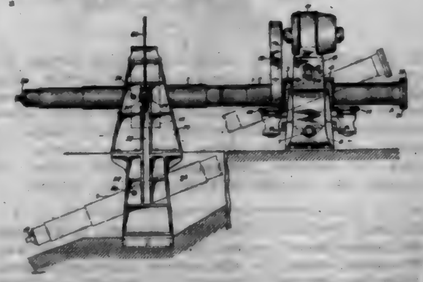
1,533,776. TRANSPORT. CARL TIBURTIUS, Kiel, Germany. Filed June 7, 1922. Serial No. 566,488. 5 Claims. (Cl. 114—0.5.)

1. A transport having a central chamber, a canal boat or barge in said chamber, water in said chamber to carry a portion of the weight of the enclosed boat, and means adapted to engage the sides of the boat to restrain the water within the chamber from rushing forward and back.

1,533,777. DUST COLLECTOR. HOBART A. WALKER, Jr., Maplewood, N. J. Filed Apr. 30, 1924. Serial No. 710,095. 2 Claims. (Cl. 126—242.)

1. A dust collector adapted for use with an ash receptacle, comprising a removable hood therefor provided with an ash-receiving door, an outlet opening in said hood, and a dust-conducting pipe leading from said opening to the interior of the furnace, said hood having a relatively large upper portion extending above

said door and opening providing a chamber adapted to cause the dust to circulate and collect in said upper portion and to fall in part into the receptacle, the residue being drawn into the dust-conducting pipe and out through the furnace flue.

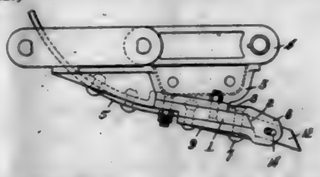


1,533,778. METHOD AND MEANS FOR PURIFYING WATER. WILLIAM H. WALKER, Bridgton, Me., assignor, by mesne assignments, to Elliott Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 27, 1920. Serial No. 413,107. 7 Claims. (Cl. 210—23.)

1. The method of purifying water which consists in the addition thereto of calcined magnesite to cause a coagulation and precipitation of the colloidal particles therein and simultaneously to form a filtering medium adapted to remove said colloidal particles from the water.

1,533,779. METHOD OF BLEACHING BARYTES. WILLIS F. WASHBURN, St. Louis, Mo., assignor to National Pigments & Chemical Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 28, 1924. Serial No. 709,692. 7 Claims. (Cl. 252—8.)

1. A method of bleaching barytes consisting in treating the barytes with a mineral acid in the presence of a gaseous reducing agent.

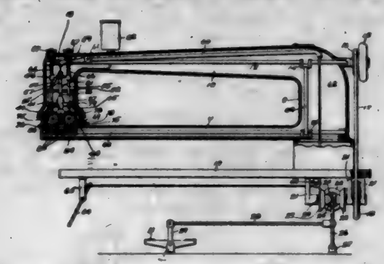


1,533,780. CASTING PROCESS AND APPARATUS. ROBERT F. WOOD, Sandusky, Ohio, assignor to The Paper & Textile Machinery Company, Sandusky, Ohio, a Corporation of Ohio. Filed Aug. 7, 1919. Serial No. 315,892. 17 Claims. (Cl. 22—65.)

1. In apparatus for casting metal tubes and the like having paraboloidal hollow bores, a mold the interior of which has the desired form of the exterior of the

casting, means for rotating said mold at the requisite speed and means for giving to the axis of said mold the requisite inclination to produce within the casting a cavity of the desired paraboloidal form.

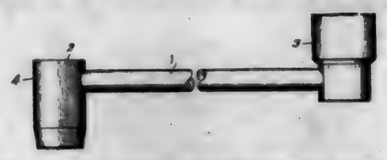
1,533,781. ROOTER-TOOTH ATTACHMENT FOR EXCAVATING BUCKETS. CHARLES F. YOCUM, Findlay, Ohio, assignor to The Buckeye Traction Ditcher Company, Findlay, Ohio, a Corporation of Ohio. Filed July 9, 1924. Serial No. 725,008. 6 Claims. (Cl. 37—142.)



1. The combination with an excavating bucket, of socketed rooter teeth holders attached to the nose plate of the bucket, and rooter teeth of rhomboidal form removably and reversibly mounted in the sockets of said holders and in inner end-thrust engagement with the nose plate edge.

1,533,782. VALVE FOR INTERNAL-COMBUSTION ENGINES. PERCY A. E. ARMSTRONG, Loudonville, N. Y., assignor to Ludlum Steel Company, Watervliet, N. Y., a Corporation of New Jersey. Original application filed Dec. 12, 1919, Serial No. 344,294. Divided and this application filed Feb. 12, 1923. Serial No. 618,693. 18 Claims. (Cl. 123—188.)

1. Valves for internal combustion engines made from alloy steel containing silicon over about .5% and under about 7%, chromium over about 3% and under about 10%, silicon and chromium taken together over about 5% and under about 13%, carbon over about .05% and under one-tenth the chromium and silicon taken together, and the principal part of the remainder iron.

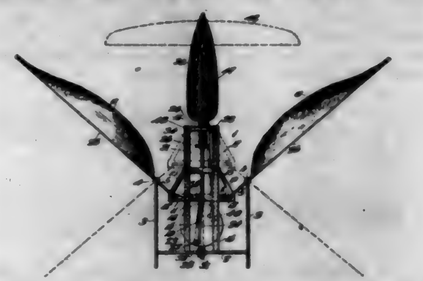


1,533,783. UNDERPRESSER. BENJAMIN BABSKIN and ABRAHAM WAISMAN, St. Louis, Mo. Filed Nov. 17, 1920. Serial No. 424,677. 6 Claims. (Cl. 68—9.)

1. An under presser comprising a head having two horizontal portions, the lower horizontal portion being free and unobstructed so that a completely sewed garment may be inserted thereover, power-driven rollers mounted in each of said horizontal portions, means for heating some of said rollers, means for placing said rollers in operation simultaneously, and means for reversing the direction of rotation of the rollers.

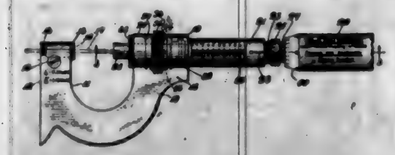
1,533,784. SOCKET WRENCH. WARREN S. BELLOWS, Worcester, Mass., assignor to Walden-Worcester, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 31, 1919. Serial No. 348,691. 1 Claim. (Cl. 81—121.)

In a socket wrench, the combination of a socket member having therein a nut engaging socket and a handle receiving hole, said handle receiving hole being located within the solid base portion of the socket member with the axis of said hole crossing the axis of the



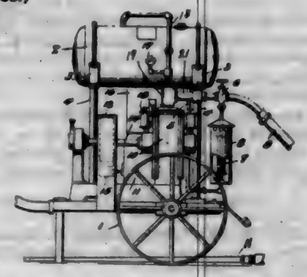
nut engaging socket, and a handle inserted in said hole and held therein by an axially located portion of the socket member driven into engagement with said handle from within the nut engaging socket.

1,533,785. WRENCH CONSTRUCTION. WARREN S. BELLOWS, East Orange, N. J., assignor to Walden-Worcester, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 13, 1924. Serial No. 749,619. 2 Claims. (Cl. 81—179.)



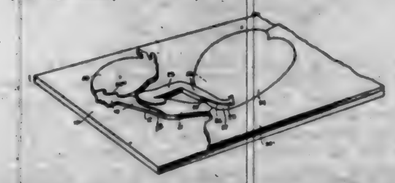
2. In a tool of the type described, a turning member and a turned member, means at one end of the turned member to cooperate with a part to be turned, and means at the other end of the turned member for securing the turned member and the turning member together comprising a hole in the turned member into which the turning member is inserted, and means to prevent longitudinal and rotational movement of one of said members relative to the other, comprising an integral axially located portion of the turned member driven into engagement with the turning member from the end opposite the means to cooperate with the part to be turned.

1,533,786. WING CONTROL FOR FLYING MACHINES AND SAFETY DEVICE THEREFOR. DANIEL W. BONNELL, Philadelphia, Pa. Filed Jan. 24, 1923. Serial No. 614,511. 6 Claims. (Cl. 244—17.)



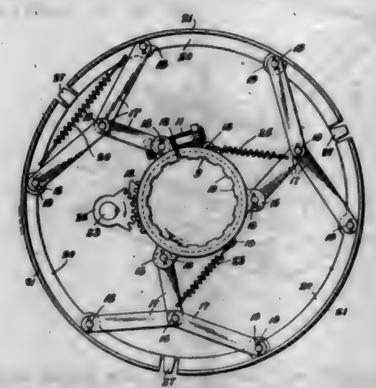
1. In a flying machine, a framework, composed of a floor and outer wing supports, wings having arms pivotally mounted in the upper portion of said supports, inner uprights mounted on said floor and provided with vertically extending ways, a cross head having a plurality of vertical T-shaped guides thereon engaging similarly shaped vertical slots in said ways, horizontal slots in the lower outer portions of said cross head, connections common to the inner ends of said arms and said slots and means for actuating said cross head up and down to oscillate said wings.

1,533,787. MULTIPLE-STANDARD MICROMETER. LOUIS C. CRESCIO, New York, N. Y., assignor of one-half to Louis Malatesta, New York, N. Y. Filed Sept. 14, 1921. Serial No. 500,676. 1 Claim. (Cl. 33—166.)



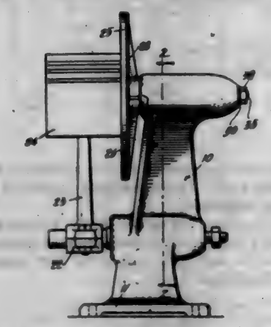
In a micrometer, for taking simultaneously readings in various standards, said micrometer composed of a spindle provided with a thread of a pitch equal to one half millimeter, a sleeve having a corresponding thread engaging the spindle, a double graduated longitudinal scale provided upon said sleeve and having a common indicator line, one graduation being in millimeters, the other in substantially one fiftieth parts of an inch, a thimble associated with said spindle and telescoping with said sleeve, and having a circumferential graduation of twenty lines, adapted to co-operate with said scale and said indicator line in taking millimeter and inch readings at one setting of said thimble.

1,533,788. HEATER. JOHN H. DEPPELER, Weehawken, N. J., assignor to Metal and Thermit Corporation, Chrome, N. J., a Corporation of New Jersey. Filed Jan. 9, 1923. Serial No. 611,681. 6 Claims. (Cl. 219—38.)



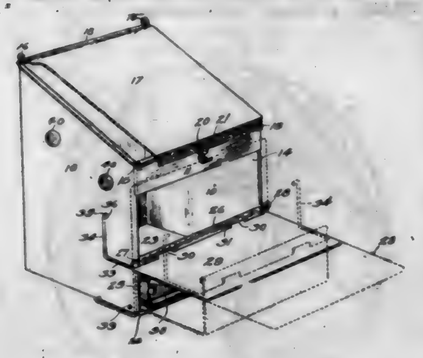
1. In a heater of the class described, the combination of a fuel tank and a burner nozzle, with means to supply a combustible mixture to said nozzle comprising an air blower connected with the tank above the fuel in said tank, a pipe connecting the discharge of said blower to said nozzle, a fuel pipe having a depending loop connecting said tank and air pipe including an adjustable atomizing valve and a heater for vaporizing the fuel in its passage towards said valve.

1,533,789. SIGN FOR ADVERTISING AND OTHER DISPLAY. VYVIAN E. DONNER, New York, N. Y. Filed Aug. 1, 1924. Serial No. 729,434. 12 Claims. (Cl. 40—136.)



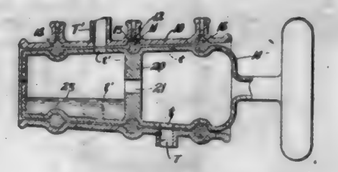
1. A pictorial representation for advertising and other display purposes, comprising a plurality of separate members representing separate parts compositely forming the pictorial representative, certain of said members being superimposed upon one another, and certain others of said members having different thicknesses relative to one another to attain the desired relief and intaglio effects.

1,533,790. INTERNAL BRAKE. RAYMOND DYMOCK, Hamburg, N. J. Filed Feb. 20, 1922. Serial No. 537,952. 4 Claims. (Cl. 188—78.)



1. In a brake mechanism for vehicles, the combination with a wheel and a brake drum secured to the wheel, of a toothed member mounted to turn in the drum, a brake shaft, a toothed segment mounted on the brake shaft and meshing with the toothed member, a sectional brake band having its ends spaced apart, a spring connecting two of the brake band sections, fixed studs in the space between the brake band sections, a plurality of sets of arms, each set consisting of three arms, two of which are pivoted together and each to a brake band section and the third arm pivoted to the first two arms and to the toothed member, and springs secured to the third arm of two of the sets and to the toothed member.

1,533,791. PISTON-LINING DEVICE. HIO P. ELLAMS, Los Angeles, Calif., assignor to Ralph M. Burdick, Los Angeles, Calif. Filed July 24, 1920. Serial No. 398,770. 4 Claims. (Cl. 33—180.)

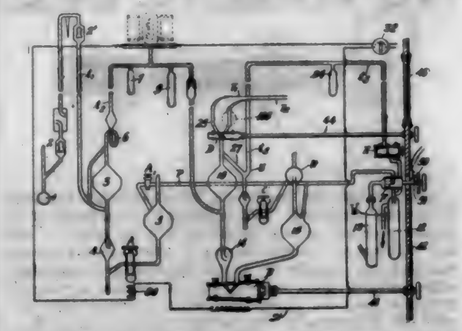


1. In a device of the character described, a frame formed with a bore, a face plate, a trunnion on the face plate to be carried in the bore, two cooperating screw members arranged in the bore, one in connection with the frame, the other in connection with the trunnion so that relative rotary movement between the frame and the trunnion causes longitudinal movement of the trunnion in the bore.

1,533,792. SANITARY LAYING, SETTING, AND HATCHING NEST AND BROODING COOP. THEODORE EWOLDT, Holstein, and JOHN A. HANSEN, Kingsley, Iowa. Filed May 22, 1924. Serial No. 715,119. 6 Claims. (Cl. 119—45.)

3. A hen's nest comprising a body portion having sides, back and partly open front, a removable bottom having a front piece adapted to partly close the front, a sleeve on the upper edge of the front piece, the sides being provided with openings registering with said sleeve, and a locking pin received through said sleeve and openings, a platform hinged to said front piece, and resilient arms secured thereto and embracing the sides, said arms being provided with means to engage the sides in various positions, the platform being positioned to swing from horizontal position to vertical position for closing the opening in the front.

1,533,798. STOPCOCK. GIOACCHINO FAILLA, New York, N. Y. Filed Dec. 13, 1919. Serial No. 344,522. 11 Claims. (Cl. 251—93.)



7. In a valve the combination with a frame of a glass stopper therefor and a silver-graphite lubricant between said frame and stopper.
